There appears to be no reason why the resignation of Yasin Pasha from the Acting Premiership of Iraq should in any way affect the Anglo-Iraqi negotiations now proceeding in London. Yasin Pasha is still Minister of Finance, and it is reasonable to suppose that what he found disagreeable was the continued and absorbing care demanded by the general internal situation of Iraq as well as by his purely financial anxieties, while the actual Premier, Jaafar Pasha, was away. Certainly no grounds exist now for stating that the able Minister of Finance disapproves *in toto* of the Iraq Cabinet's policy; that is a misapprehension which has leapt too swiftly to the minds of those who either desire the downfall of Jaafar Pasha's Cabinet or imagine that Yasin Pasha is playing a lone hand with a view to avoiding any conceivable loss of popularity. It is a pity, however, that the excitement caused by the suppression of the Shiah newspaper, *An-Nadha-tul-Iraqiyah*, which began to appear last August, and which is very hostile to the present Baghdad Government, should have arisen during the absence of King Faisal and his Prime Minister, and also of the High Commissioner and his Counsellor. In its very first issue, it may be recalled, this Shiah newspaper accused the present Cabinet of possessing an autocratic and militarist spirit, and quite bluntly asserted that there could be no enforcement of conscription in Iraq "so long as personal ambitions are toying with the interests of the nation for purely private ends." The bitterness which thus characterised the first issue of *An-Nadha* will certainly not have been lessened by the decision of Yasin Pasha to suppress it; nor was the protest of the politically-minded of Karbala to the Acting High Commissioner likely to smooth the waters. It has been stated that the Regent, the Amir Ali, was at one with Air Vice-Marshal Sir Edward Ellington, in proposing to allow *An-Nadha* to continue publication. With the purely internal affairs of Iraq, however, the outsider should have nothing to do; the all-important thing is that they should not disturb the even flow of Anglo-Iraqi relations.

Zionism: 1917 and 1927.

It is impossible, on the tenth anniversary of the Balfour Declaration (which was proclaimed on November 2, 1927) not to contrast the hopes then entertained by Zionists

THURSDAY, NOVEMBER 3, 1927.

POLITICS AND ECONOMICS IN ROUMANIA.

National discontent where it exists is apt to make use of any method of expression that offers. Behind the mild dynastic intrigues that are being staged in Roumania lies a prolonged period of economic stress, from which a way out is even yet not apparent to the large majority of the Roumanian people. Consequently when the policy which is held responsible for the country's economic difficulties is attributable to the party or politicians mainly identified with the existing dynastic settlement, there is a tendency on the part of many who would otherwise be staunch supporters of the *status quo* to coquet with a movement which, it is imagined, would react advantageously on the economic situation by the elimination of the Bratianu régime. It may be doubted, however, whether anything that has happened in this connexion during the last few weeks in Roumania has much conviction behind it. The ex-Crown Prince has made it difficult for any large section of the people to espouse his cause with much enthusiasm or without elaborate excuses; the economic situation, on the other hand, is improving, and it is seen that the policy which was so strongly denounced under the last Liberal Government is being materially altered under the present one. It is typical of the Prime Minister to act with decision; for this reason the steps taken by him to check dynastic intrigues need not necessarily be regarded as reflecting very closely the measure of the danger to the safety of the State. The country as a whole seems to have accepted with equanimity the exclusion of Prince Carol from the Throne; one or more political parties seized upon the question as a convenient weapon to add to their armoury for attacks on the Liberals, but in the face of the late King's personal appeal they gave their formal adherence to the succession of Prince Michael. Misgivings regarding a long period of regency are, no doubt, sincerely held by many people; but it would be another matter to lend themselves to action that might plunge the country into civil war. At the same time they would probably not consider it false to their oath of allegiance or disloyal to the interests of the country to assist in a general canvassing of public opinion on the question whether the appointment of a reformed Prince Carol to the Throne was not preferable to the uncertainties of a prolonged Regency.

It was presumably to this end that touch was maintained, more or less openly, between certain people in Roumania and Prince Carol in France. M. Manoilescu, a former Under-Secretary of the Finance Ministry and a political supporter of General Averescu, the last Prime

Minister, but no longer the warm friend and ally of M. Bratianu of a year ago, was known to be the principal go-between. With a view, therefore, to checkmating a movement that might sooner or later have proved embarrassing, the Government ordered the arrest on October 24 of M. Manoilescu on his return from France, where he had been seeing Prince Carol. The letters that he was carrying from the latter contained, according to the Prince's version, nothing worse than a suggestion or request to various heads of parties that the Roumanian people should be given an opportunity of recording their views regarding the succession to the Throne instead of having to endorse an accomplished fact. It is obvious, however, that any attempt to change the *status quo* is a violation of the Constitution, which specifically provides that "no modification can be made in the Constitution during the period of a regency," and for this reason the Government is justified in taking measures against any such attempt. Its methods of action inevitably provoke criticism, as the political opponents of the Liberals challenge the legality of the Bratianu Ministry's existence on account of the manner in which the elections were conducted; consequently they do not admit that the Regency is in the circumstances strictly constitutional, although they have accepted it in the interests of internal peace.

Foreign interest in a quarrel that is the particular concern of the Roumanian people turns on the possibility that Prince Carol's bid for a throne that he has once renounced and many times over forfeited may lead to a challenge by force. For the present, in spite of rumours of revolution, the Bratianu Ministry would seem to be master of the situation. It cannot, however, be altogether satisfied with a position which invests Prince Carol's potential return with a glamour that it would never acquire if the economic condition of the country had been more favourable. The Liberals were responsible for the carrying through of agrarian reform, but they have been inclined to neglect agriculture, the mainstay of the country, for the sake of an industrial policy which, while satisfactory to the Liberal shareholders of essentially Liberal undertakings, has effectually alienated by high tariffs and export duties all the other interests that are linked up with the prosperity of agriculture, on which eighty per cent. of the population is dependent as a means of livelihood. It is noticeable that the National Peasant Party, the chief group in the Opposition, has made the encouragement of agricultural development and the abandonment of the "artificial development of Roumanian industries" a prominent plank in its platform. Although the Bratianu Ministry, with the prospect of four years in power, is likely to steal some of its opponents' thunder, it cannot jettison the whole of its industrial policy. Consequently, if the National Peasant Party could make up its mind to avoid all attempts to find a short cut to power, and would concentrate upon the consolidation of its hold upon the agricultural population throughout the Kingdom, there would be some chance of its being able to build up on a definite political principle a strong Opposition, which would not only be the natural heir to a Liberal Government, but might also exercise a salutary influence on Roumanian policy during the rule of the latter. Half-hearted meddling with the dynastic question can hardly strengthen their position, but will most certainly arrest the adoption even in a limited form of measures that they advocate for the betterment of the wider interests of Roumania.

The Near and Middle East*

From Our Own Correspondents.

Constantinople, October 20.

The Ghazi's Speech.

Since October 15 the Turkish Press has devoted almost all its space to the publication of the President's long-awaited speech which he is delivering at the Popular Party Congress now being held in the Grand National Assembly building. This is the third Republican Party Congress which has been held since the coming of Mustapha Kemal Pasha, but the circumstances have greatly changed since the last one in 1919. Mustapha Kemal Pasha presided over the first Congress in Erzeroum in 1918, and the second was held at Sivas in September 1919. The 1,400 page speech, which is the item of primary importance at the actual Congress, describes in detail every phase through which the Republic has passed since its constitution. The difficulties encountered and overcome, the tremendous victories obtained, the superiority of the present régime over that which it has ousted and replaced, and the ideal state of affairs finally attained are all related with a vividness and eloquence which can have only one result; that of a renewed expression of gratitude to the orator who is responsible for the metamorphosis. The driving of the Greek armies into the sea and the defeat of the Allies (morally—if not at the point of the bayonet) lose nothing of their importance with the passage of years and the description of the way it was done can only add to the popularity of those responsible for the happy issue. Even the foreign Ambassadors and diplomatic representatives present at the Congress have, according to the Press, been moved by the speech. It can be imagined, therefore, how it will affect those who understand its every word and to whom every incident referred to has some personal significance. This "record" speech will doubtless be adopted as the official history of the Turkish Republic, as it is by far the most complete and detailed work yet compiled on the subject. At the termination of the Popular Party Congress Parliament will open and Mustapha Kemal Pasha will be re-elected President. His new Cabinet will, it is generally believed, embody few changes from the old one.

The Yildiz Casino.

The Public Prosecutor has again come off second best and the gamblers of the "Gamblers Case," in being acquitted, have received the official assurance that by gambling at Yildiz Casino they committed no legal offence. Signor Maria Serra is also admitted to have a perfect right to run a *salle de jeu*, while the Public Prosecutor has had it explained to him that in raiding and closing Yildiz he was acting quite illegally. But on the charge of permitting access to the gaming room of military and Government civil officials and minors, Maria Serra has been found guilty. However, his punishment—fined Ltqs. 25 and sentenced to one week's imprisonment, with reprieve in view of his social position (*sic*)—does not appear to

be at all heavy. Nevertheless his champagne supper to friends which he is reported to have given on Monday night seems to have been somewhat precipitate, as the Public Prosecutor has now signified his intention of trying his luck with the Court of Appeal. There is, however, little likelihood of the appeal being allowed.

Ihsan Bey, the Judge who tried the Casino Case, ordered the restitution of all money and counters confiscated and gave authority for the re-opening of the *salle de jeu*. Great applause greeted his judgment, which is the last Ihsan Bey will give, as he has just been appointed Public Prosecutor. At this final hearing of the "Gamblers Case" a rather original procedure in education was instituted. Just before the beginning of the day's proceedings a large class of boys and girls from a neighbouring school was ushered into the court house. Questioned on the reason for this visit of the class of minors, the professor in charge stated that it was a new departure introduced to furnish children with object-lessons on the administration of justice. School here is becoming quite interesting.

The Census of Constantinople.

On October 28 Constantinople's census is to be taken, and, to ensure that every inhabitant shall be registered, the population will, for that day, be confined to their houses. Orders have been issued warning inhabitants to stock in all that is likely to be required in the way of food and drink as no one will be allowed out on any pretext after the gun signals the beginning of formalities. This census will doubtless reveal many secrets, as it is held that there are hundreds of persons living in Constantinople completely unknown to the fiscal authorities, thereby escaping taxation. Furthermore, many will find it difficult to prove how and when they established themselves here and this will certainly lead to further complications for the Commission for the Exchange of Populations. It seems unfortunate that the measure requiring Turks to adopt a family name could not have been enforced before the census, as its application afterwards will necessitate considerable work in changing nearly half a million names.

CYPRUS.

Nicosia, October 18.

Visit of the Fleet.

The visit of a considerable division of the Mediterranean Squadron, which has just come to an end, has given the greatest pleasure in the island. There have been numerous entertainments and amusements at the "ports" of Famagusta, Larnaca, Limassol, and Kyrenia, including athletics, football, dances, concerts, etc., while music from the bands has added much to the enjoyment. The Governor and Lady Storrs dined with Admiral Sir Roger Keyes on board the Warspite at Famagusta and attended a dance. They spent the night on board, returning to Nicosia next day. Government House was the scene of much hospitality. The papers have expressed great satisfaction, and it is hoped that the Governor will do his best to persuade the Naval authorities to arrange that regular annual visits may be resumed to what is now a British Colony.

The Cyprus Museum.

The island may now well be proud of its Museum, for it contains a most valuable collection. Additions are frequently made, and it is under excellent management. Excavations are being carried out by a Swedish mission. Sir Ronald Storrs takes great interest in the institution. He has informed the Committee that Professor Cockerell, of the Fitzwilliam Museum of Cambridge, has expressed

his high appreciation and admiration of the collection and has sent a catalogue of all objects from Cyprus in that Museum; also that Dr. Reisner, the eminent Egyptologist, has written expressing his admiration of the collections and their arrangement. The Museum is able to sell numerous duplicates, and spare objects, especially of pottery. The Governor promises to support an application for a considerable increase in the grant towards the maintenance and expenses.

Public Library and Chess Club.

The new Library also progresses and continues to receive additions. At a recent meeting of those interested in chess, held in the Library, the Governor being in the chair, it was decided to establish a chess club at Nicosia, of which Sir Ronald Storrs is Hon. President and Canon Newham, Chief Inspector of Schools, President. Meetings of the club will be held in the Library.

The Chief Inspector of Schools.

The Chief Inspector of Schools is shortly to have an assistant in the person of Mr. H. O. Lee, who will, it is said, succeed him when his time comes to retire. Mr. Lee is a Cambridge scholar, and has recently been a Professor at Lahore. Canon Newham is one of the oldest, if not the oldest, British official in Cyprus and is very highly esteemed, as much by the Greek and Ottoman communities as by the British; and when the time comes for his retirement the loss of his services will be a very serious one for the island.

General News.

The summer season has come to an end and some rains have fallen. The hill stations are almost deserted. Platres, now full of hotels, offers for some weeks to come a very welcome resort for those who are able to remain there.

The return visit of the Governor of Rhodes and the Dodecanese, Signor Mario Lago, is looked forward to with great interest.

There is much discussion respecting the use to be made of the £32,000, now available annually from the Tribute. It is believed that it will be applied to a loan of half a million, or more, for island development.

Cairo, October 22.

Paris and London.

All eyes are at present turned towards Paris and the press is full of long cables giving in the greatest detail accounts of King Fuad's reception. At the same time, Sarwat Pasha's coming visit is a constant topic of conversation and its results are being canvassed in the clubs and cafés.

The Financial Adviser.

The resignation of Sir Reginald Patterson did not come as a surprise. It had been known as far back as the spring that he would seek an early opportunity to retire, so that everyone was prepared for the announcement. Sir Reginald is due here on the 31st instant, and retires as from November 15, but will not do any further

work. It is understood that, like so many other former Government officials, he will take up his residence in Egypt, at any rate during the winter months.

The question of a successor is, of course, the subject of widespread conjecture, but so far nothing is definitely known on it. The occasion of the visit which Sarwat Pasha will be paying to London at the end of the month on the conclusion of King Fuad's visit to Brussels will be taken to discuss the matter with the Egyptian Prime Minister. Opinions are divided on whether it would be better to appoint a man who has already had experience of Egyptian affairs or someone from outside. Each has its advantages and drawbacks, which make it extremely difficult to pronounce in favour of either course, but on balance it is thought that in the long run an entirely new man will prove the more satisfactory for all parties.

The "Dar El Ulum."

Peace has reigned for so long in the student world that, until we had a reminder this last week, we had almost forgotten that there was a time when every little complaint was made the ground for a strike or a threatened strike. The reminder came from the *Dar El Ulum*, the training college for Arabic Teachers, where the students struck as a protest at the injustice which they alleged was being done to them in that the graduates were no longer considered in regard to general teaching vacancies in the schools. There was, as a matter of fact, no justification for their complaint. The *Dar El Ulum* is run to supply teachers in Arabic, but during the period when the Higher Training College for general teachers was being developed recruits for the school personnel were also taken from the former. Recently the Training College was found to be able to provide all the general teachers necessary, so the *Dar El Ulum* reverted to its old rôle of supplying merely teachers in Arabic.

The strike was short-lived, as it was very firmly dealt with by the Minister, Aly Shamsy Pasha, who threatened to shut the *Dar El Ulum* definitely if the students did not forthwith resume their studies. It is all the more pleasing to be able to record this attitude on the part of Shamsy Pasha, seeing that his appointment to Education was hailed with dismay by the non-Wafdist element, who regarded him as a bad influence with the student element. Far from that he has, as in this instance, revealed throughout the time he has been at the Public Instruction marked firmness in maintaining discipline and eliminating politics from the schools and has gained the deep respect of the pupils, while, in the matter of policy, he is displaying high courage and broadmindedness as well as clear insight into the real needs of the country of which education has been badly in need for some time. Shamsy Pasha is now regarded as one of the men of the future.

The Mixed Courts.

The Mixed Courts have re-opened after the summer vacation and soon the General Assembly will be called upon to elect a new President in the place of M. Cambas, who recently resigned. It seems a foregone conclusion that Judge Hanssen, the Norwegian, will receive the placets of his colleagues for, as Vice-President, he is very highly esteemed, and, in fact, on him has fallen a great deal of the administrative work, owing to the ill-health of the President. In the event of his election the vice-presidency will have to be filled, and it is not improb-

THE PERSIA SOCIETY.

E. H. Keeling,
Hon. Sec.

able that an Englishman will be elected, as the next senior on the list is of that nationality.

The Courts will start with three of their members absent, the Italian Counsellor, Signor Baviere, who had to undergo a special cure this summer and needs an extension of leave to complete his recovery, M. Van den Bosche, the able Procureur-Général, who has done such yeoman work in his very difficult post—last summer the British Government recognised his services to the community in general by conferring on him an Honorary C.B.E.—and who is detained in Belgium by a broken leg; and Judge Crabites, the American, who met with a tram accident four years ago, which necessitated the amputation of one of his legs, and is only just recovering from a fall which he suffered early in the summer, resulting in the breaking of the patella of his sound leg. It is unfortunate that the Courts should be deprived of the services of some of their best members just at a time when there is so much litigation of importance to be handled, but the rest appear to be more than willing to shoulder the additional burden so that their colleagues shall be able to take the rest they need. The *esprit de corps* in the Mixed Courts is excellent, remarkably so, considering that they comprise so many different nationalities.

So far nothing more is known, either on the reforms, legal and other, which the Egyptian Government is desirous of seeing introduced into the Mixed jurisdiction from the Consular to these international Mixed Courts. It is believed that these questions are among those about which Sarwat Pasha is anxious to talk in London but the consensus of opinion is that for the time being there will be no alteration in the capitulatory régime. Apropos of the latter it will surprise everyone to learn that the representative of Angora recently made an official claim that Turkey should now be accorded capitulatory rights like the other Powers in Egypt.

Sofia, October 27.

The Macedonian Nightmare.

The facts about Macedonia are well known. The Yugoslavs, following upon their vain efforts to denationalise Macedonia, undertook a series of anti-Macedonian measures, of which the most recent and striking was the imprisonment of all the Macedonian students who studied at the Yugoslav Universities of Belgrade, Zagreb, and Liubliana, and who had to undergo torture on the charge of being engaged in subversive activities. The Revolutionary Macedonian Organisation thereupon re-entered into action, and, answering terrorism by terrorism, began the execution of a whole plan of anti-Yugoslav attempts, of which the most remarkable was the assassination of General Kovatchevitch at Shtip. From this last incident there arose such excitement among the Nationalist Serbs that the Belgrade Cabinet, which apparently sought to make itself master of the situation and not to envenom it, had to make representations at Sofia. The Bulgarian Cabinet, fearing an invasion by the exasperated Yugoslav troops in Macedonia, thought it prudent to decree a state of siege and martial law in the two frontier Departments of Kustendil and Petritch, being convinced that by this means it would increase the security of the Bulgarian frontier and, at the same time, give fresh proof of its loyalty and of its firm resolve to do its utmost to prevent the passage of revolutionary Macedonians into Yugoslav territory.

The Sobranye.

The Sobranye, convoked urgently to sanction this exceptional measure, in conformity with the Bulgarian Constitution, had a long debate upon the causes of the situation. The Macedonian question, therefore, once again took first place in inter-Balkan politics. All the speakers of all the parties explicitly condemned the revolutionary outrages and emphasised the peaceful intentions of Bulgaria; but all equally gave it to be understood that they could not remain indifferent to the sufferings of their brothers in Macedonia, and that they follow with sympathy their struggles for the obtaining of their liberties which were guaranteed to them under the Treaties concluded for the Protection of Minorities. The political parties declare that they all favour *rapprochement* and an entente with Yugoslavia. The Macedonian Group itself has explained that the Macedonians do not oppose such an entente and that they aspire no longer to union of Macedonia with Bulgaria, but that the régime under which they now are is so intolerable that they will not renounce the struggle for obtaining their just rights.

Macedonia's Rights.

The rights of Macedonia, contained in the 1919 Treaties, will be defended, according to the Bulgarian politicians of the Opposition, either by the Revolutionary Macedonian Organisation, or by the Powers which signed the Treaties, notably Bulgaria. The best means of destroying the Revolutionary Organisation is to take the reason of its existence away, that is, to satisfy the just claims of the Macedonians. Before coming to an effective *rapprochement* with Bulgaria, therefore, the Belgrade Government must, both in its own interest and in the interest of the Balkans as whole, restore to the Macedonians their schools and their churches. Without that, according to this school of thought, no friendship is possible.

The Government's View.

The Government, whose views were explained by M. Bouroff, Foreign Minister, has adopted exactly the opposite view to this. Without denying that the aim must always be the improvement of Bulgarians left under foreign domination, it is of the opinion that this aim can be obtained, not by a policy of putting forward noisy claims in a more or less hostile manner, but by collaboration with Yugoslavia, in the same way as with Roumania and Greece, who, definitely assured that Sofia nourished no *arrière-pensée* in their regard, will be more disposed to give all facilities to Bulgaria and to accord to their Bulgarian population the benefit of the minorities régime. In a word, the Government advocates a policy of sincere inter-Balkan co-operation.

But whichever choice one makes of these two policies, whether a *rapprochement* between Sofia and Belgrade should come before or after, it is none the less true that Macedonia weighs like a nightmare upon the Balkans, and particularly upon Yugoslavia and Bulgaria. The Balkans will not recover peace until something is done for the Macedonians.

NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association was held at 64, Queen's Gate, by kind permission of Dowager Lady Boyle, on October 26, when an address was given by Mr. H. St. John Philby on "Arabia of To-day." Sir E. Denison Ross was in the chair. Mr. Philby, who has only recently recovered from illness, explained that he was obliged to cover that evening much of the same ground as he had traversed at a lecture the previous week, of which a full report appeared in our last issue. He dealt, however, more fully with the details of the Treaty of Jidda, and in particular with the subjects not actually embodied in the Treaty but referred to in correspondence between the signatories. For the present these subjects—slavery, and the Hijaz-Transjordan frontier, to which must be added the Hijaz Railway, which was not mentioned at Jidda—were left unsettled, but he had no doubt in his own mind that when ultimately they came to be settled it would be along the lines of Wahhabi determination.

At the close of the lecture various questions were put to the lecturer, and Lady Heath spoke of her experiences on the Red Sea littoral. A vote of thanks to Dowager Lady Boyle terminated the proceedings. Among those present were:—Lady Dupplin, Lord and Lady Strathspey and the Hon. Joan Grant, Sir Edward and Lady Boyle, Sir Frank and Lady Newnes, Sir James and Lady Heath, Sir Thomas Arnold, Sir William Clark, Lt.-Col. Sir James Roberts, Lady Whyte Thomson, Lady Tighe, Lady Penson, Lady Graham, Baroness de Knoop, Air Commander A. E. Borton and Mrs. Borton, The Rev. Chancellor Ponsonby, Captain and Mrs. E. N. Bennett, Mr. and Mrs. F. H. Cook, Wing-Commander Smith, Mr. Owen Montefiore, Mr. and Mrs. James Conchie, Commander and Mrs. Howes, Colonel Phipps, Colonel and Mrs. Hawkes, Captain and Mrs. Phillips, Mrs. Halford Hewitt, Mrs. Roy Devereux, Mrs. Steuart Erskine, Mrs. Margaret Hasluck.

The King of Egypt arrived in Brussels from Paris on October 26. His Majesty, accompanied by the King and Queen of the Belgians, attended a reception by Burgomaster Max and the aldermen of Brussels at the Hôtel de Ville the following day. In the evening King Fuad was present at a dinner given by M. Vandervelde at the Belgian Ministry for Foreign Affairs.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE MACEDONIANS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—The Yugoslav devil is not always given his due in his quarrel with the "Macedonians." May I set down for reference some facts which came under my observation in South Serbia (Macedonia and Kossovo) during two months (May and June) in 1914, six weeks in the autumn of 1923, and one month in the autumn of 1926? My information is incomplete, because it was acquired only incidentally in the course of my proper work.

Theoretically non-Serbian schools, newspapers, and church services are forbidden in South Serbia. Actually certain exceptions are made to this rule. Thus, Turkish children may study Turkish (and, I think, Arabic) for three hours per week. More privileged, Jewish children may study Hebrew and Espagnolica for two out of their five hours of school per day. In 1923 a newspaper appeared in a Turkish as well as a Serbian edition. I do not know whether it still appears. Jews may conduct their worship in Hebrew. Turks, Muhammadan Albanians, and Muhammadan Serbs may worship in Arabic. Catholic Albanians have Mass said in Latin.

No concessions about education, newspapers, or religious services are made to Bulgars, Vlachs, Greeks, or Orthodox Albanians. This raises two different points. First, it will be noted that the mother-countries of these unfortunate minorities have a frontier in common with Yugoslavia, whereas the privileged Jews and Turks do not have their mother-countries so near and are correspondingly less dangerous. The Muhammadan and Catholic Albanians owe their religious privileges, perhaps, to pressure from their co-religionists in Bosnia and Croatia. Secondly, it will be noted that taken together, the Greeks, Vlachs, and Albanians (counting those who benefit by religious concessions) far outnumber the Bulgarians. Why do we not hear of their difficulties with the Yugoslav Government?

On the positive side a good deal may be said for the Serbs. They are explicitly trying to raise the agricultural, hygienic, and cultural level of Macedonia. To improve the agriculture they have introduced pigs, better breeds of cattle, and more up-to-date implements. For the same purpose they have appointed agricultural officials to tour the villages, to advise peasants individually, and to give lectures on better methods of farming. Some of these officials are not Serbs, but foreigners, such as Czechoslovaks. To improve the public health, doctors are maintained by the State in the main centres. They attend patients for nominal fees and give free lectures on hygiene. In many villages small clinics exist where advice is given at fixed times and medicines and dressings are distributed. The State doctor at

Dibra is a Dane from Reykiavik. At Monastir (Bitolye) a Serbian lady with an American degree occupies the same position. For better culture the imported officials and schoolmasters are encouraged to give concerts, dances, and theatrical performances. Some attempt is made to glorify Serbia at these performances, but the main aims are to make a brighter Macedonia for both peasants and officials.

It seems clear that the Serbs wish to Serbise their southern provinces both politically and economically. There exists considerable evidence that many of their alien subjects consider that their economic gain from Serbian rule outweighs their political loss. I will cite only one item. Certain Turks left Serbian Macedonia for Asia Minor. A fair percentage of them, disliking recent changes in Turkey, have returned to Serbian Macedonia. Given the intense dislike felt by Turks for Christian rule, this is surely strong evidence that the Yugoslav devil is not so black as he has been painted by the "Macedonians."—I am, etc.

MARGARET HASLUCK.

FROM THE BATINAH TO THE TRUCIAL COAST.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Just a year ago, at the end of a paper to the Central Asian Society on the Sultanate of Muscat and 'Oman, I predicted that Mr. B. S. Thomas, Wazir to H.H. the Sultan, would find an opportunity to penetrate into the interior. It was with great pleasure, therefore, that I read in THE NEAR EAST AND INDIA of a very interesting journey made by him from Sohar on the Batinah Coast to Abu Dhabi on the Trucial Coast.

The account you give is naturally incomplete, but I noted in it one or two points which I should like to mention.

1. The route from Sohar up the Wadis Jizzi and Ubailah to Mahadhah is the same as that taken by the D'Arcy Exploration Company's party (in the opposite direction) in 1925. From north of Mahadhah to Jabal Faiyah Mr. Thomas will have joined Sir Percy Cox's route.

2. The account contains the following remark: "The route westward from Jabal Faiyah to Sharjah, hitherto untravelled by European." Exiled as I am in this barren spot, I am unable to consult any references. May I therefore be excused if I venture to query this?

In 1836 or '37, Lieut. Whitelock travelled from Sharjah to Shinas on the Batinah Coast. I have only Wellstead's book with me, but a study of the latter's map leads me to think that Whitelock passed well north of Jabal Faiyah, possibly to Dhaid and thence down the Wadi al-Qor. If this is correct his route would lie some 20 miles north of that of Mr. Thomas at Jabal Faiyah.

In 1901 the Rev. S. M. Zwemer passed between the same points but by a different route. He came down to Shinas by the Wadi Hatta. Again I am unable to consult any reference, but a glance at Sir Percy Cox's map published in the *Geographical Journal* of September, 1925, will show that he must have passed very close to Jabal Faiyah either to the north or south. In the former case he could not have been more than ten to fifteen miles from Mr. Thomas' route. In the latter, not more than a mile or so.

In bringing forward these points my object is to elucidate the exact route taken by Mr. Thomas. I should

like to express my admiration at a journey undertaken in the hottest time of the year over particularly difficult ground—a fine achievement, as all who know the country will agree.

Another point at issue in respect of which Mr. Thomas may be able to add his evidence is the height of Jabal Hafit. I look forward with eagerness to a full account of the journey.—I am, etc.

G. J. ECCLES.

October 9, Murgha (Zhob) Baluchistan.

CYPRUS FORESTS.

One of the first acts of the new Governor of Cyprus, among his measures to promote the prosperity of the Island, has been to appoint a Forest Inquiry Committee to take in hand the vexed question of the proper regulation of the forests. In common with those of other lands of the Near East Cyprus forests have suffered from three prominent evils: fires, goats, and neglect. The need for coping with these evils has long been recognised, but the problem has still to be tackled whole-heartedly and systematically. More than a generation ago a French expert

CYPRUS FOREST INQUIRY COMMITTEE.

The above photograph was taken outside Government Cottage, Troodos. Reading from left to right:—Eyoub Bey, M.L.C.; Munir Bey, Turkish Delegate to Efka; C. H. Hart-Davis, Commissioner of Nicosia; B. T. Watts, Director of Land Registration and Surveys; H.E. Sir Ronald Storrs; M. H. Michaelides, M.L.C.; S. G. Stavrinaki, M.L.C.; The Abbot of Kykkou; K. R. Rossides, Editor of *Demiourgia*.

was called in to advise the authorities on the subject. If his recommendations had been acted upon in their entirety, it is probable that the appearance of the island would be very different to-day and its wealth more considerable. The new Committee can bring M. Madon's report up to date, for, although the members are not experts themselves, they can call upon the expert knowledge of the Island's present Principal Forest Officer, Mr. A. H. Unwin. Their chief task, however, is likely to be to prepare the ground for the extension of a better "forest sense" among the inhabitants of Cyprus. While the Committee is sitting, the Cyprus Press is carrying on a propaganda for a withdrawal of even the mild restrictions already imposed on the depredations of the goat, on the plea that a single fire will do more damage in a night than all the goats of the Island in a generation. If Cyprus is to make the most of its resources, it must guard its forest wealth against all insidious attack, and fearlessly make up its mind to legislate on sound lines for the years to come. All the chief interests of the Island are represented on the Forest Committee, and if the members have the courage of their convictions they will follow the lead given by the Governor in his speech at the opening of the Legislative Council, when he pointed out that the forest and the goat cannot live together.

HISTORY ILLUMINATED.

"FIFTY YEARS IN A CHANGING WORLD." By Sir Valentine Chirol
(London: Jonathan Cape. 16s. net.)

This is a very notable book. Sir Valentine Chirol takes the last fifty years as his horizon, and brings, as it were, a powerful telescope to bear on a number of chosen points. The result is a series of pen pictures which throw into vivid relief incidents and personalities which have had a potent bearing on the history of the period, or are aptly used to clinch a diagnosis and adorn the narrative. For the author is an artist with the pen, as he is with the brush. With one exception none of the twenty-three chapters is more than twenty pages in length, and in this short compass the subject is treated in so masterly a way that the reader is held as much by the manner of telling it as by the interest of the subject itself.

In the particular foreign spheres in which he has spent so large a part of a long and active life—and how varied these have been this book is evidence—Sir Valentine Chirol has always qualified as an expert in his subject. To this circumstance quite as much as to his association with *The Times*, or to the wide range of personal friendships which have stood him in good stead in so many parts of the world, he owes the closeness of the touch which he has been able to maintain with important political developments in a number of countries. Prince Bülow, afterwards German Imperial Chancellor, bore testimony to this characteristic when he wrote at the beginning of the century in a secret memorandum on Anglo-German relations: "On the whole it is certain that opinion in England is far less anti-German than opinion in Germany is anti-English. Therefore those Englishmen like Chirol and Saunders are most dangerous for us, who know from their own observation the depth and bitterness of German antipathy against England." (G. Saunders succeeded Sir Valentine Chirol as Correspondent of *The Times* in Berlin).

Fifteen out of the twenty-three chapters of this fascinating volume are devoted to the affairs of countries within the sphere of THE NEAR EAST AND INDIA—Egypt, Syria, Turkey, Bulgaria, Persia and the Persian Gulf, India and the Balkans—to the last of which Sir Valentine Chirol went on a special War mission in the middle of 1915, when the political situation in those States which had so far remained neutral in the Great Struggle (Greece, Bulgaria and Roumania) was causing increased anxiety to the Allies. Whatever the subject he touches, the author can be relied upon to illuminate it with some personal touch, some trenchant observation or glimpse behind the scenes, which lifts it above the plane of ordinary historical narrative.

To Egypt Sir Valentine Chirol devotes three chapters: "Egypt before the British Occupation," "The Spacious Days of Lord Cromer," and "The Decay of British Influence in Egypt." The present generation has forgotten Arabi, in the more recent achievements of Zaghloul Pasha, whose prototype he was, if only as "the first leader of his people who spoke to them in their own Arabic tongue." It may be well to recall the final scene of that early Act in the Anglo-Egyptian drama.

"Some years afterwards," writes Sir Valentine Chirol, "when I saw Arabi in Ceylon, during the banishment into which the death sentence had been commuted under British pressure, he confessed to me quite simply that he felt nothing but gratitude towards the British, who were doing in Egypt most of the things he had himself wished and proposed to do. A little later he was allowed even to return quietly to Cairo, where, almost unnoticed, he continued until his death to follow England's work in Egypt with increasing admiration, for none were greater gainers by it than the *fellaheen*, from whom he himself had sprung. Whatever others might think or say about the British occupation, the evil days of the *kurbash* and the press gangs would never, he knew, return so long as we stayed in Egypt."

Nearly every page of the book, however, lends itself to quotation. Many striking incidents in the author's career are described, and most of them are of special historical interest. He was in Syria in those far-off days when the

Druses could assure the British Consul at Beyrout that his word was law to them.

"The old fires of religious and racial hatred continued still to burn beneath the surface, and on one occasion the danger of an outbreak seemed so imminent that, in default at the moment of any better messenger, Eldridge asked me to ride as fast as one of his horses could carry me to the Druses' headquarters on Mount Hermon and deliver a confidential message to one of the chiefs whom he specially trusted. . . . Night had fallen before I reached my destination. . . . In normal times the whole village would have been asleep, but there were lights still burning in some of the houses, and I had little trouble in finding a guide to take me to the house I was in search of. That of a Druse chief was wont to be his castle, and admittance at such an unusual hour to be granted after a long parley. But the mere statement that I had come with a message from the British Consul-General was a sufficient Open Sesame. My message was short and easily delivered. It was to the effect that the Druses were on no account to stir or give the slightest provocation to their enemies, and that they might rely upon the British Consul-General's word—the word of an Englishman—that the particular grievances which had produced the crisis would be redressed. A few other chiefs were brought in to hear my message, and finally I was conducted into a still more private apartment, where I had to repeat it to a dignified old lady . . . when I had spoken, she turned to the chiefs . . . and put to them one single question: 'Do you trust more to the Englishman's word than you dread the Turk?' And with one voice they bowed low before her, touching breast and lips and forehead: 'Wallahi. We trust the Englishman's word, and, having it, we need dread no Turk.'

Many prominent personalities pass across Sir Valentine Chirol's ample stage: the Khedive Ismail, Cromer, Kitchener, Curzon, Reshad Effendi (afterwards Sultan Mahomet V. of Turkey) with whom the author has a striking interview—Alexander of Bulgaria, Prince Bülow, Li Hung-Chang, Prince Ito, King Ferdinand of Bulgaria, Gandhi, Sultan Hussein, Holstein of Germany, Lord Morley. The list, which can be extended almost indefinitely, illustrates the wide range of the author's personal experiences, as the text of the book records the shrewdness of his observations and judgments. The chapters on the Far East and on India are particularly valuable annotations on recent and current history, as was to be expected from the author of "The Far Eastern Question," "Indian Unrest," and "India Old and New." To close on a note nearer home, there is a good story of a dinner party at Marlborough House, when a guest having pronounced authoritatively that certain oranges on the table were Californian, explained that he had spent three months selling oranges on a railway platform in California. "On being asked why he had done that, he said he had done it in order to keep his pride down. The Prince (afterwards King Edward) however, burst out laughing: 'I can get

A SONG OF ARABIA.

"*FOUR SONGS.*" By *W. Denis Browne*. (London: Winthrop Rogers Ltd., and Oxford University Press. 5s.)

In the verses that have been written on Arabia by English poets there is often, I think, a considerable amount of ignorant nonsense that must annoy the real traveller and knower of Arabia. But, of course, there are for poets two, if not more, Arabias; one is called "Araby," and then we may expect the worst poeticising to follow; the other is the ineluctable and uncompromising country by which but a few men, of whom the chief is probably Doughty, have been moved to verse. But Mr. Walter de la Mare, who has written the words of the first song in this beautiful and fragrant posthumous book, has the skill and boldness to call his subject "Arabia" and yet to treat of the romantic land which used to be called "Araby." The truth is, however, that this Arabia is a figment: Mr. de la Mare, I am sure, has never been to Arabia. But you, of course, know his poem, which begins:—

Far are the shades of Arabia,
Where the Princes ride at noon,
'Mid the verdurous vales and thickets,
Under the ghost of the moon.

And the clear, chiselled imagination is preserved in the last stanza:—

They haunt me—her lutes and her forests;
No beauty on earth I see
But shadowed with that dream recalls
Her loveliness to me;
Still eyes look coldly upon me,
Cold voices whisper and say
"He is crazed with the spell of far Arabia,
They have stolen his wits away."

This poem in itself is music, yet even those who disagree that the best verse can fitly be set to music could hardly deny that the exquisite remoteness of the poem has been matched and not marred by the free, economical genius of Denis Browne, a young Cambridge musician who was, I think, killed at Gallipoli. (Is there anyone, by-the-by, now writing such songs as Butterworth and Denis Browne wrote?) It is a lovely song, this "Arabia," of whispered rustlings, overtones, and echoes; fine-spun yet firmly rhythmical. Something very much more than a voice, however, is needed for the singing of it.

Of the other three songs in the book, this is perhaps not

the place to write. But let me mention them. "To Gratiana Dancing and Singing," a most noble setting of Lovelace's irresistible words, was first (and at once) made memorable to me, I recall, by the singing of Mr. Stuart Wilson; its melody (derived from a seventeenth century Virginal Book) surges unforgettably through the mind. "Diaphenia" is a very chaste version of the oft-set words of Constable, tripping gaily and unfalteringly. And last is that stark and simply beautiful thing, the "Epitaph on Salathiel Pavy" (A Child of Queen Elizabeth's Chapel) which Ben Jonson wrote. It is not difficult to analyse the technical roots of the impression which this makes on one: the octaves' chromatic descent, the even and ceaseless flow of the changing time-signatures, the sad undercurrent of sustained bass notes, and so on. But there was very much more than mere joinery in the art of Denis Browne. He was, I believe, a genius. K. W.

NOTES OF THE WEEK

(Continued from page 547.)

throughout the world and those still cherished in the breasts of the faithful. For he is a man of infinite faith and courage who yet dreams of an eventual and preponderatingly Jewish country of Palestine. Ten years ago that dream was easily nursed; a kind of mental exultation, if not intoxication, fired the hopes of Zionists, both Jewish and non-Jewish. But in the meantime, what has happened? As with the idealists possessed of pan-Arab notions, the aftermath of the Great War caused clash after clash of dream with reality. Some there are, whether Jew or Arab, who yet cling to those high hopes, but the majority, perhaps, now see that only partial realisation is possible. The ordinary Zionist, by which is meant the "majority" Zionist, now understands that consolidation of what exists of wholly Jewish enterprise in Palestine must precede any further attempt to spread wings; his ultimate dream, has, indeed, not been abandoned but indefinitely postponed. No one would deny that the progress of the Jewish National Home has not been what was confidently expected by many practical Jews; it has, for example, taken all the abundant tact and sympathy of Dr. Weizmann, during his recent tour through Palestine to allay misgiving. The feeling which Dr. Weizmann had to encounter is illustrated in the following extract from a letter which a Jerusalem Jew wrote to the *Jewish Chronicle*: "Consider the position in 1917 and consider it now. Then—jubilation, joy at the forthcoming rehabilitation of the Land of Israel, expectations of mass repopulation, gigantic economic fantasies, schemes of Jewish emancipation, gratitude to the British Government. And now—let us face the facts—depression, despair, Jewish emigration, industrial panic, vain efforts at economic readjustment, and resentment against the British Government." As we have said before, the facts of the situation are quite well realised by the responsible heads of the Zionist Organisation, and it is to their infinite credit that they have not been drawn into the false position of making the Government which sponsored the Balfour Declaration liable for the temporary downfall of deep-rooted dreams. The Zionist ideal is in truth a magnificent one, not to be confounded by merely sordid considerations. Nor would it die if all the Jews were forced by economic circumstances to leave the Holy Land. But to the present Jewish colonist in Palestine it must be cold comfort to remember that Rome was not built in a day, nor shall Zion be reared in a decade.

THE CENTRAL ASIAN "JOURNAL."

The new issue of the *Journal* of the Central Asian Society contains an interesting variety of reports of lectures and papers. Among these may be mentioned "The Tatar Domination of Asia," delivered by General Sir George MacMunn, and articles upon "Railways in Persia," "The American Financial Mission in Persia," and "Education in Iraq." The section devoted to reviews of books is an increasingly strong one.

PERSONAL AND GENERAL

TO-DAY

November 3, 1927 (New Style).

October 21, 1927 (Old Style).

Jumada I, 8, 1346 A.H., of the Muslim Calendar.

Marcheshvan 8, 5688, of the Jewish Calendar.

Sir Charles McLeod arrived last week at the Grand Pump Room Hotel, Bath.

Sir John and Lady Ferguson sailed from London in the Rajputana for Bombay on October 28.

Colonel Sir Ronald and Lady Ross left London on October 28 in the Rajputana for Gibraltar.

Lord and Lady Congleton, who are on their way to India, will be away from England for four or five months.

Sir Alexander and Lady MacDougall left London on October 27 to join the s.s. Maloja at Marseilles for Bombay.

Admiral Sir William and Lady Henderson left Tilbury on October 29 in the Osterley for Egypt. They will be away for about three months.

Lord Carew arrived in London on October 29 from India on six months' leave from his regiment, the Duke of Cornwall's Light Infantry.

Mr. Sydney Orme Rowan-Hamilton (President of a Land Court, Palestine) has been appointed Chief Justice of the Bermudas or Somers Islands.

Mrs. Eddy Campbell embarked at Marseilles on October 29 in the City of Paris to join Captain Campbell, to spend the winter in Lucknow.

The King has been pleased to approve that the dignity of a Barony of the United Kingdom be conferred upon the Right Hon. Ronald McNeill, M.P.

M. Siciliano is to be appointed Minister for Greece in Cairo, in place of M. P. Metaxas, who, for reasons of health, will spend the winter in Switzerland.

Lord Lloyd, High Commissioner for Egypt and the Sudan, had the honour of being received by the Prince of Wales at St. James's Palace on October 25. On October 31 he had an audience of the King at Buckingham Palace.

On the occasion of the Turkish National Fête on October 29, the Turkish Ambassador in London received members of the Turkish colony at the Embassy, 69, Portland Place, W.1.

The following Admiralty appointment is announced: The Right Hon. Viscount Inchcape of Strathnaver, G.C.S.I., G.C.M.G., K.C.I.E., to be hon. captain in the Royal Naval Reserve to date October 19, 1927.

In Congregation at Oxford University on October 25, the degree of M.A. was conferred by decree upon Mr. Frederick W. Thomas, M.A. Trinity College, Cambridge, and now Fellow at Balliol College. He was recently appointed Boden Professor of Sanskrit.

Lady Margaret Lindsay, travelling with Mrs. Edward Campbell, left Marseilles on October 29 for India, and during the winter months will be the guest at Lucknow of Mrs. Campbell and Captain Edward Campbell, 60th Rifles.

Abdel Khalek Pasha Sarwat, Egyptian Prime Minister, arrived in London on October 30 from Brussels, where he has been in attendance on King Fuad during the official visit to the King of the Belgians. He was met at Victoria

by Mr. Walford Selby, who represented Sir Austen Chamberlain, and by members of the Egyptian Legation in London.

The second of a series of lantern lectures on "Great Personalities in Egyptian History" will be given by S. R. K. Glanville, M.A. at 8.30 p.m. on November 9, in the Meeting Room of the Royal Society, Burlington House (by kind permission of the Council). The subject is "Amenophis III."

At the dinner, in honour of the Earl of Balfour, which is being given by the Anglo-Palestinian Club, at the Savoy Hotel on November 10, in commemoration of the Tenth Anniversary of the Balfour Declaration, Mr. James de Rothschild is presiding. Among those attending the dinner are the Marquess of Reading, Sir Herbert Samuel, the Hon. Ormsby-Gore, Sir Alfred Mond, Mr. and Mrs. Phillip Snowden and Mr. Bernard Baron.

NEWS IN BRIEF.

Last Saturday (October 29) being the fifth anniversary of the proclamation of the Turkish Republic, was observed as a national holiday throughout Turkey.

M. Liaptcheff, Bulgarian Prime Minister, opened the ordinary Session of the Sobranye on October 28, under commission from King Boris, who is still abroad, and read the Speech from the Throne.

King Michael of Roumania celebrated his sixth birthday on October 25. A "Te Deum" was sung in the Patriarchal Church in the presence of members of the Roumanian Government and representatives of the Diplomatic Corps.

The body of Tsena Beg Kryeziu, Albanian Minister to Czechoslovakia, who was recently assassinated in Prague, was on October 25 taken by train to Trieste, for trans-shipment to Bari for interment at Tirana.

According to the *Osservatore Romano*, Mgr. Valerio Valeri has been appointed Apostolic Delegate to Egypt and Arabia, and was consecrated titular Archbishop of Ephesus on October 28.

Owing to the collapse of a bridge, a goods train on the Serayevo-Mostar line in Yugoslavia fell 150 ft. into a ravine. Two guards were killed and the fireman was severely injured.

Colonel Tewfik Bey, Principal Private Secretary to Ghazi Mustapha Kemal Pasha, has been appointed Turkish Ambassador in Moscow vice Zekiai Bey, who has resigned on being elected a Deputy.

According to a report last week from Hodaïda one of the two German aeroplanes imported into the Yaman by Hassan Pasha Anis, former Under-Secretary of State for Foreign Affairs, who is now head of the Zaidi Imam's Air Force, crashed near Sanaa. Two German airmen and an Arab passenger were killed.

The Central Office of the Zionist Organisation has received a telegram from Rome stating that Mr. N. Sokolow, President of the Zionist Executive, had a long audience with the Pope yesterday, and that he has been invited by the King of Italy to-day to the San Rossore Palace, near Pisa.

Reports to the Egyptian Ministry of Agriculture last week from Assouan and Kena stated that the flights of locusts which appeared on October 19 at Wady Halfa and elsewhere in the Sudan, flying northward, had disappeared in a westerly direction towards the desert, where it was expected that they would all perish.

King Fuad, accompanied by the King of the Belgians, on October 28 visited the Colonial Museum at Tervueren. In the evening he entertained the Belgian Royal Family and the State authorities at dinner at the Egyptian Legation. King Fuad has sent to Burgomaster Max a donation of 50,000f. (about £285) for the poor of Brussels. On the following day he visited the spinning mills and horticultural establishments at Ghent.

PUBLIC HEALTH IN BENGAL.

In his letter of October 6 our Calcutta Correspondent referred to the question of the public health in Bengal. He quoted from an address in which the Director of Public Health, Dr. C. A. Bentley, gave certain striking particulars of infant and child mortality in the province. Dr. Bentley was doubtless alluding more particularly to the mofussil districts rather than to the town of Calcutta itself. But it appears that in Calcutta also an alarmingly large number of children and adults are still carried off by diseases, some of which are preventable. Small-pox, for instance, is responsible for at least a thousand deaths yearly, and malaria for about twelve hundred, while *kala azar* and enteric fever claim another twelve hundred between them. And from tubercular diseases as many as 2,400 persons die in a year. These outstanding figures have been recently placed on record by the Calcutta Municipal Health Officer; and they certainly deserve the very serious attention of the authorities responsible for the public health of the city. For they indicate that a great deal of work requires to be done in the way of checking the advance of disease. It is not for a moment suggested that nothing has been done already with the object of making Calcutta a healthy town. On the contrary, the record of the last thirty years or so is distinctly creditable. The insanitary condition of the city was revealed in an investigation which was made in 1896 by a Medical Commission. Bubonic plague first visited Calcutta in that year, and became epidemic. In fact for five or six years from about 1900 it was responsible for the death of roughly 7,000 persons yearly. As a result of the inquiry by the Medical Commission of 1896 the Municipal law was revised and remodelled in 1899. New life was infused into the Corporation with the result that in the following twenty-five years a great advance was made. In almost every direction there was progress. In sanitation, in conservancy, in the water supply, in the lighting and paving of the streets, in the provision of markets, open spaces and other amenities, in the improvement of insanitary areas, and in a host of other important matters, the Municipal Corporation proved its worth and efficiency.

Unfortunately, a recommendation, that the Medical Commission made, for the establishment of an Improvement Trust was not adopted until as late as 1911. The idea was to constitute an organisation vested with powers to open up congested areas, to lay out, to alter and to widen streets, to provide open spaces for ventilation and recreation and so on. It was not, however, until the beginning of the year 1912 that the Trust could begin work. There is no need to explain its constitution here, or to discuss its mode of working and its finances. It will suffice to say that the Trust has successfully undertaken a number of large and important improvement schemes with the object of ameliorating the conditions under which the poorer classes of the population live. In the town itself the area which has been already improved, or which is now under improvement, extends

to 294 acres. In the suburbs the area so dealt with is 750 acres; and, in addition, 200 acres have been reserved for open spaces. The schemes comprising these areas also involve the construction of twenty-four miles of new roads. Of these $7\frac{1}{2}$ miles are main roads of a width of 80 feet or more; and eighteen miles of existing roads are being widened. Numerous other large and important schemes are in contemplation, or have been already begun. The improvement of the Burra Bazar, which is about the most extensive of the congested areas, is one of these. But they are all likely to be delayed, mainly by reason of financial difficulties. It is not necessary to detail these difficulties here, but the most serious of them is due to the fact that the surplus lands which are made available in the cleared areas cannot be sold so quickly as is desirable in the interest of the Trust's finances. In fact it is estimated that at present the Trust holds surplus lands valued approximately at Rs 2½ crores. This is clearly bound to slow down progress. Nevertheless, there is good reason to believe that with prudent management the Trust will be able successfully to complete the greater part of what is unquestionably an ambitious programme. The Government of Bengal have recently reviewed the operations of the Trust for the period 1921-26, and they have come to this conclusion after full consideration.

The foregoing record makes it clear that very serious efforts have been already made to check the advance of disease. But it is equally obvious from the figures quoted at the beginning of this article that there is still a great deal more to be done. At the moment plague is not a serious matter in Calcutta, but cholera is never entirely absent. Diseases such as small-pox, malaria, *kala azar*, and enteric can be brought under control, although the task is admittedly difficult. But it will have to be undertaken if the public health is to be raised to a proper standard. And it must not be forgotten that as Calcutta is a great port as well as a great city the question is of far more than local consequence. In 1923 the municipal law was again revised. The Montagu-Chelmsford reform scheme of 1919 had to be followed by an extension of the principle of self-government in municipal affairs. The Corporation was greatly enlarged in point of numbers, and popular control was extended to all branches of municipal work. Under the law of 1899 there were three independent co-ordinate authorities, namely, the Corporation, the General (or Executive) Committee and the Chairman; and the executive work was undertaken very largely by the General Committee and the Chairman. This system has now been completely changed. The Corporation is the only authority, and it meets under the chairmanship of a Mayor. There is no General Committee; and the executive work is in the charge of an executive officer whose authority is derived from the Corporation. Whether municipal affairs will be as successfully administered under the new law as they were under the old remains to be seen. But it is only fair to emphasise the fact that it is the officers of the Corporation who are now drawing prominent

attention to the need for staying the progress of epidemic disease. They have pointed out also that the purity of the filtered water supply is threatened. For some time past the Corporation have had in hand a big scheme for enlarging the supply of filtered water. But it is now feared that before this scheme can be put into operation a new sewage system will be necessary if contamination of the filtered water is to be prevented.

CURRENT TOPICS.

An Interesting Suggestion.

Why is it that the extreme party in Indian politics has offered such strenuous opposition to the scheme of constitutional reform which was introduced in 1919? Indian politicians had for years previously asked to be given a larger share in the administration of the country. At first they were satisfied to serve as advisers, but later they pressed to be permitted to exercise some measure of control. And then, as time went on, the more extreme clamoured for an advance in the direction of representative institutions. They wanted to convert the Indian Government into a democracy on Western lines. In 1919 they were offered a definite step in that direction; and what did they do? The answer is given in a recently published pamphlet by an Indian, Rai Vihari Mitra Bahadur. "Those," says the Rai Bahadur, "who had been most insistently clamouring for the dawn of democracy turned their faces away from it when it came."

An extraordinary situation, and one not easy to understand. The extreme politicians say that the reforms did not really tend towards representative institutions: they were not offered a real democratic advance, but were asked to help to work a pretence and a sham. It is difficult to see why they should have taken up this attitude. The writer of the pamphlet, from which we have already quoted, explains it by saying that experience or tradition has sown the seeds of distrust in the minds of the people. They cannot believe that the British Government will ever give effect to measures which, sooner or later, must loosen its grip on a subject people. There may be something in this view, but it is undeniable that the scheme of reform does confer real power on the people. And if it were efficiently worked by competent electorates and representatives it would in fact considerably loosen the grip of the Executive Government. Far from being a mockery and a pretence, it is really a very definite step in the direction of self-government on democratic lines. Rai Vihari Mitra Bahadur shares this view while pointing out that the new system undoubtedly has defects. But he holds, and we certainly agree, that the Indian politicians missed a great opportunity when they refused to co-operate in the scheme. Had they been wise, they would, while recognising its defects, have taken advantage of those of its provisions which indisputably do mark a step forward in the direction that they want to travel.

They took exactly the opposite course. They condemned the scheme root and branch, and they did everything that they could to ensure its failure. As the Rai Bahadur puts it in his pamphlet, "it was not only in trade or in education, or in politics that the hands of the clock were set back; in every direction the policy of blind obstruction in administrative measures for the sake of making the working of the reforms impossible led to retrogression." But notwithstanding all this, the scheme cannot be honestly said to have been a complete failure. It has never been given a fair chance. No scheme of government, however well constructed it may be, can be fairly judged when carried on under conditions such as those which have prevailed in India. The worst feature of the present situation is that the divisions between the various communities have become deeper and wider since the scheme of reform was introduced. "It cannot be denied," to quote again from the pamphlet, "that in actual practice the reforms have shown the interests of

large sections of the people in apparently irreconcilable conflict, and they have revealed unbridgable gulfs between the different communities." This is the simple truth, and it immediately raises the question of whether India, with her deep racial, communal and religious differences, has yet reached such a stage of development as to be able to govern herself as a democratic State. Rai Vihari Mitra recognises that this question must be faced. "Unlike other democratic States, India is," he says, "a country where the divisions of society are based on differences of religion, and the reforms, instead of obliterating the lines of separation between the various communities, have actually accentuated them." But he does not go beyond this plain statement of fact, except to leave the solution of the question to the Royal Commission. Although he thus avoids expressing an opinion on this crucial point, the Rai Bahadur makes an interesting suggestion. He refers to the late Mr. C. R. Das's campaign for the regeneration of village life. He maintains that had the politicians followed the lead given to them by Mr. Das and devoted their efforts to the political education of the masses, something tangible might have been achieved. And he believes that if, when the reforms were introduced, such efforts had been made, intelligent electorates would have been created and a further advance in the direction of self-government would have been thereby assured. It may be so, but it has yet to be shown that any such educative measures would tend to bridge the gulf between Hindu and Muhammadan, and so put an end to communal tension and discord.

Mercantile Generosity.

In the issue of THE NEAR EAST AND INDIA of September 15 mention was made of the fact that the well-known European School in Calcutta, La Martinière, has recently received a large bequest under the will of the late Sir Paul Chater, and a donation from Sir Percy Wilson Newson, Bart. It should have been added that the School has also benefited by a generous arrangement made by Sir Campbell Rhodes, C.B.E., who was for a number of years a member of the governing body. Sir Campbell Rhodes gave to the Bengal Chamber of Commerce Education Trust a sum of Rs. 1 lakh, specially earmarking the income derived from it for La Martinière. The Trust was established a few years back by the Bengal Chamber for the benefit of the European schools in Calcutta. Most of these schools are badly in need of funds, and it is hoped that by means of the Trust this need may be in the future supplied, at least to some extent.

Meanwhile the Committee of the Chamber have been informed by the administrator of the estate of the late Lord Cable that, among the legacies bequeathed by Lord Cable in his will, a sum of Rs. 1 lakh has been left to "The Bengal Chamber of Commerce," free of all death duties. The Committee of the Chamber are satisfied that it was Lord Cable's intention to benefit the Chamber Trust fund, but as the Chamber is specifically named in the will as the beneficiary it appears that the amount must in the first place, at any rate, be paid into its own funds. As the Chamber's Memorandum of Association does not authorise the use of its funds for any charitable object the Committee propose to overcome the difficulty by an enlargement of the scope of its operations to include the creation of charitable funds or the donation of subscriptions to existing funds. The Bengal Chamber of Commerce Trust was founded by the late Mr. Shirley Tremearne, who made over to the Chamber a sum of Rs. 1 lakh with which to establish it, in the hope that there would ultimately be created a large Trust Fund for the benefit of the European British members of the Chamber. At the last annual meeting in February, the Hon. Sir John Bell, the President of the Chamber, warmly commended both funds to the generosity of the members, and emphasised that as no further capital contribution had been received by the Trust, its resources were clearly strictly limited.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 13.

The Bengal Ministry.

On Monday of this week the *Englishman* published an interview of very great interest with Sir P. C. Mitter, the Hindu Minister-designate. "One thing to be remembered in judging the situation," Sir P. C. Mitter emphasised, "is that in the Bengal Council there is only one organised party, the Swarajists. The other groups are fluctuating quantities, but they are committed to assisting in a genuine effort to work the present Constitution for what it is worth, with the aim of proving our fitness for further and more important responsibilities. I take my stand to-day on that principle and that policy, as I have always done in the past."

"I have never made a secret of my real opinion of Dyarchy. It is an unsatisfactory Constitution, but it is for the moment the only Constitution, and it must be made the most of. You cannot get rid of it by abusing it; you will only get it improved by showing that, even under the difficulties inherent in it, Indian Ministers are capable and worthy of a better opportunity to serve their country."

Sir P. C. Mitter preferred to express no opinion on the proposal for a Ministry of four. He had noted that Nawab Musharruf Hossain favoured the plan, as one definitely ensuring the stability of the Ministry in Bengal, but, for the present, preferred to say nothing that would commit him either way. "There are points in favour of the idea," he said, "and there are difficulties. I have an open mind on most subjects and I prefer meantime to keep an open mind on this one."

Passing to the subject of the distribution of portfolios, he said: "Naturally I have my own inclinations, but the distribution of Departments is one for discussion with His Excellency and my colleagues. My main object in accepting office was to support the Constitutional movement for bigger and better reforms, by proving our fitness for them. The allocation of particular spheres of work between the Ministers in the attempt to achieve this aim is a secondary consideration."

Sir Provash expressed confidence in the new Ministry's having as favourable a prospect of enduring as any one of its predecessors had and more than most of them had. "My attitude," he said, in conclusion, "on the eve of accepting office is this. Now that I have decided to do my best to help Bengal—and, through Bengal, India—forward on the road to full self-government by making the best of the opportunities open to us for the time being, I shall do my utmost to make the Ministry a success. I am confident that it will not be so easily broken as its too confident enemies suggest, and that, when the day of test comes, we shall have a substantial majority in the Council. This is what I hope and believe. If I fail, I personally shall not break my heart over it. I have tasted the sweets and the bitterness of office before to-day."

There does sound a note of confidence in that, but now read this:—"I take it then," said a political correspondent of the *Englishman* to Mr. Altaf Ali, the Whip of the new Union Party, and one of the earliest of those to call on Sir P. C. Mitter on his arrival in Calcutta, "that the new Ministry can count on the support of the Union Party?"

"The position in regard to the Ministry," Mr. Altaf Ali replied, "is a very difficult one. We have had no meeting of the party as a whole since His Excellency announced that Sir P. C. Mitter and Nawab Musharruf Hossain had accepted office. A meeting will be held in the near future and until then all I can say definitely is that Sir Provash Mitter is not entitled to count on its support of the Ministry as at present constituted."

The *Englishman*, commenting on Sir P. C. Mitter's statement the same day, wrote:—"The appointment of four Ministers invested with a joint responsibility in resist-

ing any attack that may be made upon them individually or collectively appears to offer a reasonable assurance of stability. To begin with, it should go far towards closing up the ranks of the Muhammadans whose dissensions constitute so great a source of strength to the Congress Party. Nawab Musharruf represents one wing of Muslim opinion; the appointment as Minister of a leader of the other wing should at least reduce very considerably the danger of a repetition of the manoeuvres which ended in the fall of Mr. Ghuznavi and Mr. Chakravarty in August. Similarly, the appointment of a Hindu as the fourth Minister should serve to consolidate the Hindu votes. Sir Provash Mitter should find that the addition of a co-religionist colleague would strength his position very appreciably among his own community; while the joint responsibility of the four Ministers should form another safeguard against personal jealousies and ambitions playing the dominant part in Bengal politics that they play now."

That is as plain a statement as any man can be expected to commit himself to in a newspaper print. It will be understood by the readers of these letters that the talk in the clubs is very much more free. A newly appointed Minister may be expected to speak of the road to full self-government and of moving forward on it by the men of the day showing that they can make the best of the opportunities that have already been opened to them, and when Sir P. C. Mitter so speaks, it is believed that he speaks with sincerity. How far the average member of the Council cares for posterity and what sacrifice he is prepared to make of his personal ambition, or even of his love of the political game, in the interests of posterity, are things very hard to be certain about. Patriotism is patriotism and the world knows how great its manifestations may be in critical times. In normal times it is a force very much weaker than self-interest.

The Railway Conference Association.

The news comes from Simla that the Railway Conference Association is to hold its proceedings in camera and that this session is likely to conclude earlier than others have done. Sir George Rainy, addressing the Conference, said that his experience of the last six months had brought home to him that from top to bottom the railway administration was imbued with the conviction that much must be done if the railways are to keep abreast of the times, and that it was animated by a desire to leave no stone unturned in the effort to reach the highest standard of efficiency. The new spirit was in a large measure due to the very difficulties they had encountered.

"I am not suggesting," Sir George Rainy continued, "that the members of the Railway Board are intemperate Radicals for whom nothing is sacred. On the contrary, I have the best reasons for knowing how carefully all new proposals are weighed before a decision to give effect to them is arrived at, but I do claim that all schemes of reform which hold out promise of improvement are approached with an open mind and with an earnest desire to make the fullest use of all that is good in them."

The Conference was also addressed by Sir Clement Hindley, whose appointment as Chief Commissioner of Railways, it was almost immediately afterwards announced, has been extended for a further two years. Sir Clement wanted attention devoted to the questions of the pooling of locomotives and the simplification of the means of interchange both for goods and passengers. Referring to the Government's policy of road development, which is to form the subject of an inquiry by the Committee during the cold weather, Sir Clement advised the railway administrations to be in favour of encouraging it, for although the roads might come into competition with the railways in certain parts of the country, as undoubtedly they would, yet the improved methods of transportation would assist the railways ultimately in obtaining more traffic and increased volume.

Presidential words at a Conference have only a conventional value, which is to say that they have little

or none. There are on this occasion proofs that the good words spoken at Simla are borne out by prosaic fact. There is, for instance, a statement from Government on the question of the Bengal-Nagpur Railway, and the Khargpur workshops, a statement in which the situation is so ably analysed, as to leave no doubt either of the sincerity of the expression of desire for efficiency, or of the capacity of the authorities to secure it. Another indication, if a slight one, was the announcement two days ago that the crew system of checking is to be introduced over sections of the Eastern Bengal Railway on November 1. Improvement may also be looked for from the activities of the statistical departments of the Indian railways, none of which is old. Indeed, in what railway systems throughout the world are there statistical departments that are old?

Reserve Bank.

Rumour said early in the week that there would be a November session of the Central Legislature for the furtherance of the Reserve Bank Bill, but it is now stated that there will be no November session. The question is still the subject of correspondence between the Government of India and the Secretary of State. It is generally believed that no definite advance has yet been made in deciding what final form the bank should take. Meanwhile the opinion may gain ground that the whole question is premature. The Currency Commission did its work, one may admit, as well as any such body could have been expected to do it. All the same one might wish that the particular question of a Reserve Bank might be examined by such a mind as the late Professor Marshall's. India, there are some who think, is too often made in questions of currency and banking to follow the example of England. Now England is so wealthy a country that, if it has a banking system not the most economical that could be devised, it does not matter. India is not wealthy: what it needs is the most economical system.

Here and There.

The monsoon seems now over and we have not had the deluge that was predicted and about which we have all talked so much. Who predicted it? Some said that the meteorological authorities had, but that does not sound like them and does sound like such expressions of opinion as are to be expected from people with minds so little trained in scientific observation as still to think that there is the same quantity of rain somewhere every year, and that, if in any year it does not fall during the first, second, and third quarters of the monsoon, it must fall before the end.

In the old days, when the monsoon was ended, they used to meet, somewhere in Dalhousie Square I have heard it said, and count to see how many were survivors and drink to their getting through yet another year. Modern sanitation has made Calcutta a city in which the expectation of life is as good as anywhere; so there need be no counting of persons at the end of the monsoon. But there is a point in counting the old trees that still stand; for every year sees some of them blown down. No old Calcutta resident, however far he may have wandered from the banks of the Hughli, can forget the Casuarina Avenue. The east side of it is now composed more of young saplings than of mature trees. One is thankful to see that those responsible for the trees have felt that the old association of the road with the casuarina was a thing to preserve. All the saplings planted there are casuarinas.

A meeting has been arranged to take place on November 9 of a group of British University women in touch with women of India at the Church House, Westminster, at 2 p.m., to hear Mrs. Randall Davidson and Miss E. Gedge, Warden of the Settlement for University Women, Bombay, speak on the responsibility of Christianity and scholarship towards the educated women of India. The speeches will be followed by a sale, to which all women interested in India are welcome.

THE STATUTORY COMMISSION.—III.

BY THE HON. SIR PHIROZE SETHNA, O.B.E.

[In the concluding article of the series, the earlier ones of which appeared in THE NEAR EAST AND INDIA on October 13 and 20, Sir Phiroze Sethna discusses the question of the composition of the Commission and other cognate problems. In conclusion, while admitting that there is much in the present political situation to give ground for anxiety respecting India's future, there is no reason, he contends, to fear that the Commission's verdict will be unfavourable.]

I shall now turn to other questions connected with the Statutory Commission. What should be the personnel of the Commission? Of whom should it be composed? If the method of negotiation and agreed settlement mentioned in the preceding article can be adopted, then the Commission, or rather the Delegation from England, may be composed entirely of the British, and it will not matter much whether it is purely Parliamentary or composed partly of Members of Parliament and partly of those who are not members of Parliament. In that case, such Delegation will represent the British Government and Parliament, whereas the Indian side will be represented by accredited Indian leaders.

But if such a method will not be adopted, then the question of the composition of the Commission is naturally invested with special importance. The Government of India Act does not require that it must be a Parliamentary Commission; it is perfectly open to the Government to appoint on the Commission persons who are not members of Parliament and such persons can certainly be Indians. The ideal composition of the Commission would, in my opinion, be that it should consist of six Members of Parliament and six distinguished Indians occupying high position in the public life of India. Out of these six Indians, at least four should be members of the Legislative Assembly, one from the Council of State and one from some Provincial Legislature.

The exclusion of Indians from the Commission or even their appointment in a lesser proportion than half cannot fail utterly to detract from its value and weight or to deprive it of all public confidence without which there is little chance of its work meeting with any appreciable measure of success. The device of appointing Indians as assessors is perhaps the most Machiavellian and detestable expedient that can be invented. It has been rightly condemned by the Indian Press, and I do not think there will be any Indian so utterly lost to all sense of self-respect as to be willing to work as an assessor. It is also a question whether Indians should agree to work as members of the Commission unless they form at least half the entire number of members. There are occasions which call for a strong and determined attitude of self-respect, and this is certainly an occasion of that kind. It must be made plain to the Secretary of State and the Government that no Indian leader will be willing to work on the Commission unless he and his Indian colleagues constitute at least half the total number of members of the Commission.

It is not necessary to specify the various questions which will engage the attention of the Commission. But two or three may be briefly referred to. One of them will be the relation between the Central and Provincial Governments. Those relations will have to be clearly defined so as to secure full autonomy and responsible government to the Provinces. At present the progress of the Provinces is handicapped for two reasons; first, they do not enjoy sufficient autonomy, administrative and financial, and, secondly, there is no full responsible government, the existing measure of responsibility being so small, so hedged round by restrictions and so unreal as to be practically non-existent. This serious defect in the existing constitution is generally recognised; it was pointedly brought out by several witnesses before the Muddiman Committee and the question is one which must necessarily

demand the most serious consideration of the Commission.

The question of the second Chamber is another subject to which the Commission will have to apply themselves. In the first place, the Commission will have to consider whether the constitution of the Council of State is not capable of improvement. Much thought has been expended in Great Britain on the subject of a model second Chamber since the enactment of the Government of India Act in 1919. The question was very carefully considered at the time of framing a constitution for the Irish Free State, and the provisions of that Constitution regarding the Irish Senate appear to me to constitute as satisfactory a solution of this difficult question as is possible in the present state of our knowledge and experience of the working of second Chambers. At all events, they afford an instructive study which will not fail to prove profitable to all those who have to deal with the question of a second Chamber for India. The value of a second Chamber in a sound constitutional system is generally recognised all over the world, though New Turkey has adopted a single Chamber system, and though there is a body of extreme opinion in many countries which considers that a second Chamber is a superfluity, if not a positive evil. The view expressed by Gambetta, the great French statesman, that "the principle of two Chambers is the guiding principle of all parliamentary government, and remains despite past errors the guiding principle of all democratic government" still commands general acceptance.

Allied with the reform of the Council of State is the question whether the Provincial Legislatures should also consist of two Chambers. It will have to be specially considered by the Commission. It is by no means easy, and before it is finally decided one way or the other it will be desirable to explore the avenue of experience gathered in Canada, Australia and other countries, about the working of State or provincial second Chambers. I venture, however, to make one observation. If the Indian Constitution is to bear the impress of the special conditions of India, it will probably be in the direction of second Chambers for the provinces, that the operation of those conditions can be usefully provided for, while at the same time providing against their proving an obstacle on the path of progress.

Some people fear an unfavourable verdict from the Commission and possibly retrograde recommendations. The apparent confusion of political parties, their endless differences and petty squabbles, the seeming demoralisation of public life, the Hindu-Muslim disturbances that have estranged the two communities and embittered their feelings—all this has made some people so pessimistic and depressed their spirits so much that they fear that unfavourable judgment and make proposals not for advancing but for going back upon the Reformed Constitution of 1919. There is much in the present political situation of India which gives ground for anxiety; tendencies have sprung up which, if not checked, may impede and not promote the growth of nationalism; public life certainly stands in need of purification and elevation. But taking a large view of the situation and trying to understand the true significance of some of its aspects, I do not think a pessimistic view is justified.

The most hopeful feature of the present situation is that dictatorship in the political life is destroyed, and, I hope, destroyed for ever. The party differences that have sprung up are an indication that the days of blind hero-worship are past, that men are acting as men, thinking and judging for themselves, and not allowing themselves to be blindly led against their better judgment, by some hero of the day. When men once begin to think and decide for themselves, they will soon learn when and how to compromise and to act together. Refusal to exercise one's judgment or allowing it to be warped by the dominance of a powerful personality is infinitely worse than the clash of opinions engendered by honest and independent thinking. A true unity of opinion, feeling and action is born of such a clash and not of an outward uniformity dictated by a masterful spirit, or timidly acquiesced in out of pusillanimity of soul. The existing chaos of opinions will, I feel no doubt, soon give rise to intelligent common understanding and action among Indian politicians. The Hindu-Muslim problem, though at the present moment it has assumed a serious aspect, is not difficult of satisfactory solution, provided the aggressive tendencies in both the communities are held in check and both the Hindu and Muhammadan leaders cultivate charity and a broad national spirit. And as regards the work done by the Indian and provincial legislatures, there can be no doubt that it has been, on the whole, of such a nature as to warrant further advance and progress. The legislatures have now been in existence for seven years and, to judge their work as a whole, it will amply satisfy the test of "co-operation and responsibility" laid down in the Preamble to the Government of India Act, apart from our approval or disapproval of the conditions of advance towards the goal of responsible government as prescribed in that preamble. I shall conclude this series with the following remarks made by Sir Frederick Whyte, ex-President of the Legislative Assembly, in an article on "The Goal in India," contributed by him to the April, 1927, issue of *Foreign Affairs*:—

"With this awakening sense of responsibility, there begins to be evident a resolve to treat constitutional and political projects on their merit. Even under the operation of the present Constitution, admittedly transitional and incomplete as it is, the Indian legislator has shown a concern for realities. He has begun to understand what government is and to see that theoretical designs, if divorced from human experience, remain sterile. The Legislative Assembly has not infrequently shown that it could appreciate the purpose of Government in proposing unpopular taxation and was prepared to support other unpalatable measures, which were necessary for the welfare and the security of the Commonwealth, while the Legislative Councils in the provinces—or in some provinces—have displayed a similar disposition. The manner in which those new opportunities of service, of which the Preamble to the Act speaks, have been taken up by the representatives of the Indian people offers no justification for a harsh judgment, and therefore I do not believe that, when the constitutional inquiry is held, India need fear an unfavourable verdict."

Egypt.

ON the way to India, see Cairo and the Nile! The American Express provides tours including that wonderful voyage to Luxor and Assuan on the Anglo-American Nile and Tourist Company steamers.

At Bombay, Calcutta & Colombo

Expert Services for Travellers.

WHEN you carry American Express Travel Tickets there is a uniformed representative to meet you, help with baggage, indicate your hotel and generally assist the disembarkation. There is an office nearby to suggest itineraries, issue tickets and arrange tours to any point inland. It pays to employ American Express service before you leave Europe.

TOURS that consider your comfort and are economical or liberal—just as you wish. Itineraries are arranged to suit your requirements. Travel is independent and private but everything is provided before you leave England.

THE ANGLO-INDIAN ASSOCIATION, LONDON.

In presenting the annual report for 1926-27, the fourth of the series, the Council of the Anglo-Indian Association, London, announce that the year has again been one of successful and active work on behalf of the community in India. At the luncheon given by the members of the Anglo-Indian deputation in his honour in 1925, Lord Winterton said that he was glad to learn of the formation of an Anglo-Indian Association in London, and wished the organisation a successful career. "Members of your community," he said, "are constantly coming to England for education and for technical training, and the advice and kindly interest of members of this Association would be welcomed by such people, and especially by those among them—and that applies to the majority—who are young men on the threshold of life."

In "India in 1925-26" Mr. Coatman, the compiler of the report, discussed the unfortunate paucity of Anglo-Indians at the universities as one of the causes of unemployment in the community. Over a long series of years the domiciled community has filled places of importance in the public works, railways, medical, post and telegraphs and other State services which could not be filled by anyone else. But the old order is changing and while alike on account of its past record of service and its present position the community is entitled to receive just and fair treatment in the new régime, the future lies largely in the extent to which its members are prepared to adapt themselves to the new order.

Hitherto, as Mr. Coatman says, the learned professions have not been very popular with either Europeans or Anglo-Indians. But if the boys and girls of those communities are to fit themselves for the conditions of life in modern India they should be encouraged to regard a university education as their normal objective. In a word, they must turn their attention to the professions and to business rather than, as in the past, almost exclusively to government service.

The responsibility resting upon the London Association in these circumstances is a heavy one and it is satisfactory to find the emphasis laid by the Council throughout its report upon the practical side of the problem. "During the past year," it states, "inquiries relating to the College of Preceptors' Examination, C.M.B. examination, training in pharmacy, Loughborough Engineering College, Faraday House, City of London Guilds Engineering College and courses in medicine and nursing have been received and full information furnished." As the Association becomes better known and its activities extended it should become, both socially and politically, an eminently useful part of the Indian body politic.

TRADE OF THE PORT OF CALCUTTA.

The recently published report, for the year 1926-27, of the Calcutta Port Commissioners shows that the trade of Calcutta is progressing steadily. The number of vessels entering the port was greater in 1926-27 than in any previous year, except the record year 1912-13. The goods handled at the jetties and quays aggregated 5,361,522 tons, valued at Rs.259.39 crores. Imports increased in volume, but exports diminished slightly. The net result was an increase in the total quantity of goods handled of 761,020 tons. Exports of tea were greater than in the preceding year; and manganese and pig-iron were also on a high level. Coal exports developed largely by reason, doubtless, of the prolonged strike in this country.

The port finances are also improving, the surplus of revenue over expenditure being no less than Rs. 20.60 lakhs. This satisfactory result enabled the Commissioners to place Rs.25 lakhs to the credit of their Revenue Reserve Account, and to carry forward upwards of Rs. 5 lakhs. Calcutta is not a cheap port for merchants and shipowners,

and it may be hoped that if trade continues to expand, a reduction of the port charges may be a possibility in the not too distant future.

It is not without interest to compare the value (Rs.259.63 crores) of the sea-borne trade of Calcutta in the year 1926-27 with the value (Rs.6.80 crores) of the trade of the whole Presidency of Bengal in 1834-35, when the East India Company closed its commercial business. This enormous development shows what great interests are now centred in Calcutta. Jute is the principal industry, and the exports of both raw and manufactured jute are on a very big scale. Tea, hides, coal, grain, manganese and pig-iron are some of the other principal articles of export, while the chief imports are piece-goods, iron and steel, machinery, railway plant and material, and so on.

NEWS IN BRIEF.

The Chancellor of the Muslim University, Aligarh, has appointed a committee to examine and report on the present working of the University and its associated institutions, to consider whether any modifications are desirable in the interest of those institutions, and to make recommendations. The members are the Hon. Sir Ibrahim Rahimtoola, K.C.S.I., C.I.E., of Bombay (Chairman), Sir Philip Joseph Hartog, of the Public Services Commission, India, and Sir George Anderson, Director of Public Instruction in the Punjab.

The *Times* Brussels Correspondent announces that under the style "The Belgian Manufacturers' Corporation" a number of Belgian industrialists have formed a co-operative association, with its head office in Brussels, for the purpose of establishing financial agencies in the British East Indies, principally for the sale of the produce of affiliated factories. The first agency will be established in Bombay. The capital of the concern is fixed at a minimum of 675,000 f. [$\text{£}19,300$]. Among the firms subscribing are several construction works, metal factories, and the National Arms Factory.

OBITUARY.

MR. G. F. SHEPPARD.

Mr. George Frederick Sheppard, late Indian Civil Service, died on October 5 at 68, Regent's Park Road, in his 93rd year. With the exception of Sir Philip Hutchins, he was probably the last survivor of the nominees of the East India Company directors trained at their college at Haileybury, which was abolished 70 years ago. Mr. Sheppard arrived in Bombay on November 23, 1854, and his service was on the executive side. He was for some years Collector and Political Agent in Kaira. He became a Divisional Commissioner in 1882, and retired in 1889.

COLONEL J. D. MACPHERSON.

Another Indian Mutiny veteran, Colonel James Duncan Macpherson, late of the 3rd Punjab Cavalry, Frontier Force, and 4th Bengal Cavalry, has died at Inverness in his 87th year. Commissioned as an ensign in December, 1857, at the age of 16, he served in the Oudh Campaign of the following year. He was also with Lord Roberts in his famous march from Kabul to Kandahar, being mentioned in dispatches for the second time. Promoted to Lieutenant-Colonel in 1883, and to Colonel in 1887, Colonel Macpherson held the Indian Military Medal, the Indian Medal and clasp for the N.W. Frontier (Black Mountain) expedition, the Kabul Medal and clasp, and the Bronze Star. His father was Major-General Sir James Duncan Macpherson, Commissary-General to the Bengal Army from 1864 to 1868.

MR. JAMES W. MOLLISON.

The death at the age of 70 is announced of Mr. James W. Mollison, C.S.I., the first Principal of the Imperial Agricultural Institute at Pusa. He went out to India in 1890 as Superintendent of Farms for the Bombay Government, being appointed seven years later Deputy Director of Agriculture. His notable work during the great famine of 1900 attracted the attention of Lord Curzon, who was anxious to find a practical scientific agriculturist to carry out his plans for the improvement and more scientific direction of agriculture in India. With the assistance of the benefactions of Mr. Henry Phipps, an American millionaire, the Agricultural Research Institute at Pusa was founded. For the control and direction of the new policy Lord Curzon chose Mr. Mollison, who had shown by his work in Bombay that he possessed exceptional qualifications for the task. He was given the title of Inspector-General of Agriculture, and though he had no executive control over the provincial departments, he was tactful in his dealings with them and formed a unifying influence. Around him was gradually grouped a staff of scientific experts. Within a few years the scheme expanded to a Central College of Agriculture, which became the focus of the policy of rural development. Mr. Mollison was created C.S.I. in 1911 and retired in the following year, after a practical work for Indian agriculture not equalled by any official contemporary.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

A Yugoslav Municipal Loan.

It is announced from Belgrade that the Foreign Trade Securities Company, Ltd., of New York has concluded an agreement with the Municipality of Osijek, Yugoslavia, for a loan of from 1,600,000 to 2,000,000 dollars (according to the town's requirements) for 25 years at $7\frac{1}{2}$ per cent. interest, the issue price being 85. The bonds are to be quoted on the New York Stock Exchange. The loan will be used for various municipal undertakings and in part to pay off a loan still outstanding on the construction of a central electric light station. Osijek, in Slavonia, has a population of 34,000.

Cotton Growing in the Sudan.

The report of the Sudan Plantations Syndicate, which has just been issued and extracts from which will be found elsewhere in this issue, gives a very plain indication of what cotton is going to mean to the Sudan in the future. The shipments of cotton during the past twelve months have been 116,278 bales as against 92,552 bales, and while this total forms only a small part of the Sakellarides production, it is now large enough to play an important part in the market. The demand for Sudan Sakellarides on the Liverpool market has been a feature of the past year and has shown very plainly that the Sudan will have no difficulty in disposing of very much larger quantities of cotton than are available at this stage of development. It will be noted that the profits of the Sudan Plantations Syndicate are increasing, and the final dividend and bonus now proposed will bring the distribution this year to 30 per cent. as against 25 per cent. last year. The latest issue of capital of £750,000 does not rank for the distribution this time, but in view of the progress of the concern, and provided cotton prices are maintained at a fair level, there is no reason for anticipating a reduction of the scale of distribution next year.

Better Trade Outlook.

A distinctly encouraging forecast of trade prospects for next year is given in the current issue of *British Industries*. It is pointed out that while the international horizon is still far from clear and our own immediate position is full of difficulty, the outlook for next year so far as British trade at any rate is concerned is brighter than it has been at almost any period since the conclusion of the War. For some time now there has been an improvement in world trade, in which, however, this country has so far participated only in certain directions, but it has gradually become clear that on the whole the tendency here is for improving commerce. It is only necessary to instance the increasing volume of contracts placed with our engineering firms—many of them obtained only in the teeth of strong foreign competition—for rails, for constructional work, and for a host of other things to realise that we have progressed very considerably towards normal conditions, and that we are once again approaching the point when we can meet foreign competition on something approaching equal terms. If the forecast to which I have referred is borne out by events (and unfortunately in these post-War days there is always an if to be reckoned with, for some adverse international development may take place which may upset the trade balance) then the coming British Industries Fair will take place under the most

favourable conditions which it has ever experienced, and without indulging in any undue optimism it may be anticipated that the volume of business done at Birmingham and the White City will be far in advance of the figures for any previous fair. The B.I.F. should, in fact, next year prove itself in very truth the spearhead of British industrial endeavour, and should be the means of obtaining orders which will go far towards lubricating the wheels of our industries.

Germany and the Near East.

I have more than once recently referred to the efforts which Germany is unceasingly making to resume her old position in the Near East. Now, as before the War, her overseas commercial endeavours have a distinctly Oriental trend. It is unnecessary to speculate why Germany should aim always at the extension of her influence towards the East; the fact remains that it is so. A recent article in the *Wirtschaftsdienst* on the movement of German capital abroad shows very plainly the prevailing tendency. It is pointed out that the principal area which is attracting German foreign investments is that covered by the Succession States and the Balkan countries. Thus branches or subsidiaries of the German banks are to be found in Bulgaria and Roumania, while the German electrical companies also play a prominent part as evidenced by the interests of the Siemens Co., in Czechoslovakia and Roumania. German capital is also interested in Bulgaria in coal, in a paper factory, and in the Bulgarian Air Transport Co., and in Roumania in mills and in the financing of the sugar industry. The journal in question points out that there are important investments of German capital in Turkey and the Middle East. Thus German firms are well established both in Persia, where the Junkers Works have a five year monopoly of the working of three air routes, and in Afghanistan, but it is in Turkey apparently that Germany has particularly interested herself, which is, of course, quite in accordance with the pre-War precedent. Mention is made in this connection of the participation of German capital in the development of the copper mines of Arghana-Maaden, of the establishment of the Elektro-Radio S. A. Turque with the participation of the Deutsche Bank and German electrical firms, the interest of a German firm in the founding of the electric and gas works of Angora, and the employment of German capital in a Turkish aeroplane factory. One result of these develop-

THE BRITISH INDUSTRIES FAIR

will again be held at the
**WHITE CITY, LONDON &
CASTLE BROMWICH, BIRMINGHAM**

FEBRUARY 20th to MARCH 2nd

1928

BUYERS

Make a point of visiting the Fair next year. It will be larger and more representative — the finest display of British Empire goods the world has ever seen.

Full particulars and Invitation Tickets may be obtained from
**THE NEAREST BRITISH LEGATION,
CONSULATE or TRADE COMMISSIONER,**

or from the

**DEPARTMENT OF OVERSEAS TRADE,
35, OLD QUEEN ST., LONDON, ENGLAND,**

or

THE SECRETARY, CHAMBER OF COMMERCE, BIRMINGHAM.

ments is, of course to further the expansion of German trade with the regions in question, and thus to increase the competition which our manufacturers have to meet.

Importance of Agricultural Research.

A very important speech was made by Sir Alfred Mond at a luncheon given by him to the delegates to the Imperial Agricultural Research Conference at the Savoy Hotel last week, in the course of which he dealt with the significance of agricultural research in relation to developments within the Empire. It need scarcely be emphasised that of all industries agriculture is the most essential, and it is the more surprising therefore that until recently it should, as he said, have been carried on the whole without much regard to a scientific basis. "It has on the whole been carried on," said Sir Alfred Mond, "by people who have worked hard and who have reaped on the whole very small, if any, reward. But throughout the history of the world it has been looked down upon as a thing which could be carried on by relatively uneducated people and as being of relatively small importance. If suddenly the agriculture of the world ceased for a very short time, we not having reached the stage of synthetic food production which the future may hold in store, those who have not regarded agriculture in the proper light would be surprised to find what a short time it took before starvation put an end to their earthly career and closed the long laborious and often tedious work of theorising on which they are engaged and which they think so important."

Trials of Fertilisers.

Sir Alfred Mond added that Imperial Chemical Industries and its subsidiary operating company were setting out to render real and he hoped increasing service to Imperial agriculture, and in co-operation with Government Departments, private growers, and commercial corporations trials are being carried out of fertilisers in various parts of the Empire. Among the regions in the Empire where the trials are being made are the Sudan, India, and Palestine, while Egypt is one of the regions outside the Empire where trials of fertilisers are being executed. The crops on which trials are being tested, he explained, are beans, cocoa, coffee, cotton, cocoanuts, ginger, grass, limes, maize, potatoes, rice, rubber, sugar-cane, tea, tobacco, wheat, many of these trials being designed specially to test the suitability of nitro-chalk for use in tropical and sub-tropical countries. To that end a study is being made of the conditions of soil and climate and temperature throughout the Empire. A whole series of new fertilisers, he pointed out, is being tried out in various parts. Thus arrangements have been completed for certain parts of India for trials on the suitability of the new fertiliser ammonium phosphate and nitro-phoska for use in tropical

and sub-tropical agriculture. "Representatives are proceeding to India," he added, "to investigate the fertiliser position of that country and to study the best means whereby the company, if called upon to do so, can give effect to the proposals laid before the Royal Commission on Agriculture in India, for a great scheme of co-operation in fertiliser propaganda between the Government of India and this country. Arrangements have also been made for co-operation between the Sudan Government and the company with a view to carrying out fertiliser trials in the Sudan."

Development in the Empire.

It should scarcely be necessary to explain the importance of this work of developing the agricultural resources of the Empire. As was appositely pointed out the other day, it has to be recognised that in all probability we must abandon the expectation that our trade will resume many of its pre-War channels. If that be the case, and the evidence is certainly strongly in favour of that view, it follows that new trade channels must be developed, and the best way to accomplish that end is to concentrate on the undeveloped parts of the Empire. Progress in agriculture—using the term agriculture in its widest sense—means not merely an advance towards the ideal of self-sufficiency, but also means that population will be attracted to the regions being developed, and these will gradually come to constitute valuable markets supplying the United Kingdom with raw materials and taking in exchange the manufactures of which they have need. I cannot do better, I think, than quote Sir Alfred Mond's closing words. "We have embarked," he said, "on what is really a great Imperial mission, not merely with the hope which I am certain we shall achieve, of extending British industry, not merely with the idea of paying some dividend to our confiding shareholders, but still further with the idea of making still more independent and still more self-contained that great economic complex which calls itself the British Empire, and which, if united in action, united in work, united in thought can achieve for itself a position unparalleled among the nations of the world in all the annals of history, a position above that which any other aggregation of human beings has ever had the opportunity of achieving in the history of the world."

Rubber Stocks.

A reduction in the London stocks of rubber for two weeks in succession is an event so unique that it cannot be allowed to pass without comment. It may, I think, be taken as the normal outcome of the restriction scheme—a belated development and one very welcome to the market. It would perhaps be premature to expect a steady continuance of this process, but it may reasonably be assumed now that the tendency will be for the London stocks gradually to decline, and in another three months there should be a pronounced difference in their total.

CYPRUS CROPS.

The following report has been issued on Cyprus crops for September:—

Cereals generally.—Preparation for sowing is now in hand. In certain localities this has already started in entirely dry land. The high prices obtained for barley will doubtless result in extended cultivation.

Potatoes.—Owing to the very good prices obtained larger areas have been planted. Very hot winds during planting, however, have caused a loss of about 25 per cent. while a certain number of plants have been attacked by a fungoid disease. There is now a shortage of potatoes in the market and prices have gone up to 2s. 3d. per stone. The yield this season in certain districts has been seriously affected by the attack of the insect "Pentatomides."

Onions.—Average production. Great demand with exceptionally high prices.

French beans (haricots) and cow peas.—Production average and prices very high.

Cotton.—Picking continues. The crop has been little affected by disease especially boll worm. Prices steady and satisfactory, encouraging a further extension of cotton cultivation for next year.

Pomegranates.—Crop average, prices up to 8d. per stone. The chief market is Egypt.

Olives.—The yield is generally very good; crops slightly attacked by *dacus olei*. Gathering of olives and oil extraction has started, and it is hoped that both the quantity and the quality of the oil will be good.

Carobs.—Production good; prices ranging from 18s. to 21s. per kantar.

Almonds.—Production good; prices satisfactory. In certain places the crop was attacked by *eurytoma amygdalis*. Measures have been taken for the destruction of the diseased almonds.

Citrus Fruits.—Crop free from scale and other diseases.

Apples.—Trees are still bearing fruit. Production exceptionally good but prices very low.

Vines.—Average yield. Grapes affected in certain places more or less seriously by *endemies* and *cochylie*. There is a good demand for export to Egypt and for wine production. High prices were offered at the beginning of the season for raisins and large quantities were prepared. Prices have now declined.

William Beardmore and Co., Ltd., Glasgow, have obtained a contract for 21 sets of Beardmore-Caprotti poppet valve gear for the Bengal-Nagpur Railway.

The Chamber of Shipping of the United Kingdom has been informed by the Board of Trade that advice has been received by the British Consul at Bushire that Lingah has been declared infected with cholera.

CHESS.

By "CARO-KANN."

I give this week an amusing position which occurred in an offhand game recently. White here played P—B3, and Black's next move finished the game. I leave it to my readers to find it. It is the type of move that the tournament player always hopes for and so seldom has the chance to play.

The solution to last week's problem is as follows:—1, ... P—B4; 2, K—K3, P×P; 3, P×P, K—K3; 4, K—Q3, P—B4; 5, P×P, K×P; 6, K—B3, P—Q5 (ch); 7, K—B4, K—K5; 8, P—B6, P—Q6; 9, P—B7, P—Q7; 10, P—B8 (=Q), P—Q8 (=Q); 11, Q—B5 (ch), K—K6 and draws.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahanada for Calcutta (Birkenhead, November 10); s.s. Manipur for Calcutta (Birkenhead, November 22).

Bibby Line.—S.s. Cheshire for Port Said, Colombo, and Rangoon (Birkenhead, November 16).

British India Line.—S.s. Domala for Bombay and Karachi (London, November 19); s.s. Morvada for Colombo, Madras, and Calcutta (London, November 19).

Cunard Line.—S.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool November 12, and Swansea November 15); s.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool November 12, also Glasgow and Swansea November 10).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the last steamer of the season for Galatz and Braila (Liverpool, November 5); s.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 3).

P. and O. Line.—S.s. Ranpura for Bombay (London, November 11); s.s. Novara for Colombo, Madras, and Calcutta (London, November 26).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (Manchester, November 13).

A contract has been obtained by the Lea Recorder Co., Ltd., Manchester, for coal meters for Athens.

The General Assembly of the Mixed Tribunals in Egypt on October 28 elected the Norwegian Judge Hanssen President of the Appeal Court, in succession to the Greek Judge Kambas, who resigned owing to ill-health. Judge Hansson's position as Vice-President was at the same time filled by the election of the British Judge R. B. P. Cator, the senior foreign counsellor.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 1.

The industrial share sections continue to absorb the major part of the interest in the stock markets. There have been once again feverish and irregular movements, but the most characteristic feature of the past few weeks has been more than ever in evidence—namely the “selective” nature of the boom. The shares first of one company and then of another are suddenly thrown into the lime-light and hoisted up by large purchases, based often on nothing better than quite unfounded rumours. This being so, the position is exceedingly unstable and investors without the closest inside knowledge of daily, or even hourly developments, should be exceedingly cautious and in particular turn a deaf ear to even the most plausible rumours. A case in point this week has been the sharp rise in Marconi shares, the boomlet being based on the success of the Beam system and its possible developments, but it was followed by an abrupt relapse on an official denial of rumours to the effect that agreement had been reached between Marconi and the cable companies. Then again the tobacco group was severely shaken by talk of American competition, but a recovery followed when the impression gained ground that a “war” is unlikely.

The Price of Home Corporation Stocks.

Despite the lack of public support for the recent high-priced home corporation loans, the issuing houses handling the business show no signs of making concessions to the public. This week, for instance, Croydon appealed for £500,000, the offer taking the form of 5 per cent. stock issued at £101½ per cent. The issue of stock at a premium is certainly in some measure an inconvenience to the investor and especially to the trustee, to whom home corporation stocks should make a special appeal. The loss of capital on redemption has to be kept in view and this

requires the establishment of a sinking fund. That is to say, the investor should set aside a certain amount of each interest payment in order to provide for the loss of capital which results when redemption takes place at par. This is regarded as a task which the investor should, if possible, be spared. It has therefore been suggested that the loans should be issued to carry interest at the rate of 4½ per cent., the price of issue being below par. Under this arrangement, it is pointed out, the investor does not have to provide for loss of capital on redemption, while he has the prospect of capital appreciation. But against this it is contended that the investor dislikes a rate of interest in which there is a fraction. While this may be arguable, it is clear that he is definitely hostile to 5 per cent. stock issued at a premium.

The Chilean Nitrate Industry.

This week it has been reported that substantial purchases of Chilean nitrate have recently been made by Russia. The nitrate is described as being of the high grade refined quality which is used exclusively for the production of explosives. These purchases have followed, or have been concurrent with, heavy buying of Chilean nitrate by both American and European consumers. Moreover, it appears that the Chilean Government, having realised the gravity of the position to which the industry was drifting is making an effort to assist it in its recovery. The result is that in the past few weeks there has been a steady growth of optimism regarding the future of the Chilean nitrate industry. A number of the leading shares have advanced to prices very considerably above the lowest levels touched this year. The investor, however, would be well-advised to act with the greatest caution in buying nitrate shares. For some time past the industry has been in a deplorable condition, many of the companies having been unable to pay ordinary dividends. Again, it is not likely that the manufacturers of synthetic nitrogen will witness a revival of Chilean nitrates without taking steps to safeguard their position. In fact, it has been reported that the British and German producers, among others, have had the situation under review.

The Demand for Preference Shares.

Although the speculative activity in the miscellaneous market has again been evident this week, stockbrokers report that there is a marked public demand for industrial preference shares. At the moment there is a shortage of stock in the market, but the gentle upward tendency of prices will doubtless result in some sales. In these circumstances, a short list of well-secured industrial preference shares may be useful. The 6 per cent. cumulative preference shares of the Union Cold Storage Company give a return of £6 3s. per cent. This company has an excellent record of sustained prosperity, the net profits in recent years having shown continuous expansion. Last year's net profits covered the interest on the preference shares twice over. There can be no doubt that the 7 per cent. cumulative preference shares of Imperial Chemical Industries are likewise well-covered, for the majority of the companies absorbed by this combine were extremely prosperous. The shares yield £5 12s. per cent. The Dunlop Rubber Company, having placed its finances on a sound basis, is undoubtedly passing through a period of decided prosperity. The 6½ per cent. “A” cumulative preference shares give a return of £5 12s. per cent. A week ago we referred to the promising outlook for electrical equipment manufacturers. A yield of £6 4s. per cent. is given by the 8 per cent. cumulative preference shares of the Metropolitan-Vickers Electrical Company.

A mission composed of members of the Economic Section of the League Secretariat left for Sofia on October 28 to carry out an inquiry into the economic and financial situation in Bulgaria in connexion with the projected Bulgarian reconstruction loan to be issued under the auspices of the League of Nations (says a Reuter message from Geneva).

COMPANY NOTES AND REPORTS.

SUDAN PLANTATIONS.

The report of the Sudan Plantations Syndicate, Ltd., for the year ended June 30, 1927, states that the area under cotton in the Gezira during the year amounted to 100,000 feddans, as compared with 80,000 feddans in the previous season. The chief items of capital expenditure were in respect of canalisation, buildings, and two new ginning factories in connexion with the new areas in course of development at the northern end of the company's concession.

The Kassala Cotton Company benefited from an unusually good flood in the autumn of 1926; in consequence, the crop for the past season was considerably larger than that of the previous year. The whole of the past season's crop has been disposed of at satisfactory prices. The Syndicate continues to hold 100,000 shares in Parana Plantations, Ltd. Extensive surveys which have been made indicate that the quality of the land generally and the area suitable for coffee cultivation are superior to original estimates. The Brazil Plantations Syndicate, Ltd., in which the Syndicate retains its holding, has a valuable interest in the lands of the Parana Plantations, Ltd. As a result of unsatisfactory experiences of 1926, the company has reduced its programme of cotton growing. It is directing its attention to the realisation of its properties in the State of Sao Paulo, and has made a beginning with the sale of some agricultural land at satisfactory prices.

In the Gezira the cotton crop was again very good. The Zeidab crop likewise showed good results, and the total yield was considerably above that of the previous season. The total shipments were as follows:—1927: Zeidab, 3,109 bales; Gezira, 113,169 bales; total, 116,278 bales. 1926: Zeidab, 2,243 bales; Gezira, 90,309 bales; total, 92,552 bales.

At the end of the financial year all the Zeidab bales and 49,680 Gezira bales and all the cotton seed shipped from Zeidab and the Gezira, amounting together to 45,875 tons, had been sold. Owing to favourable market conditions satisfactory prices have been realised. The remainder of the Gezira crop appears in the balance-sheet at a valuation made by the directors, which subsequent sales have proved to be conservative.

The profit and loss account for the twelve months, after deduction of all outgoings, shows a net profit of £558,382, which, added to the balance brought forward from last year, viz., £294,655, less payment made on account of directors' percentage, £13,996—£280,659, brings the total credit to £869,042. The interim dividend of 2s. per share (equal to 10 per cent.) paid in July last, less income tax, absorbed the sum of £150,000. The directors now recommend the declaration of a final dividend of 3s. per share, plus a bonus of 1s. per share (together 20 per cent.), less income tax, payable on November 17, to holders of shares numbered 1 to 1,500,000, registered on November 5, £300,000, leaving a balance to be carried forward of £419,042.

Ransomes and Rapier, Ltd., Ipswich, have obtained a contract for eight pairs of hydraulic buffers for the Indian State Railway.

It is reported that valuable salt deposits have been discovered near Provadia, in Bulgaria, and that deposits have also been found in other parts of the country.

At the 87th ordinary general meeting of the Peninsular and Oriental Steam Navigation Company, to be held at the company's offices on December 14, at 11 a.m., the directors, after providing for the usual dividend at the rate of 5 per cent. per annum on the preferred stock (less income tax), will recommend a dividend on the deferred stock of 5 per cent. for the six months (free of income tax) making, with the interim dividend of 5 per cent. paid in May, a total distribution on the deferred stock of 10 per cent. for the year. Warrants will be payable on December 16.

Motors and Motoring.

By G. B. B.

It was said recently that in certain parts of the Empire the motor car is of more importance than the railway. It may be said that there are few places where that is not the case; even in England commercial motor and passenger coach services are proving themselves to be severe competitors with the great lines which in itself shows that by traders, manufacturers and the general public they are being considered as of steadily increasing value. But so far as the Near, Middle and Far East are concerned we may regard the motor vehicle as the key that will eventually unlock their resources. Lands that are at present of little value will be cultivated; crops that previously it did not pay to raise will be grown and will find a ready market, and localities that were previously almost inaccessible will, by the commercial motor vehicle, be opened up for trade. The market offered in the East generally for motor cars is of extraordinary magnitude, and although American and Continental manufacturers have already obtained a foothold through what can only be regarded, I think, as the apathy of British firms, it is open for us not only firmly to establish ourselves there, but to obtain, if possible, a dominant position. The most important thing—and one that we have neglected in the past—is to let the prospective buyer know what we have to sell. As I have pointed out, almost times without number in these columns, we have failed altogether, speaking of the British motor trade as a whole, to let potential customers in the Near East, no less than in the Middle East and India, know that we are able to fill their needs and to let them know with what types of car we propose to fill them.

The Cars Needed.

That is not to say that we have merely to offer cars to these buyers to have them eagerly snapped up. The time has gone by when goods were bought by Eastern buyers merely because they were of British manufacture. We have, to-day, to show the buyers that our goods, whether they be textiles or motor cars, are suitable for the requirements. We must know exactly what is wanted and then offer what we know to be suitable. When we start offering cars in the localities mentioned, no really radical alteration in the design of British cars is needed; the modifications we need to make are of a minor nature, but there is no disguising the fact that they will have to be made if our efforts to sell them are to meet with success.

What are, it will be asked, these modifications? In the first place we must remember that the cars will be used on roads that are very different, as regards make and surface, from those in this country. Our cars must have a good ground clearance, but that does not necessarily mean a highly-placed chassis. A clean design beneath the chassis will be quite sufficient for cars for all but very special services. A further point is that the axle bearing must be so designed and constructed as to prevent wheel splay, and sumps should be made of steel and not of aluminium so as to withstand knocks. Certain special adjustments should be made in connection with induction and ignition, and a rather essential point is in connection with a secure anchoring of the radiator. Excessive vibration must be expected and guarded against, and with all this it must be borne in mind that cars for any part of the East will not find expert repairers and deft mechanics waiting at every roadside to deal with minor troubles. Points to which attention should be paid are in connection with brake linings and the clutch. A brake lining is needed that does not become useless the moment it gets wet, and the clutch, in just the same way, should be of such material that it does

not slip when wet. A further point is that headlights should be of the dipping and not of the fixed pattern. There is nothing material, perhaps, about any of these points, but—unless they do receive attention efforts to sell cars in the East will not be nearly as successful as they should be.

A Six-Cylinder Car.

One must not be regarded as unpatriotic in mentioning in these columns, the new 18-60 h.p. Donnet-Zedel, which is a French car, with a Weymann saloon, capable of seating six persons, and selling at a fairly low price. Unless we know exactly what our competitors are doing, we shall be at a disadvantage when trying to show the excellence of our own productions. The engine, which is of the six-cylinder type, of a bore and stroke of 70 and 110 m.m., respectively, has seven crankshaft bearings, and has forced lubrication, and there are four speeds. Cylinder and crank case are one casting, the head is detachable and side by side valves are fitted. The high tension generator is chain driven, the distributor is vertical above the head and is readily accessible, and the dynamo is driven directly off the forward end of the crankshaft. By means of two nuts the starter, which is built in, can be withdrawn for adjustment or repair, and the radiator, which is of the film type, can easily be drained. The inlet is of square sections with buffer ends and has four branches, and the exhaust manifold has five branches with a forward pipe connection, and the exhaust and inlet manifolds are in one casting. This is by no means a full description of this car, which is

designed and built in a workmanlike manner throughout, but enough has been said to show that it is a thoroughly sound engineering proposition.

The Commercial Vehicle Show.

The Dunlop Stand at the Commercial Vehicle Show which is to be held from November 17 to 26, will show commercial vehicle tyres of every type. There are the Dunlop Giant Pneumatics which have made the most astonishing progress within the last year or so, their efficiency on heavy vehicles being proved beyond all doubt by their adoption on the latest six-wheeled 11-ton London 'buses. Then there is the Dunlop Giant Balloon—a new development for passenger carrying vehicles; and the various tubes for these covers.

Dunlop solid tyres will, of course, be on view, as well as cushion tyres, which may be said to bridge the gap between solids and pneumatics. Industrial trolley tyres, Dunlop disc wheels, and a full range of accessories complete the show.

The old rubber manufacturing concern of Charles Macintosh and Co. Ltd., are showing their tyres, the chief exhibit being the renowned N.A.P. cushion tyres. These tyres are, of course unpuncturable, although giving a remarkable degree of cushioning effect, useful for carrying passengers or fragile goods. Macintosh solids for very heavy vehicles are also on view, together with N.A.P. equipment for Trojans.

THE MOTOR CYCLE SHOW.

The Cycle and Motor Cycle Exhibition, which opened at Olympia on Monday and will continue throughout this week, is in striking contrast to the Motor Show, and, of course, appeals to a different section of the community. Its appeal is probably more widespread than that of the Show, for every young man will want to visit it whether he owns a machine or merely dreams of possessing one in the future, while its importance may be gauged from the fact that while our motors have so far not made the desired headway in foreign markets, the British motor cycle is to be found everywhere abroad, where, owing to numerous successes in international contests and to the enterprising policy of the manufacturers it tends to be in increasing demand.

One of the features of the exhibition is the display of small-engined machines offering adequate road performance at an extremely low price. These little motor cycles are the safety-first machines of the road, more readily controllable than anything else on wheels, safe because of their low saddle positions, their stability, and their lightness. They will travel at any reasonable speed, will climb all hills with plenty to spare, and will operate with such facility of control that a child could ride them.

At the other extreme are powerful sidecars and three-wheeled cars, designed for road performances and extreme comfort. Some are specially adapted for sport, others for

the conveyance of family parties. The motor cycle is an all-purpose machine and Olympia shows it in its various forms. Between the two extremes are a bewildering collection of solo and passenger machines of all sizes and descriptions. Noticeable features indicating the general trend of design are the general adoption of saddle tanks, the further lowering of saddle positions, and the adequate silencing arrangements.

Motor cycling is growing, both as a sport and a pastime, and there are faster sports models at Olympia than at any previous show, and cheaper and more efficient touring mounts. The specifications of a sports mount become those of a touring mount in course of time, and it will be seen that overhead valves are largely used on touring machines. The tendency in sports models is to employ overhead camshafts, and these, in course of time, will become standard on the tourers. Generally speaking, there are very few drastic departures from convention so far as the engineering side of the motor cycle is concerned, but there are modifications which are also improvements. Improved braking and facilities for adjusting the brakes are noticeable. One very interesting feature of the Exhibition is the display of commercial sidecars. These handy little vehicles have proved their claim to recognition as the best of all units for parcel carrying and light load delivery.

One of the most interesting stands in the exhibition is that of Ariel Works, who show a wide and most attractive range of their well-known motor cycles and cycles. Five types of motor cycles are exhibited—a 5.5 h.p. side valve standard, a 5.5 h.p. side valve de luxe, a 5 h.p. o.h.v. standard, a 5 h.p. o.h.v. de luxe, and a 5 h.p. o.h.v. two-port super sports. A feature of the machines is the improved frame, which provides a particularly low riding position and thus reduces the risk of skidding. The 5.5 h.p. side valve engine, which has a bore of 86.4 m.m. by stroke 95 m.m. 557 c.c., is notable for its high power output, reliability, and cool running. The engine of the other three models has a bore of 81.8 m.m. by stroke 95 m.m. 497 c.c., and is capable of sustained speed combined with reliability. The Ariel motor cycles, which, it may be pointed out have very many notable successes to their credit in competitions, represent the highest standard that has been reached in the production of these machines, and their sterling qualities combined with their attractive appearance ensure a good demand for them here and in the overseas markets. The same may be said of the Ariel cycles, of which there is a wide range to meet all tastes and requirements.

Another interesting stand is that of the Raleigh Cycle Co., who show ten models of their motor cycles and a number of their cycles. The motor cycles range from the 1.74 h.p. model to the 4.98 h.p. model, and all the models have been redesigned. Features of the 1.74 h.p. model are a new frame and a three-speed gear-box, while the 2.48 h.p. de luxe provides a low riding position and has a three-speed gear-box and twin petrol tanks. It is almost unnecessary to refer to the cycle exhibits, and it must suffice to say that they, like the motor cycles, are fully up to the standard which has made a "Raleigh" a name to conjure with in the cycle and motor cycling world.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 26 :—

Egyptian Futures.—Sakel Contract.—Throughout the past week the chief feature of this market has been the steady undertone displayed; thus, during the earlier days' trading our level remained unaltered, in spite of continual weakness in the American departments. It is true that yesterday this attracted some scattered selling, with the result that prices were forced down at the lowest to 18.15d. for the January position; however, the decline was quickly regained owing to the sharp rebound in New York after the publication of the ginning figures. To-day, further strength has developed, with the result that closing prices show gains of 15 to 27 points for near and 12 lower to 14 higher for distant positions. With our contract continuing to run at a discount with Alexandria, we are not attracting any weight of pressure, either from the crop movement or outside sources, and it is to be noted that further purchases for shipment abroad have been made out of the local stock, owing to its relative cheapness as against offers of similar qualities coming to hand from Alexandria. Fairly heavy straddle and Continental selling of later summer months has completely altered positional differences, and we now find instead of the premium ruling hitherto for distant months they have been forced to a discount of 11 points with the January position. Trade reports from the fine count section continue to be of a satisfactory character, but we hesitate to say that spinners have shown any marked activity in their purchases of actual. It cannot be said, however, that the ruling conditions in the market have been favourable for any broadening out in the offtake, and a more settled outlook will have to obtain before we can anticipate the placing of business that is undoubtedly being held up at the present time. The Alexandria market continues to show firmness, and reports from there are to the effect that the outside demand has shown an improvement; also "bullish" spectators there have been encouraged by the publication of the Agricultural Syndicate's crop figure estimating a yield of only 2,200,000 kantars. Whilst we are not prepared to anticipate any decided movement in the market for the time being, we think that the possibilities are now leaning more strongly towards the "long" side, and, on this account, should the market develop an easing tendency, we would think that the opportunity should be taken to make conservative purchases.

Upper Contract.—Fluctuations in this market have approximated closely to the movements in values witnessed in the American contract. The undertone, however, continues to be rather heavy, and the prevailing tendency seems to incline towards liquidating earlier purchases and straddle reversing with the American market. Spinners in this country continue to purchase sparingly, but activities in other quarters appear to be making up for this, with the result that Alexandria is not feeling any lack of business. Fairly heavy tenders are expected when the November position matures, but we understand that one or two local houses, acting for American interests, are prepared to accept these, so that probably they will have little effect on the general outlook.

Egyptian Spot.—Conditions have ruled dull during the past week, particularly during the first few days, when our markets were distinctly poor and a general sagging tendency appeared to have set in. A slight fillip was received on Saturday following a "bullish" crop estimate issued by the Agricultural Syndicate, Alexandria. An improvement in the general inquiry followed, but prices failed to hold and apathy again set in until yesterday, when a sharp upturn in the American market resulted from the publication of the ginning figures. This improvement

was at once reflected in our Egyptian markets and a certain amount of trade was brought in; and prices reacted to practically the same level ruling at the commencement of the week. We are, of course, at a time of year when sheer weight of cotton is normally apt to depress prices in the absence of fresh "Bull" features. Apart from yesterday's ginning figures, we have had nothing lately to supply the requisite stimulus, with the result that, apart from some further purchases of Sakel and Upper for American account, which have taken place during the past few days, trade buying has once again degenerated into a hand-to-mouth affair.

Sakel has been in fair request up to about 22d. with, however, only moderate results. Uppers from 13½d. to 14½d. have been in good demand, but buyers appear loth to purchase anything that is not a palpable bargain, and here results have only been moderate. Pilon has been rather neglected, but a few inquiries for cotton from 15½d. to 16d. have been met with. The market for low cotton (4d. to 7d.) has been distinctly quieter, probably owing to the fact that stocks have now been thoroughly sifted.

At the beginning of the week the inquiry for Sudan Sakel was quite keen, but very little was available to meet the requirements of buyers. Stocks are now exhausted (except for the SSSSSS quality), but here and there a spinners' re-sale, or an odd lot of speculators' cotton, may still be found. The basis of these odd lots is steadily hardening. There can be little doubt that many consumers (who perhaps entered the market rather later than their competitors) have been disappointed by the sudden drying up of the source of supply and, looking ahead to next season's crop (due here about March), we can foresee something in the nature of a scramble for the early arrivals.

C.i.f. business has been of rather a patchy description,

but on the whole the slight improvement recently noted has probably been held. Forwardings to spinners for the week ending 21st inst. were returned as 2,259 bales Sudan and 3,482 bales Egyptian. Estimated sales, 1,500 bales Egyptian and 1,900 bales Sudan. Quotations of Sakel show an advance of 100 points for Extra Fine, and 5 points for Fine and Good. Other grades unchanged on the week. F.G.F. Sakel to-day, 19d. F.G.F. Upper to-day, 15d. F.G.F. Pilon to-day, 15.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 20, state :—

Since our last report the futures market has been steady and fluctuations small. The week's summary of price movements is as follows :—Sakellaridis : November, 36.90 dollars, 0.04 dollars up; January, 37.11 dollars, 0.02 dollars down; March, 37.40 dollars, 0.07 dollars up. Ashmouni : October, 37.90 dollars, 0.58 dollars down; December, 28.15 dollars, 0.45 dollars down; February, 28.47 dollars, 0.34 dollars down; April, 28.60 dollars, 0.35 dollars down.

Sakel.—The week has been a series of quiet markets, but the undertone has been good; the heavy drop in New York during the past few days has had hardly any effect on this market.

The chief reason of the strength of the market is to be found in the reversal of the straddles opened last week by some of the local operators; their operations last week reduced the difference between November Sakel and December Ashmouni to about 8 dollars, but the reversing of the straddle during the last few days has sent the difference out again to above 9 dollars. There has been some speculative buying on the belief that the demand for Sakel for Lancashire mills has improved; we can find no foundation for this belief, the demand remaining very much as it has been for many weeks past—not at all good.

Negotiations continue between the Soviet Delegation and the Government for the purchase of a part of the Government stock, but no purchase has yet been definitely concluded.

Uppers.—The fall of prices in America and the undoing of the straddles mentioned above has had its effect on the prices of this variety. An additional factor against the market is the continual mediocrity of the demand from abroad.

The week's receipts amount to 306,884 kantars, against exports 172,402 kantars; the stock in Alexandria stands at 27,19,240 kantars.

The official figures of arrivals and exports for the period September 1 to October 12 are as follows :—Arrivals : Sakellaridis, 385,723 kantars; Ashmouni and Zagora, 837,742 kantars; Pilon, 59,337 kantars; Various, 29,732 kantars; Scarto, 17,612 kantars; total, 1,330,146 kantars. Exports : Sakel, 237,686 kantars; Ashmouni, 286,226 kantars; Pilon, 24,446 kantars; Various, 15,386 kantars; total, 563,744 kantars.

Spot : During the week under review Minet el Bassal has been quieter, and a considerably smaller turnover has resulted. In some measure this is due to greatly decreased buying of Upper Egypt for stock by local houses, but spinners' demand remains very mediocre and no great enthusiasm is shown by the trade. Sales amount to about 18,700 bales, of which we estimate 6,700 bales Sakellaridis, 11,150 bales Ashmouni and Zagora, 600 bales Pilon, and 250 bales other varieties. On the spot, the better grades of Sakel are rather neglected and pressed for sale and may be bought at what seem to us very reasonable premiums, but there is some demand for Fully Good Fair and the grades below and these qualities are more or less well maintained as they are not yet showing in any great quantities. In Uppers the situation is much the same as for Sakel, as the greater part of the demand is for Fully

Good Fair and below. The first of the State Domains sales took place this week and the cotton brought excellent prices, though we did not consider the cotton very good compared with other years.

Sakellaridis : A very moderate business has transpired covering all grades. There is a fair demand for the medium qualities, and there is business in the Extra grades for Continental account at high premiums, but the grades for Fully Good Fair/Good up to Strict Good are rather neglected. Spot differences are unchanged for Fully Good Fair, but are unchanged for the better styles.

Pilon : Has been in rather less favour than last week and a fair trade only has resulted. Spot differences are, however, very steady and inclined to stiffen.

Other Growths : A fair business has been done in White at last week's rates. Several small lots of Nahla and Maarad have changed hands.

Crop, 1927 : Little cotton now remains in the fields, but the favourable weather which we have recently experienced has opened many of the top bolls and the late picking promises to be as good as last year, or even better in certain districts. The ginning yield of all varieties is lower than last year and the difference may be estimated, in general, at from 3 to 4 per cent.

Company Meeting.

ASSAM RAILWAYS AND TRADING COMPANY.

A Record Year.

The forty-seventh ordinary general meeting of the Assam Railways and Trading Company, Limited, was held on October 26 at Winchester House, Old Broad Street, E.C.

Sir Walter R. Lawrence, Bt., who presided, read the statement which had been prepared by Mr. George Turner, M.E. (Chairman of the company). During the course of that statement Mr. Turner mentioned that the accounts presented showed the best results yet published by the company.

Since the last meeting a good deal had happened, and he thought they were entitled to say that, so far as one could see, the rupee was practically stabilised at or about 1s. 6d. The auditors were of opinion that it was time a change was made, so this had been done. The actual effect was that by this alteration the profit on exchange was distributed over the different departments of the company in the correct proportions. But in the present accounts one effect was that the figures could not be compared with those of last year, which were converted at a different rate.

The past year had been, on the whole, one of increasing prosperity, and all departments showed an improved result as compared with the previous year. Taking the railway accounts, while the progress which they had anticipated had been fully realised, last year's figures did not really compare so unfavourably with the current year as was shown in statement No. 7. Actually, the difference between the two years was an improvement of about £13,000, which was very satisfactory.

The coaching and goods traffic showed a very substantial increase, while the increase in the expenditure was not more than one would expect from the greater amount of traffic dealt with. It was an encouraging feature that their profit had now reached 49.54 per cent. of their gross earnings, which was very near the ideal they were working up to. If they compared the present and past figures they found that their railway earnings now were just double what they were seven years ago, and this improvement had been realised with only a 38 per cent. increase in working expenses.

The actual amount they had available was £126,971. This was arrived at after making the same provision for the renewals and depreciations as they did last year—namely, £15,000, and adding their usual amount to fire insurance. The board recommended that they should write £12,000 off discount on debentures as a safeguard, £10,000 off the new collieries, and £5,000 off timber developments, and the payment of a final dividend of 7 per cent. on the "B" stock, making 12 per cent. for the year. This would leave £13,571 to carry forward.

The report was unanimously adopted.

The North British Locomotive Company, Ltd., have been awarded a contract for two 4-6-0 metre gauge engines and tenders for the Jamnagar-Dwarka Railway of India.

The total imports of bicycles into Egypt during 1926 amounted to 3,026, valued at £E12,018, as compared with 2,061, valued at £E9,294, in 1925.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Light Railway Materials.—Tenders are invited in respect of a contract for the supply of light railway materials, such as rails, sleepers, fishplates, crossings, trolley wheels, etc., required by the Main Drainage Department, Ministry of Public Works, Cairo, for the Gebel-el-Asfar Farm near Cairo. December 1. (D.O.T.)

Photoopic Papers.—The Superintendent of Stores, Saptieh, Cairo, invites tenders for the supply of photocop papers. November 17.

Brass Slide Valves.—The Superintendent of Stores, Saptieh, Cairo, invites tenders for the supply of 250 slide valves brass for engines. November 30.

Sewers.—Tenders are invited by the Ministry of Public Works for the supply, construction, and delivery to the Ministry in perfect working order of main branch sewers in Sharia El Azhar, Cairo, and subsidiary works. November 14. (D.O.T.)

Safes.—The Egyptian Ministry of Finance invites tenders for the supply of 100 small iron money safes, 18 in. by 12 in. by 11 in. December 1. (D.O.T.)

Signal Materials.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of mechanical signal materials. November 29.

Surgical and Medical Instruments.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of surgical and medical instruments. December 20.

Safes.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of iron safes required by the Direct Taxes Department. December 1.

THE SUDAN.

Electric Generating Set, Etc.—The Inspector-General, Egyptian Irrigation Service in the Sudan, Khartoum, invites tenders for the supply of : (1) One electric generating set and searchlight; (2) one petrol paraffin engine with reversing gear, stern tube, propeller and propeller shaft. November 27.

The Great Indian Peninsular Railway have given a contract to Braithwaite and Co., Ltd., Antrim, for eight girder bridge spans.

The Indian Stores Department have given an order for 1,500 yards of insulated cable to W. T. Henley's Telegraph Works Company, London.

Mr. Michael Seymour Spencer-Smith, a partner in Messrs. H. S. Lefèvre and Co., and a director of the Bank of England, has joined the Committee of the Ottoman Bank, in London.

The Roumanian Supreme Economic Council has decided to make the following reductions in the export duties: on live stock (horses excepted) by 50 per cent., making the duty on cattle 1,000 instead of 2,000 lei, that on pigs 150 instead of 300 lei, that on sheep 50 instead of 100 lei, and that on lambs 25 instead of 50 lei. The duty on grain is reduced to 3,500 lei, that on flour to 3,000 lei, and that on bran to 750 lei per wagon of 10 tons.

Notes of the Week.

The Anglo-Egyptian Negotiations.

Sarwat Pasha, Prime Minister of Egypt, has left London for Cairo on the conclusion of the extended conversations that he has had with Sir Austen Chamberlain on the subject of the future relations between Egypt and Great Britain. The object of these conversations, as is known, was to clear the ground for negotiations which it is hoped will result in a formal treaty regulating the respective positions of the two countries in their close contact with one another. Before these negotiations could be undertaken with any advantage to either side, it was necessary that both parties should be reassured in their own minds regarding a number of points which the last few years in Egypt have brought into prominence. Understanding, it may be said, was sought on basic principles rather than in respect of individual incidents which have continually cropped up to occupy the main attention of both countries. There is reason to believe that this goal of the conversations has been reached, and as soon as the Egyptian Government, in accordance with constitutional practice, is able to make the Egyptian Parliament and public sharers in the understanding the stage will be set for treaty negotiations—a happy state of affairs, to which the personality and statesmanship of the Egyptian Prime Minister have largely contributed.

The Macedonian Question.

The suggestion made in our issue of October 6, that the Macedonian situation called for a conference, at which Yugoslavs, Bulgarians, Greeks and Macedonians themselves should be represented, under a neutral Chairman, has been taken up with approval (as will be seen from a letter appearing elsewhere in this issue) by the National Committee of the Organisations of Macedonian Emigrants in Bulgaria. This body is, of course, entirely distinct from the Macedonian Revolutionary Organisation, which accepts responsibility for the outrages on Yugoslav territory. It must be inferred that the National Committee is under no illusions at this period regarding the possibility of an autonomous Macedonia, and is generally concerned to ameliorate the lot of those of its fellow-countrymen

who have suffered or are suffering disabilities or worse. Whether it has any influence with the Revolutionary Organisation we have no means of knowing; but it is obvious that no settlement would be of any value, unless it carried with it the agreement of the Macedonian Revolutionary Organisation, to be followed by its disbandment. The suggested conference would in no way encroach upon Yugoslav sovereignty. It might with advantage be convened by the Yugoslav Government itself, as definite proof to the world at large of the conciliatory nature of its policy. As things are, Yugoslavia is making it difficult for judgment not to go against her by default, because she makes no attempt to publish her answer to the Macedonian allegations. It is unwise, however, to allow too large a mass of uncontradicted accusation to be piled up against the Yugoslav régime in South Serbia. There is no reason why local officials who act beyond their instructions should be shielded by the Central Government, to the grave prejudice of Yugoslavia. It is known that recently the Yugoslav Government has been at pains to attract a better type of official to South Serbia and has made several wise appointments; on the other hand a recent article in the *Hrvatski List* suggests that even in Yugoslavia itself the failure to pay more attention to the situation in that part of the Kingdom is held to be prejudicial to the best interests of the country.

A Difficult Problem

That the Macedonian problem is a difficult one for Yugoslavia is readily admitted in Great Britain. The task of governing an unwilling community is apt to test peoples with far more administrative experience than the Yugoslavs and it is, unfortunately, not one in which the experience of others is considered to be of any benefit. If this were not the case, Yugoslavia would have a variety of precedents to choose from. From South Africa she could learn the value of making no attempt to suppress a language; from Ireland she could realize how what is apparently the most hopeless situation yields to a conference with good will all round. Only harm can be done by shutting one's eyes to actual conditions. In the obituary notices of the late General Kovatchevitch it was

stated that he was the head of an organisation of National propaganda in South Serbia. That such a body should be needed in any part of Yugoslavia and should have at its head an officer of high rank in the regular army does not endorse the contention that there is no Macedonian question. Again the formation of bands of irregulars to cope with the threatened *komitaji* attacks is of doubtful expediency in a region where only a well disciplined force should be allowed to operate, in view of its relations with the local population. The desire to improve conditions in South Serbia, however, does prevail. A recrudescence of outrages is not calculated to assist the process; but it is also certain that improved relations between Yugoslavia and Bulgaria will not alone bring about the millenium in Macedonia. The Macedonians themselves must be a party to any agreement that aims at a betterment of their conditions.

Lake Tana.

After Mayor Thompson of Chicago anything may happen in America, and perhaps an attempt on the part of an American engineering company to cut in between Egypt and the Sudan and their water supply constitutes a "good second," without the humour attaching to "Big Bill." For the moment there is no need to take either the Mayor or the J. G. White Engineering Corporation too seriously. Following upon the discovery of Great Britain by the former, the latter has discovered Abyssinia and the Blue Nile, and nothing would appear more natural to pioneers in geography than the proposal to build a dam at Lake Tana to regulate the waters of one arm of the river that constitutes the life-blood of Egypt and the Sudan. Unfortunately for the American project, however, the question of the regulation of the head waters of the Blue Nile is governed by a treaty of long standing between Abyssinia and Great Britain by which the Abyssinian Government has bound itself not to construct nor to allow to be constructed any work across the river or Lake Tana which would arrest the flow of the waters, except in agreement with the Governments of Great Britain and the Sudan. It is only fair to the American Corporation to suppose that, when it first entered upon the negotiations, it had never heard of the Anglo-Abyssinian Treaty of May 1902, and that it was not considered by the Abyssinian representative to be his duty to enlighten the Corporation regarding certain little obstacles that it would be the latter's business to overcome. The event proves, however, that the wish of the White Engineering Corporation was father to the thought. It was approached on the subject of constructing a dam at Lake Tana, but not with any idea of a firm contract, without reference to Abyssinia's treaty obligations.

Abyssinia's Part.

One upshot of this incident is likely to be the appointment of an American representative at Addis Ababa. Since the death before the War of their Consul the United States have not been represented at Addis Ababa, but have had the interests of the few Americans visiting Abyssinia looked after by the British Legation. Recently, however, efforts have been made on both sides to bring the United States and Abyssinia into closer relationship. American capitalists have been invited to pay attention to "an almost virgin field," and the visit of the Abyssinian representative, Dr. Warnegh Martin, to the United States must be connected with this movement. It is unfortunate that the first business agreement to materialise should step on prohibited ground. The enterprise of the American engineering company, however, is to be welcomed, as it has revealed the fact that the Abyssinian Government, which must have been aware of the way in which Dr. Warnegh Martin was spending his time in the United States, has abandoned its objections to the construction of a dam at Lake Tana. Hitherto it has always felt unable to agree to the scheme, which the enlightened Regent, Ras Tafari, has supported, owing to the risk of antagonising Church and local interests, which affected to be prejudiced by such a project. The

ground would seem now to have been cleared for agreement between Great Britain and Abyssinia for the carrying out of an undertaking, the details of which have long been decided upon. British diplomacy, it is to be hoped, will know how to take advantage of this change of attitude at Addis Ababa.

Greece and Her Antiquities.

A change from the discussion of politics and Pangelism has been provided in Athens by the announcement that the police have detected the First Secretary of the Belgian Legation in an attempt to smuggle a number of antiquities out of the country without permission. The prohibition of the export of antiquities from Greece is a necessary measure in the interests of the Greek museums but is naturally irksome to the foreign would-be collector. Unless the law has been altered in recent years, an exception is made for antiquities which the authorities do not require for national collections; consequently it is possible to purchase objects of archæological interest—genuine as well as faked—in shops and to export them. To the ordinary souvenir-accumulator the latitude thus provided by the law is adequate, and if it should be a case of a special "find," there is—provided that it is not too big—always a possibility of forgetfulness on the part of the traveller, who has overlooked its presence in his luggage. The Belgian First Secretary would seem to have been more ambitious, unless he intended to qualify as a benefactor to a Brussels museum. A statuette (presumably not from Tanagra), some marble heads and portions of inscribed tombstones—three cases in all—would have required an Emperor's baggage train in order to escape notice; but accompanying humbler mortals, even if First Secretaries, they could hardly fail to arouse the suspicions of watchful Customs authorities. The diplomatist is said to have left them to the tender mercies of the Piræus police and to have discreetly continued his journey. It may be possible therefore, if the exchange of correspondence between the Greek authorities and the Belgian Legation is not too acrimonious, to establish the fact that the antiquities in question were such as the Greek Ephors would have been delighted to pass on to Belgium, and that the First Secretary merely committed an error of judgment in not having secured the necessary permit.

Political Changes in Albania.

The reconstruction of the Albanian Cabinet would not in itself be a matter of much significance under existing conditions in the country; but it is of interest to find that the changes affect just those Ministers of whom it might be said that they could be the most easily spared. One of the retiring Ministers is Faizi Bey Alizoti, who held the portfolio of Finance and was identified with what was regarded by the majority of Albanians as an excessively Italian orientation in his financial policy. Ahmed Bey Zogu has experienced considerable difficulty in placing his Portfolio of Finance; and it is to be hoped that the new appointment will prove successful. In other directions a tendency to place at least a mild brake on Italian penetration in Albania is noticeable. If the Yugoslav Government were well advised, it would make sure not only that its own attitude towards Albania at this stage should be unexceptionable, but also that no Yugoslav subject should be allowed to disturb or threaten the harmonious relations between the two countries. The Albanians are just as anxious as any other Balkan country to stand on their own feet; they received no encouragement in the first instance from Yugoslavia, and considered themselves obliged to turn to Italy. Italian patronage has proved to be of rather a heavy and depressing character, and Albania is looking around to see how she can gain a little relief from the incubus. She does not want Yugoslavia to exchange places with Italy; but she would like to establish a condition of friendly solidarity—on an equal footing—with her neighbours. If Yugoslavia can meet her on this point, the risk that the Balkan Peninsula is supposed to be running from Italian penetration will be found to be considerably diminished.

The Passing of a Crisis.

Unless the trial of M. Manoilescu, the former Under-Secretary of State, who was arrested for carrying letters from Prince Carol to political leaders in Roumania, produces additional evidence of a plot to place the Prince on the throne in the place of merely a scheme to work for a revulsion of feeling in his favour, the Roumanian Government may find that the machinery it has set in motion has been on the lines of employing a steam-hammer to crack a walnut. From the published extracts of M. Manoilescu's diary it does not appear that the "plot" had advanced very far. In fact he seems to have been the only "conspirator" and was mainly concerned to rope in others—always using "political means, not direct revolutionary methods," in the words of the diary. That he acted wrongly and exposed himself to a charge of working against the Constitution goes without saying. The outside world, however, has little interest in M. Manoilescu; what troubled it was that Roumania should be supposed to be on the verge of a revolution, calling for the exercise of a drastic censorship and the proclamation of martial law. The event has shown that there was little need for either, as far as can be judged from the published evidence. On the other hand the measures employed give rise to fears among those who wish to see Roumania quietly and peaceably governed under a stable Government such as M. Bratianu's promised to be, lest national exasperation will provoke discontent and unrest. It is announced that the censorship on the outgoing messages is to be abolished. The pity is that it was ever imposed.

The Turkish Census.

If the provisional returns of the Turkish census, which was taken on October 28, are confirmed by the final figures, Turkey will have refuted her critics once again. The consensus of foreign estimates in recent years has placed the population of Turkey at between six and seven million. According to the new census the total number of inhabitants is 13,750,000, of whom 810,000 are in Constantinople. This figure substantiates the return of the Ministry of the Interior in 1924, when the population was shown as 12,426,597. It gives the Republic a population density of roughly 50 to the square mile, as compared with 125 to 130 in the case of Bulgaria and Greece. On the basis of the last Budget expenditure works out at 14 Turkish pounds (say, £1 10s. od.) per head of the population, while that of Bulgaria is over £2 and that of Greece £3 10s. od. These financial comparisons, however, when converted to pounds sterling, are apt to be vitiated by disparity of local standards. The Greek and Bulgarian expenditure figures, moreover, include Debt payments, which are for the most part omitted from the Turkish Budget. In all the circumstances the Angora authorities will, no doubt, be encouraged by the census to hope for bigger revenue returns in the future.

Zionist Emigration.

Not yet is the retrograde tendency in Zionist immigration into Palestine stemmed; for yet another month the emigrants have outnumbered the immigrants. The official returns for September show 272 Jews as having entered the Holy Land, and 465 Jews as having left it. There is no gainsaying the seriousness of these figures, although it is possible to exaggerate their importance. It is very important at this anxious phase in the history of the Zionist movement to distinguish between the features of fundamental importance and those of but transient interest. We note that Dr. Weizmann, who has just returned from Palestine, places in the first category the purchase of land by the Jewish National Fund and the erection of electrical power by means of the Rutenberg scheme, and in the second category, such questions as customs duties, the restriction of immigration, and the reduction in the Zionist schools budget. The President of the Zionist Organisation, indeed, went so far as to say that it was precisely because the Jewish

community did not distinguish between its desires and the actual possibilities of the situation that the crisis in Palestine had arisen. He would, however, probably be the first to admit that it is easier from a distance than in Palestine itself to sort out the essential from the fleeting. But there is one aspect of this problem which has partly escaped notice. It is well-known that the system of the "dole" had to be introduced to deal with the problem of unemployment. This system has been fortified—for that is what it really amounts to—by the constant emigration of Zionists. In other words, the problem of unemployment is gradually finding its own solution. To suppose, however, that this process is profoundly affecting the basic life of Palestine is misleading, and the title which we notice that *The Times* gave to the latest immigration and emigration figures—"The Palestine Population" is to be deplored. Actually, this unemployment is the inevitable result of an artificial movement, and vitally affects only the urban Zionists and Zionist officials, except, of course, in so far as Zionist emigration is bound to affect adversely the Jerusalem Exchequer.

The British Government and Zionists.

It was quite evident, at the time of the signing of the Weizmann-Marshall Agreement for the extension of the Jewish Agency, that the introduction to that Agency of American non-Zionists would be accompanied by more frank and comprehensive criticism of the British Government in its relation to the construction of a Jewish National Home in Palestine. Americans who look at Palestine from a distance, or, alternatively, on the spot with *idée fixe*, are apt to imagine that the sole or the main task of Great Britain in Palestine is the construction of a Jewish National Home. Naturally, Dr. Weizmann, who shortly goes to America in connexion with the extension of the Jewish Agency, is very well aware of this critical attitude, and all his tact will probably be needed to temper it. At a notable Conference of the United Palestine Appeal of America, held at Cleveland on October 31, the British Government was strongly criticised and appealed to to change its policy in Palestine in the direction of facilitating the Jewish work in the country. Now it cannot be too often emphasised—for although the more intelligent Jews have already perceived it, there remain a large number who have not—that the main job of the British Government in relation to the Zionists is already accomplished. The political

THE PROBLEM OF MACEDONIA.

The recrudescence of outrages in South Serbia has served to bring into prominence again the Macedonian problem. There can be no doubt that a considerable section of public opinion in Great Britain is seriously exercised in mind over the question, without being in any way actuated by prejudice. It forms its judgment on the evidence as presented to it, and it is not its fault if the versions that reach it are almost exclusively Macedonian in origin. These, it goes without saying, are of the familiar type. Macedonians—to use the name adopted by the people concerned—are reported as being subjected to every form of persecution, to imprisonment, torture and murder at the hands of Serbs or Yugoslavs; and such circumstantial evidence is forthcoming that it is difficult for Englishmen to believe that the allegations are not true in practically every particular. Inasmuch as appeal is made to Great Britain to intervene in a difficult and delicate matter, it is incumbent upon Britons to approach the subject in a judicial spirit. Judgment can, obviously, not be formed on the evidence of one side alone, and, even if silence on the other side suggests that the accusations are embarrassing, it is the duty of the judge to try to find out whether there are any extenuating circumstances to be urged on behalf of the accused. The first thing that strikes the impartial observer is that nothing is heard of any acts setting the horrors in motion. The impression conveyed by the accusations is that a peace-loving law-abiding population in South Serbia suddenly has the even tenour of a quiet life disturbed by vicious attack on the part of officials or is being steadily exterminated by relentless and systematic persecution. For this picture to be accurate in every detail it is necessary to infer that every member of the population in South Serbia which calls itself Macedonian is an angel in human guise, and that the majority of the Serbs, certainly all the Yugoslav officials, are not only devils but fools as well. It calls for very little acquaintance with the Balkans for the most simple-minded to realize that the two parties must move from these extreme positions much nearer to a common meeting-ground, if the facts of the case are to be envisaged. No one will pretend—least of all the Yugoslavs themselves—that the Yugoslav administration leaves nothing to be desired. Given election excesses practised on victims whose crime, with or without additional provocation, is mainly that they belong to a different political party, it is not difficult to suppose that rough-handed treatment will be meted out to those who are not backward in emphasising racial antagonism. On the other hand the "Macedonians" would be less than human, if they did not react to the propaganda and other forms of encouragement from without, urging them to assert their racial distinction.

With the ground cleared of sympathies and prejudices based on incomplete evidence, we may proceed to examine the cases of the two disputants, apart from the occurrence of outrages or excesses on one side or the other. The Macedonian claim is that the Macedonians constitute a separate nationality and should for this reason form an autonomous State, which would eventually occupy its own place in some grouping of Balkan countries. The only attempt officially made to indicate the Macedonia contemplated by the Macedonians is so exaggerated in its demands that it cannot be regarded as practical politics; it has in any case been stultified by the radical change in the composition of the population now inhabiting Greek "Macedonia." When the map of the Balkans was being re-drawn there was much to be said for an autonomous Macedonia, and this solution was constantly urged in these columns. To-day it may be regarded as out of the question that the Great Powers or the League of Nations should attempt to enforce this solution. For one reason, an autonomous Macedonia holds out no prospect either of a unified people, in view of the feuds in their ranks, or a State able to fend for itself financially, politically or in the economic sphere; and its tutelage would entail in all probability greater complications than those which it is now sought to avoid. On the other hand the Macedonians are entitled to live their own lives with as much freedom and scope for development as the minorities in other countries; in so far, therefore, as they claim in this respect to be harshly and unjustly thwarted, their appeal should not be allowed to fall on deaf ears.

On the subject of the treatment of Macedonians in South Serbia there is inevitably a conflict between the Macedonian and the Yugoslav statements. The Yugoslavs contend that, with only slight rectifications on the Bulgarian side, their frontiers are, so far as Macedonia is concerned, those with which the Serbs entered the Great War, and these they are prepared to defend against all comers. They claim to be anxious to have peace and contentment in South Serbia, and to this end would like to meet all reasonable Macedonian demands. No Government, however, it is urged, can treat with an organisation that so far proclaims its irreconcilability as to style itself "Revolutionary." On the subject of the régime in South Serbia the Belgrade Government would, it is claimed, be prepared to treat with the actual inhabitants; but it will not tolerate dictation at the hands of those who have left their native land and have become domiciled in Bulgaria. In regard to actual conditions in the districts in question it is pointed out that the whole of Yugoslavia still labours under difficulties arising out of the War, and that education can be given in the Macedonian dialect only when Macedonians have been trained as teachers. In this connexion it is contended that there could be no question of admitting teachers or books that would disseminate Bulgarian propaganda and so keep the country permanently in a state of unrest. The Yugoslavs believe that by raising the economic prosperity and cultural standard of the population they can bring about peace and contentment; but that the work is being deliberately hindered by those who do not want to see settled conditions in South Serbia, whose aim is avowedly revolutionary. In all the circumstances there would seem to be a case for a round-table conference at which the disputants' points of view could be made clear. An essential preliminary to such a conference would be that the campaign of outrages should be definitely "called off." In settling the Irish question the British Government was broad-minded enough to negotiate with the "Gunmen"; but if the Yugoslav Government is unable to meet M. Protogueroff and his colleagues, these latter might be persuaded to be represented by others, such as the National Committee of Macedonian Emigrants in Bulgaria from whom we publish a letter on another page. An autonomous Macedonia might have to be outside the terms of reference; but if in other respects peace and contentment were the aim of all the parties, the conference, under whatever ægis it may be summoned, could be provocative only of good.

The Near and Middle East*

From Our Own Correspondents.

Jerusalem, October 29.

Dr. Weizmann's Visit.

Periodically Dr. Weizmann visits Palestine in the course of his world-wide tours on behalf of the Zionist Organisation. He has just left us after a month's stay, during which time even his most astonishing patience and diplomacy must have been drawn upon to exhaustion. It seems to be characteristic of Palestinian Jewry to be either at the extreme and noisy limits of confidence or of depression—uncomfortable material for a leader to handle. Thus though, in the absolute sense, the Zionist moral and material position in Palestine has progressively strengthened and is now more firmly entrenched than ever before, yet an accumulation of minor setbacks, or, rather, applications of the emergency brakes, had reduced local Jewry to a curious pitch of hysteria which the innocent passer-by might well suppose to stand for the final wrecking of Zionist hope.

Zionist Troubles.

The sum total of local Zionist troubles certainly makes a formidable display if isolated from the setting of actual and solid and continuous achievement. Thus we find Jewish emigrants (almost all of them recent settlers) three times as numerous (according to the official figures for August) as immigrants; rigid restriction of Jewish immigration applied by the Administration; a steady succession of Jewish bankruptcies; certain large industries (such as the Delphiner silk factory) cutting their losses and leaving the country; the levying of certain customs between Palestine and Syria fatal (so it is alleged) to certain young Jewish industries; protracted unemployment in the larger urban centres with the accompaniment of the dole system. Still more upsetting to local feelings has been the heavy reduction in the Zionist education budget; worse still, the inability to continue the existing rate of unemployment dole from funds allotted for that purpose; and, what seems to be hurting most of all, the appointment by the recent Basle Congress of a new Palestine Zionist Executive wholly (so the bulk of the local Jewry seemed to believe) foreign in language, thought and outlook to the *Yishub* (i.e., the Jewish homeland as so far built up) and utterly antipathetic to its democratic ideals.

It does seem a heavy adverse balance. But each item has its importance or significance grossly exaggerated or distorted owing to the nature of the local Jewish organism which suffers from an excessive articulateness, too many newspapers, too many organised societies for the development of internal heat, and a morbid tendency to mistake a heatrash for a symptom of malignant fever. No one can possibly envy Dr. Weizmann his task, nor can anyone deny his consummate ability in reducing the general social temperature and restoring a better sense of proportion.

Yet even so the local executive are left with quite sufficient problems on their hands; their probable salvation lies in the fact that they are not (as has been the case with

previous more representative executives) likely to generate too much heat among themselves. They have still to win the sympathy and approval of the *Yishub*; but the latter are not likely to be ungrateful at the spectacle of such a one as Mr. Harry Sacher sacrificing his own highly successful professional practice and, unpaid, devoting his skill to the straightening out of the temporary tangles.

The New Currency.

This coming week we are to watch the interesting process of changing over from the Egyptian to a Palestinian currency based on the pound sterling. Even in spite of the certain consequent reduction of the cost of living by two and a half per cent., the local Arab Press is seizing the opportunity for protests (a) against "the high handed action of the Government in effecting so radical a change without consulting the people," and (b) at the innocent Arabs (even the independent sons of Transjordan) being compelled to handle a strange new coinage defiled with "the mark of the beast," to wit, words in Hebrew characters. The most curious protest of all is that of certain Arabs boasting bank balances, who have written to their bank to insist that the total of their deposit shall not be translated into terms of Palestinian currency!

A fortnight ago the Government published broadcast handbills explaining and illustrating the new coinage. The general verdict seems to be that in appearance the new coins are even worse than the recently issued Palestinian stamps. The type used on certain coins—a seven-leaved sprig of olive—is construed (by the gloomier Arab die-hard) as a scarcely veiled representation of the Jewish seven-branched candlestick, and a sinister significance is read into the fact that the new coinage, Hebrew inscribed, is given currency on the very eve of the tenth anniversary of the Balfour Declaration. On the other side Jewish elation at the first Hebrew inscribed coins since Barkokhba is damped by the unpleasing general effect which (according to one opinion) "would hardly do credit to the least civilized African tribe."

Cairo, October 29.

Preparations for the King's Return.

Preparations for the reception of King Fuad on his return from his European tour are proceeding apace, and they promise to be almost grandiose. The Municipality of Alexandria has voted a large sum of money for the occasion. Part will be devoted to the erection of a hospital in memory of the Royal visit to Europe and the

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

balance to illuminating the city and providing for a special reception. In addition a committee of notables has been formed under the presidency of Prince Omar Tussoun to draw up a special programme, one item of which is to be a banquet on the night of His Majesty's arrival. The King has already signified his intention to attend this banquet, which is unprecedented. In Cairo a committee of notables has been formed, and with the approval of the Governor has prepared a programme which includes the erection of several triumphal arches and the illumination of the route from the station to Abdin Palace, and thence to the river bank, where a great reception will be held. Altogether there is a determination not to let this occasion pass without giving expression to the pleasure which has been felt at the honour done to the King and through him to the Egyptian nation by the several countries which he has visited this summer; and the element headed by certain Wafdists, who have worked hard to prevent any such demonstration, has received a check, which in the circumstances can be regarded as significant.

Public Security.

This week there took place the first meeting of the commission appointed by the Minister for the Interior to deal with the grave question of the organisation of public security in the country. The commission has as President Aly Gamal Eddine Pasha, Under-Secretary to the Interior and its members include, Kaisy Pasha, Director-General of Public Security, Mr. A. W. Keown Boyd, Director-General, European Department of the Interior, Taher Pasha Noor, the Procureur-Général, Lewa Palmer Pasha, the Deputy Inspector-General of the Egyptian Army, and one of the senior Mudirs. Its attributions are to examine and make recommendations in regard to the present police organisation so as to permit of the separation of the judicial from the executive police, and to the Police School, so that it may produce officers capable of more effectively executing the duties of judicial police; to examine the possibility of reforming the *ghaffir* system by recruiting from the army and of amending the present executive powers of the Omdas so that they may render more effective service to public security; and to revise the law regulating suspects and vagrants and devise an identity system similar to that in vogue in European countries.

The Egyptian Government is to be commended on this step, which is, in fact, long overdue, for the state of public security has been steadily deteriorating, particularly during the past five or six years, and at present in so far as the provinces are concerned it does not exist at all. The cause is in part the fact that the organisation has not been kept abreast of the development in the country and that the personnel is in great measure not up to the standard required. At the same time one of

the fundamental causes is the loss of authority of the provincial authorities—due in part to the fact that there is no longer the close supervision by inspectors which existed up to a few years ago, but in great measure to the intervention of deputies and senators.

Since the new Parliament came into existence four years ago the situation in this respect has become almost intolerable for any official who wanted to do his duty. Members of Parliament have without the slightest compunction used their position in order to interfere with the proper course of justice or the enforcement of regulations when the application of the law affected their own interests or those of their friends; and as they have acquired the habit of ventilating their slightest grievance in the Chamber the result has been that the Mudirs and Mamurs have come completely under the domination of the deputies, who have for all practical purposes acquired the authority which the former should exercise and enjoy. Until some radical change is made in the relations of deputies to the local authorities and in the attitude of Parliament towards the executive, it is doubtful whether any re-organisation of the services connected with public security will have the desired effect of improving the conditions in this respect in the provinces where crime has latterly shown an alarming increase.

Egypt's Commercial Treaties.

The French Government has just renewed its commercial treaty with Egypt for a further year with faculty for its automatic extension beyond that until either side denounce it. The reason that such a short period has been chosen is that the Egyptian Government is seeking the earliest opportunity for revising its customs tariff. This will not occur until 1930 when the treaty with Italy expires. It is, therefore, renewing all the other treaties as they fall in, in such manner that their final expiry will coincide with the negotiations for the renewal of the Italian treaty. Meanwhile steps are being taken to draw up a tariff which, while affording protection for such local industries as need encouragement, will also provide the additional revenue of which the Egyptian Government will be in need in the very near future for the various development schemes which have either been embarked upon or are about to be started. For the elaboration of the tariff a British expert, Mr. P. Lamontagne, Canadian Trade Commissioner in Brussels, and a Frenchman, whose name is not yet known, have been selected and they will start work very shortly. It is understood that the Egyptian Government contemplates raising the *ad valorem* rate on imports generally from 8 to 12½ per cent. and introducing a system of specific tariffs with minima and maxima rates.

Mr. Arthur Wiggin.

It has been with sincere regret that we have all learned of the transfer of Mr. Arthur Wiggin, the First Secretary at the Residency, to the corresponding post in Rome. Mr. Wiggin has done excellent work during the past three eventful and busy years, and he will be sorely missed, both by his colleagues on the staff, and by the outside public, particularly by the foreign correspondents who will always gratefully remember the unfailing courtesy and assistance they received at his hands. Mr. Wiggin had already considerably overstayed his time at the Residency and should have left us some two years ago. He remained as it was found difficult to spare him from here. But his transfer could not be much longer delayed, and Rome is to be congratulated on its acquisition not only of its new First Secretary, but also of his charming wife who had gained for herself a niche in the hearts of all the communities here.

Felix Powell Bey.

An old familiar figure has disappeared in Felix Powell Bey who has died suddenly in Alexandria. No Englishman was better known than he, none more respected and liked. He was one of the best type of Englishmen this

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

CHIEF ADMINISTRATION
7, CHANCERY LANE, LONDON, ENG.

country has known. Keen on his job, the model of integrity, ever ready to take up the fight for justice, ever ready to lend a hand to any worthy cause. A staunch friend and an admirable companion, he will be sorely missed wherever Englishmen congregate in this country, and the memory of his many kind acts and of his humorous personality will long remain with those who were privileged either to know him or to be assisted by him.

Belgrade, October 28.

Party Politics.

The Coalition Government still remains intact, and a measure of confidence is now felt in certain political circles that, although this Government cannot possibly remain long in power in its present form, it has at least ensured its safety for the next month or two.

During the last week all attention has been concentrated on the crisis in the Democrat Club. Dr. Davidovitch had resigned, but his resignation had not been accepted; the Democrat Ministers refused to give way in the slightest from their position that the Democratic Union must remain, for the time being at least, in the Coalition; M. Raditch, M. Pribitchevitch and M. Yovanovitch had sent a letter to the Democratic Union inviting them to join the Democratic bloc Club about to be formed and already assured of the support of the Croatian Peasant Party, the Independent Democrats and the Serbian Agrarian Party, and Dr. Davidovitch was reported to be in favour of accepting this offer, which was, however, strongly opposed by the Democrat Ministers and certain other elements in the Club, those who distrusted M. Raditch and those who distrusted M. Pribitchevitch. All these matters had to be dealt with at the meeting of the Democratic Union on October 25, and it seemed certain that the Club must split and possibly the Coalition Government fall. But, as so often happens in Balkan lands, the crisis just fizzled out. The Democrat Club passed a unanimous vote of confidence in Dr. Davidovitch and in the Democrat Ministers as well, and decided that for the time being they must remain in the Coalition but gave Dr. Davidovitch permission to investigate the offer of the new bloc. Nothing was settled.

The Radicals who supported M. Voukitchevitch most strongly and optimistically accepted this decision of the Democrats as a sign of the stability of the Coalition. But many Radicals are dissatisfied with it, for they point out that, if the Democrats are loyally to support the Coalition, there is no need for them to examine further the offer of the Democrat bloc. Moreover, so long as Dr. Davidovitch, who is strongly opposed to M. Voukitchevitch retains the confidence of the Democratic Union, then M. Voukitchevitch's friends cannot trust it. There would seem also to be growing dissatisfaction in the Radical ranks owing to the Premier's refusal to consult the Club on matters of current policy.

The Croatian Peasant Party has chosen this time to launch a strong attack on M. Voukitchevitch, holding him personally responsible for election-time abuses, in the hope of winning over the Democrats and strengthening the tendency to dissatisfaction in the Radical Club.

The situation is still most involved and among Radicals and Democrats alike there are a growing disposition to favour the formation of some sort of wider Concentration Government, a tendency towards admission that the pre-

sent coalition is not the strong Government capable of carrying through its programme of urgent legislation which is essential to the well being of the country, and therefore a desire to make changes calculated to create such a Government.

This morning to add to the difficulties of the situation M. Bogdan Markovitch, Minister of Finance, who was specially placed in that position as an expert to deal with the questions of War Debts and of economy and who has successfully settled the War Debts to Britain on mutually favourable terms, resigned. It seems that he cannot win the support of his fellow Ministers for a policy of rigid economy beginning with the reduction of the salaries of Ministers and the allowances of Members of Parliament. There have been differences too with the Minister of Communications, who objected to having his credits for the development of the railway system cut down and his project for a loan for this purpose rejected.

The Bulgarian Frontier.

Despite the passing by the Sobranje of the Government's proposal for the declaration of martial law in the Petritch and Kustendil districts, hostile demonstrations, fortunately not very severe in nature, continue to take place, as when on the 23rd inst, shots were fired and rockets sent up near Gradska, a village some ten kilometres from Zayetchar. It would appear also that *trojkas* have been sent over with the intention of blowing up State munition depots and in the last week or so attacks have been made, unsuccessfully, to damage the military arsenals near Zayetchar, Pozarevatz and Kraguyevatz. The continuance of these incidents tends to weaken faith in the Bulgarian Government's sincerity and to strengthen the belief that the declaration of martial law was only a bluff to please the Powers. To-day's *Politika* recalls the statement of an Opposition member during the debate in the Sobranje to the effect that while there was really martial law throughout Bulgaria although it had not been declared, it did not exist in those very provinces where it was reported to have been declared.

Montenegro.

News from Montenegro shows the plight of that barren, poverty-stricken district to be worse this year than ever. The drought which affected to some extent the whole of the country was infinitely worse in its effect on this mountainous, limestone region and in many cases the peasants had to go twenty to thirty kilometres to get drinking water and all crops were dried up completely. A deputation has been sent to Belgrade to ask for food and for work to be provided to enable the people to earn their living until the spring. Promises have been given that help shall be sent and all sorts of schemes for providing work which shall also tend to make such need less likely in the future are being investigated. One of the most favoured of these is the draining of the lake of Scutari which would give much additional, fertile land and enormous water power. But for this the consent of the Albanian Government must also be won, and that is difficult, owing to the present instability of that Government and its not too friendly attitude to Yugoslavia.

A Train Accident.

It was most fortunate that the train which fell from a bridge between Mostar and Sarajevo was a goods train and that, despite the great material damage done, only two human lives were lost. Greatly exaggerated reports of the loss of life seem to have been circulated in the European Press.

A Treaty of Commerce and Navigation between Greece and Yugoslavia was signed in Athens at November 2.

The first of a series of five Tuesday addresses at the church of St. Stephen Walbrook, E.C., in connexion with the "World Call to the Church" will be given on November 15, at 5.30 p.m., when the Rev. H. D. Hooper will speak on "Africa." Subsequent topics and speeches will be "Moslem World," the Rev. W. Wilson Cash; "Far East," Mr. J. Gurney Barclay; "India," the Rev. E. F. E. Wigram; and "Colonies," the Rev. G. F. Trench.

SINAI.

Lt. Colonel A. C. Parker lectured to the Central Asian Society on November 2 upon "Sinai." The lecture, which was delivered in the Room of the Royal Society, Burlington House, was presided over by Lord Allenby, who explained that Colonel Parker knew Sinai better than any living man and that for a long time his word was law among the inhabitants.

The lecturer explained that before the War a lecture on Sinai would have been a somewhat simpler undertaking. Then few people knew anything about Sinai except what they had read in the Bible, and still fewer had visited it. That had been changed and great numbers of men passed through the northern part on their way to Palestine under Lord Allenby. Travelling by ship down the Gulf of Suez before the War a lady pointed out to him the mountains of Sinai, and inquired whether she was correct in thinking that it was part of Persia! As a contrast, in 1925, passing through the Suez Canal, a gentleman, who confessed that he had never himself been in Sinai, told Colonel Parker more about it in ten minutes than he had learned in fifteen years of residence there!

Sinai was, he said, about 150 miles across from east to west, and well over 200 miles from the Mediterranean to the southernmost point, Ras Muhammad. Roughly, therefore, it covered an area of more than 20,000 square miles. The population, including the Towns of El Arish (7,000) and Tor (1,200), was probably not much more than 20,000-25,000. The country could be divided into two main areas, the southern triangle between the gulfs of Suez and Aqaba, composed almost entirely of lofty granite mountains of wonderful colours and shapes of a maximum height of 8,500 feet, separated by gravelly dry water-courses, and the northern rectangle about 120 miles deep from north to south, of limestone plains sloping down to the Mediterranean and draining almost entirely into the Wadi El Arish (the River of Egypt of the Bible). Isolated blocks of hills rose from it. And on the west along the Suez Canal, and on the north along the Mediterranean, lay belts of sand.

The tribes were divided in the same way in those two areas into two distinct groups.

The lecturer first made acquaintance with the Peninsula in 1906 at the time of what was called "The Aqaba Incident." (Aqaba, he said, was a place which during the War was captured by the Navy when it had nothing better to do! He said it was thus taken seven or eight times.) Disagreements had arisen on the boundary

between Sinai as part of Egypt and Turkey; there being no delimited line. It was then reported that the only definite boundary mark, two old pillars under a tree at Rafa on the Mediterranean, were being removed by the Turks. The Governor of El Arish, an Egyptian official, was by descent a Turk, and on that account it was thought best to move him elsewhere. Colonel Parker was sent to El Arish.

Before Muhammadan times El Arish, or Rhinocula, as it was then called, was the See of a Bishop, but no traces, said the lecturer, remained of any old buildings except for an occasional marble pillar or cut stone arch. The inhabitants had a variety of means of livelihood. They cultivated barley, fig-trees, date palms, and small gardens of vegetables. At the period of the southern migration of quail they made good money by netting them. They moved to Egypt to pick cotton, and to Palestine to the harvest there when the crops were good. They were ready for any kind of trade. For several months after the opening up of Palestine by the Army of Lord Allenby the El Arish Post Office showed an average of £20,000 a month sent to Egyptian towns, no doubt in payment for trade goods, cotton stuffs, sugar, and so on, of which Palestine was badly in need. They were of very mixed race. El Arish had been the pathway of many conquering armies. One curious section of these people, the *Araishiet El Sahel* (Arishians of the plain) were gradually dropping its somewhat more civilized state and were adopting a purely Arab mode of life—a singular form of degeneration.

Colonel Parker's next visit to Sinai was to a very different scene. The Aqaba incident was pursuing its course of diplomatic discussion, and to strengthen the Egyptian arguments H.M.S. Diana was sent to Aqaba, and a detachment of Egyptian Infantry to Faroun Island near the head of the Gulf.

On the way down the Gulf of Suez he passed by the town of Tor. In early Christian times it was called Elim, and many hermits dwelt in the neighbourhood. Later it gained importance as a port for Indian merchandise, but lost it again at the beginning of the sixteenth century when the Portuguese opened up the sea route to India via the Cape. In recent times the Egyptian Government decided on Tor as the best site for a quarantine station for pilgrims returning from Mecca, and there developed a most up-to-date quarantine station capable of dealing with many thousands at a time. This was against the advice of Sir Richard Burton, who strongly advocated the advantages of Al Wajh in the Hijaz. The Tor quarantine station was built before there was a thought of the Hijaz railway, and was ideally placed for dealing with all pilgrims returning by sea.

Leaving Tor he proceeded up the Gulf of Aqaba and anchored off Faroun Island. The fortifications on the Island were attributed to Renaud de Chatillon in Crusader times, about 1170, but the Franks lost their hold in 1184, defeated by Malek El Adel, brother of Salah El Din.

An agreement was eventually come to with the Turks and arrangements made for a delimitation Commission, which later on moved over the country between Aqaba and Rafa and fixed on a line. It fell to Colonel Parker's lot to arrange the building of the pillars (150) marking the line—not a very easy matter since water was generally a difficulty. Of sand there was sometimes not enough, and sometimes too much. By this time he was in charge of the whole Peninsula with Headquarters at Nekhl, 80 miles East of Suez, his duty being to keep the Arabs in some sort of order.

Nekhl Fort with its well and masonry cisterns was one of the chain of pilgrim stations established by Sultan Selim to guard pilgrims from Egypt on their way to and from Mecca. The fort was actually completed by Sultan Murad in 1571.

The Arabs had in the past been left to look more or less after themselves. The Ancient Egyptians from the First Dynasty onwards went to Southern Sinai for what they could get in the shape of turquoises, in the mining of which they used captives with military guards. Later on the Romans developed the northern part along the

Mediterranean, but took no interest in the country south of a line from Suez to the edge of the Coastal belt south of Rafah. With the rise of Arab power this southern area became part of Midian. In the sixteenth century Sultan Selim established the pilgrim road across Sinai with forts at intervals and water facilities, but no attempt was made to do more than to protect the pilgrims by these measures.

In 1892, owing to friction with Turkey over the boundary, a senior Egyptian officer was sent as Commandant to Sinai, and he and his successors until 1906 did good work in settling Arab disputes and keeping things quiet. They were hampered by having a negligible number of police and no judicial authority.

In August, 1882, Professor Palmer, called by the Arabs Shaikh Abdulla, with his companions Captain Gill and Lieut. Charrington were murdered in the Wadi Sudr. Professor Palmer, a great Arabic scholar, and possessing the most intimate knowledge of the Arabs, was proceeding from Suze up Wadi Sudr to purchase camels, and to allay the excitement among the Arabs of Sinai produced by the Arabi revolt. He and his companions were thrown down one of the deep chasms of limestone in the Wadi Sudr, the Arabs firing into them and killing them as they lay at the bottom. The Shaikh whom Professor Palmer had selected at Suez to accompany him had refused to undertake the responsibility, and the camel men were a mixed lot from various tribes. In these circumstances and with the countryside unsettled by the Arabi rebellion it was dangerous to proceed. But it was probable that Professor Palmer, with his knowledge, realized and accepted the risk. Sir Charles Warren hunted down the murderers.

At the head of Wadi Sudr on an isolated, lofty water-worn hill lay the ruins of an old Fort or Castle built by Salah El Din in 1187 according to the late Narm Bey Shoucair, who visited it and found an inscription. It had the usual underground chambers for the storage of corn and water.

One of the great needs in 1906 was for a more adequate force of local police, together with measures on the frontier to put a stop to the frequent raiding parties, who came over, collected camels, and retired quickly. A fort of recent construction existed at Nuaiba on the Gulf of Aqaba, but it served no purpose and was more or less abandoned.

Frontier posts were erected at Kuntilla, Kossaina, and Rafa, and by degrees police were drafted into them under Warrant Officers, their duty being if possible to stop raids and at any rate to give warning to Nekhl. The best material for the police came from Nekhl itself with the addition to a few Arabs and men from El Arish, Tor, and Aqaba.

The total population of Nekhl was at that time only a little over 300, most of them descendants of Moors, who had drifted there on their way back from the pilgrimage and settled down. They had a certain prestige among the Arabs, knew the country well, and were mostly camel owners, and so could mount themselves. In a year or two, from the original nucleus of twenty or thirty, the police had grown in numbers to about 100 mounted and 20 dismounted men.

To assist police work generally, and particularly with regard to raids telephone lines were built from Nekhl to the frontier posts of Kuntilla and Kossaima, and telephone communication arranged on the existing telegraph line between El Arish and Rafa. All measures succeeded to a great extent in discouraging raiding parties and improving public security. With regard to the latter, a strict adherence to the principle of recognizing and of upholding the authority of the Shaikh in his tribal area, while at the same time claiming responsibility from him for that area, had probably as much, if not more, effect than the purely police measures.

The lecturer then mentioned the Convent of Sinai. Established by Justinian early in the sixth century, it had a continuous history since that time. Prior to its building there were said to have been hermits living in the neighbourhood and near Tor numbering up to six thou-

sand. Their mode of life was intentional continuous starvation. Certainly the district could give them little except a few dates. The Arabs frequently raided and slaughtered them, and it was to give them protection from Arab attacks and also possibly as an outpost to guard the Empire against the growing Arab menace that Justinian built the Convent.

At the beginning of the War, said Colonel Parker, Sinai, with the exception of Tor, was evacuated, and the defence of Egypt concentrated on the Canal. With the occupation of Sinai by the Turks, numbers of Arabs were enrolled by them as scouts and issued with rifles. They were no doubt useful as guides, but otherwise were not of much value. But when the Turks were driven out of Sinai it became a problem as to how best to re-assert authority. Fortunately, Turkish pay lists were available showing the name of every Arab employed. A system was adopted of demanding from the Shaikhs the rifles of all men who had taken service with the Turks, or, in default, a fine of so much per rifle. The rifles were handed in or the fines paid, permission being given from Cairo to expend the money thus obtained in useful local works such as well digging.

Turning to the inhabitants of Sinai, the lecturer said that a great proportion of the Arabs lived in a state of almost perpetual want. A hard life in a hard country. Utterly uneducated and ignorant, they had no respect for truth, and bribery was no shame to them. Generosity and honesty they invariably honoured, even if they felt that they could not themselves afford either.

They were, of course, all Muhammadans, but were often unorthodox in their customs. For instance, in marriage the father of the bride, after receipt of the dowry, handed to the bridegroom a green twig, on which the latter took his oath to cherish or keep his bride, and the ceremony was complete. Their love or hatred of a man they perpetuated for generations.

Among the Sinai Arabs there were really fine characters. For instance, Shaikh Mussa Abu Nessir who was head Shaikh of all the Arabs in Southern Sinai in 1906, was a man of great fineness and strength of character. He ruled his district with much firmness and skill, and was as fine a man of any colour whom the lecturer had ever met.

In the subsequent discussion a question was asked whether there was evidence in Sinai of copper mines having been worked by the Egyptians, the questioner stating that the authorities differed fundamentally on this point. Colonel Parker answered that there was indubitable evidence of the existence of copper in Sinai, but by whom it had been extracted and in what quantities he could not say. Sir Gilbert Clayton also spoke. Lord Allenby recorded his experiences at the Convent, and on Jabal Moussa.

On October 31 a sentry who was guarding a munition dépôt near Strumnitsa, in Central Serbia, fired on and killed a suspicious individual who was endeavouring to approach the dépôt.

The death is announced of Colonel Peter Paget, who saw considerable service with the R.A.M.C. In 1915 he was in Arabia with the Aden Field Force, going into action with the Arab Movable Column. He returned to India with his battalion in 1916, and was thence invalided home with dysentery.

The Parliamentary Commission of Inquiry in Greece into the acts of the ex-Director on November 3 issued its report. It advocates the prosecution of General Pangalos and his confederates for premeditated homicide in making the death penalty retrospective in the cases of two officials executed for speculation on November 26, 1925.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE MACEDONIAN QUESTION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In No. 855, Vol. XXXII. of your paper, which appeared on October 6 of this year, we find on page 417, in an article in which you comment on recent events in the Balkans connected with the outrages committed during the last few months in that part of our fatherland under Serbian rule by the agents of the Macedonian Revolutionary Organisation as its representatives themselves recently stated in a memorandum sent to the Press of all countries—we find in the above-mentioned article the following very valuable suggestion:

"Since the Macedonian question is by its very nature an international question, it would be best for it to be taken up in a conference of delegates representing Serbia, Greece, Bulgaria and the Macedonians themselves, under the chairmanship of a neutral leader."

The Macedonian National Committee in Bulgaria, representing an organisation of nearly 600,000 people exiled from those parts of Macedonia under Serbian and Greek rule, which has always had the highest regard for all that has been written in your magazine about the Macedonian problem which for the last ten years has deservedly been one of the greatest concerns of all serious people in Europe and even farther away, read with sincere satisfaction the above quoted suggestion given in the columns of your magazine.

Taking up your suggestion we, in the name of the many thousands of emigrants whom we represent, hasten to inform you, and, if you permit it, through the pages of your magazine, to inform England and the world, that we are ready at any time to take part in a conference made up as suggested. Of course, the presidency of such a conference would be entrusted to a neutral person of international reputation, who by his past service in the cause of justice and peace has given proof of his impartiality and his clear perspective.

Fortunately, humanity is not without many such names at the present time.

We also hasten to add that we are ready to bear our share of the expenses involved in the suggested conference.

We trust that this will be well received as an expression of the sincerest desire of all Macedonians who wish with all their power to further the cause of peace through the triumph of righteousness on the basis of freedom and self-determination for all nations.

We allow ourselves to believe that the putting into effect of your proposed idea would be sure to help in bringing peace to the Balkans and hence to Europe.

If that is accomplished we Macedonians shall be most

grateful that you will have helped us thus to save our fatherland from the hell in which it now exists.

We beg you to believe us that we are soldiers of peace. Our fight for Macedonia is a fight for peace. Not a peace built on oppression, but a peace built on justice.—We are, etc.,

D. STANICHEFF, *President.*

N. GABROVSKY, *Secretary.*

The National Committee of the Organisations of Macedonian Emigrants in Bulgaria.

Sofia, October 26.

THE ARAB HORSE SOCIETY.

A Council Meeting of the Arab Horse Society was held on October 26 at the Grosvenor Hotel, London, Lt.-Col. T. R. Badger (President) being in the Chair.

There were also present: Messrs. T. C. Armitage, H. V. M. Clark, C. W. Hough, Edward Hurtle, C. W. Laird, Brig.-Gen. F. F. Lance, Major S. A. Medcalf, Mr. G. H. Buxton, Lt.-Col. P. D. Stewart, Mr. R. S. Summerhays, and the Secretary, the Rev. D. B. Montefiore.

The following new members were elected:—Sir John L. Dashwood, Bart., West Wycombe Park, Bucks; Miss Norah Dawson, Holne Park Ashburton, S. Devon; Thomas Denis, 25, Denmark Avenue, Wimbledon, Surrey; Col. P. C. Joyce, Army and Navy Club, Pall Mall, S.W.; H. H. Reese, Pomona, California; Miss E. M. Thompson, Penhill Close, Cardiff, Glamorgan; John A. Titterton, Whalebone Hall, Stowmarket, Suffolk; Charles E. Waller, Rokeby House, near Rugby; Lt.-Col. Sir Archibald Weigall, K.C.M.G., Petwood, Woodhall Spa, Lincs; and José M. de Ybarra y Gomez, 1, Cardenal Cervantes, Seville, Spain.

Governors:—Lt.-Col. T. R. Badger, Orchard House, Horninghold, Market Harborough, and Edward Hurtle, Crowborough Warren, Sussex.

MESSRS. RAPHAEL TUCK'S CHRISTMAS CARDS.

What the aeroplane is to the old post-chaise so is the modern Christmas card to its prototype of fifty years ago. The really artistic productions that issue at this season of the year from Messrs. Raphael Tuck and Sons justify their description as the World's Art Service. The variety is amazing, the workmanship perfect, and the taste shown in the designs beyond challenge. To the familiar features in the way of cards—Royal Cards, Perfumed Cards, Auto Stationery, etc.—are added each year an increasing number of new "lines"—Annuals, Gift Books, Panoramas, Painting Books, Calendars, and Zagsaw Puzzles. The standard of the Pictures and Etchings seems constantly on the upgrade, and in this connexion attention may be called to the Exhibition now being held at Moorfields House, Moorgate, of some six hundred Pictures in Oil, Water Colour, and Pastel, the originals of various art publications issued by the Company.

The Congress of the Roumanian National Peasant Party will open at Alba Julia on November 20.

The Leningrad Academy of Sciences, in conjunction with the Eastern Academy of Germany and the Turkish Ministry of Education, is publishing the only Turcological dictionary in the world, which has been compiled by the academician V. V. Radlov. The first edition has already been sold out. The dictionary is in the Russian, German, and Turkish languages.

DR. D. G. HOGARTH.

We much regret to announce the death, which occurred at Oxford on November 5, of Dr. D. G. Hogarth, President of the Royal Geographical Society and Keeper of the Ashmolean Museum. Dr. Hogarth was a scholar of most versatile gifts. In his earlier years he was assiduous in exploration and excavation, being in Asia Minor in 1887, 1890, 1891, and 1894, at Pathos in 1888, Dar al Bahari in 1894, the Fayoum in 1896, Naukratis in 1899 and 1903, Ephesus in 1904-5, Assiout in 1906 and 1907, and at Jarablus (Carchemish) in 1911. From 1897 to 1900 he was Director of the British School at Athens, and conducted excavations at Melos, and in Crete at Knossos and Dictæan Cave in 1900.

In 1908 he succeeded Sir Arthur Evans as Keeper of the Ashmolean Museum. When the Great War broke out his knowledge of the history and geography of the Near East, particularly of Arabia, was utilised by the authorities. An Arab Bureau, over which he presided, was set up at Cairo, and it was under his wings, so to speak, that there blossomed forth thence such personalities as T. E. Lawrence, Gertrude Bell, Mark Sykes, George Lloyd, Aubrey Herbert. After the War, Dr. Hogarth was present at the Paris Peace Conference as an expert upon the Middle East. After that date his main activities were conducted at Oxford University. In 1925 he was elected President of the Royal Geographical Society.

Dr. Hogarth was eminent as archæologist, historian, and geographer. His published works include "The Nearer East" (1902), "The Penetration of Arabia" (1904), "Ionia and the East" (1909), "Accidents of an Antiquary's Life" (1910). In 1922 he published a short but very valuable history of Arabia. And comparatively recently he had reprinted his charming "A Wandering Scholar in the Levant," first published in 1896.

He held numerous academic distinctions, besides the C.M.G., the Order of the Nile, third class, and the Order of Nahda (Hijaz), second class; and his death will mean a sad gap in many gatherings, both learned and lay. Dr. Hogarth was indeed a rare type of scholar, whose wood was never lost in his trees.

NEWS IN BRIEF.

By the end of October the Palestine earthquake relief fund had reached £18,000.

The third Grand National Assembly of Turkey, which has been elected for a period of four years, was opened on November 1.

According to the new census the population of Constantinople is 810,000, and that of the rest of Turkey 12,940,000, making a total of 13,750,000 for the whole country.

The Turkish Consul-General in the Hijaz, Sulaiman Shavkat Bey, having been elected a Deputy, Abdulgani Bey, Consul at Beyrout, has been appointed to succeed him. Abdulgani Bey will also represent Turkey in the Yaman.

In response to an appeal from the Government of Iraq for assistance in its campaign against locusts, the South African Government has decided to place the services of Mr. R. H. Williams, chief locust officer, temporarily at the disposal of Iraq.

Captain Lancaster and Mrs. Keith Miller arrived on November 4 in Baghdad after a four-days' flight from Cairo. They were delayed partly by bad weather and partly by the necessity for engine adjustments at Rutba. They were en route to Australia in an Avro Avian.

The Dome over Chorus Dominorum in the Church of the Holy Sepulchre in Jerusalem, which was seriously damaged by the earthquake of July 11 last, has now been officially condemned. As soon as possible the Department of Public Works will erect a temporary roof, demolish the dome and rebuild it next summer.

The Turkish delegates on the Permanent Turco-Iraqi Frontier Commission have returned to Mardin from the third meeting held at Mosul. The Turks expressed themselves as charmed with their reception in Iraq. The fourth meeting is to be held at Mardin on April 20 next year.

After an absence of over three months, King Boris returned to Bulgaria on November 5, via Calafat and Vidin, where his Prime Minister, M. Liaptcheff, and his Minister for War, Lieutenant-General Volkoff, were awaiting him. The rest of the Cabinet were present to meet the King on his arrival in Sofia.

As a result of the initiative taken by the Roumanian Society for the Cult of the Fatherland, an "eternal flame" was lit on November 1 on the tomb of the Unknown Soldier of Roumania in Bucharest by General Presan, who was formerly Commander-in-Chief of the Roumanian Army.

Very stringent measures are being taken to prevent the spread of cholera from Iraq into Syria. All the desert routes into Syria have been closed except that through Ramadi, where a strict control has been established. All Medical Corps students in Damascus have been enrolled, inoculation is compulsory, and the suburbs are being specially patrolled.

Hai-ed-Din Fattah, one of the leaders of the Syrian revolt, now a refugee in Palestine, has sent a circular letter to the Arabic Press announcing that he intends to submit to the French Government because the Central Syrian refugee fund in Jerusalem has not provided him with the support promised. With thirty-three of his followers he will be conveyed to Syria in a French ship from Jaffa and will be amnestied.

The trial of members of the band of Haji Sami who were captured near Smyrna last summer has begun in Constantinople. Evidence was given to show that their aim was first to assassinate the Ghazi Pasha, secondly, to effect a revolution in certain parts of Turkey, especially in Kurdistan, where Vehib Pasha would have assumed the command; and thirdly, to re-establish the Sultanate under the Caliph Abdul Mejid. It was also alleged that the Greek Government had connived at the activities of the band.

According to *The Times* Jerusalem Correspondent a petition has been sent to the High Commissioner for Palestine asking that access to the Wailing Wall, which is the outside fence of the lower part of the south-west corner of the enclosure round the Temple of Solomon, should not be allowed to mere sightseers during the Jewish hour of prayer on the Sabbath. It is pointed out that the behaviour of non-Jewish spectators, who are often present in large numbers during this ceremony, is frequently tactless or even offensive to Jewish religious susceptibilities, and that ordinary places of worship belonging to other creeds are not open for sightseers during the hours of prayer.

PUBLICATIONS

OF

THE PERSIA SOCIETY.

Prices as stated, post free.

Bound in green cloth, 9d. each:—

- Persian Autonomy**, The Rt. Hon. The Earl Curzon of Kedleston, G.C.M.G., G.C.I.E., P.C., 1911.

Applications for copies, accompanied by a remittance, should be made to Hon. Sec., Persia Society, Brittan House, Finsbury Circus, E.C.2.

A complete set will be sent post free for 14s.

NOTES OF THE WEEK

(Continued from page 579.)

issue is at an end; the rest is for the Jews themselves to determine. One would have thought that Jews, noticing the High Commissioner's constant refusal to have truck with "politics," whether Arab or Jewish, would have realised this fact. Perhaps the majority of them do; certainly patience is not a notable absentee in the catalogue of virtues of the Jewish race. And we imagine that less and less will be heard of the British Government's "perfidy" when such big schemes as those which pertain to hydro-electric power, the Haifa harbour, and the extraction of minerals from the Dead Sea are employing thousands of workmen and bringing fresh prosperity to the Holy Land.

In the Syrian Desert.

An interesting, but tantalisingly brief report of fighting among the Rualla tribe is to hand from Damascus via Jerusalem. It is stated that, owing to the rivalry between the Amir Nouri as Shaalan and Shaikh Fawaz ibn Tawaf, fighting has broken out among the different sections of the great Rualla tribe, and that the French mandatory authorities tried to mediate, but, perhaps, naturally, without success. Apparently considerable importance is attached to the outbreak, on the grounds that other tribes may be involved, though it is reported, somewhat curiously, that Shaikh Fawaz ibn Tawaf has fled from the Amir Nouri into Najd, "and has embraced the Wahhabi creed." A certain obscurity must always surround the beginnings of such movements as this internecine desert fighting, but perhaps the main point to be noted, apart from the anxiety which it gives to the French in Syria proper, is the relation which it may set up between the Rualla and Najd. It had been popularly assumed that Nouri as Shaalan, who must be now an old man of over eighty, had been subdued by the Wahhabis of King Ibn Saud; he was certainly driven out of Jauf; and if it is his rival, Fawaz ibn Tawaf, who has sought refuge in the broad arms of the Wahhabis there may be interesting developments. The Amir Nouri, by the way, was reported to have died not so long ago. These big and unceasing tribal movements are not of the stuff of which newspaper "copy" is made, but they are extremely important, not only to the Desert itself, but also to those Western Powers who attempt to guard the frontiers of their charges against being overrun by some such tendency.

Syria and France.

News from Syria has been exceedingly scanty during the past few months, and out of the rumours which always arise when a situation is obscure, only one is indisputably correct: that the soul of the rebellion against the French Mandatory Power is dead. Of the political intentions of the High Commissioner, M. Ponsot, next to nothing is known. Whether Syria is to be a Republic with a Constitution similar to that of the Lebanon, or a Constitutional Monarchy similar to that of Iraq, or a Principality—no-one knows. The report has spread, however, that on Syria is to be imposed a Constitution similar to that which the Lebanon enjoys or supports,

and the Syrian Nationalists, who have of late adopted a very different, almost conciliatory, tone towards the Mandatory, are most concerned about it. It should be noted, incidentally, that the extreme Syrian Nationalists, many of whom, notably the Syro-Palestinian Committee, live outside Syria, have recently quarrelled among themselves: a probable sign that any considerable activity on their part is at an end. The protest which these Nationalists in Syria have sent to the High Commissioner is said to be moderate in key; it formally declares, indeed, what for months past had been the subject of unofficial advice, the Nationalists' desire to co-operate with France. Naturally all their past views are not jettisoned, but the intention is implied in this document to strive for improved conditions by peaceful means and not to re-indulge in vain warfare. Manifestly the French, who have re-imposed order and security with much courage and, probably, with added prestige, have a magnificent chance of setting Syria upon the right lines at last. There can be no right-minded man who does not hope that they will take it. Through whatever means the unity of Syria must be achieved: let us trust that the political sense of France will be equal to her military sense.

Iraqi Politics.

There is naturally nothing definite yet to report on the Anglo-Iraqi negotiations in London, which are presumably proceeding in an accommodating spirit. In the meantime, the Baghdad Majlis was prorogued on November 1, for six weeks, by the end of which time the result of the London negotiations will in all probability be known. This prorogation apparently caused some surprise, but it seems to have been the obvious course. Naturally the standing of Jaafar Pasha's Cabinet is intimately bound up with the success of the Anglo-Iraqi negotiations, upon the results of which, it may be assumed, will in part depend the determination of the present Iraqi Cabinet to persist with its Conscription Bill or not. In the absence of knowledge upon these results speculation upon their reaction on Iraqi politics is unprofitable. Quite conceivably, however, the effect of attempting to put such a Bill into practice will have been so described in London as, together with the known attitude of a large section of Iraqis, to make the Baghdad Cabinet hesitate in giving to the test of the Majlis. For more than one reason the advice of the British is now more highly valued than ever by a preponderating man of Iraqis.

THE NEW TURKISH CABINET.

The new Turkish Cabinet is constituted as follows:—

Ismet Pasha	Prime Minister.
Shukry Kaya Bey	Interior.
Shukry Bey Sarajoghlu	Finance.
Tewfik Rushdi Bey	Foreign.
Mahmud Essad Bey	Justice.
Abdul Halik Bey	National Defence.
Behij Bey	Public Works.
Nijuti Bey	Education.
Nijati Bey	Health.
Rahmy Bey	Commerce and Agriculture.

King Fuad paid visits on November 2 to a number of steelworks and the technical institute at Charleroi, returning to Brussels in the evening. He left Paris the following day, embarking at Marseilles on November 6 on his return to Egypt.

The funeral of Princess Vera of Montenegro, sister of the Queen of Italy, who died on October 30, took place at Cap d'Antibes on November 1. The mourners included Prince and Princess Danilo of Montenegro, Princess Francis Joseph of Battenberg, and Prince Peter of Montenegro.

A message from Belgrade on November 1 reported that Michael Michaeloff and his son Ricto were shot dead at Istip. Michaeloff was the father-in-law of Mencia Carnicia, the assassin of Todor Panitza, the Macedonian patriot and bandit leader, who was killed in the Burg Theatre at Vienna last year.

SINHALESE SELF-TAUGHT

By Don M. de Zilva WICKREMasinghe, M.A.

Epigraphist to the Ceylon Government.

In Sinhalese and Roman characters, with the English Phonetic Pronunciation. Containing the Sinhalese Alphabet, with transliteration and phonetic signs used; Table of Syllabic characters, Tonic Accent; Classified Vocabularies and Conversations: Outline of Grammar; Terms and Phrases for Travel, Commerce, Planting, Public Works, Fishing and Shooting, &c.; Numerals, Money, Weights and Measures, &c.

Red Cloth, 4s. net; Blue Wrapper, 3s. net. Postage, 3d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.
London E. MARLBOROUGH & CO., Ltd., 51, Old Bailey, E.C.4

PERSONAL AND GENERAL

TO-DAY

November 10, 1927 (New Style).

October 28, 1927 (Old Style).

Jumada I, 15, 1346 A.H., of the Muslim Calendar.

Marcheshvan 15, 5688, of the Jewish Calendar.

The Maharaja Gaekwar of Baroda arrived last week at the Hyde Park Hotel.

Sir Montagu and Lady Turner celebrated their golden wedding on November 3.

Lord Egerton of Tatton left London on November 4 in the Moldavia for Port Sudan.

Mrs. Eckstein and Miss Eckstein returned to 18, Park Lane, W.1, last week from the Continent.

Sir John Maffey, Governor-General of the Sudan, left London on November 3 on his return to Khartoum.

Lord Lloyd, High Commissioner for Egypt and the Sudan, left London on his return to Cairo on November 8.

Lord and Lady Cornwallis left London on November 3 for Marseilles, to join the P. and O. s.s. Rajputana for Bombay.

Sir William Barton (Resident in Hyderabad) had the honour of being received by The King at Buckingham Palace on November 2.

Lieutenant-Colonel the Hon. Stuart Pleydell-Bouverie left London on November 3 to join the s.s. Rajputana at Marseilles for India.

Lieutenant-Colonel the Hon. George and Mrs. Monckton-Arundell left London on November 3 for India. They will return to England early in March.

Bishop Nikolai of Ochrida, who is staying in England for a short time after a visit to the United States, leaves for Yugoslavia on November 14. He preached at St. Margaret's, Westminster, on November 6.

His Excellency Hovhannes Khan Mossaed (who presented the Letters of Recall of his predecessor and his own Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the Shah of Persia) was received in audience by the King at Buckingham Palace on November 1.

Dr. Shafaat Ahmed Khan, Professor of History at Allahabad and Member of the Legislative Council of the Central Provinces, will lecture on "Local Self-Government in India Since the Reforms," this afternoon (Thursday) at 5.30 p.m. in the Indian Institute at Oxford.

Sir Austen Chamberlain, Secretary for Foreign Affairs, gave a dinner on November 2 at Claridge's Hotel in honour of Sarwat Pasha. The guests invited to meet Sarwat Pasha included Lord Peel, Lord Eustace Percy, Lord Lloyd, Mr. Winston Churchill, Mr. Ronald McNeill, Sir William Tyrrell, Sir John Maffey, Mr. A. M. Samuel, Ismail Bey Sarwat, the Egyptian Chargé d'Affaires, Mr. Godfrey Locker-Lampson, Mr. J. Murray, Mr. Walford Selby, Mr. H. Lloyd Thomas, and Mr. Beare.

Viscount and Viscountess Elibank returned last week to 187, St. James's Court from Scotland. Viscount Elibank will shortly leave London for Egypt.

Sir Henry Lawrence, Sir Logie Watson, Lady Worsley, and Sir David and Lady Ezra left London on November 3 by the P. and O. Bombay express to join the s.s. Rajputana at Marseilles for India.

The King received King Faisal of Iraq at Buckingham Palace on November 5. King Faisal arrived by motor-car, attended by a British officer attached to the suite, and was received by Sir Derek Keppel, the Master of the Household, who conducted him to the King. An interpreter was present at the audience, which lasted about a quarter of an hour.

King Faisal of Iraq was present at a dinner party on November 3, given by Captain T. L. Jacks, at the Green Park Hotel. Among those who accepted invitations to meet him were:—The Prime Minister of Iraq, Jaafar Pasha el Askeri, the Minister of Justice, Raouf Bey Chaderchi, the Diplomatic Agent, Muzahim Bey Al-Pachachi, Captain Qadri, Sir Denison Ross, Lieutenant-Colonel Sir Arnold Wilson, Colonel Medlicott, and Mr. J. A. Jameson.

Sarwat Pasha was entertained at lunch on November 1 by Abboud Bey, member of the Egyptian Parliament, other guests including Sir William Tyrrell, Mr. W. Selby, and the Egyptian Consul-General in Paris. In the evening Lord Lloyd gave a dinner to the Egyptian Prime Minister, at which there were present Sir Austen and Lady Chamberlain, Lady Lloyd, the Earl and Countess of Cromer, the Marquis and Marchioness of Titchfield, and Lady Ian Malcolm.

Sarwat Pasha left London on November 8. He was seen off at Victoria Station by a large number of people, including Sir William Tyrrell, Sesostri Sidarouss Bey and other members of the Egyptian Legation, Sir Edmund Wyldbore-Smith, Mr. J. Murray, Ahmed Bey Abboud, and Mr. P. H. Tottenham.

Where to stay in the East

*Write for particulars of attractive offer
for Advertising Hotels on this page.*

HAIFA—Strand Hotel.

JAFFA—Hotel Jerusalem.

JAIPUR (Rajputana)—New Hotel.

JERUSALEM—

St. John's Hotel,

H. & F. Fast, Managers.

KYRENIA, Cyprus—

Sea-View Hotel.

NICOSIA, Cyprus—

George Hotel.

PORT SAID—

Casino Palace Hotel.

Grand Hotel de la Poste.

Marina Palace and Savoy Hotels.

THE EGYPTIAN HOTELS Ltd.

General Management: Shephard's Hotel, Cairo.
Telegr. add.: "Shepheards Cairo."

CAIRO.

SHEPHEARD'S—World-renowned.

The CONTINENTAL-SAVOY—facing the Royal Opera House and Ezbekieh Gardens.

The SEMIRAMIS—overlooking the Nile. The fashionable Hotel

MENA-HOUSE—an ideal spot for repose at the foot of the Great Pyramid. All sports.

HELOUAN GRAND HOTEL—Health resort. Sulphur Baths and Thermal Establishment.

THE UPPER EGYPT HOTELS Co.

General Management: Winter Palace, Luxor.

LUXOR: The centre of the recent discoveries.

The LUXOR WINTER PALACE—The most up-to-date; beautifully situated.

The LUXOR HOTEL—Entirely re-built with all modern requisites

ASSOUAN: Ideal Winter Climate. The place for a rest cure.

The CATARACT HOTEL—On the banks of the Nile.

The GRAND HOTEL—Entirely renovated.

Golf, Tennis and Excursions

An Exhibition of Watercolours of The HOLY LAND AND PETRA,

also of HONG KONG, by Mrs. Stephenson, in the Alpine Club Gallery, Conduit Street, from November 23, till December 6.

Refinery at ABADAN, PERSIA

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes:—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

The ANGLO-PERSIAN OIL COMPANY controls by itself and through its associated Companies Bunkering Stations at the following Ports:—

LONDON	ABADAN	FREMANTLE
Royal Albert Docks and Purfleet	ADEN	HAMBURG

GRANGEMOUTH	ANTWERP	KARACHI
HULL	BERGEN	MADRAS
JARROW (Tyne)	BOMBAY	MARSEILLES
LEITH	BORDEAUX	MELBOURNE
LIVERPOOL	CALCUTTA	MOMBASA
MANCHESTER	CAPE TOWN	ORAN
SOUTHAMPTON	COLOMBO	OSLO
SUNDERLAND	COPENHAGEN	PORT SAID
SWANSEA	DONGES(Loire)	RANGOON
	DUNKIRK	SYDNEY
	DURBAN	TRIESTE

Other Stations are in course of erection.

ANGLO-PERSIAN OIL Co., Ltd.
Britannic House, Finsbury Circus, London, E.C.2.

THE STATUTORY COMMISSION.

Before these lines appear in print the Cabinet's decision to proceed at once with the appointment of the much-heralded Statutory Commission under the Government of India Act, 1919 will have formed the subject of an official announcement, in the House of Commons by the Prime Minister and in the Lords, and in India, by the Secretary of State and the Viceroy, respectively. The fact that there has been a somewhat premature disclosure of many of the points which will presumably be covered by Tuesday's statement will surprise nobody who has followed closely the elaborate efforts made in India to prepare the ground for its favourable reception. What is infinitely more important is the subject matter of the pronouncement itself. For once the Sunday Press, which has not always been happy in the past in its "intelligent anticipation" of events in that country, seems likely to be substantially correct. The Commission, it now appears, is to be a purely Parliamentary body, representative, in the numerical sense at least, of all three parties, and recruited from the ranks of those who can lay no claim to any real experience of Indian affairs, other than that acquired in the ordinary course of their Parliamentary duties. With the policy underlying the somewhat novel procedure by which the chosen representatives of the Indian peoples are to be associated, for the first time in history, in the evolution of their future constitution, we are whole-heartedly in sympathy. Of the personnel it need only be said that a body of sensible level-headed men have been chosen. The question whether the Chairman is Conservative, a Liberal, or Labour Member, is of relatively minor importance provided the chosen individual is the best available man for one of the most responsible tasks that ever fell to the lot of a British Statesman. In Sir John Simon we believe that the requisite qualities of heart and head are largely to be found and we appreciate the public spirit which has actuated his acceptance of the trust. That the other members of the Commission will command in anything like the same measure the confidence of those whose future political destiny is entrusted to their charge is by no means so sure. But in that and other respects it is clearly desirable to suspend final judgment until all the facts are known.

The appointment of the Commission lends additional interest to Sir Phiroze Sethna's three articles, the third of which we printed last week. Sir Phiroze Sethna is exceptionally well qualified to deal with the subject from the Indian standpoint and his views cannot fail to be of great interest. In saying this we do not mean that we agree with all his arguments, or accept all his conclusions. But we are grateful to him for having defined the Indian case so fully and so precisely. He earnestly hopes and wishes that there may be an immediate extension on the widest and most liberal scale of the principle of self-government not only in the provinces, but in the central, or national, Government as well. He would transform India forthwith into a great democracy; and he has no misgivings as to the practicability of the change. "All that we have

to do," he says, "is to re-adjust our social institutions to the needs of responsible government, and steadily to impress the national mind with the principle that success in responsible government cannot be achieved except by intelligent, sustained, strenuous honest and disinterested interest by the people in the affairs of the nation. These conditions are certainly not beyond our reach." We frankly admire Sir Phiroze Sethna's courageous optimism; but is the matter really so simple as he suggests? It would be indisputably an advantage to the British Empire if India could take up the task of self-government as efficiently and resolutely as the other great British Dominions are doing. But it seems to us that the circumstances and conditions of the country are so utterly unlike those of any of the other great Dominions as to make the task infinitely more difficult. In the first place, there has never been in the history of the world, so far as we know, a democracy of three hundred millions. It has yet to be shown, therefore, that so enormous an aggregation of people can be sufficiently united to act together as one nation.

Considerations of this kind are not dealt with by Sir Phiroze Sethna. As he states the case, the one question at issue—"the vital consideration" as he defines it—is whether responsible government is or is not the best form of government for a country to adopt. He is enthusiastically of the opinion that it is the best; and, calling India a country, his solution of the Indian problem is the application in the widest sense of democratic principles. To our way of thinking this is to misunderstand the problem. The real question, as we view it, is not one concerning the abstract merits or demerits of democracy as a system of government. It is the much more practical question of whether the application of democratic principles will weld together into a nation a great continent with an enormous population made up of many more or less antagonistic races speaking different languages, professing different religions, and observing different social customs. Sir Phiroze Sethna refers to the—as he holds erroneous—idea that "democratic responsible government is a peculiarly western institution which can never thrive, or grow, on any eastern soil." For our part we are quite willing to concede that self-government need not necessarily be an exclusively western institution. But this does not unfortunately diminish the difficulties in the way of India's becoming one self-governing country. For the point surely is that democratic principles of government as they are understood in the West are separatist in their tendencies. They tend, that is to say, to lead each race or each nation to become a separate self-governing unit. Europe, like India, is, and has always been, divided into a number of races, or nations, distinguished from each other by racial, religious and linguistic differences. Since the War democratic principles of government have been applied to Europe more extensively than they were before the War. And the result has been that the number of independent States, or nations, has increased. The groups of nations, held together on the autocratic system, have been broken up. And, to come nearer home, it may

be added that the grant by Great Britain of autonomy to Ireland has resulted in the division of that small country into two independent self-governing nations.

The Indian political leaders presumably expect that a precisely opposite result will follow the application of democratic principles to India. They evidently anticipate that on the establishment of a complete system of representative institutions the various races and communities—which are now held together by an external power—will not tend to become separate units, as those in Europe have become, but will sink their differences and work together in a united India. At any rate this seems to be the attitude of Sir Phiroze Sethna, although he admits that “tendencies have sprung up which, if not checked, may impede or not promote the growth of nationalism.” But he believes that even the Hindu-Muhammadan problem will be solved by the widest possible application of democratic principles. We confess that with the example of Europe before us we can see nothing to justify this optimistic anticipation. Nor does the result of the tentative move which was made towards democracy in India in 1919 support it. On the contrary nobody can suggest that the relations between Hindus and Muhammadans have improved since that move was made, or that communal tension generally has lessened.

Although we hold these views, we agree with Sir Phiroze Sethna that there can be no return to the system of government that prevailed before the introduction of the reforms. Any step is barred by the terms of the public announcement which was made by Great Britain on August 20, 1917. Nor do we consider that the reforms have failed so completely as to justify a return to the older system. As we view it the scheme has not been given a fair chance; it cannot, therefore, be said to have failed. But, on the other hand, has it been so well received, and has its working been such as to warrant the establishment of “full or almost full Swaraj both provincial and national?” This is we take it the main question that the Statutory Commission will be asked to consider. Sir Phiroze Sethna has no doubt as to what their answer ought to be. He thinks that, if the members are inspired by only “a modicum of the spirit of idealism,” they may not improbably make proposals “conceived in such a spirit of justice, liberality and finality that may once for all solve the Indian problem.” But what will be the outcome, if the Commission’s ideas do not appear to the Indian leaders to come within this definition? Sir Phiroze Sethna would provide, against any such contingency by an agreed solution. If his plan is followed, the Commission will not simply take evidence and report. It will also meet the leaders of the various communities and parties, at Round Table Conferences, with the object of working out an agreed solution. This in effect, if rumour is correct, is substantially what Mr. Baldwin’s proposals should be designed to achieve.

CURRENT TOPICS.

“Three Acres and a Cow.”

Few measures of a more far-reaching character have been introduced in any provincial legislature under the reformed Constitution than the Bill to deal with the excessive sub-division of land which Sir Chunilal Mehta presented to the Bombay Legislative Council last month. In the ordinary course the duty of piloting the measure would have fallen upon the Revenue Member. But Sir Chunilal Mehta, although he took over the portfolio of Finance upon Sir Henry Lawrence’s retirement about a year ago, has been in charge of the Revenue Department for the greater part of his term of office as a member of the Governor’s Executive Council. During that period he has taken special interest in the subject and the speech with which he introduced the measure showed the care and thoroughness with which he had studied every aspect of a very complex question. Practically every witness who answered the specific query

in the Royal Commission’s questionnaire agreed that the unfortunate system of fragmentation is one of the greatest economic evils from which India suffers at the present time and the cause, in a large measure, of the poverty and distress of the ryot. But perhaps few people were aware of the magnitude of the evil until it was pointed out by Sir Chunilal Mehta in the Council.

In the Bombay Presidency, excluding Sind, there are about 12,000,000 distinct land divisions in the 32,650,000 acres of occupied land, which gives less than three acres to every actual holding, in spite of the fact that about one-half of the registered holdings are more than 25 acres in area. Under such conditions as these, and the figures take no account of the fact that the individual holdings are often broken up into small fragments lying some distance apart, the resultant loss in agricultural efficiency and the virtual impossibility of profitable cultivation require no emphasis. The problem is, of course, as is explained elsewhere, as much social as economic. It is not merely a question of whether it is advisable in a country like India for peasant holdings to outnumber large estates, or vice versa, or in other words to determine what proportion of labourers is required to maintain an economic equilibrium in a village and district. In the Bombay Presidency fragmentation has only been practised upon the present extensive scale since the British conquest of the Peshwas, but even in the period of about four generations the number of holdings has upon an average increased four-fold. In Ahmednagar the survey completed in 1921 recorded 347,316 parcels of land. Within six years that number has risen by the large figure of 42,336, or by 12.15 per cent. And specific examples, as Sir Chunilal said, could be multiplied. “Land-owning certainly engenders a sense of responsibility and dignity,” an Anglo-Indian contemporary pertinently observes, “but on the other hand ‘an acre and a cow’ are of little commercial use to a family in a tract like the Bombay Deccan.”

The evil is not peculiar to India alone. In all countries, both in the East and the West, where the laws of succession entitle the heirs to divide property equally similar disabilities have been felt. A detailed account of the steps taken to counteract them, in the majority of instances by legislation, will be found in Keatinge’s interesting study of “Agricultural Progress in Western India,” and Sir Chunilal carried the story down to more recent times. The widespread prevalence of the conditions which it is sought to remedy in the present Bill makes the Central Legislature appear to be a more appropriate instrument than a local Council for the purpose. The system of fragmentation is not confined to a single province; it is to be met, in greater or lesser degree, practically throughout the country and is, in fact, an incident of the Hindu law. The Central Legislature offers more facilities for threshing out a matter of this kind from all points of view and the authority of an all-India measure is, of course, far greater than that of a purely provincial enactment. But the Bombay Government is none the less to be congratulated on being the first to provide at least a basis of discussion in one of these matters which, every one agrees, calls for action, but on which, as the evidence before the Royal Commission only too clearly showed, it is extremely difficult to secure unanimity of opinion as to the precise methods to be adopted.

Lord Cornwallis, Deputy Grand Master, accompanied by Lieutenant-Colonel G. V. A. Monckton-Arundell, Past Grand Warden; Sir Kynaston Studd, Past Grand Deacon; and Lieutenant-Colonel S. Pleydell-Bouverie, Deputy Grand Director of Ceremonies, left England on November 3 on a Masonic Mission, authorised by the Duke of Connaught, Grand Master, to the Indian sub-Masonic jurisdictions of Bengal, Bombay, Burma, Ceylon, Madras, and Punjab. They will be away from England for six months. On their arrival in India they will be joined by Sir John Ferguson, Past Grand Treasurer, who left England a fortnight ago.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 20.

The Viceroy.

On Sunday we were given the following to read from the Simla Correspondent of the *Statesman*: "However much official circles may be reticent regarding the object behind the abrupt change in the Viceroy's tour, there is no denying the fact that his presence is needed in Delhi to enable him, simultaneously with London, to make some important pronouncement. Now, speculation is naturally rife regarding the nature of this announcement. Recent London advices, while indicating that the Statutory Commission when appointed would be purely Parliamentary, asserted that no announcement would be forthcoming till the beginning of next year. My information was that the fact that the Viceroy had kept a week for Delhi in the third week of November was probably for the purpose of making an announcement on the subject of the Statutory Commission. It seems that the date has been advanced, and, however inconvenienced the Viceroy must have been, the Parliamentary session must have made the change in his tour desirable in the public interest.

"The questions that next excite interest are the personnel of the Commission, its scope of inquiry, and the probable date of its arrival in India. As regards the first, your London Correspondent seems to be in close touch with developments in Whitehall, and there is no reason to doubt the accuracy of his forecast; only the Chairman of the Commission may not be a Conservative but a leading Liberal member of the House of Commons. The Commission will be comparatively small. Now so much has been said regarding the desirability of including Indians in the personnel of the Commission, that the Government, if their decision is adverse to this advice, will have to take its critics into their confidence regarding their intentions and the considerations that led them to constitute a purely Parliamentary Commission. This can best be done by an informal conference of the kind that have taken place occasionally at Viceregal Lodge with Party leaders both in Simla and in Delhi. Whether the Viceroy intends to do this is not yet known."

Others think that, if there is to be a conference in Delhi next month between the Viceroy and Party leaders, its subject is more likely to be the communal situation that has developed in the Punjab. The truth will be known soon. "In any case," adds the *Statesman's* Correspondent, "it is apparent that some big move is impending, and there is every indication in Simla that the Civil Secretariat is also advancing its date of arrival in Delhi. At any rate the Viceroy's colleagues on the Executive Council who have gone on tour, or are about to leave Simla, are now regulating their movements with a view to be with the Viceroy in Delhi from November 1 to November 8 for the purpose of consultation on questions of high policy."

Some may be reminded by all this speculation of a Simla story told in a letter of Lord Auckland's sister, the date of it some ninety years ago. The Commander-in-Chief called on the Governor-General one morning and stayed talking with him for an hour. The report spread through Simla like wild-fire. What could it mean? It was a time when at any moment orders might be given to move troops to the North-West Frontier, and, when troops are moved, husbands and wives are separated. There was to be a garden party that afternoon. Simla decided to put up its boldest lady to ask the Governor-General what was in the wind. "Might I ask?" she said. "I don't think," replied the amused Governor-General, "there could be any harm in my telling you. The Commander-in-Chief called to ask where I got my potatoes, for he never has such good ones served at his table." One has no doubt, of course, that this time something bigger than potatoes is in question.

The Bengal Ministry and the Portfolios.

The portfolios of Finance, Commerce, Marine, European Education, Railways, etc., go to the Hon. Mr. Marr. That was a foregone conclusion. What was not a foregone conclusion was that the portfolios of Local Self-Government, Agriculture and Industries, and Public Works should go to Sir P. C. Mitter, while those of Education, Excise, and Registration went to his Muhammadan colleague, Nawab Musharruf Hossain; but that is what has been decided. On the same day that His Excellency the Governor made the announcements a statement in explanation was published from Sir P. C. Mitter. "After mature consideration," it read, "I have reluctantly decided that for the present I shall not ask His Excellency to place me in charge of the Education Portfolio. I had on another occasion to deal with the educational problems of the province. From a life-long study of the problem and especially a closer study for a period of three years. I held the view that those problems can only be truly solved on national lines and by a Minister who is vouchsafed the great privilege of working in a calm atmosphere where the different political parties in the Legislative Council are willing to place the interests of the nation above those of the parties. I am not also unmindful of the fact that an influential section in the Council of those who think on national lines are not willing to assure me the whole-hearted support in solving those great problems in which our countrymen are so vitally interested. If my humble judgment on those points happily proves to be erroneous, or even if I am vouchsafed the support of a larger section of those members of the Council who think on national lines, I would then invite my hon. colleague to consider the advisability of approaching His Excellency for a change of portfolios."

In no light vouchsafed to an onlooker is that judgment likely to be proved erroneous which does not count on a calm atmosphere in which to work out and solve problems even less thorny than those of education, and even the most sanguine well-wisher of Bengal, the most optimistic, is not likely to be found counting on more support for the non-official Ministers than they themselves count on at the beginning of their Ministry. One wishes Sir P. C. Mitter and Nawab Musharruf Hossain all success possible in their accepted tasks. More than that one cannot venture.

The Khargpur Situation.

The Khargpur workshops of the Bengal-Nagpur Railway were reopened after the holidays. The men attended, but they had not come to work, and one report had it that some of them brought musical instruments with them. There was nothing for the Administration to do but to close the shops, and so closed they were; and this time, unlike the last, no pay is to be given the men for the days during which the shops remain closed. One says "days," but of course it may prove more than days. No strike has yet been declared, and with each day that passes the chances of a strike probably grow less. The general sense of the employees of the railway appears to be that a reduction of the workshops staff was unavoidable and that it was carried out with all the consideration that could be shown. The Agent has been on the spot all the week and his attitude appears conciliatory. There was published on Tuesday a rejoinder to the Government of India's recent *communiqué* on the Khargpur situation from the President, Bengal-Nagpur Railway Indian Labour Union. It does not read very convincingly; it bears all the marks of over-hasty drafting.

Miss Mayo's "Mother India."

A statement on the subject of "Mother India," signed by the Rev. Dr. N. Macnicol and Mr. P. O. Philip, the Secretaries, and Miss A. B. Van Doren, Hon. Officer, has been issued in the name of the Executive of the National Christian Council of India, the only dissentient members being Bishop J. W. Robinson, who does not find that he can assent to its terms. The statement, which is clear and

emphatic, is too long to quote in full. It concludes as follows: "We have faith in India and India's spirit to obtain deliverance from these evils. We earnestly desire that the East and the West should co-operate to this end in a spirit of love and understanding. Our fear is that this book may by its lack of understanding, its exaggeration and its unfairness make such co-operation more difficult for both sides. For this reason we have felt impelled to issue this statement to the peoples of India and to the missionary leaders in the West."

"It has never been denied," the statement says in another part, "either by Indians or by foreign missionaries that grave social evils exist in India, and it is a matter of common knowledge that strenuous and organised efforts are being made by groups of Indian reformers to get rid of them." Those last words are certainly true. Those who know their India better than Miss Mayo ever will, know that Indian social reformers have been strenuously at work since the time of Mr. Justice Ranade and earlier. That takes one back for more than half a century.

The European Association and the Y.M.C.A.

So our late Governor, Lord Lytton, considers the Pearson-Mitter report a complete vindication of the Y.M.C.A., and has been surprised and pained to learn that, after the publication of the report, the European Association has stated that it saw no reason to modify the original resolution. His Lordship thinks that this was ungenerous. He is reported by the cable to have gone on to say: "One thing which should have saved the Association from making the mistake they did was the fact that Dr. S. K. Datta was the National General Secretary of the Y.M.C.A." That is the kind of amiable things to say with Dr. Datta present (he was present when Lord Lytton spoke) and all the reporters absent: with the general public it cuts no ice. The fact is that the European community in India was probably much more influenced by the news from Bombay about Mr. Spratt, which so very soon followed the publication of the Pearson-Mitter report, than by that document. One knows that it may be impossible to substantiate charges in the conditions in which they have to be publicly investigated, but that all the same there may be a good deal of fire to account for the smoke. The Y.M.C.A., the report notwithstanding, appears to be the subject of grave and deep suspicion, a suspicion that Dr. Datta's name alone will never conjure away. This suspicion is likely to be reflected for some time in a great falling-off of subscriptions. It is for the Y.M.C.A. to trust, not to speech-making, but to putting rigorously its house in order. That it will do that is every good man's hope.

Chartered and P. and O. Banks.

The news regarding the Chartered and P. and O. Banks elicited by the *Englishman*, and published in that journal yesterday, will have been cabled to your side, or given out simultaneously there; so there is no need to enter here into detail. The interest in the matter is greatest, of course, in banking circles, but it is not confined to them. There is a general feeling that the years that saw the Agra Bank and the Alliance Bank of Simla and others shaken out and the fittest survive will not bear all the fruit expected of them, if the fittest that have survived are exposed to more competition than a reasonable quantity, and that banking in India was not really furthered by the establishment of the P. and O. Bank. As it is known that whoever acquires control of it also acquires control of the Allahabad Bank, the general public takes that interest that it always takes in big deals, just because they are so big.

Here and There.

There has been rain on only one day of the week, I think, and the days and the nights too have been a little warmer than one expects at this time of year. The place is beginning to fill up, though the last time I had tea at Firpo's which was only two or three days ago, there were

very few dancers. It is said that the Viceroy's stay in Calcutta is to be only a matter of three days, and that His Excellency will bring no bodyguard, its place being supplied by the Calcutta Light Horse. Calcutta must take the rough with the smooth. Other matters of talk have included the mystery of an unannounced aeroplane that was heard in the dead of night, and which some people assert to have been only a noisy motor cycle. The Indian Cinematograph Inquiry Committee has held its first sitting in Simla. The special *puja* travel concession of a one-pice fare granted by the Calcutta Tramways Company had, it is reported, only a small measure of success, and that all in favour of the passenger. Let it sometimes be the passenger that is favoured.

THE BOMBAY SMALL HOLDINGS BILL.

"It will not be within the scope of the Commission's duties to make recommendations regarding the existing systems of land ownership and tenancy . . . but the Commission shall be at liberty to suggest means whereby the activities of the local Governments may best be co-ordinated and to indicate the directions in which the Government of India may usefully supplement the same."

The widely expressed dissatisfaction with the original terms of reference of the Royal Commission on Agriculture in India, which resulted in the modification of the foregoing instructions to the extent of allowing the Commission to take evidence on the working of the present system and even to recommend that until and unless they were revised its proposals were likely to fail of their full effect was abundantly justified. There can be no doubt that the system of land tenure in British India is one of the largest factors militating against the welfare and prosperity of the rural population.

A brief description of the present position, in broadest outline, is essential to an understanding of the immensity of the problem involved. The Government of India, representing the British Crown as successors to the East India Company and the Moghul Emperors, is the sole proprietor of all land, which is held on permanent, semi-permanent, or temporary lease in lots ranging from one small field farmed by the individual *ryot* up to over 1,000 square miles held and sub-leased by one of the big revenue farmers of the 18th century. There are several different types of leasehold agreements; in fact, the conditions in this respect differ in almost every province, but they may be grouped in four main categories, viz.:—

(1) Large holdings with annual contributions fixed at definite sums in perpetuity by agreements concluded at various dates from 1795 onwards between the Government and the local landlords. In such cases the rents paid by the actual cultivators to the landlord may be varied periodically (even every twelve years), although the latter's contribution to the State is fixed, and the proportion of the landlord's income handed over as Land Revenue, has tended to diminish very considerably from about 90 per cent., upon the original assessment, to an average of roughly 25 per cent.

(2) Large holdings, the contributions in respect of which are assessed periodically (generally every thirty years) by a system known as Temporary Settlements. In such cases, which account for some two-thirds of the total land held under the landlord system, the Government draws as revenue on an average about 50 per cent. of what the sub-tenants pay to the landlord.

(3) Holdings by village communities, for the rent of which (periodically reassessed) the village headmen are held responsible, the sub-division over individual cultivation being a matter of local arrangement.

(4) Small holdings, the rent of which, reassessed every 30 years, is payable by the *ryot* direct to the Government.

But while the land revenue system, not so much the incidence of the assessment as the effect of the periodical

revisions of the settlement upon the investment of brains and capital in the soil, has clearly an important bearing upon agricultural productivity in any country, the associated problem of the excessive fragmentation of holdings is obviously of first importance. Particularly is that so in rural areas where the population is very dense. The average holding of one family is about $2\frac{1}{4}$ acres, and even this is often sub-divided among several members.

In his evidence before the Royal Commission, Mr. G. F. Keatinge, formerly Director of Agriculture, Bombay, and author of the standard work on "Rural Economy in the Bombay Deccan," described the distribution of land among the cultivating classes as most prejudicial to production. In the case of a small and fragmented holding uneconomic in size and shape, or even if economic in actual area, so split up into many little parcels of scattered land that they cannot be effectively tilled, permanent improvement, he pointed out, was impossible. But perhaps the worst effect was to be seen in the helpless and indifferent attitude produced in the cultivator himself. "The position," he observed, "is as though a large number of the farm hands in England were trying to live on the produce of their allotments." Mr. Keatinge suggested as a remedy legislation permitting the creation of economic holdings, which would be permanent and impartable, but subject to transfer by sale, gift or bequest. In his opinion the result of consolidation would be to double the productivity of all such holdings in ordinary circumstances, and in some parts of the country, where the creation of an irrigation well was possible, it might be multiplied five or ten times.

Although the ryotwari, or small holding, tenure in its complete form is established only in the Bombay and Madras Presidencies, the evil of excessive sub-division exists also in the United Provinces, in the Central Provinces and in the Punjab. Voluntary efforts in these provinces have not been successful in coping with a custom that is as much social as economic. So long as the ancient Hindu social system was intact the disruptive tendency of the Hindu law of succession did not show itself. The joint family was the economic unit and it was a point of honour with its members to do nothing that would impair its integrity. Only in extreme cases of incompatibility of temperament would a member demand his share to be partitioned, and public opinion universally condemned his action. The joint family sentiment is no longer as strong as it used to be, and partition is now the rule rather than the exception.

To the Bombay Government belongs the distinction of being the first local Government to grapple with the evil upon the only lines which afford a reasonable prospect of success. Hitherto, although the question of legislation was discussed on several occasions in the pre-reform Councils, upon the initiative of both non-officials and individual officers, the local administration has been reluctant to proceed further in that direction in the belief that there would be no public support to any measure which might be held to involve undue interference with the social customs of the people. In the Bill introduced in the Bombay Legislative Council last month, and now under

consideration by a Select Committee, an attempt is made, in the words of the Member in charge of the measure, "to provide a solution which does not contravene the accepted law of inheritance as at present applied, both because a revolutionary change would scarcely be acceptable to the people and also because it is difficult to foresee what would be the effect in the distant future of the grave social changes that would otherwise have to be effected."

The Bill, which has been carefully drafted, proposes to remedy the evil in three ways:—

(1) By prohibiting all future sub-divisions of land into plots which are agriculturally uneconomic;

(2) by ensuring that all transfer of land shall henceforth be towards the consolidation of holdings instead of in the direction of their fragmentation; and

(3) by setting up machinery which will, where necessary, redistribute into plots that can be cultivated at a profit, holdings which have become so fragmented as to be no longer worth cultivating.

The scheme applies to agricultural land only, and may be briefly outlined as follows:—

(1) In districts or areas to which Government shall extend the provisions of the Act, standard units will be selected having regard to the character of the crops in the particular area.

(2) After standard units have been fixed for an area any person who desires to transfer his land which is less in size than the standard unit (otherwise than by lease or mortgage without possession) shall give the first right of refusal of it to the owners of the adjoining lands, and it is only when no neighbour has notified his desire to exercise such right that the owner can sell his land to any other person.

(3) The Courts and Revenue officers shall not recognise a partition involving the separation of land of less size than the standard unit.

OBITUARY.

MR. C. A. PATERSON.

Mr. Charles Alfred, Paterson, LL.B., died on November 3 at a nursing home in Edinburgh at the age of 70. He went out to the Church of Scotland Mission in India 47 years ago, and did educational work in Vellore and Bombay before being appointed Principal of the Church of Scotland Missionary College, Madras, in 1890. He held this post with distinction, exercising an important influence on student life in Madras, and after retiring from the Mission was for some years Registrar of the Madras University.

Mr. James Hulse Humphries, C.E., who was connected with Messrs. Braithwaite and Co., Ltd., the well-known engineers and contractors to many large engineering projects in India, who died in Johannesburg in May last, left £4,000 to his wife for distribution between the West Bromwich District Hospital, the Royal Gwent Hospital, Newport, St. George's Hospital, Bombay, and the Presidency Hospital, Calcutta.

The Judicial Committee of the Privy Council has dismissed the appeal of the Commissioner of Income Tax, Bombay, against the judgment of the Bombay High Court, which held that the rate of super tax applicable to the Western Indian Turf Club was the flat rate of one anna in the rupee, and not the scale rate prescribed for the income of an unregistered firm or association of individuals, as contended by the income tax authorities.

THE STATUTORY COMMISSION.

THE NEAR EAST AND INDIA understands that the Statutory Commission, the personnel of which will be announced after we go to press, will be composed as follows:—Sir John Simon, K.C. M.P. (Chairman), Viscount Burnham, Lord Strathcona and Mount Royal, Hon. Edward Cadogan, M.P., Colonel G. R. Lane-Fox, M.P., Mr. Stephen Walsh, M.P., Major Attlee, M.P. The Commission will proceed to India in February for a preliminary survey, returning to London before the monsoon.

The actual examination of witnesses will be reserved for the second stage of the inquiry, which will commence upon the Commission's return to India in October, 1928. The work of investigation, it is understood, will be carried out in association with a representative Committee of the Indian Legislature, the members of which will probably proceed afterwards to London to assist in drafting the report, upon which Parliament will be asked to make its final decision. The decision to ante-date the appointment of the Commission will necessitate the amendment of the Government of India Act, 1919, and an amending measure will be introduced by the Government early in the present session, after which the necessary resolutions will be submitted to both Houses of Parliament authorising the Secretary of State to submit for the approval of His Majesty the names of the above-mentioned nominees.

DELHI CHURCH APPEAL.

The *matinée* at the Adelphi Theatre in aid of the Imperial Delhi New Church Fund took place on Thursday, November 3, and realised nearly £4,000. The King and Queen, who were unable to be present owing to the death of the Marquess of Cambridge, expressed the wish that the arrangements in other respects should be adhered to in view of the fact that all the tickets had been sold. Organised by Mrs. Frank Braham, the programme opened with selection by the Temple Church Choir, which were followed by a performance of "A Midsummer Night's Dream," presented by Miss Italia Conti. The cast included a large number of well-known actors and actresses. Lady Patricia Herbert was in charge of the programme sellers.

The Executive Committee has received many generous donations but the sum of £3,000, it is understood, is still required. Contributions may be sent to the Countess of Pembroke, 16, Portman Square.

CORRESPONDENCE

THE STATUTORY COMMISSION.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I add a few remarks on the really illuminating article on "The Statutory Commission," by Sir Phiroze Sethna of which the first two instalments have appeared in your journal of October 20 and 27?

England stands pledged by the memorable announcement of August 20, 1917, to grant India national self-government when the latter proves her fitness to take charge of her affairs and to provide her with all possible facilities for the attainment of the desired object during her period of political education and training. This pledge has since 1919 been reiterated by public men holding responsible positions and belonging to the different schools of political thought in this country. Lord Irwin's avowal before the combined Legislatures on August 29, at Simla that "India desires to win self-government and it is Great Britain's self-appointed task to guide her to this end," is the latest repetition of this solemn promise. It is, therefore, perfectly true, as Sir Phiroze Sethna has remarked, that consistently with the terms of the Government of India Act 1919, no Commission can recommend that the principles of responsible government should be abandoned altogether and another system, not based on these principles, be established. India's demand for an increasing association in the shaping of her destinies and for complete self-government in the end, is as reasonable as her need is imperative to be helped and guided in this difficult task by Great Britain.

Whether India will be granted a measure of political

advance, and if so, what will be the nature and scope of that advance, and whether her progress towards the goal of self-government will be accelerated or checked, will greatly depend on the extent to which the Statutory Commission will be satisfied on the justification of her demands for an additional share in the management of her affairs. But the success of the Commission itself will largely depend on its personnel. From all that has been written in the Press and said on the platform in India, it is quite obvious that a Commission from which Indians are excluded will hardly get a good reception in that country. India's desire to be represented on the Commission through men in whom the country has confidence, is by no means unnatural or unjustified. But who are those men in whom the country as a whole has confidence, is the vexing question. The two premier communities, Hindu, Muslim, are breaking one another's heads. The whole inter-communal atmosphere is surcharged with mistrust and hatred. The Viceroy's pathetic appeal to the conscience and heart of India failed to arrest the progress of the communal fights which have caused an appalling loss of life and property and have lowered Indians in the esteem of even their friends. The Unity Conference recently held at Simla, in which leaders of all shades of opinion took part, ended in smoke on such trifling matters as the killing of cows and music before the mosques. This indicates to a great extent the depth and intensity of the suspicion in which the members of one community are held by those of the other. The Muslims, being the backward community in all respects, are naturally more apprehensive of their future. They will most cordially welcome any extension of the Reforms in which their rights are adequately safeguarded by separate electorates but would rather have no reforms at all than part with the system of communal representation which, considering the present state of affairs in India means their extinction as a community. Consequently they want on the Commission one or more (as the case may be) members of their community of unimpeachable integrity enjoying the perfect confidence of the whole community. If any Muslim is to be selected to sit on the Commission, he will certainly be from the Punjab or Bengal, the two provinces in which Muslims are in a great majority. And there is no one held in higher esteem by their co-religionists and better suited to represent Muslim interests than Sir Mian Fazl-i-Husain in the Punjab and Sir Abdur Rahim in Bengal.—I am, etc.,

GHULAM FARID MALIK.

The Muslim Political League, 63, Melrose Road, S.W.18., October 29.

THE ANGLO-INDIAN ASSOCIATION, LONDON.

The Anglo-Indian Association, London, gave a reception on November 2 at Veraswamy's India Restaurant, Regent Street, to bid farewell to Sir Alexander Muddiman, Governor-designate of the United Provinces, and Sir Charles Innes, Governor-designate of Burma, who was accompanied by Lady Innes. The guests also included Sir Robert and Lady Holland, Mr. and Mrs. S. N. Mallik, and Sir Campbell Rhodes. The various speeches dealt mainly with educational problems. Mr. Kunning, the President, among other matters, drew attention to defects in education in Burma which induced many parents to send their boys to schools in India and Sir Charles Innes undertook to look into the matter at an early date and said he had already arranged for a meeting with the Director of Public Instruction. Sir Charles also instanced the extent to which the Railway Department was promoting education—not only providing for training their men in India but even sending them to England for higher training. Both Sir Alexander and Sir Charles paid tribute to the public services rendered by the Anglo-Indian community and Sir Charles referred specially to the steadfastness and proved loyalty of the Anglo-Indian employees on the railways.

A reception in honour of the Indian Army Contingent which attended the recent unveiling of the Indian War Memorial at Neuve Chapelle was given by the British Indian Union at the Hotel Cecil last week. The Indian cadets at Sandhurst were also the guests of the Union. Lord Reading presided and the speakers included Sir Atul Chatterjee, the High Commissioner for India, Honorary Captain Parabat Chand, and Major A. H. McPherson, who, together with Captain D. M. Lindsay, was in charge of the contingent, which numbered 26 Indian officers and other ranks.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

The Anglo-Persian.

At the first meeting of the Anglo-Persian Oil Company, at which he has been privileged to preside, Sir John Cadman was able to give a further encouraging picture of the progress of this great undertaking. As already recorded, the trading profits showed an increase of £1,000,000 on the previous figures while the net profits were higher by £250,000, results which can only be regarded as highly satisfactory, and as Sir John Cadman justly remarked it will doubtless be agreed that they fulfil the anticipations expressed at the last annual meeting. The Chairman naturally devoted considerable attention in his speech to the position with regard to the fields. He pointed out that the wells at Masjid-i-Suleiman continue to flow strongly, and that the production amounted to over 4,800,000 tons as compared with the estimate of 4,750,000 tons, and he further stated that the current year's production will probably exceed 5,000,000 tons. Drilling on the main fields showed a decrease during the year, and the Company's drilling is now practically confined to the marginal areas, while the other important feature of the year was that the Company began to produce gasoline on a large scale from field gas. Seven outside areas in Persia are being tested, and a total of over 37,000 ft. has been drilled, but the main limestone has so far not been reached in any of the wells. In the Naft Khana area there are nine wells drilling, but Sir John Cadman stated that although there is little doubt as to the possibilities of this field there is not yet sufficient evidence of the structure as a whole to justify pipeline equipment.

Current Year's Prospects.

In view of the existing market conditions Sir John Cadman was naturally very guarded in referring to the prospects for the current year. The present position has arisen through the competitive overproduction in America which has resulted in a very marked fall in prices, and Sir John Cadman warned the shareholders that unless there is a radical change in prices the profits of the Company are likely to be reduced. That the market situation is only a passing phase is, however, beyond doubt, and if production is increasing it is no less true that consumption is steadily rising, and as lower prices for motors and motor cycles are rapidly enlarging the use of these machines it seems clear that in a few years' time the demand for oil will be such that additional supplies will be required. One other feature of the meeting demands reference, and that is the ratification by the meeting of the appointment of Lord Greenway to the position of President of the Company. No one who has followed the progress of the Anglo-Persian Oil Company can fail to be aware of the immensely valuable nature of the services that Lord Greenway has rendered to the Company, and the appointment will be universally regarded as a most fitting recognition of successful endeavour by one who has had the vision throughout to realise the possibilities of this great British concern and has been able to see them well on the way to realisation.

The Company and Persia.

While considerable pride is felt in this country in the the Anglo-Persian Oil Company as a British institution, we are apt to forget what the existence of the oilfields means to Persia herself. Quite apart from the monetary gain to the Teheran Government, there is the even greater

service that the Company renders as an object lesson of British industrial methods and British business standards. As the years pass the number of Persians who are being educated and trained to occupy more responsible posts in the oil area is increasing, and, although their work will be done for the Company there can be little doubt that they will serve as a leaven that will gradually react on business conditions in Persia as a whole. To the material benefits arising from the exploitation of the oilfields the Imperial Persian Commissioner, Mirza Eissa Khan Fayz, bore eloquent witness when he spoke at the annual meeting of the road construction, the schools and hospitals for which the Company has been responsible. He also referred to the personal intercourse that is now being maintained between the Teheran authorities and the Company. These visits from the capital to the oilfields not only dissipate misunderstandings, but also play their part in making more widely known in the country the example set by the Company of an efficient industrial organisation.

The Iraq Oilfields.

Particular interest will attach to the coming meeting of the Turkish Petroleum Company in view of the successful results which have attended one of the drillings, as it may be anticipated that information will be forthcoming in regard to progress in the other areas where drilling is taking place. As there is no doubt about the occurrence of oil over a large area between Mosul and Baghdad there is justification in hoping that before long further encouraging developments will be reported. Once the existence of oil in commercial quantities is adequately proved by drilling operations the question of the provision of further capital will arise, as the oilfields cannot be developed without the construction of a pipeline to the Mediterranean, a development which, as is well known, will be a very costly operation. Given satisfactory tests in the oilfields it is unlikely in present conditions that rapid steps would be taken for the exploitation of the field for with the market overstocked with oil as it is now the addition of further supplies would be most undesirable. In a few years, however, when supply has adjusted itself to demand, the Iraq oil will constitute a most important addition to the world's resources. The question of the provision of further capital lends added interest to the prospect of American participation in the concession. It has been reported that the American oil companies had arranged to take up the 22½ per cent interest offered, but it appears that an agreement has not yet actually been reached, though it may be assumed that it will not be long now before the negotiations are concluded.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

General The Hon. SIR H. A. LAWRENCE, G.C.B.

Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

BRITISH-ROUMANIAN CHAMBER OF COMMERCE.

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., presiding at the annual meeting on November 2 of the British-Roumanian Chamber of Commerce said that the death of His Majesty Ferdinand, King of Roumania during the year had removed one who was regarded with esteem throughout Europe and who had occupied the throne at a time when Roumania received an accession of territory which nobody could have foretold as likely before the Great War, or even during the greater part of the time in which it was fought. His Majesty was also a valuable ally to those striving to improve Anglo-Roumanian relations.

The meeting of the Chamber happily occurred on a day on which an authoritative statement had been made refuting the alarming rumours recently circulated as to the position of affairs in Roumania and testifying to the complete state of quiet in the country.

The work of reconstruction was being pushed forward by Roumania by its own efforts. The addition, after the War, of territory and population, brought with it great enhancement of the prestige of the country but, at the same time, increased obligations and responsibilities. These had naturally added to the difficulties of reconstruction already great enough owing to the sufferings which the country and its people had endured during the War. It must take time to reorganise the administrative departments and to train a civil service responsible for much wider duties than before the War. The greatest need of an agricultural country like Roumania, dependent for its prosperity on the export of the produce of its lands, was an improved transport service. The inadequacy of the present service was hampering the export trade of the country and it was devoutly to be hoped that a serious effort to improve the existing state of things would be made before long. This was all the more necessary at a time when the economic position of the country gave such encouragement for the future. The figures for 1926, which showed imports to the value of 34,000 million lei compared with 30,000 millions in 1925, and exports 38,000 millions as compared with 29,000 millions in 1925, exhibited a trade balance on the right side of 3.9 milliard lei in the year 1926. It was satisfactory that this favourable result was reflected in the figures for the first half of 1927. The best news that the Chamber could get would be that a loan had been obtained to develop the railway systems and the requisite feeder roads.

So far as British trade was concerned, the showing for last year was not so good as that for 1925. This was no doubt attributable to the coal strike, which not only affected coal exports but exports of goods produced by

those industries which were particularly dependent upon coal as a raw material. The actual figures were:—

	1926.	1925.
Exports from U.K. to Roumania	£	£
British goods	2,612,583	3,072,818
Foreign and Colonial goods	85,971	115,170
Imports from Roumania to U.K.	2,671,738	2,283,972

Roumania's improved economic position encouraged the hope of greater opportunities for traders doing business with that country and of an adequate return for their enterprise. There had been budget surpluses for several years past and the exchange had reached a point of comparative stability.

There was evidence of strenuous efforts being made by other countries, particularly those adjacent to Roumania, to secure a firm footing in the Roumanian market. This they were attempting by offering most favourable credit terms. Notwithstanding this competition, and the protection which the Roumanian tariff gave to the textile and metal industries, there was scope for the extension of British trade on sound lines. The market however, needed to be carefully studied and it would seem that personal visits, with a view to a proper understanding of the actual needs of the Roumanian people and local conditions were likely to be of the utmost value.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Birkenhead, November 22); s.s. Imani for Calcutta (Birkenhead, November 29).

Bibby Line.—S.s. Cheshire for Port Said, Colombo, and Rangoon (Birkenhead, November 16).

British India Line.—S.s. Domala for Bombay and Karachi (London, November 19); s.s. Morvada for Colombo, Madras, and Calcutta (London, November 19).

Cunard Line.—S.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool November 12, and Swansea November 15); s.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool November 12, also Glasgow and Swansea November 10).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 3).

P. and O. Line.—S.s. Kaiser-i-Hind for Bombay (London, November 25); s.s. Novara for Colombo, Madras, and Calcutta (London, November 26).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (Manchester, November 13); s.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, November 19).

Ellerman and Papayanni Lines.—S.s. Assyrian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 17); s.s. Manchurian for Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 19); s.s. Algerian for Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool, November 26, Swansea December 1); s.s. Lesbian for Algiers, Malta, Smyrna, and Constantinople (Liverpool December 3). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan Ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*ELYSIA ...	Nov. 10	*MASSILIA ...	Dec. 15
*CASTALIA ...	Dec. 1	*BRITANNIA ...	Jan. 2

*First class passengers only. Specially low fares. Tealls Port Sudan

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Sir Montagu Cornish Turner and Lady Turner, who celebrated their golden wedding on November 3, received a large number of congratulatory messages. Sir Montagu Turner married in 1877, and in that year went to India, where he subsequently became President of the Bengal Chamber of Commerce and was elected a member of the Viceroy's Council. Sir Montagu and Lady Turner have two sons and one daughter. Sir Montagu Turner is Chairman of the Chartered Bank of India, Australia and China, Erith and Dartford Lighterage Company, Joint Deputy-Chairman of the Westminster Bank, and a director of Allen Bros. and Co., the P. and O. Banking Corporation, the P. and O. Steam Navigation Company, Chairman of the Near East, Ltd., and also honorary treasurer of the School of Oriental Studies.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 8.

Last week, which was broken by the November 1 holiday on the Stock Exchange, the influences affecting the stock markets were of a rather conflicting character. There has certainly been a perceptible pause in the rather breathless activity of recent weeks, but this has not been accompanied by any general setback in prices. Investment stocks, indeed, have been well-maintained and it is in the industrial and semi-speculative markets that the change in conditions was most marked, there having been some liquidation in certain directions. Towards the end of the week, however, this ceased and the tendency in industrials improved a little, and in the new account the improved movement was resumed. Many observers think that in some directions the recent speculative activity has been decidedly overdone, but taken as a whole the position is not unsound. Monetary conditions are more satisfactory than seemed likely a month or two ago and quite possibly, after last week's slight check we shall see a resumption in Stock market activity, coupled, we may hope, with a little more caution than has lately been exhibited.

Insurance Shares.

The probability of another insurance fusion—it has been announced that negotiations have been entered into for the sale of the control of the Motor Union Insurance Company—is a reminder that during the past few months investors have been steadily buying insurance shares. This is reflected in the gradual rise in share values. The shares of many of the first-class companies, indeed, stand at levels at which they substantially discount the future. For instance, the ordinary stock of the Royal Exchange Assurance Corporation, whose name is mentioned as the purchaser of the Motor Union shares, gives a return of no more than £3 9s. per cent. But those who are buying these relatively high priced shares largely justify their action by pointing to the conspicuous rise that has taken place in insurance shares over the past few years. Again, in some cases it is considered that there is a possibility of amalgamation, with a favourable offer for the shares. Finally, there is often the possibility of a capital bonus or

of a new capital issue on bonus terms. Doubtless first-class insurance shares will continue to appreciate in greater or less degree. But it should be considered whether the rate of appreciation shown in recent years will be maintained. Will the expansion of business continue on the same scale?; and will the tendency of the rate of interest affect the dividend distribution? In any case, the investor should be at pains to confine any purchases that he may make to the shares of the first-class companies.

The British Match Corporation.

This week the British Match Corporation has declared its first interim dividend, the distribution being 2 per cent. less tax. In recent weeks the ordinary shares of this undertaking have been the centre of considerable interest. The British Match Corporation, it will be recalled, was formed in August of this year to amalgamate Bryant and May and J. J. Masters, with certain agencies of the Swedish Match Company. The issued capital of the corporation consists of 6,000,000 £1 ordinary shares, of which more than one quarter are held by the Swedish Match Company—the huge concern that dominates the match industry of the greater part of the world. Investors evidently believe that the amalgamation will have beneficial results by effecting economies, eliminating competition and so forth, for the shares stand at 35s. This price may very well be justified ultimately, but it must be recognised that a purchase at this price is in some measure for "the long shot." Though too much should not be read into the interim dividend just declared, it may possibly foreshadow a conservative dividend policy on the part of the directors in the immediate future. It is extremely difficult to put forward a useful estimate of earnings for the current year, but some of the most optimistic trade authorities are expecting a dividend of not more than 7½ per cent. On this assumption, the shares return less than £5 per cent. The 14 per cent. cumulative preference shares of Bryant and May, yielding £5 15s. per cent., deserve careful attention.

Attractive Debentures.

A week ago we gave a list of attractive industrial preference shares. To-day we again propose to cater for the investor who wishes to pursue a cautious investment policy by giving a selection of sound debentures. The first in order of security are the debentures issued under the Trade Facilities Acts. These are, in effect, Government securities since they enjoy the Government's guarantee as to principal and interest. The Tata Power Company's 4½ per cent. "A" debentures, which give a return of £5 2s. per cent., fall into this category; the final redemption date is 1948. The debentures issued by a number of Indian railways are guaranteed as to principal and interest by the Secretary of State for India. Among these are the Madras and South Mahratta Company's 4 per cent. debentures, the yield being £5 6s. per cent. Turning to the debentures of industrial undertakings, the investor is offered a wide field of choice. He should choose, whenever possible, a debenture secured by a first mortgage charge on the company's property and assets. The existence of a fixed charge or a mortgage entitles debenture holders to apply to a Court of Law for authority to take over the company's property—usually through the medium of a trustee—should their interest not be forthcoming. Among desirable debentures are the Metropolitan Vickers Electrical Company's 4 per cent. debentures, returning £5 12s. per cent. and the Mond Nickel Company's 5½ per cent. debentures, yielding £5 11s. per cent.

The following interim dividends have been declared in respect of the year ending December 31, 1927:—Imperial Tea Company, Ltd., 10 per cent. (actual) less tax, payable December 1; British Assam Tea Company, Ltd., 10 per cent. (actual) less tax, payable December 10; Halem Tea Company, Ltd., 10 per cent. (actual) less tax, payable December 10; Cingia Tea Company, Ltd., 10 per cent. (actual) less tax, payable December 10; Doologram Tea Company, Ltd., 7½ per cent. (actual) less tax, payable December 10.

WIRELESS IN THE MIDDLE EAST.

No great amount of interest has been shown in wireless in Arabia except in Aden, where in 1926, a representative of a firm intimated his desire to introduce receiving sets (says an article in the United States "Commerce Reports"). The market is entirely an unknown entity, and no definite prediction can be made until receiving sets are actually put in operation and the people given an opportunity to hear how programmes from great distances can be reproduced. The nearest broadcasting station is in India, and because of the peculiar nature of the equatorial atmosphere, it might not be heard. Once the possibilities of wireless are demonstrated there might be a good demand for receiving sets in Aden where the proportion of Europeans is greatest.

In Iraq only five or six receiving sets are operated, and the nearest broadcasting stations are in Russia and Italy. This distance, together with the adverse atmospheric conditions and the poverty of the people prevents sales.

The market has not been developed in Palestine, as the nearest broadcasting station is in Rome, and the atmospheric conditions are unfavourable for good reception.

Broadcast reception is practically unknown in Persia, there being no broadcasting stations within 1,000 miles of any part of the country.

Until recently receiving sets have been prohibited in Syria, but they are now permissible under certain restrictions. Only a few sets have been imported, and it is thought that no more than 15 are in use in the whole country. No broadcasting stations are near Syria. However, very good reception can be had from British and

German stations with a five-valve set. It is quite possible that a few more sets may be purchased, but no great market will be created until a broadcasting station is established.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 22:—

The arrivals of sultanias on the Smyrna market since the opening of the season are estimated at 33,100 tons, and the estimated sales to date are put at 28,850 tons. Closing prices Smyrna, per cwt. c.i.f.: type 12, 41s.; type 13, 44s.; type 14, 47s.; type 15, 51s.; type 16, 56s.; type 17, 64s.; type 19, 41s.; type 6, 38s.; type 20, 36s.

The week's sales total 2,500 tons. Fine grades are in scant supply. Medium to good qualities have been rather neglected during the week, demand running mainly on rain damaged and inferior sorts, prices for which show little change on last week's level.

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 21,214 tons and the sales to date are put at 20,440 tons.

The arrivals of figs have practically ceased owing to exhaustion of supplies in the interior centres of production. The season so far as this fruit is concerned may be considered closed for the year.

A large new brewery is to be erected in the vicinity of Belgrade (says a United States Consular Report). The site has already been purchased near the railway station Klanitsa, about 400 metres from the Danube. Chemically tested pure well water is available.

Motors and Motoring

By G. B. B.

It is many years since the British commercial motor industry was in so favourable a position as it is to-day. In fact in its palmiest days, which were about the middle of the War period, it had not the prospect of sustained prosperity that it has at the present time. The Commercial Motor Show should do much to strengthen the position, and during the next twelve months the export trade in this type of vehicle should considerably increase.

The Scottish Motor Show is the oldest motor exhibition, and this year it appears to be more popular than it has been for some time. Possibly this is due to the hopes that have been expressed as to the advent of the £100 car. The show is not, as in England, arranged by the manufacturers, but is organised and conducted by Scottish retail dealers. The general run of the exhibits is practically that of Olympia, and so there is no purpose to be served by dealing with the Scottish Show at any length. Glasgow appears now to be its settled home and there seems little prospect of its being again held in Edinburgh.

There is one type of commercial motor vehicle which is peculiarly British and in which no foreign competitor has ever challenged us seriously. That is the steam wagon. The British steam wagon is easily the finest in the world, and buyers in every part, where it is known, have no hesitation as to where to place their orders. Even in the Near East, the British steam traction engine and steam wagon is not unknown, and a ready export business could easily be done in all parts of the East.

Proposed Steam Wagon Demonstration.

There is every prospect of a Steam Wagon Demonstration being arranged by the Steam Vehicle Committee of the Society of Motor Manufacturers and Traders. The idea is one that has been about for some time and a good many of the earlier proposals have been either dropped or modified, but, briefly, the suggestion now is that vehicles of this type should visit every important town in the country and that municipal authorities, manufacturers and business men generally should have an opportunity of seeing these machines at work.

I understand that so far the firms ready to take part in such a demonstration are: Messrs. Atkinson Walker Wagons, Ltd.; Clayton Wagons, Ltd.; Fodens, Ltd.; Richard Garrett and Sons, Ltd.; Mann's Patent Steam Cart and Wagon Co., Ltd.; The Sentinel Waggon Works, Ltd.; and the Yorkshire Patent Steam Wagon Co. There are a few names missing from the list, but there is plenty of time for others to join.

The proposal is that the vehicles should meet in London, parade there, and then tour the Home Counties, following this by a tour in the Potteries and the Midlands. In the North the towns visited will be Liverpool, St. Helens, Wigan, Preston, Blackburn, Burnley, Wakefield, Bradford, Leeds, and thence to Sheffield, Huddersfield, Manchester, Newcastle-under-Lyme, Hanley, Stoke, Stafford, Wolverhampton, Birmingham and Coventry.

The only improvement in the route that I could suggest would be for the vehicles to be shipped to Boulogne, and then make their way, by Paris and the chief Continental countries to Roumania, Yugoslavia, Bulgaria, Greece, and Turkey, and then on for an extended tour through the Middle East. It seems to me that the prospects of business along my route would be much better in every way.

THE MOTOR CYCLE SHOW.

(Continued from page 572.)

The stand of B.S.A. Cycles, Ltd., showed a good range of machines ranging from the 1.74 h.p. model to the 9.8 h.p. model de luxe with sidecar. The popular 1.74 h.p. machine has a single cylinder two-stroke engine with an aluminium alloy piston and a roller big-end bearing. The engine mainshaft is mounted on two ball bearings. Ignition is by high-tension magneto, gear driven from the engine and mounted behind the cylinder. The clutch, mounted on the layshaft is of the floating dry plate type, and is controlled by a lever on the left of the handlebar with a large diameter cable. There is two speed gear, and the gears are constantly in mesh, the change being affected by dogs. The saddle is arranged to give a low riding position in accordance with modern practice. There are two independently operated brakes which act in the same drum mounted on the rear wheel, one being operated by a lever on the right of the handlebar, the other by a heel pedal on the left side of the machine. This model with electric generator set, complete with head and tail lamps and dry battery costs £30 12s.

A very interesting stand was that of Douglas Motors, Ltd. who were showing a new model 350 c.c. machine, which has overhead valves, three speed gear, internal expanding brakes on the front and rear wheels, plated silencers and dual mechanical lubrication. The other machines shown included various types of the 600 c.c. model, among them the standard side valve model E.28, a very fine machine, admirably suited for long distance touring.

Roumania's foreign trade for the first eight months of the year was as follows (in millions of lei):—Imports, 22,353; exports, 25,079.9.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

SAFEGUARDING STANDARD OF CYPRUS PRODUCTS.

Regulations have recently been promulgated in Cyprus designed to ensure a higher standard in exported goods. They empower the Customs Department to examine produce intended for export, and, if necessary, to require the exporter to remove adulterants. The text of the regulations, which are made by virtue of the Adulteration of Produce Law, 1926, is as follows:—

1. These regulations may be cited as the Adulteration of Produce Regulations, 1927.

2. No person shall export any of the produce enumerated in the Schedule hereto which contains foreign, superfluous or inferior substance, matter or thing in excess of the percentage prescribed.

3. Any person acting on behalf of the Chief Collector of Customs may examine any of the produce enumerated in the Schedule hereto intended for export. If upon examination such person is of opinion that the produce contains foreign, superfluous or inferior substance, matter or thing in excess of the percentage stated in the Schedule hereto he may call upon the exporter, owner or person in charge of such produce to have such foreign, superfluous or inferior substance, matter or thing removed therefrom and may detain such produce in the custody of the Customs until such foreign, superfluous or inferior substance, matter or thing has been removed.

4. In the event of the exporter, owner or person in charge of such produce, not being satisfied with the decision of the person acting on behalf of the Chief Collector of Customs, such person in conjunction with the exporter, owner or person in charge of such produce, shall take three samples of the produce each of which shall be marked and sealed or fastened up in such manner as its nature will permit. One sample shall be retained by the person acting in behalf of the Chief Collector of Customs, one retained by the exporter, owner or person in charge of the produce and the third sent to the Chief Collector of Customs for examination. The decision of the Chief Collector of Customs shall be final. Provided that should it appear for any reason to the person acting on behalf of the Chief Collector of Customs that the decision of the Chief Collector of Customs may be delayed and thereby the export of the produce prevented in due time the person acting on behalf of the Chief Collector of Customs may allow the export of such produce pending the decision of the Chief Collector of Customs.

5. The Chief Collector of Customs or any person acting on his behalf shall not be liable in damages for any action taken by him in pursuance of these Regulations.

6. Any action taken by the Chief Collector of Customs or any person acting on his behalf in pursuance of these Regulations shall be without prejudice to any prosecution under the provisions of section 3 of the Adulteration of Produce Law, 1926.

7. The expression "foreign, superfluous or inferior substance, matter or thing" in these Regulations shall with regard to carobs include any wild carobs in excess of the percentage in the Schedule hereto prescribed, except as regards carobs of the 1926 crop.

8. These Regulations shall come into force on January 1, 1928.

SCHEDULE.

	Percentage of foreign, superfluous or inferior substance, matter or thing which may be included.
Carobs	1
Wheat	4
Barley	4
Oats	4
Vetches	3
Raisins	Nil
Potatoes	1
Aniseed	4
Linseed	4
Broad beans	1
Cumin, white	4
Cumin, black	4

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended October 20:—

The arrivals of Kordofan Hashab from September 21 to October 20 showed a decrease of about 85 per cent. as against the same period last year the total arrivals at El Obeid being 48 tons and at Nahud 62 tons or a total daily average of less than 5 tons.

During the above period the percentage of rain damaged gum was 30 per cent. of the arrivals at El Obeid whilst there were no arrivals of rain damaged gum at Nahud.

The shortage from September 21 to October 20 was 773 tons as compared with the same period last year, which brings the total shortage of Kordofan Hashab gum from the beginning of the year to date to 3,128 tons and the total shortage on all varieties of Hashab to 5,128 tons (the shortage on the inferior qualities being estimated at 2,000 tons).

Taking El Obeid as the standard, prices remained firm during the whole period and on about the same level as during the previous period, fluctuating sometimes within the range of 1s.

Taking our sales as an indication of demand, demand was quiet for the last ten days of September whilst during October we have experienced a general revival from practically all markets with the exception of the United Kingdom, France and Belgium.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended October 31:—

Currants.—The remarkable strength and activity ruling during the month has been due to two factors. The daily cables advising advancing prices on the Greek market have undoubtedly been the dominating force, contributing to the continued rise of values, aided by the strong statistical position in this country. The new crop arrived to bare boards, and right up to the late arrivals of the period under review practically all supplies were quickly absorbed as landed. The most striking feature is the rise in values of Vostizza growth, which in early September were selling at 50s. to 55s., while closing sales are 58s. to 65s. even as high as 72s. being registered for a few parcels. Values during the closing days of the month eased a little, but as the Greek market continues strong, holders are quite content to wait, anticipating an improvement in trade during November. S.s. Mardinian, Sea Victory, Lisbon, Karnak, Roumelian, Bavarian and Tyria have arrived and replenished our stocks, bringing a good selection of all qualities, although the medium and lower growths are scarce. Some business was done in Pyrgos at 43s. 3d. c.i.f. Spot sales were Amalias and Patras 48s. to 51s., Zante 49s. to 51s., Bags 47s. to 48s. 6d., Gulf 50s. to 53s. Shade Dried 55s. to 60s., Vostizza 58s. to 65s. up to 72s. for special lots, Vostizza Smalls 55s. to 62s. Quotations:—Pyrgos 48s., Amalias and Patras 48s. 6d. to 51s., Zante 49s. 6d. to 51s., Gulf 53s. to 60s., Vostizza 60s. to 72s. Vostizza Smalls 54s. to 60s.

Sultanas.—The early reports of the damage to the Smyrna crop are fully confirmed by the later arrivals coming to hand, a large proportion being of dark and unattractive quality and difficult to sell. Coloury fruit 60s. to 70s. arriving per s.s. Lesbian was readily picked up. Cretans are more appreciated on account of colour, and find buyers at 75s. to 92s. 6d.

Figs.—When increased quantities of skeleton cases came to hand the market became very dull, although holders were firm, due to the fact that shipments were small, and it is now reported that the principal packing houses are closed for the season. Latest sales:—large boxes, layers 60s. to 85s., with a few choicest at 100s. small boxes 72s. 6d. to 85s. Locoums 105s. to 140s. Trade for Bag Naturals has been slow, sales being of a retail character. Buyers are now receiving deliveries of forward purchases of Genuines, quality of which is disappointing. Recent spot sales, Genuines 36s. to 37s.

Locusts, which appeared recently in Upper Egypt, coming from the Sudan, are causing anxiety to the authorities.

The Syro-Lebanese Motor Transport Company is to open a weekly transport service from Beyrout to Mosul on November 15, with the co-operation of Baron André de Neuville.

Company Meeting.

ANGLO-PERSIAN OIL COMPANY.

Increased Production.

The Outlook for the Industry.

Sir John Cadman's Address.

The eighteenth ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held on November 2 at Winchester House, Old Broad Street, London. Sir John Cadman, K.C.M.G. (chairman of the company), presided.

The Secretary (Mr. John Clark) read the notice convening the meeting and the report of the auditors.

The Chairman, who was received with cheers, in moving the adoption of the report and accounts, said:—You will doubtless agree that the results are satisfactory and fulfil the anticipations expressed at the last annual meeting.

From the profit and loss account you will see that the balance of trading profit shows an increase of £1,000,000 over the preceding year, while the net profit for the year, as shown in the appropriation account, is £4,635,444, an increase of more than £250,000. These profits are arrived at after making liberal reserve for depreciation, not only in the Anglo-Persian Oil Company, but also in each subsidiary company.

On the debit side of the account there is an increase in the amount of royalty payable to the Persian Government, owing to our increased trading profits, amounting to about £300,000, and an increase in the debit for income-tax of about £640,000. This latter increase is chiefly due to the fact that the directors have considered it wise to create a taxation reserve of £500,000, because in the year ending March 31, 1928, we shall be paying, owing to the change in the method of assessment of income-tax, on the profits for the year ending March 31, 1927, instead of, as formerly, on the average of the three preceding years.

You will observe that we have appropriated £450,000 for extra depreciation and that we have entirely written off the expenses of the issue of the bonus Ordinary shares. We have also made the usual allocations to the Debenture stock redemption reserve and amortisation reserve, and have placed £1,000,000 to general reserve.

Including the amount brought in from the previous year, the profit carried to the balance-sheet amounts to £4,800,005, and after deducting the dividend on the Preference shares and the interim dividend of 5 per cent. on the Ordinary shares, there remains available the sum of £3,263,755. The directors recommend that a final dividend of 7½ per cent., less income-tax, should be paid on the Ordinary shares, which will leave a balance of £2,246,880 to be carried forward, an increase of £300,000 over the previous year. It is a matter for regret that the excess profits duty still figures as a liability, but considerable progress has been made towards a final settlement.

Balance-sheet.

The authorised capital has risen from £20,000,000 to £24,000,000, while the issued capital has been increased to £23,925,000 by the issue, sanctioned last year, of the bonus Ordinary shares. The usual redemption of Debenture stock has taken place, and owing to the release of £1,250,000 of Debenture stock lodged as collateral security for the £1,000,000 6½ per cent. five-year notes repaid on January 1 last, the company holds this amount for reissue if and when required.

The employees' provident, pension, and insurance fund account is being transferred to a trust, and will therefore, we hope, disappear from our next balance-sheet. New rules and a trust deed are in course of preparation, and it is anticipated that the necessary formalities will shortly be completed.

In the assets the item "purchase price of concessions, etc.," shows an increase of £2,940,000, which is due to the purchase of an interest in "Olex," a German distributing company, the formation of certain subsidiary companies whose assets were previously owned directly by the company, and further advances to some of our associated companies with the object of extending their organisations.

The item "refineries, tank installations, etc.," shows a decrease of nearly £700,000, which is due, chiefly, to the excess of the sum provided for depreciation over and above the capital expended during the year and also to the transfer of certain assets to the new subsidiary companies.

Stocks have been valued upon the usual conservative basis.

Fields.

The wells at Masjid-i-Suleiman continue to flow strongly and under perfect control. Production amounted to over 4,800,000 tons, which compares closely with the estimate of 4,750,000 given in last year's review of our operations. The current year's production will probably exceed 5,000,000 tons.

Two features stand out in the operations in the main fields during the year. For the first time in their history, drilling shows a decrease; and for the first time we started to produce gasoline on a commercial scale from field gas. As regards drillings we have almost demarcated the great structural unit that constitutes this remarkable field, and our drilling is now practically confined to the marginal areas. The reduction in drilling implies not only large field economies,

but also release of personnel and material for testing new areas in other parts of the concession.

In his speech in November, 1925, Lord Greenway reported that a scheme had been decided upon for the recovery of petrol from field gas. The first units have been running efficiently for some time. They deal with 300,000,000 cu. ft. monthly, from which the satisfactory yield of 2½ gallons of high-grade petrol per 1,000 cu. ft. is obtained. Additional plant is now in course of erection which will enable us to extract 2,250,000 gallons of spirit monthly from 900,000,000 cu. ft. of gas. I should explain that, after extraction of this gasoline, the "stripped" gas is used for power purposes generally throughout the field, but, as the quantity available is largely in excess of our requirements, we are now engaged on other lines of research which may possibly yield remunerative results.

Outside Areas in Persia.

The testing of seven outside areas in Persia has proceeded with commendable rapidity, in spite of many difficulties, but, although a total of over 37,000 ft. has been drilled, the main limestone has so far not been reached in any of them, and several of these wells are at depths which will make further progress difficult and slow. In Persia it has been found hard to deduce from surface evidence the relative position of the underground reservoir rock; we therefore decided some time ago to attach a skilled section of geophysicists to our geological staff. These men have been, and are, continuously conducting surveys by means of the torsion balance. At the same time active research is being conducted in seismographic, magnetic, electric, and sonic methods. While such scientific methods of testing cannot give the assurance which the drill alone can afford, they form a valuable addition to our geological analysis because of the readiness and economy with which they can be applied. They are especially important to a company like ours, whose concession area is so vast; and their employment is part of a settled policy of taking the fullest advantage in every phase of the oil industry of the discoveries of modern science.

During the year we have added to the capacity of the pipeline by laying a further 100 miles. We can now, at any time, secure increased "throughput."

NAFT KHANA.—The crude production from this area, though capable of satisfying a larger demand, is at present restricted to the requirements of the new Alwand refinery, which is now supplying Iraq with indigenous fuel and light products. We have nine wells drilling in this area, but progress is necessarily slow by reason of the exceptionally high pressures met with. Although there is little doubt as to the possibilities of this field, we have not yet sufficient evidence of the structure as a whole to justify pipeline equipment.

Should the Persian Government grant us the facilities for which their consent has been sought we hope to be able to develop more fully the Persian sector of this area; a satisfactory result from this sector would do much to support the case for an export pipeline, and we hope that such results will be eventually forthcoming.

Turkish Petroleum Company.

IRAQ.—As you are aware, the Turkish Petroleum Company, in which we have a large interest is working in Iraq. Following the extensive geological survey referred to last year, test wells are now being drilled in several areas. These tests cover a large extent of country, and as Iraq is practically without roads a great deal of road construction has been necessary. This has been carried through in spite of innumerable difficulties. The successful results secured from the Kirkuk area—to which the Press has recently given much prominence—would appear to indicate a very promising future

for this company, in which success the Anglo-Persian Company will participate substantially.

ALBANIA.—Test drilling is being carried out on three areas, two of which promise to be deep. On the third area, where, as Lord Greenway announced last year, a good show of heavy asphaltic oil of low value was struck, we have obtained oil in two wells, but have failed to find it in two others, from which it appears evident that the total producing area will not be of very considerable extent. Pending the completion of other wells now drilling with the object of defining the extent and capacity of the oil zone, it would, however, be premature to arrive at any conclusions as to ultimate prospects.

Further progress has been made in the dredging of the bar at the mouth of the Shatt-al-Arab. Lightering has been reduced by about 100,000 tons per month—that is to say, from 60 per cent. of the cargo shipped to 20 per cent. The dredging work has been carried out by the Iraq Government under the supervision of Colonel Ward, C.I.E., D.S.O., Director of the Port of Basra, and, in recording these excellent results, I should like to pay tribute to his remarkable competence and untiring energy.

Persia.

The oil industry of Persia, like every other industry of the country, has benefited from the general security established by His Imperial Majesty the Shah. His Majesty honoured us by a visit to the field of operations two years ago, and since this date frequent visits have been made by Persian Ministers and other notables. May I say that we cordially welcome these visits, as we do every other manifestation of the identity of interests which exist between the Persian Government, the Persian people, and ourselves. Personal intercourse of this character encourages us and greatly helps to acquaint the Persian public with the magnitude of the oil industry established in a part of their country which, owing to lack of communications, has hitherto been seldom visited.

I take this opportunity to address the people of Persia and ask them to compare the conditions of that part of their country in which we operate with what it was before the oil industry was established. I am sure that all fair-minded Persians will agree that the changed conditions have been wholly in the direction of advancing their country's welfare.

Our methods and efforts have not infrequently been adversely criticised in Persia, but I feel sure that such criticisms are due to wrong impressions arising from lack of information, rather than any absence of good will or appreciation of what we have accomplished. We want Persians to feel that our activities in Persia are not only directed toward extracting oil but also toward developing a great national industry in the country.

We are educating and training Persians to occupy higher and more responsible posts in the company; we are constantly increasing the number of our Persian employees. These efforts are based on the well-established and recognised principle that the maximum success is only possible with the co-operation and good will of all concerned.

I am happy to say that we have had no serious differences or misunderstandings with the Persian Government in the past; but this is not sufficient; we want the good will of the Persian people, and our policy is directed toward achieving this end.

Reference to the company's activities would not be complete without mention of the medical service, to which the employees and inhabitants of the districts in which we operate are largely indebted.

Future Prospects.

I am sure that no one fails to appreciate the wisdom of the generally conservative policy adopted by the company in the past in order to prepare itself for the inevitable demands of the future—and to safeguard itself against the vicissitudes of fortune. At the last general meeting my predecessor in the chair very properly refused to assume the mantle of the prophet. Even then, as he pointed out, there were signs of excess in production; but it was by no means clear that the steadily growing consumption would not establish an equilibrium between supply and demand. Taking the long view—the short space of one year is by no means sufficiently long—I see no reason to depart from that opinion; but it cannot be denied that for some months past the petroleum industry has been in an extremely unsettled condition. The decreased exports from Mexico have been

more than offset by large over-production in the United States, and by a significant advance in production from South America and elsewhere. The abnormal situation created by excessive competitive production in the United States, a country which ordinarily dominates the position in the oil world, has been rendered more acute by the larger exports from Russia, where the peculiar conditions seem to prevent—for the time being at least—the ordinary operation of economic law. It is obvious that this large source of supply, freed temporarily from the various charges and restrictions which affect the production of petroleum in other parts of the world, must be a disquieting factor in a market situation already very much disturbed. At the same time, it is a factor of which the influence in the industry has by now in some measure been discounted, and it seems unlikely to assume a much greater importance than it at present possesses.

A Warning.

As to the prospects for the current year, it is more than ever difficult to venture a forecast owing to the very disturbed condition of the world's markets. I am bound to warn the shareholders that unless there is some radical change in prices there is likely to be a reduction in the profits of the company which may well affect the ordinary dividend. There is, however, one phase of the situation from which we may derive encouragement and confidence, and that is the steady and remarkable growth of the consumption of petroleum products in every part of the world. If the production of petroleum is far greater than ever before in the history of the industry, so also is the consumption. Further, I might also mention that the improved yields and the economies we are constantly striving to introduce into all phases of our operations represent an important, if only a partial, offset against the effect of over-production and uneconomic prices.

Staff.

I should like to ask you to place on record an appreciation of the excellent work done by the staffs of this company and of its many associated concerns. We can pride ourselves on being most zealously served by a great band of loyal and competent workers, both on land and sea. (Hear, hear.)

In conclusion, I should like to say how pleased we are to have his Excellency Mirza Eissa Khan Fayz, the Persian Imperial Commissioner, once more in our midst to-day. His Excellency has held high Cabinet rank in his own country, he is a very vigorous representative of his Government, and the importance which the Imperial Government attaches to the oil industry in Persia is clearly shown by its appointment of so able a representative as its Imperial Commissioner. (Loud cheers.)

Sir Edward H. Packe, K.B.E., seconded the resolution, which was carried unanimously. Subsequently the proposed dividend was approved, the retiring directors were re-elected, and the auditors were re-appointed.

Lord Greenway's Appointment as President.

The Chairman: It is now my duty to move a resolution which has been considered by the board:—"That this meeting hereby ratifies the action of the board of directors in creating for Lord Greenway the special office of president of the company and appointing him thereto in recognition of his valuable services to the company, and authorises the board to attach to that post such emoluments as they may consider suitable."

In moving this resolution I do not think it is necessary for me to say anything, the wish of the shareholders at the last annual meeting was so clearly indicated, and it so much followed the board's own wishes and views that they took upon themselves to nominate Lord Greenway as president. It now becomes necessary to get this matter definitely ratified by the shareholders, and to give us the necessary authority to take such action as is necessary in connexion with the appointment.

Mirza Khan's Speech.

H.E. Mirza Eissa Khan Fayz (Imperial Persian Commissioner): Mr. Chairman, ladies, and gentlemen,—I am very pleased to have the opportunity at this general meeting of the company's shareholders of endorsing our distinguished chairman's kind remarks about my country and fellow-countrymen, who, I am sure, are fully conscious

proposition

of and highly appreciate the fine work which this great concern has accomplished in Persia. I know that I voice the sentiment of my people in expressing deep admiration for the manner in which the company has developed that part of Persia in which they operate, the efforts made by them in constructing roads and establishing hospitals and schools, their expenditure of vast sums of money on wages and material, and for the benefits derived by my country generally.

The occasion is particularly of interest to me since it is the first appearance of Sir John Cadman as chairman of this company. As you all know even better than I do, Sir John combines, with his wide knowledge of everything connected with oil and its industry, a highly scientifically cultivated mind, remarkable breadth of vision, and a rare capacity for organisation. It is ever a source of great pleasure to me to meet him and discuss matters together which are to the mutual interest of my country and the company. I should like, therefore, to offer him my sincerest congratulations, both on behalf of the Imperial Persian Government and of myself, in the high position he has assumed and in the great work in which he succeeds our eminent president, Lord Greenway, whose magnificent competence might well be described as unsurpassable.

Our chairman has given abundant proof of his splendid ability to maintain and further still more the high standard of efficiency which characterises every department of his activity. His initiative and untiring efforts bear fruit in the results you have just heard stated, results of which we have all reason to be justly proud, and which are a high tribute not only to our chairman but to the skill and faithfulness of work of all who co-operate with him in the fulfilment of his aims, thereby creating for the company the enviable position it occupies to-day as one of the foremost industrial organisations of the world.

There is a point to which I should especially like to refer. Sir John has remarked that personal intercourse is a source of encouragement and greatly helps to acquaint the Persian public with the magnitude of the oil industry established in Persia. I should like to pay a tribute to his foresight and good judgment in this connexion. Two years ago Sir John paid a visit to Teheran on an auspicious occasion and impressed all those who came in contact with him by his personality, generous spirit, and charm of manner. I consider that he has rendered this company a great service in having set the example of initiating and establishing personal contact which has won for him the esteem of everybody who is anybody in Persia, and which is bound to have very far-reaching results in further cementing the already cordial relations existing between us. (Cheers.) As Sir John himself has said, up to the present there has been no serious misunderstanding with the Persian Government. In an enterprise of such magnitude it would perhaps be expecting too much if no differences were ever to arise, but I feel confident that in such event I should not look in vain to our chairman's love of fair play and impartiality of judgment in bringing about a happy solution.

Before sitting down there is one point I should like to emphasise. While in no way underestimating the incalculable value of the construction of roads, the establishment of hospitals, and the annual increase of profits in which we share, the thing of paramount importance to my mind is the founding of schools by the company in co-operation with our Ministry of Public Instruction in that part of Persia, which, by reason of its inaccessibility through lack of communication, has not hitherto enjoyed the benefits of modern education. When this has been achieved, with its consequent increase in the number of Persians employed in the service of the company, the good will of the Persian Government and people will be still further strengthened and completed. (Hear, hear.)

Allow me to end by expressing my sincere hope that for many years to come our chairman may be spared to us to continue his fine work to the furtherance of the best interests of all concerned, company, Persia, and Empire. (Cheers.)

He concluded by proposing a vote of thanks to the chairman, which was seconded by Mr. Grant Hooper, and was carried by acclamation.

Chairman's Acknowledgment.

The Chairman: Gentlemen, I am particularly indebted to my friend Mirza Khan and to the seconder of this resolution for the very kind words which have been spoken, and particularly do I appreciate the reference made to my colleagues and the staff, because this concern is not a "one-man show"; it is a concern which is built up of a very fine body, and it happens to be my particular privilege merely to move the thing into activity. I also am very much indebted to the meeting for their generosity to myself and for the way in which they have permitted my shortcomings to pass unnoticed. I did make one omission, which I am bound to refer to now. When the resolution with regard to Lord Greenway was passed I did not give him an opportunity to say a word which he desired to do, and if you will allow me I will now call upon him. (Hear, hear.)

Lord Greenway's Remarks.

Lord Greenway: Sir John Cadman, ladies, and gentlemen,—I thank you very much for the kind remarks you have made about me and for the resolution which you have passed. I should like to say—and that is my object in getting up—how greatly I appreciate the enormous honour that has been paid me in electing me as president of your company. I, of course, feel a very great pride and satisfaction in the enormous progress of the company during the period that I was associated with it, and I would like to say that I am not giving up the reins without some regrets, but those regrets are leavened by the fact that I am handing the reins over to such an able successor. (Hear, hear.) Under Sir John Cadman I am quite sure that the

company will continue its career of success and become more and more a monument of British enterprise, British science, British skill, and British thoroughness. I said before that this company is in its early youth. I repeat that statement to-day, but, with the solid foundation that it now possesses, its potentialities are illimitable, and we can therefore look forward with the utmost confidence to the company attaining a manhood of great strength and power. I once more thank you, ladies and gentlemen. (Cheers.)

The proceedings then terminated.

CHESS.

By "CARO-KANN."

In the game I gave last week Black's reply to P—B3 was RxP which leaves White in an indefensible position. Actually White here played B—Kt2, and after Black played RxB promptly resigned. As I have already remarked Black's move is one of those developments which the player always looks for but which so seldom rewards his enterprise.

The diagram gives another example of the occurrence of the chance of the same kind of move. The position which occurred in a game between Blackburn and Steinitz, the English master being White, is a classic instance of the unexpected, and will no doubt be familiar to many of my readers. It is White's move.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Earthenware Conduits.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invite tenders for the supply of 5,320 conduits earthenware, salt glazed. December 6.

Telegraph Poles.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 2,535 creosoted and 5,700 uncreosoted telegraph poles. December 15.

Light Railway Materials.—Tenders are invited in respect of a contract for the supply of light railway materials, such as rails, sleepers, fishplates, crossings, trolley wheels, etc., required by the Main Drainage Department, Ministry of Public Works, Cairo, for the Gebel-el-Asfar Farm near Cairo. December 1. (D.O.T.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 2 :—

Egyptian Futures.—Sakel Contract.—For the greater part of the past week this contract has shown an easier tendency. Whenever prices have approached the region of 18½d. for the January position, support has been forthcoming from both trade and outside interests, and under this influence prices have rallied; in addition, the recent firmer tone of the American markets had its effect, so that much of the earlier decline has been regained and we finish the week with losses of 23 to 53 points for near and 15 to 23 for more distant positions. Anticipations of a fairly heavy tender were realised on the 1st inst. when 22 dockets were circulated, although the recent stock figures only show 20,000 bales of all grades of Sakel here, and relative differences with Egypt made the cotton appear attractive; takers up were rather shy owing to previous appeal allowances being much in the sellers' favour, with the result that the November/January difference widened out to over 30 points just before noon yesterday. Trade reports in the fine count section continue to indicate quite a healthy turnover, but spinners are proceeding cautiously with their purchases of actual; however it has been noted lately that cotton for immediate shipment or "at sea," has been sought for which rather implies that in certain quarters mill stocks are beginning to run down.

The Alexandria market, in spite of having to bear the brunt of the crop movement, has maintained a very steady level throughout the week. Our contract still runs out of all parity, with the result that consignment and import business is at a standstill; some readjustment appears inevitable sooner or later, and in our opinion a trade movement would reveal a "lack" of contracts here owing to the existing "short" and "on call" accounts now open. For the time being we do not consider that any important price movements will be experienced, but towards the end of the year when a larger portion of the crop has passed into trade channels, the whole outlook may have to be sharply revised. In the meantime, the present level does not appear unattractive for those prepared to take a long view and if necessary to average their commitments should the market take a downward swing.

Upper Contract.—Values in this option have been maintained at a steady level throughout the past week; the reduction in the Government's earlier crop estimate and increasing trade support, combined to create a better undertone.

Egyptian Spot.—Business has been distinctly quiet since last we wrote. The Egyptian Government's deferred crop estimate was published on the 31st ult. and, whilst showing a decrease on their previous estimate, the total of 6,055,633 kantars (of which 2,499,161 represent Sakel) was not of as "bullish" a character as the market had apparently expected. Following on a series of apathetic and sagging American markets, this estimate further contributed towards a general undermining of confidence amongst buyers. Some kind of fillip is badly needed at the moment. Possibly, the Bureau report to-day week may give us what we require and act as an inducement to spinners to operate a little more freely. Other features of interest have been entirely lacking.

The improved inquiry for Sakel has been well maintained, but, in spite of this, prices have eased slightly on the week. A good inquiry has continued for Upper cotton at from 14½d. to 15.25d., the bulk of the business having taken place in Strictly Good Fair cotton with staple, which has changed hands freely at about 14.75d. to 15.00d. Some attention has again been paid to the better grades with moderate results up to 16½d. per lb. Pillion has been in only moderate request and buyers appear loth to pay over 16.00d. for this cotton at the moment. Considerable searching of the market has taken place for odd lots of Sudan Sakel, chiefly for the S, SS,

and SSS qualities. A fair business has been transacted in White Sudan.

C.i.f. business has shown some improvement, and it was noticeable that in spite of the poor spot business which is at present being transacted, the forwardings last week to spinners reached the large total of 9,831 bales Egyptians and 2,318 bales Sudan. Estimated sales for the week, 1,300 bales Egyptian and 750 bales Sudan. Quotations of Sakel show a net decline of from 25 to 35 points. Uppers have registered an advance of 20 points, and Pillion has improved by 20 to 30 points. F.G.F. Sakel to-day 18.80d. F.G.F. Upper to-day 15.20d. F.G.F. Pillion to-day 15.45d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended October 27 state :—

Since our last report the futures market has been steady with a good undertone. The week's summary of price movements is as follows :—Sakellaridis, November, 37.18 dollars, 0.28 dollars up; January, 37.52 dollars; 0.41 dollars up; March, 37.73 dollars, 0.33 dollars up; November 1928, 37.25 dollars, 0.25 dollars up. Ashmouni: December, 28.80 dollars, 0.65 dollars up; February, 29.09 dollars, 0.62 dollars up; April, 29.25 dollars, 0.65 dollars up; October 1928, 28.45 dollars, 0.50 dollars up.

Sakel.—Arrivals from up-country continue heavy and the market has again had to absorb a good deal of hedges; these hedges, however have not weighed on the market, speculators have taken some, whilst the rest have found a home with the export houses who have this week been in the market from time to time as a result of the somewhat better demand from abroad.

THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION
OFFER FACILITIES FOR THE SALE,
PURCHASE AND FINANCE OF
EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary.

Uppers.—The sharp rise of prices in New York has naturally had its effect here and the week has been a series of firm markets. Local operators have been purchasing on large lines, said to be on straddle account either against sales of Sakel or sales of American in New York, whilst exporters have also been on the market covering sales for forward shipment. America especially has, this week, shown considerable interest in Ashmouni.

At the third October tender, 20,750 kantars dockets were issued, bringing the total during October to 77,500 kantars. The week's receipts amount to 295,523 krs. against exports 137,785 krs.; the stock in Alexandria stands at 2,842,275 krs.

Up-Country.—Business up-country is normal. Some choice crops have recently changed hands at exceptionally high prices.

The official figures of arrivals and exports for the period September 1 to October 19, are as follows:—Arrivals: Sakellaridis 492,678 krs., Ashmouni and Zagora 1,009,125 krs., Pilon 73,488 krs., Various 37,183 krs., Scarto 22,763 krs.; total 1,635,237 krs. Exports: Sakel 290,497 krs., Ashmouni 389,394 krs., Pilon 31,305 krs., Various 19,498 krs.; total 730,649 krs.

Spot.—During the past week Minet el Bassal has been moderately active and a fair business has been done. Sales amount to about 21,300 bales, of which we estimate about

7,800 bales Sakellaridis, 12,650 bales Ashmouni and Zagora, 600 bales Pilon and 250 bales other varieties. The spot position is much the same as last week and the good grades of Sakel are pressed for sale and freely offered at what seem very reasonable premiums. There has been a brisk demand for all grades of Uppers below Fully Good Fair, presumably for American account.

Sakellaridis.—Slightly more business has been done and all grades have been dealt in with the medium qualities attracting most attention. With the exception of Good Fair, which is rather dearer, spot differences are without much change.

Ashmouni and Zagora: continue in good demand. All styles have been dealt in but buyers' interest has centred mainly on the grades below Fully Good Fair, and these have changed hands freely. Spot differences are rather weaker for Good and better but firm and unchanged—with a hardening tendency—for the lower grades.

Pilon.—A fair business has been done at about last week's differences.

Other Varieties.—In White a fair business has been done at last week's differences. In Nahda there has been a fair turnover. A few bales of Fouadi have changed hands.

Crop 1927.—There is very little to say on this subject as practically the whole of the crop has now been picked.

Notes of the Week.

The Egyptian Parliament.

The Session of the Egyptian Parliament which opens this week is certain to prove of interest and may well be of considerable importance to the future of the country. It is the first following the death of Zaghloul Pasha, and that event must inevitably affect the status of the Prime Minister. During the last Session, Sarwat Pasha was, indeed, the head of the Government; the Wafd accorded him its support, but, as it were, admitted no responsibility for any acts or policy of which it had not specifically approved. In the interval the elimination of the striking personality of the national hero has tended to bring the Prime Minister and the Wafd closer together. It is remembered that his position was whole-heartedly endorsed by Zaghloul Pasha, and in keeping with the spirit of the latter's leadership there is a tendency to emphasise the fact that Sarwat Pasha's authority derives from the Wafd. Inasmuch, therefore, as his last visit to London was undertaken after discussion with the titular head of the Wafd, it may be expected that he will be listened to in the Chamber of Deputies to a much greater extent as a national leader, and not as a party leader, than was the case at the last Session. Moreover, the general setting of the new Session promises to be better than that of its predecessor. Without doubt King Fuad's visit to England, which has now been followed by wonderful demonstrations of popular enthusiasm on his return, and the unchallenged sincerity of Sarwat Pasha's efforts have served to clear away a good deal of suspicion on both sides. Already in the last Session some sound legislative work had been accomplished; and if, after endorsing the Prime Minister's policy in London, the Chamber of Deputies and Senate can pass to the order of the day, there will be numerous constructive measures essential to the well-being of the country awaiting its attention.

The Franco-Yugoslav Treaty.

The wider aspects of the Treaty of Friendship and Arbitration signed on November 11 by France and Yugoslavia are dealt with on another page. Only in Yugo-

slavia would the Treaty appear not to have aroused misgivings. There it is undoubtedly popular at the moment, and will have the effect of strengthening the Government's position. To this extent the Treaty responds to the reasons given in France for the selection of this particular juncture for its signing, that it would reassure public opinion in Yugoslavia and make it less liable to chronic uneasiness owing to a feeling of isolation. That it will encourage a policy of aggressiveness on the part of the Yugoslav Government need not be entertained; the event will prove whether it will give an added sense of security to the Yugoslav public that will make the latter more intolerant of what is regarded as Italian provocation. In France some misgivings are heard lest the Treaty should commit the French to stand by the Yugoslavs whatever the mistaken policy to which they commit themselves in regard to Italy. The Italians are indulging in undisguised resentment, and there can be no doubt that the Treaty instead of promoting goodwill in Europe has created further friction and may prove an important factor in splitting up the Continent into opposed camps—the state of affairs that was largely responsible for the Great War, and which it was hoped would not be repeated. In spite of the fact that these Treaties, in so far as they are strictly within the terms of the Covenant of the League of Nations, have very little practical significance—France and Yugoslavia stand in need of a treaty of non-aggression just as much as, and no more than, Chile and China—Italy will consider it due to her *amour propre* to create some counterpoise. Hungary and Bulgaria offer two directions in which the Italian Government may feel drawn with a view to correcting the balance. The latter, it is to be hoped, will have the good sense to continue to reject any overtures to this end. If Roumania and Yugoslavia had adopted the same attitude towards these entangling alliances with a Great Power as Greece and Bulgaria have done, the federation of the Balkans might conceivably be closer than it is to-day.

Macedonian Unrest.

The resolution recently passed by the Balkan Committee on the subject of Macedonian unrest looks for a settle-

ment of the problem in co-operation between the Belgrade and Sofia Government, and to this end it suggests that the British Government "should use its friendly right to have the entire question referred for settlement to the Council of the League of Nations at its next meeting, under Art. XI. §2 of the Covenant." The "thorough inquiry under the authority and prestige of the League" which the proposed reference to Geneva envisages would be invaluable for the consideration of the round-table conference of the parties concerned which has been urged in these pages. The later course could be adopted without the suggestion of pressure from outside, and it may be presumed that the delegates would have at their disposal all the facts that a League inquiry could collect, while lacking the authority behind them that a neutral report would provide. The main point is that some definite steps should be taken towards liquidating the situation, rather than that it should be allowed to remain subject to violent explosions every now and then.

The Lake Tana Dam.

Abyssinia's representative, Dr. Wargneh Martin, has arrived in London, and it would appear from his latest utterances as if the main purpose for which he originally left Addis Ababa was to assure the Egyptian Department of the Foreign Office that the Abyssinian Government was consumed with eagerness to conclude with Great Britain an agreement for the construction of the Lake Tana Dam. Unfortunately, he selected for his journey from Addis Ababa to London the route *via* New York, and his artless way of telling the J. G. White Engineering Corporation of the latter city that Great Britain would shortly be building the dam led that firm to suppose that Dr. Martin wished it to undertake the work. From that stage to an agreement for the construction was a simple step in American publicity. Now that Dr. Martin has seen British Government officials the misunderstanding has been explained, and the only interest still attaching to it rests with the Abyssinian Government, whose envoy Dr. Martin is. The incident will have served a useful purpose, if it enables the British Government to expedite the conclusion of its own negotiations with Addis Ababa regarding the construction of the dam.

Roumania's Troubles.

The Roumanian Government has made a shrewd move in publishing the details of Prince Carol's repeated renunciations of the Throne. It is an unsavoury record, and

it will increase surprise abroad that any considerable body of opinion in Roumania can still be found to favour the Prince's return. As to this point, however, it is by no means established that there is much personal devotion to the Prince left in the country. If he is wanted back at all, it is mainly to save Roumania—in the opinion of these supporters—from a worse fate than even that of having on the Throne a Sovereign who would command respect neither at home nor abroad. In an attempt to gauge the situation in any country in South-Eastern Europe regard must be had to the bitterness with which political hostility is indulged in, even to the extent of refusing to an opponent credit for any patriotic motive. From the information published by the Government it would appear that M. Bratianu, the Prime Minister, had in the past done his best to retrieve Prince Carol from the error of his ways, and to prevent him from forfeiting his succession to the Throne. When once the step was irrevocably taken, however, M. Bratianu was resolved that there should be no undermining of the constitutional position, and his precautions to this end have been taken with the vigour and thoroughness for which he is notorious. It will be as well, therefore, not to take the Opposition analysis of the present situation in Roumania wholly at its face value. On the other hand, the arbitrary way in which resort is had to the censorship serves to support that analysis, as the spirit of the Constitution undoubtedly contemplates the employment of the censorship only in very extreme circumstances. That a case can be made out for its enforcement at the present time does not seem to have been established by any evidence brought against M. Manoilescu, Prince Carol's diary-keeping agent; and, although a verdict may be secured against him on the ground of acting against the young King Michael, a large section of the Roumanian public, by no means favourable to Prince Carol's return, will hold the view that his only offence was that of opposition to the Government. As far as foreign opinion is concerned, the touchstone of the situation in Roumania is likely to be the position of M. Titulescu, Foreign Minister. If he remains in the Government, it will be generally supposed that the internal situation cannot be as bad as it is painted; if he should resign his post, probably the worst will be believed of the Bratianu Government.

The Turkish Census.

The statement given to the Turkish press by M. Jacquard, the Belgian expert engaged to carry out the first official census of Turkey, will set at rest all doubts as to the general accuracy of the provisional figures. M. Jacquard declares that he is well satisfied with the way in which the census was carried out, and he has no doubt himself that the provisional total given—13,641,810—will be confirmed within a small margin when it has been possible to check the figures. He emphasises the fact that no influence was brought to bear on anyone to "fake" the returns, no additions have been made to the figures compiled and no tampering will be allowed with the final result. It would appear that the counting of the results has been carried out under the supervision of the Valis and Kaimakams, who have telegraphed their totals to the Census Department at Angora. The lists will now be examined by the Department, which will check the figures and will publish supplementary details regarding the sex, age, religion and other particulars of the inhabitants of Turkey. The final figures for Constantinople, it will be noticed, are considerably below the estimates—6,99,602, of whom 354,013 are males and 345,589 females. The population of Angora is given as 74,789, males again predominating with 49,439 as compared with 25,350 females—a sure sign that the capital has not yet become the residential centre that it is planned for it to be.

THE FRANCO-YUGOSLAV TREATY.

The signing in Paris of a Treaty of Friendship and Arbitration between France and Yugoslavia introduces no new factor either in the Balkan or in the European situation, although it does emphasise a tendency which from the point of view of the Balkans may be regarded as a matter for regret. This tendency, it is true, has now been carried to such an extent that one more instance of it makes little difference. There is nothing in the terms of the treaties which France has concluded with Roumania and Yugoslavia to which exception can be taken. They contain a mutual pledge of friendship and an undertaking by the contracting parties not to make war upon one another and to take counsel together if one or other is attacked, and an agreement to submit any differences between them to arbitration. All this ground should be adequately covered by the Covenant of the League of Nations, but it is arguable that a repetition of such peaceful engagements can only be desirable, as they tend to make peace doubly sure. In practice, however, they contrive to make just as much bad blood in other directions as they promote good relations between the signatories. In the present case there was not the least likelihood of France and Yugoslavia making war upon one another; but France has convinced herself that her interests require her to throw a chain of these friendly pacts across Europe, and Yugoslavia constitutes an important link in such a chain. A treaty of friendship and arbitration with a Power with whom France is not on particularly friendly terms would be a more virtuous act and a much more valuable contribution to the peace of Europe. As things are, the pact with Yugoslavia does neither country the least good, as it merely makes Italy more antagonistic to both. France and Yugoslavia alike will claim that the treaty is a real protection against Italian aggressiveness; but in reality there are enough safeguards in existence to protect both against that menace, and what is required is to disarm Italy's supposed aggressiveness and to substitute for it such relations between Italy and all other Powers as will free Europe from alarms and allow the Continent to get on with its work of reconstruction after the War.

It would be idle to attempt to apportion blame between France and Italy for the present state of affairs. The French chain of pacts was originally directed against Germany; but thanks to Great Britain's lead better relations now exist between the two countries. French hostility, or at least suspicion, is now directed towards Italy, and each country will consider the other to blame for the latent antagonism between them. As far as their rivalry in the Balkans is concerned, Italy will, of course, contend that her interest in the Peninsula is determined by the necessity of preventing any formidable Power from establishing itself on the opposite side of the narrow neck

of the Adriatic Sea. This argument, to be valid, must give still greater right to Yugoslavia to refuse to countenance the shutting up of the Adriatic by the Italian occupation of both sides of the narrow neck. In these circumstances the problem called for amicable arrangement between the two countries; but in the place of this solution both endeavoured to stake out claims in Albania, while taking no steps to restrain antagonisms and the growth of further misunderstandings between them. There can be little doubt that Italo-Yugoslav relations are responsible for such readiness as Yugoslavia has shown for a pact with France. The latter, for reasons already stated, could be relied upon to knock continually at the Yugoslav door, but even the moderate measure of admission that she has now gained might not have been given if Italy had been more tactful in her Balkan policy. It is foolishness, therefore, on the part of the Italian Press to seek to attach blame to Yugoslavia. The greater share belongs to the two Great Powers which have failed to live up to their position and have intrigued in the approved pre-War method. Italy and France have now taken the parts previously played by Austria-Hungary and Russia in the Balkans, and only the accession of more common sense among the Balkan States will prevent them from becoming, as they were before, the catspaw of two Powers utterly indifferent to their real welfare.

If any proof were necessary of the wrong-headed policy that has inveigled in turn Roumania and Yugoslavia into these treaties with a Great Power, it is to be found in the excitement aroused in Yugoslavia over the signing of the pact in Paris. It is true that an attempt is made to throw a cloak of decency over the enthusiasm by the expression of the hope that a similar treaty may yet be concluded with Italy. Certainly, until this is done, the treaty with France will be regarded as a weapon in the Yugoslav armoury against the Italians, and among the more irresponsible elements of the nation may be considered as justification for a more bellicose attitude towards Italy. False hopes built on the Franco-Yugoslav Treaty may also cause the necessity of a better understanding with Bulgaria to appear a matter of less urgency than when Yugoslavia laboured under the impression of being more or less isolated in Europe. Wiser counsels would bring home to the Yugoslav nation and to all the Balkan peoples the obvious fact that their real interests are bound up in a close understanding among themselves, which would render them indifferent alike to the menace and the blandishments of either Italy or France. The crux of the strained relations between Italy and Yugoslavia, and consequently of the whole situation in the Balkan Peninsula, is Albania. The Franco-Yugoslav Treaty brings no solution of this problem; on the other hand, it is a direct incentive to Italy to tighten her hold on Albania, a policy that is the reverse of what it should be the Yugoslav Government's aim to bring about. Yet a treaty of this character between Yugoslavia and Albania was, if Albanian statements are correct, deliberately rejected by Belgrade. Albania must inevitably fall more and more under Italian influence, unless she is helped to assert her independence by the sense of an identity of interests with her Balkan neighbours. So far she has received little or no help in this direction from Yugoslavia, who appears to have pinned more faith in a policy of dragooning the Albanians into an attitude of friendliness. There are, indeed, signs at last that the fatuity of this policy is being recognised in Belgrade, but the breach between the two neighbours who ought to be the closest of friends has been allowed to widen to such an extent that the task of bridging the gap is not an easy one. Yugoslavia's treaty with France was initialled more than eighteen months ago, and its signature should be of no special moment. The sooner the comparative uselessness of the pact for Yugoslavia's material advancement is recognised the better, as the country can then proceed to give serious thought to the only foreign policy—a Balkan understanding—that is likely to promote its real interests.

The Near and Middle East*

From Our Own Correspondents.

Teheran, October 29.

The Russo-Persian Treaty.

The eagerly-awaited and long-expected agreements, which were at last signed in Moscow at the beginning of the month by Chicherin and Karakhan on behalf of the Soviet Government and by Ali Ghuli Khan Ansari (Moshaver el Mamalek), Persian Foreign Minister, who has been conducting the negotiations in Russia for many months, were ratified by the Majlis a week ago. The Pact of Neutrality and Non-Aggression provides that each Government undertakes to abstain from any attack or act of aggression against the other, and from introducing its armed forces into the other's territories. In the event of either of the Governments being attacked by a third Power the other shall observe strict neutrality. Each Government undertakes not to enter into any alliance or agreement detrimental to the interests of the other, and also not to interfere in each other's internal affairs in any way.

In the agreement with regard to the important Caspian Sea Fisheries the Soviet and Persian Governments agree no longer to recognise the Concession granted many years ago to Lianosoff Brothers, and the fisheries will be worked for a period of 25 years by a company under the joint auspices of the two Governments on an equal basis, each enjoying half the profits, the Chairman being a Persian.

The Trade Agreement means the raising of the embargo on Persian goods which has had such a disastrous effect on economic conditions in the North, and has been received with satisfaction generally, especially in the Bazaars, which are, of course, most concerned in the resumption of trade relations. The revised Customs tariff does not call for much comment.

Railways.

A few days ago the Shah turned the first sod on the site chosen for the capital's railway station, thus inaugurating the actual construction of railways in this country, an enterprise in which, as is well known, he has always taken the keenest interest and to which he has lent his whole-hearted support. It was most unfortunate that the weather (which is almost invariably to be relied on in Persia) should have on this occasion turned out to be unfavourable, for, about half an hour before the ceremony was timed to take place a violent dust storm arose, and out

there on the plain (about a mile south of the town off the Kazvin road) the full effect of it was experienced. Three or four of the marquees erected on the ground for the spectators were blown down, and by the time the Shah arrived, in military uniform, accompanied by the young Crown Prince wearing a grey military cloak over his diminutive uniform, everybody was white with dust and half-choked, and the enclosure, which had been gaily decorated with bunting and flags, presented rather a bedraggled spectacle. The American Director-General of Railways explained the plans to His Majesty, who then proceeded to cut the first sod. It is said that the Railway Administration proposed to have a special spade and pick made of silver for the occasion, but the Shah objected, saying that ordinary tools were good enough for him, and certainly the ones he used were workmanlike enough! A salvo of guns proclaimed the fact to the town in general, and this was also wirelessly to the two terminal points of the projected line, Bunder-i-Gez on the Caspian and Khor Musa on the Persian Gulf, where work was immediately commenced.

In the diplomatic tent it was interesting to note the representatives of several new countries. Japan has now a Delegation here; Holland has reopened its Legation which has been closed for a number of years; and Czechoslovakia, which has an increasingly large trade with Persia, has just opened a Consulate. The new Pahlavi peaked hat, which all Government officials and employees are now obliged to wear, with short lounge jackets in place of the former long frock coats, was much in evidence. This hat in various shades, blue, grey, fawn or khaki, usually to match the wearer's suit, is a quite pleasant change and affords a welcome relief from the monotony of the universally black *kola* which the Persians have worn for generations past.

Conscription.

Conscription does not appear to be popular in this country and a great deal of disaffection and opposition to it have been shown this month when, for the second year since the law came into force, those liable for military service have been called up. In Persia the pulse of the people is the Bazaars, through whose action public opinion is reflected, and their closing by the merchants is a recognised sign of protest. In Isfahan, where slight disturbances occurred, the Bazaars were closed for weeks and still partially are so. The Teheran ones were completely closed for several days and a number of provincial towns followed suit in sympathy. People seem, however, to have accepted the inevitable now, and the enrolment of recruits is duly proceeding.

Financial Advisers.

The Bill for the engagement of two Swiss and two German financial advisers was recently passed by the Majlis. In the meantime the Prime Minister's term of office as Administrator-General of the Finances has been extended, and the Treasurer-General, Mr. McCaskey, who was asked to stay a month after the expiration of his contract, has left for America, being replaced by Major Davis, Financial Agent for Azerbaijan.

General News.

The Anglo-Persian Oil Company have decided to move the quarters of their resident Director, which have hitherto been in the Gulf, to Teheran, and Mr. T. Lavington Jacks is shortly coming here to take up his residence in the capital.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

ALBANIA.

Tirana, November 1.

The Murder of Tzena Beg Kryeziu.

The assassination of Tzena Beg Kryeziu, Albanian Minister at Belgrade and recently accredited to Prague as well, has made a painful impression throughout Albania, not only on account of his official standing and his relationship to President Ahmed Bey Zogu, whose sister he married, but still more by the resentment which the crime has evoked among all classes of the population. The late Minister was quite young, hardly 30 years old, and well known for his attachment to Serbia; he came originally from Yakova, a town that was incorporated in Serbia in 1912, where he possessed an estate. In politics he had supported Ahmed Bey Zogu in the struggle against the celebrated leader Bairam Tsurri during the years 1922-1925. When Ahmed Beg came to power in 1926 Tzena Beg became his Minister of the Interior, and subsequently the representative of Albania in Serbia. It was, however, from the inauguration of the new régime that tension arose between the two brothers-in-law—a tension which became aggravated after the conclusion of the Treaty of Tirana, when Tzena Beg openly espoused the Serbian cause.

It is impossible to say much about the motive of the crime before the investigation now being made at Prague has been concluded. If there is anything certain, it is the impression that I have gathered in my recent tour among the main centres of the country, that this political outrage is considered unanimously as most regrettable. Albanians are convinced that political struggles ought to be regulated by constitutional methods and not by assassinations.

Ministerial Changes.

For some months past Ahmed Bey Zogu has been anxious to remodel the Cabinet. Since the introduction of the new régime Ministerial changes have been effected wholly at the instance of the President, and not in response to any action on the part of Parliament, and to this extent the Chamber of Deputies has lost its parliamentary power. At the end of last month, accordingly, the Cabinet found itself obliged to resign. The new Ministry is composed as follows :—

Ilias Vrioni	Minister of Foreign Affairs and Interim Minister of Justice.
Abdurrahman Dibra	Minister of Interior.
Suleiman Starova	Minister of Finance.
Ferid Vokopala	Minister of Agriculture and Interim Minister of Public Works.
Jafer Ypi	Minister of Education.

It may be mentioned that Suleiman Starova, who becomes Minister of Finance, is recognised as a man of integrity; he is not favourably disposed to the exercise of Italian influence in Albania, and is particularly watchful of the activities of the National Bank and of the Italian Company, Svea. Ilias Vrioni, when announcing the programme of the new Ministry, in his capacity as Interim Minister of Justice, laid stress on the importance for Albania of the two questions which are still outstanding with Greece—the question of the Albanian minorities of Chameria and that of the property of Albanian subjects in Greece, which Greece is inclined to expropriate practically without compensation.

Cairo, November 5.

Sarwat Pasha and Britain.

By the time this reaches you and is in print the conversations which Sarwat Pasha has been conducting will have been concluded and he will be back again in Egypt. According to the cables received here everything has gone very smoothly and Sarwat Pasha himself is satisfied with what he has been able to achieve. Whether this means that the Foreign Secretary and he feel that the way has been sufficiently cleared to permit of official negotiations being opened up between the two Governments is a matter on which everyone would like to be informed, for there is no doubt that the settlement of the questions outstanding between Great Britain and Egypt is a matter which is to-day very near the heart of most of the people of Egypt.

Some time must necessarily elapse before anything definite can be known, for Sarwat Pasha must first consult his own friends and the political leaders. But there are not a few leading Egyptians and also Europeans, all in close touch with public affairs, who, while strongly desiring an *entente*, are of opinion that, in view of the change in the local situation caused by the death of Zaghoul Pasha and the consequent uncertainty of the present political outlook the moment is not opportune for negotiations. They consider that although assurances have been given to Sarwat Pasha by the new leader of the Wafd, it is by no means certain that the latter enjoys sufficient influence with the rank and file to justify the expectation that when the time comes he will be able to “deliver the goods,” and they fear that in present circumstances the opportunity might be taken by interested parties to try to

gain political capital out of opposition to the terms of any proposed agreement. Their view is that it would be far better to have no negotiations at all than to risk another failure with the inevitable further irritation of feeling that must result from another breakdown. A postponement until next summer, by which time the obscurity, in which the political situation is enshrouded, should have been cleared up, will, therefore, not come as a surprise, and it would have the added advantage that Parliament would not be sitting.

Alexandria Main Station.

At last Alexandria possesses a main station consistent with her dignity as Egypt's second capital. One of the things that has most struck new arrivals at that port has been the amazingly inadequate nature of the railway arrangements at the terminus, and their remarks have found a hearty echo among the resident population, who have felt very sore at the continuation, in spite of representations, of a state of affairs which was fast becoming a disgrace. It was not as if the authorities did not agree that the station was inadequate. On the contrary, as long ago as 1910 it was decided that the increase in traffic necessitated a much larger station, and designs were approved, and the credits opened, for the construction of a new building on another site. But the spirit of procrastination which resides in the Orient appears to have hovered over this enterprise from its very inception. For four years nothing was done for some inexplicable reason, and it was not until 1914 that the work was actually started, only to be interrupted by the outbreak of the War. It was resumed in 1920, but a very slow rate of progress was maintained and it was not until the end of this summer, i.e., seven years from the starting of the work, that the station was completed. A fine building providing ample facilities for further extension, it was unofficially opened to traffic on November 1, and it will receive its official inauguration when the King proceeds to Cairo on his return from his European trip.

The Mixed Tribunals.

As foreshadowed in this correspondence, the election of a President for the Mixed Court of Appeal in place of M. Cambas, who has retired, has resulted in favour of Judge Hansson, the Norwegian Counsellor, whose place as Vice-President has been taken by Judge Cator. This is the first occasion an Englishman has filled the position to which falls so much of the administrative and legislative work of this very important jurisdiction, and it is understood that in view of the extent to which the Mixed Tribunals will be occupied with legislative work during the coming year the new Vice-President has signified his desire not to avail himself of his right to preside over one of the chambers, but to sit under one of his colleagues so that he may be able to devote the maximum of his time to his other important duties. This means that the presidency of one of the three chambers will continue to fall to Judge Vaux, the next senior Englishman.

Labour Legislation.

In response to the wish expressed by Parliament during the last session the Government has set up a Commission to study the question of labour in Egypt and to prepare legislation to safeguard the interests of workmen and conduce to the reduction of disputes and the maintenance of good relations between workers and employers. The Commission is presided over by Abdel Rahman Rida Pasha, Under-Secretary of State for Justice, and its members comprise two senators, two deputies as well as the representatives of administrations most interested in the question. The first meeting was held this week, when sub-committees were formed to study and report on various branches of the main question.

During recent years there have been periodical disputes between workers and employers, notably the Tramways and the cigarette factories, and conciliation committees have been set up in each *Mudiria* to deal with these disputes. But these committees are not altogether satisfactory, as there is no means of enforcing their decisions.

Moreover, there is no legislation on the subject if one excepts the laws dealing with the employment of children in the factories.

Although Egypt is not fundamentally an industrial country, industries are certain to play an increasingly large part in the economic life of the country, and it is no doubt wise to have proper legislation to deal with the problems which are sure to arise in the future. At the same time one cannot help feeling that many of the disputes which have taken place in the past, or perhaps it would be more correct to say that the difficulties experienced in their settlement, have been in great measure due to the intervention of lawyers, many of them young men without regular work who saw in these disputes a means of advancing themselves politically and of making some pecuniary gain. If something could be done to make it impossible for such elements to foment industrial trouble or hinder settlement of dispute, much of the difficulty would be overcome.

On the other hand, while there is no objection to the regularisation by law of the conditions of employment, health, wages, prevention of accidents and compensation for accidents, indemnities and so forth, of ordinary artisans, it is sincerely to be hoped that the Commission will not include in its review recommendations with regard to the employment of agricultural labour. The *fellahin* cultivators appear perfectly content with their condition and whatever disputes arise are settled to mutual satisfaction of wage earner and proprietor according to local usage. The only result of any intervention of the nature which legislation would entail would be completely to disturb an industry which is the mainstay of the country.

Sofia, November 7.

The Ministerial Situation.

The return of King Boris was awaited with a certain impatience in political circles in Sofia and more particularly in Governmental circles, which, being sadly divided, are displaying a somewhat feverish activity. Partisans of the Democratic Entente, indeed, do not hesitate to speak of a partial, if not general Ministerial crisis. This crisis, moreover, is freely bandied about, and springs from a vague sentiment of the necessity of making a change to overcome existing difficulties. Herein is a phenomenon which is quite characteristic of Bulgarian political life, and which finds expression in a general and rather unreasonable *ça ne va pas* attitude, against which the best Government can do little.

If it were asked what precisely is meant by this *ça ne va pas* attitude, all sorts of answers would be given, some more surprising than others, which would confuse the foreigner and would leave him completely at a loss. Actually, there lies at the bottom of this attitude the effect of the aggravated economic crisis. When things seem to be far from improving, one is always disposed to cherish the illusion that a change of Government might alleviate the situation. But there is also a kind of instinctive perception that the Government is beginning to "wear." This process, quite natural for a régime which has endured more than four years is most manifest in the heart of the Democratic Entente. The Governmental group is composed of the Democrats of M. Liaptcheff, of the "Populists" of M. Buroff and M. Majaroff of the "Progressists" of M. Daneff, and of the "Ententists" of Professor Tsankoff (the national Entente which contributed powerfully to the execution of the *coup d'état* of

June 1923), without counting the small group of Radicals, who have almost completely disappeared in the new formation. All these "tribes," as they are ironically called, have, after the last elections which made a Democratic majority in the *Sobranje*—certain, begun a lively struggle among themselves. Moreover, since none of them can gain predominance, each of them threatens to retire from the group and to seek new combinations. This threat is most entertained by the "Populists," albeit against the advice of M. Buroff, and it has been taken up by the "Ententists."

Difficulties of M. Liaptcheff.

M. Liaptcheff, therefore, has to overcome in his own party the internal opposition of the "Populists" and of the "Ententists," to whom are joined some of the "Progressists," and who, for the sake of the cause are at present all rallying, more or less openly, to Professor Tsankoff, now President of the *Sobranje*. The struggle is thus confined to two personalities, of whom one, M. Liaptcheff, had an incontestable superiority at the legislative elections, and the other, Professor Tsankoff, seems to have been getting the upper hand after the elections. Things are, in fact, in such a way that Governmental deputies may be heard to declare that, unless there is a profound remodelling of the Cabinet, M. Liaptcheff will be defeated in the *Sobranje* by his own supporters as brutally as was Professor Tsankoff early in January, 1926.

Why are matters so grave for M. Liaptcheff? First, corruption would appear to be abundant. But corruption cannot be directly imputed to the Ministers; at any rate, there is no proof of it yet. It is true that M. Liaptcheff has the misfortune to be the friend and more or less the protector of a young Deputy who has recently scandalised the whole country by his attempt at extortion on a grand scale in a judgment which he endeavoured to gain in favour of a firm which would pay him a commission of four million levas, to be divided between him and "the powers that be." But no one has dared to assert that M. Liaptcheff was *au courant* with these criminal transactions and still less that he encouraged them.

The second complaint against the President of the Council is that he favours the Democrats at the expense of the other sets, that is to say that he does not make enough concessions to them, while the Governmental Democrats, who should not be confused with the Malinovist Democrats of the Opposition, reproach him for making too many! This argument, therefore is interested, and signifies nothing.

Lastly, and, I believe, most important, is the charge which concerns the extension of the political brigandage, at bottom anarchist or Agraro-Communist, the considerable reinforcement of the Agrarians, not yet sufficiently purged of Communist elements and consequently inspiring insufficient confidence in their pacific intentions and in general in their loyalty towards the State. A situation has consequently arisen which involves heavy responsibilities for the Government, which is reproached with not having been able to master the subversive currents. And so there is talk of "governmental feebleness." It is forgotten, however, that this brigandage flourished as much, if not more, in the time of the Tsankoff Cabinet, and as for the Agrarians they were not then less dangerous than they are at present. On the contrary, the Governmental pressure to which they were subject at this time forced them to conspiratorial methods, in which they met the

Communists, emissaries of the International of Moscow, while the relative liberty which M. Liaptcheff allows them—and it is his chief merit—has had the effect of separating them farther and farther from the Communists.

Informed circles await an effort at conciliation of the "tribes" which would repair the Government by the formation of a Cabinet that would include all the chief personalities of the Governmental Group and would be spared, at least for some time, the rivalries from which it now suffers.

Belgrade, November 11.

The Franco-Yugoslav Treaty.

Not only the Press of Yugoslavia and France, but that of the whole of Europe has been full of the signing of the Pact of Friendship between France and Yugoslavia, to which immense importance seems to be attached. Yet its signature cannot greatly change the relations which have existed between these two countries ever since the end of the War, cannot make their friendship more devoted or more obvious, nor their mutual assistance in case of need any the more sore. The Treaty is important only in so far as it makes the situation in South-Eastern Europe more clearly defined.

It is interesting, however, to speculate on the reasons for the signature at the present moment, of this pact, a draft of which was initialled in March last year on the occasion of Dr. Nintchitch's visit to Paris. In one way it is the natural result of the change of Foreign Ministers, of the fall of M. Nintchitch owing to the failure of his policy of friendship with Italy at any price, and marks a reversion to the earlier policy of complete reliance on France. Its apparently hurried conclusion has led to rather sensational suggestions—that it is due to fear of the development of Austrian Fascism in intimate alliance with the Italian movement; that it is France's challenging reply to the Italian naval demonstration off Tangier; that it is Yugoslavia's way of escape from the difficulties and dangers created by the Macedonian Revolutionary Organisation and the unsettled state of Albania. It is possible that any of or all these circumstances influenced the French and Yugoslav Governments in coming to a definite decision to sign their pact now—but it really appears that the haste with which this decision was reached was more apparent than real and that negotiations for its signature began at Geneva and have been proceeding for several months. The most amazing feature of the whole affair was the utter ignorance of General Bodrero, Italian Minister in Belgrade, of what every other diplomatist in the town seems to have known to be going on. On Saturday General Bodrero did not know what was happening; on Sunday, when the only question remaining to be settled was whether M. Marinkovitch should leave for Paris on the Tuesday or the Wednesday, he still professed his disbelief in its possibility. On Monday he was officially informed of the decision of the Yugoslav Government and he at once rushed off to Rome to report on what

will, doubtlessly, be considered there as his failure. It is, perhaps, a fitting revenge for the way in which he led on former Foreign Ministers of Yugoslavia finally to let them down.

There is one very simple possible explanation of the choice of this moment for the signature of the pact which seems to have been over-looked entirely. M. Marinkovitch should have faced Parliament to-day to reply to M. Raditch's and M. Pribitchevitch's sharp-tongued criticisms of his handling of foreign policy. Instead he is in Paris signing a treaty which is so very highly popular with all parties that it will cover him with glory and take the sting out of all Opposition criticism of his treatment of the Albanian and Bulgarian crises. This may answer the question "Why now?"

A Political Alliance.

Tired of waiting for M. Davidovitch to decide whether his party will join the suggested Peasant and Democratic bloc to which they have given their consent in principle, M. Raditch and M. Pribitchevitch have made a first definite step towards the realisation of their aim by making a definite alliance between their own parties. This sign of their sincerity, together with new and acute differences which have arisen between the Radicals and Democrats in connexion with certain matters relating to the recently concluded municipal elections in the Voivodina district, may lead to new dangers for a Government which is being allowed to live largely because of the fear that what might follow it might be even worse.

NOTES OF THE WEEK

(Continued from page 610.)

Jewish Education in Palestine.

No one expected that the reductions in the various Budgets to which the fifteenth Zionist Conference at Basle had recently to consent—there being no alternative—would be received without demur in Palestine itself. But the perturbation which the reductions have caused is apparently deeper than was even feared. It has just been reported by the Jerusalem Correspondent of *The Times*, for instance, that none of the Zionist schools has as yet reopened after the summer holidays, and he refers to the possible closing of such institutions as the Bezaleel School of Art and the Jewish National Museum. It is, of course, entirely natural that the Jewish community in Palestine should take alarm at the departure or disappearance, temporary though they may be, of some of their cherished members or institutions, but it must be emphasised once more that theirs is necessarily the short view. The Zionist Organisation and the Zionist Executive had no choice but to cut down to a minimum the grants to Education, as to Labour. The Jewish teachers in Palestine are not, indeed, strange in thinking that Education should be the last thing to suffer the fell hand of economy; nor should there be surprise because the unemployed of Tel Aviv have another sacred thing, the "dole," which should be kept inviolate from the tightening grip. There must be a certain sympathy with those who assert that at the root of a revived Jewish life in Palestine lies a Jewish cultural centre in Palestine, but, as Lord Balfour remarked at the dinner which was given in his honour last week by the Anglo-Palestinian Club, economics unfortunately lie at the root of things which are far greater than economics. It is all very well for the teachers and the Labour members to revile their Mother Hubbard, the Zionist Executive; but until the cupboard is replenished, all will have to go emptier than they choose. For the immediate future, and until more fuel is supplied from America and from internal developments in Palestine, the speed of the Zionist ship must be "dead-slow." They are but faint-hearted mariners who imagine that those in charge of the vessel have forgotten their destination. As Mr. Ormsby-Gore

has just expressed it, there are on the Zionist ocean an ebb and a flow; which are, perhaps, as much the result of uncontrollable forces as the product of human unwisdom.

The Turco-Persian Dispute.

As far as evidence is available, it is Persia which would appear to have the balance of right in the dispute between Persia and Turkey which came to a head some weeks ago on certain incidents in the region of Mount Ararat. It will be recalled that the recent punishment by Turkey of Turkish Kurds living near the Persian border involved Persia in difficulties, for these Kurds, having resisted the Kemalist soldiers, made good their escape (with some prisoners) into Persian territory. Largely this was possible owing to the unsatisfactory nature of the boundary between Turkey and Persia; a fact which was sufficiently demonstrated by the bombing by Turkish aeroplanes of Persian property and of the firing of Sardar Balaghi by Turkish troops. We have already recounted the history of the indignation caused in both Persia and Turkey by these events, and of the sending of Notes by the respective Governments. Fortunately it would appear that common-sense—in other words, the proposals made by the Persian Government in its Note of October 6—is at last governing the matter. Negotiations are now proceeding in Angora which will probably result in the setting up of a mixed Commission to make inquiries on the spot. Whether the Persians and the Turks on this boundary will find agreement an easier matter than it proved to be in 1914, when every dispute had to be settled by British and Russian representatives, remains to be seen. It will be indicative of how the subjects of Reza Shah Pahlavi and of Mustapha Kemal Pasha may be found to differ from those of the Qajar and Ottoman predecessors.

BYRON SOCIETY.

The celebrations in commemoration of the centenary of the death of Canning and the Battle of Navarino having been concluded, the following have been elected Vice-Presidents of the Byron Society:—The Poet Laureate, Captain A. W. Byron, Earl Beauchamp, K.G., Lord Ernle, Sir John Shelley-Rolls, Sir John Murray, Mr. H. N. Gladstone, and Mr. F. S. Stevenson.

Sir Rennell Rodd remains President, and the Rev. D. R. Fotheringham (Charing, Kent) continues to act as Secretary, with Mr. S. C. Atchley (British Legation, Athens) as the Society's representative in Greece.

LORD BALFOUR AND PALESTINE.

The dinner which was held at the Savoy Hotel on November 10, under the auspices of the Anglo-Palestinian Club, in commemoration of the tenth anniversary of the Balfour Declaration, was attended by about 700 members and guests. Mr. J. A. de Rothschild presided, and the company included Mrs. James A. de Rothschild, Lord Rothschild, Lady Samuel, Lady Mond, the Very Rev. the Chief Rabbi and Mrs. J. H. Hertz, Sir Leslie Scott, K.C., M.P., Lieut.-General Sir George Macdonogh, Sir Ernest Rutherford, Brig.-General Sir Gilbert and Lady Clayton, Major Walter Elliot, M.P., Sir Wyndham Deedes, Mr. Bernhard Baron, Dr. and Mrs. Weizmann, Mrs. Wedgwood, Mr. and Mrs. Edgar Dugdale, the Hon. Mrs. Walter Levy, Sir William Crawford, Sir Elly Kadoorie, Sir Martin Conway, Professor Graham Wallas, and Mr. Robert Vansittart.

Lord Reading, proposing the toast of "The Mandatory Power," said that in plainer English this toast meant that of "His Majesty's Government." In paying a very warm tribute to Lord Balfour, who, he said, had won the respect, the esteem, even the affection of all classes, Lord Reading said that Lord Balfour was associated for all time with the great, historic Declaration made in November, 1917. At that time the skies were overcast, the atmosphere was murky, but the effect of the Declaration was to fire the imagination, to inspire the soul of Jewry. The Declaration was actuated by the highest principles of toleration and justice, and in this connexion Lord Reading instanced, as typical of British administration, the régime in India.

To this toast Mr. W. G. A. Ormsby-Gore, M.P., Under-Secretary for the Colonies, replied. He recalled his pleasurable time in furthering Zionist efforts in Palestine in the early days after the War. Then, however, the Balfour Declaration was the subject of some controversy, alike in the British Parliament, in the British Press, and in the East. Of that controversy hardly anything was heard now. This fact was mainly due to the impartiality administered in the Holy Land by the "men on the spot," whom it was always the practice of His Majesty's Government to trust. The absolute justice of Sir Herbert Samuel and of Lord Plumer had had the effect of quietening strife. Palestine, like all other countries, was subject to ebb and flow, and just now was experiencing the ebb. But let them not be dismayed by that. The Zionist ideal was of benefit not to Jews only; it had a great spiritual value for all mankind.

The health of Lord Balfour was proposed by Dr. Chaim Weizmann, who explained that the author of the Declaration did not act on the spur of the moment in signing the 1917 document, but that his action was the result of long conviction. The Declaration was inspired by a sense of justice which had contributed much to the civilisation of mankind. Dr. Weizmann amusingly recapitulated the history of the Declaration. He remembered how Sir Mark Sykes had come to those anxiously awaiting the verdict of the Cabinet upon the Jewish aims, and had declared to them: "Gentlemen, it's a boy." He ventured to think that this Zionist boy, though noisy at times, was a sturdy boy. It would become infinitely stronger when the Jewish people, who were not ready at the end of the War to take advantage of what was offered them in Palestine, wholeheartedly supported the Zionist movement. He also expressed the hope that the British Government would afford more facilities in Palestine for accelerating the progress of the Jewish National Home.

Supporting this toast, Sir Herbert Samuel stated that since the Declaration the Jewish population of the Holy Land had been increased by some 100,000 souls, and the antagonism of the Arab population, which was still in a great majority, had been mitigated. It was in the highest interests of Zionism that no injustice should be meted out to the Arabs. He recalled the visit of Lord Balfour to Palestine in connexion with the opening of the Hebrew

University on Mount Scopus, and spoke of the intellectual and spiritual movement which was focussed in that University. He often wondered what inspiration the author of the Declaration had derived from Disraeli, whose significance to the Jews was so considerable. He believed that as Disraeli was connected with the past of the Jewish race, so Lord Balfour was connected with the future of that people. And Sir Herbert quoted Disraeli's own words:—"A race that persists in celebrating their vintage, although they have no fruits to gather, will regain their vineyards."

Lord Balfour, replying to the toast of his health, referred to his early thoughts upon the great enterprise of the Zionists. Long before 1917, he said, he had discussed with Dr. Weizmann their hopes and fears, not foreseeing then that the opportunity would come in their lifetime. The Zionist endeavour was at once the most ideal and the most practical of causes. The movement for a Jewish National Home in Palestine was not merely a question of economics, although it was unfortunately true in our time that economics lay under so many things that in themselves were far greater than economics; it was a great question of human, intellectual, and emotional development. It was not merely the settling in Palestine of some thousands of depressed Jews, who had endured suffering in other parts of the world, but the releasing, for the service of humanity, of the great gifts of the Jewish race. About this great experiment—he used the word experiment, because the movement concerned a thing wholly novel, which had never been tried before, not because there was a question of its succeeding or failing—he was an optimist. But the Jewish settlers in Palestine would not be given a fair chance—and here he praised the most statesmanlike utterances of Dr. Weizmann and of Sir Herbert Samuel—if anyone could charge the Mandatory Power with unfair treatment of the inhabitants of the Holy Land. That would be an injury which Great Britain would be ashamed to commit, and which would in the first place be prejudicial to the Jews themselves. He believed, indeed, that the difficulties existing between Arab and Jew would progressively diminish. He realised the difficulties of the Zionist settlers, and in this connexion he read out the following authorised statement:—

The Palestinian Government has in mind all the difficulties which have to be dealt with by the Zionist Organisation, and, having that in mind, it is intended to introduce as soon as possible certain general reforms in matters of land taxation. A special staff has recently been appointed to undertake the work of land survey, which is an essential preliminary in the reform of land taxation. The result of their work will be to enable the Government to readjust the present incidence of taxation on land.

He added that anything which could properly and justly be done to make the many tasks of the Zionist Organisation a success would be done.

In proposing the toast of "The Jewish National Home," Colonel Wedgwood stated that the settlement of the Jews upon the land of Palestine was the key to the success of the Zionist movement. The workers in the Holy Land had far more joy and hope in their labours than any workers in the world.

This toast was responded to by Sir Alfred Mond and Mr. Nahum Sokolow; and the toast of "The Anglo-Palestinian Club and the Chair" was proposed by Mrs. Philip Snowden and replied to by Mr. James A. de Rothschild.

Squadron Leader H. S. Maxwell, M.C., D.F.C., R.A.F., Cairo, has been transferred to Iraq and left Egypt for Baghdad by the air mail on October 31.

Three of the members of Haji Sami's band, arrested near Smyrna last August, have been condemned to death, one to life imprisonment, while one has been acquitted by the Criminal Court sitting in Stamboul. The charges against them were that they had come secretly into Turkey from Greece with the intention of assassinating the Ghazi Pasha and that they were captured with arms and bombs in their possession.

Book Review

THE FOUNDER OF ISLAM.

"MOHAMMED. A BIOGRAPHY OF THE PROPHET AND THE MAN." By R. F. Dibble. (London : Hutchinson. 12s. 6d.)

The adoption by the West of a reasonable attitude towards one of the world's great religions, Islam, is not achieved in a day, though a better understanding between Islam and Christendom is the sure outcome of more earnest and properly conducted study. Unfortunately the old, uncomprehending attitude either of intolerance or of depreciation is still occasionally manifested, and of the second attitude this book, which appears, from internal evidence, to have been written by an American, is a supremely mischievous example.

Mr. Dibble's attitude, in recounting various facts and legends about the life and experiences of the Prophet Muhammad, is one of highly-coloured superiority. Disdainful unbelief is manifest in almost every line; and what is claimed by his publishers as irony is merely a cheap and unworthy sarcasm. As a key to the greatness of Muhammad this book is useless: we cannot, indeed, conceive of any valuable service to which it would possibly be placed.

It has been the author's purpose, presumably, to write a "popular" account of his subject; in consideration of which, perhaps, an impossibly overloaded style and certain misstatements of fact may be forgiven by the more ignorant reader. Even he, however, knowing something of what Islam owed to Judaism and Christianity, may blink his eyes when he reads, on the very first page, that the Syrian Desert is "impassable," and that "to this day, indeed, Arabia has been left almost entirely alone by the outside world." And of his style, perhaps this sentence, taken from an early paragraph upon the bedouin of Arabia, may be given as an example: "Nevertheless, the centralising power arising from perpetual traditions of a mutual fraternalism of interests held these roving hordes in an elastic coalescence."

In the chapter on the early years of the Prophet, the reader is regaled with such expressions as "sharp-eared Allah, aloof in his own particular Heaven"; "high-spirited Abdallah"; "grief-stricken Abd Al-Muttalib." And in his remarks upon the Prophet's youthful morals, the "ironical" style is more than usually detestable.

The style, in fact, increasingly detracts one's attention from the well-known or imaginary details. We read, for instance, when Muhammad explained that the Quran was "not the word of a poet," but "a revelation from the Lord of the Worlds," that—"this lofty gesture temporarily squelched his defamers, who promptly dug off with their tails between their legs." Again, we read, when the Prophet turned towards Heaven and said, "O Lord, if Thou willedst, it would not be thus!", that—"Allah—Who, logically, should be as much of a nomad as His creatures—seems to have been enjoying a vacation just then." In a dissertation upon Muhammad's wives we find this:—"Perhaps Ayesha provoked the Prophet most of all by failing to treat his religious views with proper decorum; when she was particularly miffed about something, she showed her disrespect by refusing to address him as the 'Apostle of God.'"

It is really impossible to have patience with such a compilation. The only readers whom we could conceive as enjoying the book would be atheists with no taste for literature. They probably would revel in its windy cynicism.

A telegram from Angora states that "the vilayet of Constantinople has informed the Census Department that the actual total of the population is 699,602, of whom 354,013 are male and 345,589 female." The figures are, apparently, for the vilayet, which was supposed to have over a million inhabitants.

SIR ELLY KADOORIE.

The King of Iraq honoured Sir Elly Kadoorie with his company at dinner on November 12 at 6, Princes Gate, S.W.7. The other guests were Jaafar Pasha el Asheri (Prime Minister of Iraq), Raouf Bey Chaderchi (Minister of Justice), the Diplomatic Agent for Iraq, Major Tahsin Qadry Bey, Major-General Sir John Hanbury-Williams, Lady Southwark, Lord and Lady Ashfield, the Dowager Lady Swaythling, General Sir John and Lady Maxwell, Sir Herbert and Lady Samuel, Sir John and Lady Risley, Sir John Shuckburgh, Mr. Daly Stanford, and Mr. Lawrence Kadoorie.

Among the guests who accepted invitations to the reception which was held afterwards were the Danish Minister, the Siamese Minister, the Czechoslovak Minister, the Egyptian Chargé d'Affaires, the Italian Naval Attaché, the Earl and Countess of Lauderdale, the Countess of Clancarty, Earl and Countess Soudes, the Earl and Countess of Cardigan, Rosalie Countess of Cork, Viscount and Viscountess Erleigh, Lady Augusta Fane, Lord and Lady Teynham, Lord and Lady Clanmorris, Lord and Lady Strathspay, Countess Biochenhuus Shack, Baron and Baroness Quarles Van Uford, Annabel Lady De Freyne, the Chief Rabbi and Mrs. Hertz, the Hon. Lionel and Mrs. Guest, the Hon. Joan Guest, Sir John and Lady Pretymann Newman.

Colonel Sir Frederic and Lady Nathan, Sir Walter and Lady Gibbons, Sir Hamilton and Lady Grant, Sir Herbert and Lady Cohen, Sir Thomas and Lady Carey-Evans, Sir George McLaren Brown, Lady Tuck, Lady Chalmers, Lady Walpole, Lady Burton, Miss Macconnel, Sir Gerald Fowler Burton, Mrs. Dighton Probyn, Mrs. George de Pass, Colonel Dodge, Lieutenant-Colonel H. V. B. de Satgé, Mr. M. Ruffer, Mr. Sokolow, Mrs. Flora Sassoon, Mr. and Mrs. d'Avigdor-Goldsmid, Mr. and Mrs. Leonard Montefiore, Mr. and Mrs. E. Sebag Montefiore, Mrs. R. S. Henderson, Captain and Mrs. E. Dugdale, and Miss Bagot.

THE BALKAN COMMITTEE.

The following resolution was passed at a meeting of the Balkan Committee held on October 31:—

"This Committee views with grave concern the present situation in Macedonia. Reports of harsh administrative measures brought to bear on the Bulgarophone populations in different areas, and more particularly of barbarous ill-treatment of certain students at Skoplye, and on the other hand numerous outrages committed by Macedonian *komitajis* sufficiently show that there is a recrudescence of serious unrest and dissatisfaction.

"This Committee once again places on record its regret that assassination and band warfare should have come to be regarded as the only possible means of redress of grievances, and expresses its conviction that contentment and pacification cannot be secured by harsh administrative methods or by the organisation of official Serbian bands to fight Macedonian bands.

"This Committee believes that the best interests of all the Balkan peoples would be promoted by good relations between the Governments of Belgrade and Sofia, and heartily approves the efforts that have lately been made on both sides to secure that end.

"The Balkan Committee is of opinion that in order to assist the Belgrade and Sofia Governments to arrive at a peaceful agreement, the British Government should use its friendly right to have the entire question referred for settlement to the Council of the League of Nations at its next meeting, under Article XI., paragraph 2 of the Covenant. Nothing less than a thorough inquiry under the authority and prestige of the League can suffice to lead to a solution acceptable to each of the disputants."

King Fuad left Toulon on November 10 in the Royal yacht Mahroussa for Alexandria, where he arrived on November 14.

M. Hautecourt, assistant curator of the Louvre Museum, has been engaged by the Egyptian Ministry of Public Instruction for a period of three years, as technical adviser on Fine Arts in Egypt.

Dr. N. Tsamis, of Alexandria, Greek delegate on the Quarantine Board of Egypt, and Mme. A. Panayotatou, director of the laboratory of the Greek Hospital at Alexandria, will officially represent the Greek Government at the Congress of "Journées Médicales d'Egypte," to be held in Cairo in December.

A full set of Transjordan stamps has been issued in a design presenting a portrait of His Highness the Amir Abdullah. There are eleven values in the series, the first seven being in normal stamp size, while the values from 50 to 200 milliemmes are larger. All are inscribed in English and Arabic, and are printed in sheets of 100 on the current script watermark paper made for the Crown Agents for the Colonies. The set comprises:

2 milliemmes, greenish blue.		20 milliemmes, olive.	
50	" mauve.	3	" rose.
4	" green.	90	" bistre.
5	" orange.	100	" bright blue.
10	" red.	200	" violet.
15	" ultramarine.		

KING FAISAL OF IRAQ.

On November 9 King Faisal visited Portsmouth for the purpose of travelling in a submarine. A pinnace from H.M.S. Dolphin conveyed His Majesty from Portsea pontoon to the Submarine Depot at Fort Blockhouse, where King Faisal lunched with Rear-Admiral H. E. Grace, commanding the Submarine Service. Afterwards he went on board Submarine L22 and left the harbour for a trip to Spithead and the Solent. King Faisal greatly enjoyed his experience, which included the pulling of a trigger in the control station and firing a torpedo from one of the bow tubes.

King Faisal was entertained on November 14 at luncheon at the Savoy Hotel by Mr. F. G. Kellaway, Managing Director of Marconi's Wireless Telegraph Company, Limited, and was afterwards shown the Marconi wireless organisation for commercial telegraphy and picture transmission.

To-morrow (Friday) King Faisal is being entertained to dinner at the Savoy Hotel by the Directors of the Eastern Bank.

AMENOPHIS III.

A lecture was given to the Egypt Exploration Society by Mr. S. R. K. Glanville on "Amenophis III," at the Royal Society on November 9, with General Sir John Maxwell in the Chair.

The lecturer said that Amenophis III (*circa* 1412-1375 B.C.) succeeded to an empire which reached from North Syria to the third Cataract of the Nile. His rule marked the zenith of the Egyptian Empire and of that luxurious civilisation which had been made known to us from the tomb of Tutankhamen. But there were curiously few historical remains from his long reign. Its chief interest lay in discovering how far Amenophis was responsible for the revolution in art and religion which was generally attributed to his successor.

There was ample evidence to show that the worship of the Aten had already become an important cult under Amenophis III, and it seemed possible that this was due to an admixture of Iranian blood through his father's marriage to a princess from Mitanni, and that it was strengthened by the friendly relations and his own dynastic marriage with the family of Dushratta, King of Mitanni. At any rate there were several strong likenesses between the religion of the Vedas and the Aten cult; and certain customs which were noted by Herodotus as peculiar to the Persians, a closely related Aryan branch, were to be found by implication in the characteristics of the Amarna Age.

LIBERATION OF JERUSALEM.

To mark the tenth anniversary of the Liberation of Jerusalem on Friday, December 9, a Mass Meeting will be held at the Central Hall, Westminster, at 7.45 p.m. The Bishop of London will be in the Chair, and the speakers will be Bishop MacInnes, Anglican Bishop in Jerusalem, Sir Samuel Hoare, Bart., M.P., Secretary of State for Air, and General Sir Philip Chetwode, Bart., who commanded the 20th Corps in Palestine. Lantern slides of the Palestine campaign will be shown, and the speakers will deal with the progress made under the British Mandate during the past ten years. All who served in Palestine will be especially welcome.

THE CENTRAL ASIAN SOCIETY.

Mr. G. E. Hubbard, who was Secretary of the Commission which in 1914 delimited the Turco-Persian Frontier and who is the author of "From the Gulf to Ararat," lectured on November 9 to the Central Asian Society on "The Two Sides of the Case in China." Admiral Sir Ernest Richmond presided, and Sir Charles Addis, Mr. Gull, and Mr. Mayers took part in the discussion. Before the lecture, the Chairman referred to the sad death of Dr. Hogarth, one of the Society's members. The audience stood while he read out a resolution of sympathy and regret.

Mr. J. D. Rockefeller, Jun., has offered £400,000 for the purpose of establishing a museum of Palestinian archaeology in Jerusalem. The gift, the conditions attaching to which must be completed within three years, has been accepted gratefully.

It is stated from Baghdad that the Ikhwan of Najd have attacked a police post in the course of erection seventy miles south-west of Naisiriya, killing over twenty men, including an overseer of the Public Works Department. It is claimed by the Ikhwan that the Iraqi-Najd Treaty inhibits the fortification of wells near the frontier.

It is reported that Shaikh Dhari' ibn Mahmoud al Dhaahir, leader of the Zobat tribe, who has been generally held responsible, with his son Khamis, for the murder of Colonel Leachman in August, 1920, has been captured. Colonel Leachman was killed, it will be recalled, by an act of treachery that still is a matter for shame among the Arabs of Iraq. It is stated that Shaikh Dhari ordered a motor to take him to his son's dwelling, but the driver recognised him and drove him to the residence of the Qaimmakam. The Shaikh was thereupon arrested.

NEWS IN BRIEF.

Earth tremors shook houses at Basrah on November 12. Several shocks were felt.

Mr. Robert Atkins opened the Shakespeare season in Cairo on November 9 at the Opera House with "Hamlet."

It is stated that the Kurdish deputies in the Baghdad Majlis are carrying out a campaign in Kurdistan against the Conscription Bill.

Sir John Maffey, Governor-General of the Sudan, who has been visiting England, arrived on November 9 at Cairo, *en route* for Khartoum.

Dr. Wargneh Martin, who has been on a mission to the United States on behalf of the Abyssinian Government, arrived in London on November 9.

King Faisal bought poppies on Armistice Day from a stall in the Hyde Park Hotel. In the afternoon he placed a wreath at the Cenotaph.

General Emanuel Zimbrakakis, who was in command of the Greek Army in Thrace during the latter part of 1920, died on November 10.

The Navarino and Greek War of Independence Exhibition, which has been held at the Greek Legation since October 20, was closed on November 12.

The Metropolitan Nicholai Velimirovitch, of Ochrida (Serbia), preached on "Reminiscences of the War and the Rebirth of the World," at St. Luke's, Rosemary Road, Camberwell, on November 13.

A gift has been received by the Royal National Life Boat Institution from the headquarters of the R.A.F. in India to which all ranks have contributed. It will be recalled that during the War the lifeboats rescued over twenty lives from wrecked aeroplanes.

The death is announced of Miss Alice Gardner, writer on Byzantine history. Her works include "The Emperor Julian" and "The Empire of the Lascarids," for the writing of the second of which she undertook a journey in Asia Minor.

The Franco-Yugoslav Treaty which was virtually concluded in March, 1926, but was delayed owing to a desire to bring Italy if possible into its orbit, was signed on November 11 by M. Briand and M. Marinkovitch at the Quai d'Orsay.

At a meeting of the Wafd held last week in Cairo it was decided to nominate Mustapha Pasha Nahas as candidate for the Presidency of the Egyptian Chamber, with Wissa Bey Wassef and Hussein Bey Hilal as vice-presidents.

It is believed in Athens that on the publication of the prospectus after the meeting of the Council of the League of Nations in December it will be possible to issue the new Greek loans by the middle of February.

The Mixed Tribunals in Cairo on November 9 ordered the release of the Soviet steamer Tchitcherin, which was seized on October 30, at the request of the owners of the Egyptian steamer Costi, seized at Odessa in September by order of the Soviet Court.

In a written reply to Mr. William Nicholson Mr. Ormsby-Gore says:—The official residence of the High Commissioner in Jerusalem is the property of the Kaiserin Augusta Victoria Stiftung, to whom rent is paid by the Palestine Government. In 1926 the rent paid was £E2,200.

A preliminary agreement between the Refugee Settlement Commission and M. Papanastasiou, Greek Minister for Agriculture, has been signed providing for the payment of compensation to agricultural refugees for their properties abandoned in Turkey to a total not exceeding £10,300,000.

A new Customs Ordinance has been promulgated in Palestine. This revises the various dues in accordance with the new sterling currency, and introduces in most cases a fixed duty per unit or by weight, instead of leaving the amount payable to be calculated on an *ad valorem* percentage.

Lady Massie-Blomfield, who died on November 4 at Florence, was the widow of Rear-Admiral Sir R. Massie-Blomfield, K.C.M.G., who in 1879 was appointed Comptroller of the Port of Alexandria, and retired, as Director-General of Ports and Lighthouses, in 1908. During her long residence in Egypt Lady Massie-Blomfield was a well-known figure in the British colony.

The Egyptian Ministry of the Interior has sent a communication to the United States Legation in Cairo pointing out that "M. Seminouk, one of the Russian cotton delegates, having failed to carry out his undertaking to refrain from Bolshevik propaganda, is considered as an undesirable and should be requested to leave the country." M. Seminouk is a naturalised citizen of the United States.

PERSONAL AND GENERAL

TO-DAY

November 17, 1927 (New Style).
November 4, 1927, (Old Style).
Jumada I, 22, 1346 A.H. of the Muslim Calendar.
Marcheshvan 22, 5688, of the Jewish Calendar.

Viscount Elibank left 187, St. James's Court for Egypt and the Federated Malay States on November 10.

Major and Mrs. R. A. Scott and Miss Joan Scott sailed for India on November 11 in the P. and O. s.s. Ranpura.

Colonel and the Hon. Mrs. Skeffington Smyth have left London for Egypt, where they will spend the winter.

The Amir Abdullah of Transjordan was on November 8 invested with the K.C.M.G. by Lord Plumer, High Commissioner for Palestine.

Sir Adam Block, British Representative on the Council of Administration of the Ottoman Public Debt, has arrived in London from Constantinople.

Mr. and the Hon. Mrs. J. Beaumont Pease left 42, Bryanston Square on November 10 for India. They will be away for about three months.

Lord Ebury and the Hon. Elizabeth Grosvenor are leaving England on November 18 in the Ranpura for India. They will be away for about five months.

The Rev. A. P. G. Maunsell, formerly Canon of Lahore Cathedral, has been nominated by the Archbishop of Canterbury to the Vicariate of St. Dunstan, Canterbury.

Sir Gerald Strickland, upon his appointment as Head of the Ministry of Malta, had the honour of being received by the King at Buckingham Palace on November 9.

The Countess of Ilchester will leave for India early in December, to visit her son-in-law and daughter, Captain and Lady Mary Herbert, and will not return to England before April.

Lady Godfrey-Faussett, who has been on a visit to her brother-in-law and sister, the Hon. Sir William and Lady Erskine, at the British Legation, Sofia, has returned to London.

Dr. Wargneh C. Martin, representative of the Regent of Abyssinia, who has been on a mission to the United States, called at the Foreign Office on November 11 by his own request. He was received in the Egyptian Department.

The Edwin Arnold scholarship at University College for the encouragement of the study of an Oriental language has been awarded to Mr. Philip Mason, B.A., exhibitor of Balliol College and probationer in the Indian Civil Service.

The King received at Buckingham Palace on November 5 the Contingent of officers and other ranks who represented the Indian Army at the unveiling of the Indian War Memorial at Neuve Chapelle. Field-Marshal Sir Claud Jacob (Military Secretary, India Office) was present.

It is understood that Mirza Said Abol-Ghassem Khan Amid (Entezamal-Molk), Persian Ambassador at Rome, is remaining in Italy and not proceeding to Angora, as originally announced. It is probable that Faroughi Khan, ex-Minister of War, who is now in Angora, will be appointed to succeed Taba Tabai Khan, Persian Ambassador to Turkey.

In Sofia, King Boris of Bulgaria received in turn M. Cambon, French Minister, Sir William Erskine, British Minister, and Signor Piacentini, Italian Minister, to express to them his gratitude for the cordial welcome extended to him during his recent visits to their respective countries.

Sir Tudor Vaughan, K.C.M.G., M.V.O., his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Riga, Reval, and Kovno, whose appointment to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary of Stockholm has been approved by the King, has held posts, among other places, at Athens, Cairo, Constantinople and Bucharest.

The King has approved the appointment of the Hon. Sir William Erskine, K.C.M.G., M.V.O., his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Sofia, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Warsaw. Among other appointments Sir William Erskine has seen diplomatic service in Teheran and Athens.

The annual re-union Dinner of the British Serbian Units of the British Legion and of all friends of Serbia will be held on December 3, at 7.15 p.m., at the Victoria Mansions Restaurant, 24, Victoria Street, Westminster. The President, the Rev. R. G. D. Laffan, will be in the Chair. Tickets may be obtained from the Hon. Secretary, Miss C. M. Marx, 24, Delcombe Court, Dorset Square, N.W. 1.

Sir Herbert Samuel entertained King Faisal of Iraq at dinner on November 8 at 35, Porchester Terrace. The other guests included the Right Hon. D. Lloyd George, Earl Beauchamp, Sir John Simon, Lord Meston, Viscount Cowdray, Dr. Weizmann, Sir Martin Conway, Sir William Tyrrell, Sir Albert Stern, Sir Elly Kadoorie, Colonel Clive Wigram, Sir William Beveridge, Sir Arthur Crosfield, Professor Graham Wallas, General Jaafar Pasha, and Captain Qadry Bey.

The Aga Khan entertained at luncheon at the Ritz Hotel on November 3 the following guests:—The Earl and Countess of Birkenhead, Viscount and Viscountess D'Abernon, the Hon. Mrs. Barlow, Sir Austen and Lady Chamberlain, Lord and Lady Stanley, Lady Juliet Duff, the Hon. Mrs. Ronald Greville, the Hon. Mrs. Montagu, Lord Beaverbrook, Mahomed Reffiqe, Lady Diana Cooper, Viscount Castlerosse, Lady Eleanor Smith, Mr. Winston Churchill, and the Ali Khan.

Mrs. P. A. F. Stephenson, whose excellent water-colours of Palestine will be remembered by readers of THE NEAR EAST AND INDIA—the proceeds of her last exhibition in London were devoted to the Palestine Exploration Fund—is holding an exhibition of her recent works from November 23 until December 6 at the Alpine Club Gallery, Conduit Street. In addition to pictures of the Holy Land, Mrs. Stephenson this time has representations of Transjordan, notably of Petra, and her exhibition should certainly fascinate all travellers who have visited these two countries under the British Mandate.

THE INDIAN STATUTORY COMMISSION.

Through some gross official blundering and a leakage which Lord Birkenhead regretted but scarcely explained, the Statutory Commission contemplated by the Government of India Act of 1919, has not made a very dignified entry into the world. Instead of ushering it in with an announcement which one would have looked for simultaneously, and in terms suitable to so important an occasion, from His Majesty's Government here and from the Government of India at Delhi, the Prime Minister in the House of Commons and the Secretary of State for India in the Lords had to make their statements in reply to questions from the leaders of the Opposition as to the accuracy of information already furnished by several newspapers concerning the constitution of the Commission. The information, however premature, proved to have been accurate. But it is not in such ways that confidence in the Cabinet's methods or in those of Lord Birkenhead in particular, as the responsible head of one of the most important public Departments, will be increased or restored.

The Commission itself is a purely parliamentary one, composed exclusively of representatives of political parties of both Houses. The strongest argument in favour of this form of commission is probably, as the Viceroy's statement indicates, the extreme difficulty of constituting one on any other lines. It may, doubtless, also be pleaded that this form clearly complies with the terms of the Act of 1919 and was, in fact, contemplated from the very first by Mr. Edwin Montagu and Lord Chelmsford, joint authors of the Report on Indian Reforms, to which that Act was designed to give effect. These are arguments that will, we fear, carry greater weight in this country than in India, where the exclusion of Indians must cause intense disappointment, and only partial compensation will be found in the equally rigid exclusion from it of all Englishmen with any previous share in the government or administration of India. Indian extremists are already loud in denouncing the Commission *ab ovo* and in talking of a "national" boycott. Fortunately their influence has been waning for some time, and neither the Swaraj party in the Legislatures nor the Indian National Congress has retained the hold which it had a few years ago upon the country, when Gandhi was sweeping it with his cry of Non-Co-operation and prophesying almost immediate Swaraj by sheer "soul force." General as may be the irritation even amongst moderate Indians, as to the constitution of the Commission, we may set against it the broad spirit of confidence in the sincerity of British policy which Lord Irwin has succeeded in restoring since his appointment as Viceroy. That the decision of His Majesty's Government can claim Lord Irwin's support in as weighty and reasoned a statement as that which accompanied the announcement will, we believe, go further than anything else to reassure public opinion in India, and to secure the co-operation of its more responsible leaders. Some of them may, perhaps, even realise that if a larger proportion of Indians

had shown themselves willing to make the best of the Act of 1919 and to help whole-heartedly in working out its provisions pending the time for its revision, instead of deliberately trying to wreck them, it would have been easier to constitute a Commission on a broader basis than this one and to provide for the inclusion of Indians.

As to the Commission itself, it may seem invidious to discuss the qualifications of its members. In the circumstances, no abler Chairman could probably have been selected than Sir John Simon, who stands for the older and better traditions of the Liberal Party, and will bring to bear upon the tangled problems in front of him the lucidity of a trained legal mind, whilst none can suspect him of the leanings towards a reactionary type of Toryism with which some members of the present British Government are, unfortunately, credited. That he has accepted a task of such immense difficulty does credit to his sense of public duty, and that he approaches it in the broad and statesmanlike spirit manifested in his letter to his constituents justifies some measure of hopefulness. The other members of the Commission have been presumably appointed merely to represent in due proportion the two leading British political parties in Parliament. Their names can be very little known in India, and it would be easy to suggest others who would have carried more weight in this country. If an open mind postulates an absolute blank, that qualification, we believe, all of them claim to possess, inasmuch as they all lack any previous knowledge of India and of Indian affairs. All their intelligence and industry will be taxed for some time in familiarising themselves with a world and a civilisation so alien to our own that those that have studied them longest and most closely generally hesitate to dogmatise about them. Nevertheless if the members of the Commission can divest themselves of all personal prejudices and predilections and, as has been recently suggested by the anonymous author of a thoughtful little volume entitled "India To-morrow," are willing to play the part of the *rapporteur* at the League of Nations conferences, and try to obtain, by formal discussion rather than by formal evidence, the greatest possible assistance of the greatest number of thoughtful people of all races and creeds and political parties in India, they may succeed in producing as a basis for further deliberation a report which will embody general principles and the natural conclusions to be deduced from them.

Sir John Simon's letter indicates clearly that the Commission itself is not intended to say the last word as to the revision of the Act of 1919, and the Viceroy's statement shows definitely that the work of the Commission, which will establish on the spot (direct contact with Indian opinion, both through the non-official representatives of the Indian Central and Provincial Legislatures) and through many other channels, will be only one stage in the procedure designed to inform the judgment of the British Parliament before it reaches the final decision for which it is alone constitutionally responsible. The crucial stage will only be reached when the findings of the Commission, whether in detail or in principle, will be sub-

mitted to a Joint Select Committee of both Houses of Parliament, before whom Indians will have the right and the opportunity to express their views, and if necessary, to challenge its conclusions. This is an aspect of the Government's scheme upon which doubtless further light will be thrown by Ministers in the course of early parliamentary debates. It is an aspect which Indian opinion has been evidently slow to seize in a first moment of bitterness, but when it has been seized, there should be a rapid revulsion of feeling amongst moderate Indians of all complexions who may then come to realise that, in the eloquent words of the Prime Minister at the Guildhall Banquet, the co-operation to which this country invites the people of India is by no means "a hollow euphemism for obedience to dictation," but the pledge of "common determination to build for prosperity on the best and surest foundations." Then, indeed, if Indians will overcome the first feeling of resentment which the constitution of the Commission and the circumstances of the announcement may have not inexcusably aroused, and respond to Mr. Baldwin's appeal with the same sincerity with which he has proffered it, the labours of this Statutory Commission may yet "go down to history as the instrument and symbol of a new era." But no new era is born without travail, and we are bound to look forward to a long and often anxious period of travail before Parliament can consummate the work to be initiated by Sir John Simon and his colleagues.

CURRENT TOPICS.

Indian State Finance.

"To-day," the Maharajah of Bikanir is reported to have said, when inviting the Viceroy to open the sluice gates of the new irrigation system, "sees the fulfilment of the ambitions of a lifetime and the fruition of nearly twenty-nine years of strenuous endeavour." The words were no mere conventional expression, for as *The Times'* Special Correspondent appropriately recalls, "the scheme would not have been possible but for the foundation provided by his sagacious administration of the State." For several years the Maharajah held the finance portfolio, throughout which period the State resources were carefully husbanded against the time when the enterprise would become an accomplished fact. As a result, when the actual financing of the scheme had to be undertaken the administration was in the enviable position of being able to report that the State had no debts or liabilities of any kind. Already the sum of over £3½ millions has been expended upon the new irrigation works and associated railway and other development projects, and of that amount less than £1½ millions had to be raised by public borrowings. The same sound and farsighted policy has also had important consequences in other directions. Nearly half the land has been profitably disposed of to outside colonists, with the result that it has been possible to make over the whole of the remainder to the original tenants as proprietors upon exceptionally generous terms.

The Budget Note for the Fasli year 1337, which commenced on October 8, prepared for H.E.H. the Nizam's Government by Mr. A. Hydari, the Finance Member, is another example of Indian State finance which must be the envy of Sir Basil Blackett. Hyderabad has been fortunate in having during the last quarter of a century a succession of capable and conscientious officers in charge of the Finance portfolio, among whom the present incumbent of that responsible position must be accorded a very high place. The foundations of the new era in Hyderabad finance, which is now firmly established, were laid by the late Sir George Casson Walker and the Honourable Mr. R. I. R. Glaney, to both of whom Mr. Hydari pays a well-merited tribute, but the progress of

more recent years is in a large degree due to the success of the contract form of budgeting which Mr. Hydari introduced six years ago. This system of departmental finance and reserves for specific purposes was inaugurated with the object of relieving the several departments of anxiety regarding the funds that may be available in the near future. Under a system of Parliamentary Government the same difficulty does not, of course, arise as the Ministers are in possession of a sufficient majority to carry their programmes through the Legislature. In British India the emergency power of certificates vested in the Governors and the Governor-General is designed for the same purpose. Mr. Hydari's scheme ensures for the Departments of the State the security and continuity which are essential to their steady and unhampered progress. "Hyderabad," the statement proceeds, "has sufficient money for a progressive and enlightened administration." Its immediate needs—and in that respect its wants are very near akin to those of British India itself—are men—"efficient men," to use Mr. Hydari's expressive phrase, "who will use the ample resources of their country with wisdom and integrity."

Irrigation in India.

Irrigation has figured prominently in the Viceroy's recent tour programme, the first part of which was concluded somewhat abruptly by his return to Delhi last week. Even the harshest critics of British rule in India find it difficult to cavil at our irrigation works. To have converted millions of acres of wilderness into corn fields is an achievement which cannot be gainsaid: it attests its own worth. Unfortunately the Irrigation Department does less than it might do in the way of advertising its results. For instance the statistics for the year ended March 31, 1926, were not issued to the public until the other day. But these statistics, although they are late, are of great interest. They show that the total area irrigated by Government works was no less than 28.1 million acres. This does not seem to be quite a record area, the total in 1922-23 having been up to 28.3 million acres. It was however nearly a million acres in excess of the area irrigated in 1924-25. The Punjab is now, as it has always been, the province with the largest irrigated area, the total being nearly 10½ million acres. This was in addition to 679,000 acres which were irrigated from channels which draw their supplies from British canals but are situated within Indian States.

The Boycott Threats.

Undue importance should not be attached to the many alarmist reports which have reached this country as to the feeling in India in general regarding the proposed personnel and programme of the Statutory Commission. That the reception of the scheme in certain quarters has been a disappointment to the Viceroy and the Government of India may be readily believed, but there are many among those who know the country best who feel strongly that the elaborate precautions taken by Lord Irwin to ensure a favourable hearing have largely defeated their own purpose. For ourselves, without minimising the danger which may be caused by hasty and precipitate action, we consider that the probability of a general boycott of the Commission is remote. The present threats come in the main from those who expected to be among the chosen, or from representatives of the many "mushroom" organisations, the existence of which, as unstable as they are ill-defined, renders the political situation so hard to gauge at any given moment. Already there are signs that the all-pervasive communal influence is at work which in this instance, at least, should make for unity, as the neither side can afford to allow its case to go by default. But the opportunity for the responsible leaders of all parties to assist in framing a new Constitution is so obvious, once all the implications of the scheme are appreciated, that our confidence in the ultimate issue rests upon a much surer foundation than mere communal jealousy.

CALCUTTA LETTER.*(From Our Own Correspondent.)**Calcutta, October 27.***The Viceroy's Conferences.**

Whether or not the change in the Viceroy's tour programme was made at the instance of the Secretary of State for India, Lord Birkenhead being anxious that the Viceroy should be within call when Parliament meets, as one cablegram has explained, and whether or not there is to be an announcement made at the beginning of next month on the subject of the Statutory Commission, the week is to be devoted by the Viceroy largely to conferences with Indian Party leaders. According to one report, but so far it lacks confirmation, Mr. Gandhi, who is touring in Southern India, has been invited to New Delhi, and has accepted the invitation. Another message says that Dr. M. A. Ansari, the President of the next Indian National Congress, has also been invited, and has also accepted the invitation. There will be no lack of subjects to confer about, even if such a matter is left unnoticed as the opinion expressed by Sir Reginald Craddock a day or two ago on the subject of India and her capacity to become a single nation. As that opinion was expressed, for English consumption on your side of the water, it need not be discussed here, unless it be to say that there are not a few people here who wish that Sir Reginald had seen his way to speak without the reservation that he showed, particularly on the subject of the Government of India despatch of 1916.

Reserve Bank.

The question of the Reserve Bank sprang once more and suddenly into prominence, when it was announced that this week's mail steamer was to carry Sir Basil Blackett to London, "that no further strain be put on the cables to hammer out a scheme which should reconcile sound business principles with legitimate Indian aspiration" in the matter of a Reserve Bank. Every well-wisher of India, knowing what havoc in any time of financial strain would be wrought by a bank with a flaw in its constitution, must pray that more may be said in London of those sound business principles than of the Indian aspirations. Intelligent India as a society, whatever individual persons might aspire to, cannot aspire to anything higher than a thoroughly sound bank constitution. If some are insisting unwisely on Indian aspirations, as might be thought, others seem disposed to make too much of the point that the Reserve Bank is to be the crowning act of Sir Basil Blackett's career in this country. The welfare of the country is too great a thing, the constitution of the bank is too vitally important, for it really to matter whether the bringing of the Reserve Bank into being crowns this person's career or another person's. One has to insist upon such elementary considerations.

The Bengal Ministry.

We still do not know for certain whether we are to have a Ministry of four or one, as hitherto, of only two—that is, for the transferred departments; and we are still left to speculate upon the chances for and against a November session of the Council. An announcement on the subject was expected before the Government moved down from the Hills, and the anticipation in many quarters if not in most was that a full consideration of the political situation, including a careful survey of the possibilities of combinations for and against the Mitter-Hossain Ministry, would weigh the balance in favour of seeking safety in a Ministry of four. The considerations which have prevailed to induce His Excellency the Governor to postpone a definite decision, not only on the question of the number of Ministers but in regard to the date of the session, when nothing is more certain than that the Swarajists will make their utmost effort once more to prove that Diarchy is not workable in Bengal, are the subject of unceasing speculation.

Sir P. C. Mitter is believed to be opposed to a Ministry

of four, and to have persuaded the Governor and his other advisers that there are possibilities of the Mitter-Hossain Ministry proving stable. The greater risk would lie, according to this view, in asking the Council to vote the salaries of two more Ministers. Risks, indeed, lie on every side; but to ask for an additional vote would appear to contain the greater risk. One has even heard it suggested that the Ministers should have secretaries, chosen, like the Ministers themselves, from among the members of the Council, which would mean more salaries. One can see the Swarajist leaders, were the choice left to them, choosing that ground for their attack with a simple but enthusiastic show of hands. There are always sound reasons to give why the money of a country should not be spent, and it is always difficult to show in advance what profit there will be in spending money.

Inter-Communal Peace.

A Unity Conference is being held in Calcutta during these very hours, or was to be. The circumstances attending this Conference are little calculated to lighten the load on our minds; for, as if those deeper things which divide Hindu and Muslim were not deep and difficult enough, there seems to have been added a certain amount of ill-will over the mere summoning of such Conferences; over the places chosen, over the dates. In a statement to the Press Mr. Jairamdas Daulatram, a member of the Simla Unity Conference, said that he was considerably surprised to learn that Mr. Srinivasa Iyengar was calling another Unity Conference at Calcutta for October 27. Mr. Daulatram did not consider that the manner in which some of these Unity Conferences were being arranged was at all conducive to smooth discussion of the very complicated questions that had to be handled to bring about inter-communal peace.

Mr. Jairamdas Daulatram, after recounting the activities of the Simla Unity Conference, and its formation of a committee, proceeded to state that he was taken aback when, soon after his return to Poona to attend the session of the Bombay Council, he read in the papers that at a meeting of Muslims in Bombay on October 8, hardly two weeks after the Simla Unity Conference had adjourned, Maulana Shaukat Ali had made a speech in which he completely ignored the decision of the Conference called in response to his own letter to the President of the Hindu Mahasabha. Maulana Shaukat Ali was reported to have said at that meeting, "We made our supreme effort for unity with the Mahasabha group at Simla, but did not achieve as much success as we expected or deserved. We will make another effort in Calcutta with the help of the Congress, the premier National organisation."

"The public," Mr. Jairamdas Daulatram continued, "had now before them the consequential announcement by Mr. Srinivasa Iyengar, the President of the Congress, that he was calling a meeting of Hindu and Muslim leaders at Calcutta on October 27 to discuss the communal question. It seemed, therefore, clear that before two weeks had elapsed out of the six given to the requisitionists to take steps to have the Unity Conference resumed, Maulana Shaukat Ali and his co-workers had made up their minds to scrap the committee jointly appointed by the representatives of the Hindu Mahasabha and the Central Khilafat Committee, and had decided to make an independent effort to settle the Hindu-Muslim problem with the help of the Congress." These are indications to record, but not meanwhile to comment upon more than I have already done.

Royal Commission on Agriculture.

The members of the Royal Commission on Agriculture in India, whose volume of evidence taken in England has been received with interest, are once more in India, and have been examining experts in Karachi. They will be passing through Calcutta very soon on their way to Burma. One of the Karachi witnesses said refreshingly that he would not have the education of the cultivator stop at the demonstration farm. He would go farther,

and do what he considered the root and branch of a successful propaganda. He would go into the man's field, and demonstrate there that he had all to gain and nothing to lose by adopting the seed and the methods of cultivation advocated. Some may live to see that done.

Bikaner Canal.

The Viceroy, whose asking a khidmatgar for another piece of toast led to his train being stopped on the way to Gangangar, opened the Bikaner Canal yesterday, to the sound of rejoicing throughout the whole State. The main canal, which is concreted throughout, is stated to be the longest concreted canal in the world, and the canal and its feeders, which make a total length of 568 miles, form one of the biggest irrigation schemes so far to man's credit. The members of the Royal Commission on Agriculture would have been persons to add to the numbers witnessing the ceremony, had duty not required their presence in Karachi, and the same may be said of all of us whom duty kept away. A whole country is made glad by the news of such a success.

Calcutta Medical College Defalcations.

Mr. Roxburgh, the Chief Presidency Magistrate, delivered judgment yesterday in the Medical College case, and the four columns of his judgment in this morning's newspapers must have been read in Calcutta, where Colonel Barnado, the College Principal, is so well known, with absorbing interest. The moral of the matter should be plain to everyone. It has been the rule that the head of a Government office, no matter for what abilities or technical skill he was chosen, should be responsible for everything, including the accounts. A man is chosen to be the head of the Medical College because he is a brilliant physician or surgeon. It appears that brilliant physicians and surgeons may be as little children in the matter of debits and credits and accounts. Things like *challans* mean nothing to little children. Apparently they may mean nothing to heads of medical colleges. They are to them as words of an unknown foreign language are to unscholarly men; that is, unconnected with things. The Medical College, as any other institution the head of which is selected for technical skill, should have its accounts controlled by a man of proved business capacity. One really capable man might control the accounts of a group of institutions. What led to the practice of the past was, of course, the desire for economy. It may be doubted if it has actually resulted in economy. The Government have lost, it is stated, some four to five lakhs of the Medical College revenues.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, October 29.

The Commission on Agriculture.

The Royal Commission on Agriculture, which returned recently from its tour in Europe, resumed investigations at Karachi early this week. The problem in Sind resembles that of other agricultural areas—indebtedness of the cultivator, heavy rates of interest and extravagant ceremonial expenses. Witnesses suggested that experimental stations should be maintained in the Barrage area to investigate the reclamation of the *kalar* lands, brought under cultivation by the Sukkur Barrage scheme, and the supply of water for the various crops. The need for extending road and rail facilities was urged as essential for easy marketing and the export of crops. A sliding scale of preferential treatment was proposed by one witness, in order to encourage efforts to improve the newly reclaimed soil. Although the Sukkur Barrage has not been as successful as anticipated, Sind is entering upon a new era in cultivation, and its success or failure depends on the organisation of agriculture.

Railway Auditing.

The movement for the centralisation of Railway administration is proceeding apace. Sir Arthur Dickinson in his report to the Railway Board recommends the complete reorganisation of accounting, audit and statistics of railways owned and managed by the Government of India. Under the new scheme the Chief Accountant of each State Railway will be responsible to a department, but to be appointed and removed only by the Railway Board. The accounts of the Railway Board will also be kept by a Chief Accountant, and the title of Accountant-General of Railways will be altered to Chief Auditor of Railways, which will be an independent post. Railway budgets submitted to the Assembly are to be supported by a revised set of income and capital accounts and consolidated balance sheet of the Railway Department. In conclusion the report states that the reforms would involve a reduction in the clerical staff and higher qualifications in those that remain. Owing to the present limited supply of persons with high qualifications European supervision in the posts of heads of departments is recommended for some time to come.

Statesman Boycott.

For some time past the question has been under discussion in civic circles for boycotting the *Statesman* of Calcutta for publishing a "gross libel" on Indian widows by Mr. Pilcher. The question arose over some advertisement which it was suggested should be published in the paper by the Bombay Improvements Committee. Mr. S. B. Billimoria, a member, maintained that sentiment should not be allowed to interfere with business, and voted in favour of the *Statesman*. This brought down on him the maledictions of all his colleagues, which culminated in a vote of censure being moved before the Indian Merchants' Chamber against Mr. Billimoria. Mr. Billimoria repeated his reasons for the line he had taken, which, however did not satisfy his critics. Ultimately the motion was withdrawn on Mr. Billimoria making a statement condemning Mr. Pilcher's speech. Mr. Billimoria had not withdrawn his former dictum of "business before sentiment," but his opponents were satisfied that he was second to none in upholding the honour of Indian widows.

Films Inquiry Committee.

Recently the Government of India appointed a Committee to inquire into the organisation and principles of the censorship of cinematograph films in India and to survey the organisation for the exhibition of films and the film-producing industry in the country. The Committee will also consider the desirability of encouraging the exhibition of films produced within the British Empire and particularly of Indian films. The last clause has met with severe criticism as opening the door to Imperial preference, despite the assurance of the President that the object of the inquiry is to examine the alleged laxity of the censorship of films and the consequent evil effects on the public. The President of the Indian Merchants' Chamber, in addressing the annual meeting, pointed out that, if censorship was the object, the question of preference need not have figured in the terms of reference.

India and the League.

The Hon. Sir C. P. Ramaswami Iyer, the Indian delegate to the conference on marine, air and road transport at Geneva, returned to India on Friday. The position of India and her tariff problems, said Sir C. P. Ramaswami, were clearly outlined in the Committee and in the Assembly, and the grounds for the qualified protection which is now a part of Indian policy were set out in his speech at the opening session of the League Assembly. His appointment as *rapporteur* of the League Committee on Health and Sanitation was, he claimed, a compliment to India and a recognition of the importance and universality of health problems. He had extended an invitation to the International Committee on Malaria to visit India and acquaint itself with the special problems that arise in the country.

THE VICEROY'S APPEAL.

Simultaneously with the announcement by the Prime Minister and the Secretary of State in Parliament of the proposed personnel and programme of the Statutory Commission on Indian reforms the Viceroy issued an important explanatory statement which was published in a Gazette of India Extraordinary of the same date. In his message which is at once an amplification of the Prime Minister's statement and an appeal for the consideration of the problems at issue in a spirit of mutual confidence and goodwill, Lord Irwin explains the reasons which have actuated the Government's decision to advance the date of the inquiry and to entrust the investigation to a purely Parliamentary body.

Eight years ago," the Viceroy observes, "the British Parliament enacted a statute which regulated the conditions under which India might learn by actual experience whether or not the Western system of representative government was the most appropriate means through which she might attain responsible self-government within the Empire." Referring to the pressure exercised in recent years to secure the anticipation of the provision providing for the appointment of a Royal Commission to examine and report upon the progress made at the end of ten years, it is explained that while political co-operation was in the ascendant His Majesty's Government did not feel that in the interests of India herself, the situation would justify an earlier inquiry which "would have been likely only to crystallise in opposition two points of view between which it must be the aim and duty of statesmanship to effect reconciliation." Of late, however, Indian Nationalist leaders, without abandoning "the principles which they have felt it right to assert" have shown a greater readiness to deal with the actual facts of the situation and to give the Government credit for good intentions.

After emphasising the necessity of ensuring sufficient time for the inquiry without unduly postponing the date of final action, Lord Irwin passes to the communal question. The prevalence of communal animosity might have furnished an argument against the early institution of the Commission. But the Viceroy leans to the belief that communal antagonism may be, to some extent, the offspring of uncertainty as to the political future; that each side may have desired to strengthen its relative position in anticipation of the inquiry; and that the appointment of the Commission, by limiting the period of "suspense and uncertainty" may in some degree relieve the situation.

In explanation of the decision of the Government to appoint a purely Parliamentary Commission Lord Irwin observes that, though Parliament must be the final arbiter, his Majesty's Government do not envisage the imposition of a new Constitution upon India from without. The inquiry must be held by an unbiased body on whose recommendations Parliament would be willing to take action. A commission composed in part of Indian members and in part of British officials could not approach its task with any detachment from preconceived opinions, and might not, therefore, command the unreserved confidence of Parliament. On the other hand, Indians have a clear right to demand that their opinions and criticisms

should be made an integral factor in the examination of the problem and should be given due weight in the final decision. The procedure upon which the Government have decided largely fulfils the requisites outlined above. A Parliamentary Commission will bring a fresh and unbiased judgment to bear upon the problem of the further advance of India towards self-government and can count in advance upon Parliamentary support. Non-official representatives of the Indian Central and Provincial Legislatures will have the fullest opportunity of laying their views before its members. It will also be within their power to challenge the findings of the Commission in detail or in principle through delegations appointed for that purpose, before a Joint Select Committee of both Houses of Parliament, to which these findings will be referred. At this stage Parliament will not have been asked to express any opinion on particular proposals, and the whole field will still be open, so far as Parliament is concerned, for reconsideration or modification of the solutions advocated by the Statutory Commission.

In conclusion, the Viceroy expresses the hope that differences of opinion as to the procedure adopted or as to the proposals of the Government will not prevent Indians from taking advantage of this means of establishing direct contact between the Indian and British peoples, and pleads for the consideration of the questions at issue in a spirit of mutual confidence and good will.

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

At question time on the opening day of the new session the Prime Minister, in the House of Commons, and the Secretary of State for India "in another place," made the anticipated announcement of the personnel of the Statutory Commission and outlined the procedure proposed for the execution of its onerous task.

The names of the seven members selected for submission to both Houses and to His Majesty, for final approval, were correctly stated in last week's issue of the NEAR EAST AND INDIA and need not be repeated. But in view of the varying interpretations which will, no doubt, be placed upon the remainder of the statement, and its historical importance it is desirable to reproduce in full that part which embodies the Cabinet's decision as to the best "means by which Indians may be made parties to deliberations so nearly affecting the future of their country."

"His Majesty's Government cannot, of course," Mr. Baldwin proceeded, "dictate to the Commission what procedure it shall follow, but they are of opinion that its task in taking evidence would be greatly facilitated if it were to invite the Central Indian Legislature to appoint a Joint Select Committee chosen from its elected and nominated unofficial members, which would draw up its views and proposals in writing and lay them before the Commission for examination in such manner as the latter may decide. The Committee might remain in being for

Egypt.

any consultation which the Commission might desire at subsequent stages of the inquiry. It should be clearly understood that the purpose of this suggestion is not to limit the discretion of the Commission in hearing other witnesses:

"His Majesty's Government suggest that a similar procedure should be adopted with the Provincial Legislatures.

"When the Commission has reported and its report has been examined by the Government of India and his Majesty's Government it will be the duty of the latter to present proposals to Parliament. But it is not the intention of his Majesty's Government to ask Parliament to adopt these proposals without first giving a full opportunity for Indian opinion of different schools to contribute its views upon them. And to this end it is intended to invite Parliament to refer these proposals to consideration by a Joint Committee of both Houses and to facilitate the presentation to that Committee both of the views of the Indian Central Legislature by delegations who will be invited to attend and confer with the Joint Committee and also of the views of any other bodies whom the Joint Parliamentary Committee may desire to consult."

Lamentable as it may be—truth demands the plain statement that this momentous announcement roused very little interest in the House of Commons. I have constantly expressed surprise at the apparent apathy of Members generally, when the subject of India comes up for debate or in any way comes on to the floor of the House, but I must confess that in this instance I had anticipated a sustained cross-fire of supplementary questions to the Prime Minister—an anticipation which was abundantly falsified.

Many reasons combine to account for the initial lack of momentum in Parliamentary interest. In the first instance the main discussion will take place in a week or two on the necessary resolutions which have to be passed by both Houses before being recommended to His Majesty: secondly the two Oppositions doubtless desire to digest Indian opinion before launching their criticism, if any, and thirdly it is, of course, realised that this is only the preliminary step in a gigantic piece of work, the finishing touches to which may well not be given for two years or more. Finally, it must be borne in mind that the ultimate proposals of Government, based on the Commission's findings, will be submitted primarily to a Joint Committee selected from the House of Commons and the House of Lords and presumably composed of Members who have previous knowledge of India and her many problems.

The fact that the Members of the most important Indian Commission in history have been admittedly chosen from the ranks of those with no special knowledge of the country has its advantages and its drawbacks. But here again it must be confessed in all candour that the British Press have but "faintly praised" the Government's choice.

The outstanding ability of Sir John Simon in persuasive argument, his unrivalled genius in unravelling and marshalling a tangled mass of facts may not unreasonably—I think—cause misgivings in the minds of many that the Commission's findings may be rather more those of the Chairman than of the Commission as a whole.

In my view, the value of team-work can hardly be over-estimated in vitally important work of this nature and outstanding personality and ability are, on occasions, apt quite unconsciously to shape the verdict of the many to the form desired by the one.

Great power and courage in debate will be necessary on the part of the two Socialist Members, if, by any chance, an unanimous report does not find favour with the then Socialist party, when the stage is set for the grand finale in 1929 or 1930—but after all I do not suppose that any Commission has ever yet or ever will be appointed which meets with universal approbation. For my part I can only extend to the members my cordial

good wishes for a successful conclusion to their task—a more gravely important one than which is hardly again likely to confront them.

According to the English Press the gist of the Prime Minister's announcement in the House on November 8, was known in India on November 4 or 5, and when I questioned him as to this immediately after his statement, he replied that to the best of his belief the leakage had occurred in India. Be that as it may the personnel was published, and given quite correctly, in the English Sunday newspapers of November 6, based apparently on advices from India. It is impossible too strongly to deprecate a leakage such as this—not merely or mainly because of any ensuing harm that might have accrued, but because the only assumption possible, in the circumstances, is that someone in whom the exigencies of the whole situation had demanded great trust and discretion being placed—betrayed both.

I remember advocating that the last Indian Currency Commission should have the power temporarily to co-opt members to assist them in investigating any particularly complicated or technical aspect of their task. I make the same suggestion here.

There are aspects of the Indian problem, financial, racial, religious and so on, which will be difficult for the members properly to assimilate in their rôles of judge and witness—but which could be infinitely simplified if—for a space—they co-opted as one of their body, a temporary member with experience of and understanding in the particular subject they were investigating.

NEWS IN BRIEF.

Mr. A. A. Purcell, M.P., and Mr. J. Hallsworth, who have been selected by the Trades Union Congress as a delegation to India, left London on November 10 by the Continental express. They are travelling all the way by land. Interviewed by a Press representative before his departure, Mr. Purcell said that, unlike other delegations of that nature, the party were going not merely as fraternal delegates to the Indian T.U.C., for they were charged with investigating the conditions of Indian labour and trade unionism, and they would, if necessary, assist in organising the movement in that country.

Sir Basil Blackett, the Finance Member of the Government of India, accompanied by Lady Blackett, has arrived in London to discuss with the Secretary of State the detailed plans for the establishment of a Reserve Bank upon the lines of the Indian Currency Commission's majority proposals. According to a *communiqué* issued by the Government of India shortly before the Finance Member's departure, it is understood that the basis of the discussions will be the revival of the Shareholders' Scheme in the amended form outlined by Sir Basil Blackett when presenting the report of the Joint Committee on the Reserve Bank Bill at the recent Simla Session of the Legislative Assembly. The revised measure will also, it is believed, embody a provision ensuring the election of directors upon a territorial basis—the one important new feature of consequence in the suggested stockholder compromise. Questioned by a Press representative regarding the report that he had been offered the appointment of English Adviser to the Federal Reserve Bank of New York, upon the expiry of the extension of his term of office next April, Sir Basil Blackett stated that the suggestion was without foundation.

OBITUARY.

SIR G. F. PADDISON, K.B.E., C.S.I.

THE NEAR EAST AND INDIA regrets to record the death of Sir George Frederick Paddison, which occurred suddenly at Canwick, Lincolnshire, last week. Sir George Paddison, who was in his 55th year and had only returned from India preparatory to retirement six weeks previously, was appointed to the Indian Civil Service in 1896, being posted to the Madras Presidency, where he was engaged for over eight years upon special settlement work. Placed on special duty for the promotion of the welfare of the depressed classes, at the time of the Montagu-Chelmsford reforms, he ultimately assumed charge of the specially created post of Commissioner of Labour, Madras Presidency, and his last report on labour conditions in the Southern Presidency appeared only a few weeks before his death. But it was as secretary of the official delegation sent by the Government of India to South Africa in 1926 to place the Indian viewpoint before the Select Committee on the Areas Reservation Bill, and throughout the course of the subsequent negotiations, culminating in the success of the Habibullah Mission, of which he was also a member, that Sir George's sympathetic understanding, tact and discretion were shown to their best advantage. For his services on that occasion he was made K.B.E., having previously become C.S.I. in 1923, and his untimely death will be nowhere more regretted than in South Africa itself.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Sudan Trade.

The figures are now available for the trade of the Sudan for the first eight months of this year. The volume of the trade at £8,631,903 shows the small increase of £215,361, which must, however, be regarded as satisfactory in view of the depression through which the country has been passing. The value of the imports was £3,857,273, an increase of £161,329 for which the increase in Government imports of £181,925 was responsible. The value of the exports was only £118,666 up at £4,513,581 which, is of course, due to the lower cotton prices which have been ruling during the early months of this year. From a report given elsewhere in these columns it will be seen that the current dura crop promises to be excellent, and as it has been the failure of this crop during the past two years which has been the principal cause of the economic depression in the country it is possible to look forward confidently to much improved conditions in the course of the next twelve months. From its staple crop—cotton—the Sudan may look to receive henceforward much more important results for the trend of prices is likely to be upward and this factor continued with the gradual increase in production will tend to have a marked effect on the prosperity of the country.

Near East Loans.

It seems probable that some little time will elapse before the first of the Near East loans which are on the tapis makes its appearance here. Differences with France are responsible for the delay in the arrangements for the Greek loan, but there is reason for supposing that before long a settlement will be reached. The necessary negotiations in connexion with the loan (or, I suppose, one should more properly say loans) will, however, take some little time, so that it will be some weeks in the most favourable circumstances before the loan is issued. The other loan for the Balkan countries, that for Bulgaria will come before the League at its December session, so that if it is authorised it cannot be looked for before the spring. There is also more than a possibility of a loan for Yugoslavia in the near future. Quite possibly before any of these loans make their appearance we shall have at long last the Palestine loan which has taken so much time to arrange.

Trade Barriers.

The convention, which has just been concluded at Geneva by the International Conference for the abolition of import and export restrictions and prohibitions marks a further and most important stage in the progress of the world towards normal commercial relations after the War. One of the greatest obstacles to trade development since 1918 has been the series of restrictions which have been imposed for one reason or another by the various countries of Europe. This has operated with special incidence in the Balkans and the convention, which has been signed by seventeen countries, including most of the European and Balkan States, promises to put an end to this state of things at no distant date as the agreement provides for the abolition of export and import restrictions and prohibitions and aims at the restoration of the pre-War position.

Banking in India.

The difficulty of the extension of banking enterprise in India was emphasised by Mr. M. M. S. Gubbay, general manager of the P. and O. Banking Corporation and formerly Financial Secretary and Controller of Currency in India, in a paper on "Indigenous Indian Banking," which he read before the Indian Section of the Royal Society of Arts last week. He was discussing the position of the joint stock banks with rupee capital and local management and of the private Indian banks, and pointed out that borrowing propositions which come before branch agents rarely conforms to the requisite standards of security or maturity. The result is that the branches have a lack of suitable banking investments as this business goes to the private banker whose local knowledge enables him to take risks which the banks are unwilling to contemplate. "I see no reason to doubt the commonly accepted view," said Mr. Gubbay, "that both because these private bankers can afford to pay attractive rates of interest, as well as because their requirements as to security are less rigid, their participation in the financial life of the community, as a whole, must be on a very extensive scale. Further, they are in intimate daily touch with those with whom they transact business, and can follow the doings of their clients with a closeness which is denied to the banks." The difficulty as far as the banks are concerned is that there is nothing to associate traders' bills with any precise transaction of goods and so long as that is the case it necessarily follows that the extension of banking practice as understood elsewhere must be slow. The position briefly is that India financially and economically has still to be educated. Until the War period investments were unpopular in India and while the habit of investment is now growing much still remains to be done to counteract the hoarding habit, and if education is required in so simple a matter as the utilisation of capital how obvious it is that it will be even more essential in regard to commercial and banking practice.

Bengal Dooars Railway.

At the meeting of the Bengal Dooars Railway Company a year ago it was suggested that as a consequence of the severe floods experienced in August, 1926, there might be a reduction in the passenger and goods traffic for the past year. This expectation has happily not been justified, and instead of decreases in the receipts under these heads Mr. Robert Miller, the Chairman, was able to announce at last week's meeting that the gross earnings from the passenger traffic showed an increase of Rs.17,959 and

from the goods traffic one of Rs.1,02,150. Actually the total gross receipts which amounted to Rs.23,43,707 constituted a record which in the circumstances can only be regarded as a most satisfactory achievement, and will naturally give rise to optimistic anticipations with regard to the results of the current year. Mr. Miller, touching on the movements of the Teesta River during the monsoon, was able to say that thanks to the protection works which have been erected, very little damage was done during the flood season, and he hopes that what has been done to cope with the recurring danger from this river will result in comparative immunity for a few years at least.

The Rubber Position.

It looks very much as if what may be called the mean position has been reached in regard to rubber, and that having had the period when almost week after week the London stocks rose with dreary consistence we have now reached the stage when if there are no great reductions the balance is at any rate on the right side. In the past four weeks three have seen reductions in the stocks which are now again below 70,000 tons. I do not expect that the present stage of narrow movements in the stocks will be of long duration, and anticipate that very shortly the third stage will be entered upon when week after week there will be a steady and perhaps substantial reduction of stocks. It must be emphasised, however, that if this forecast proves to be correct the development will be due not to the growth of demand but to the reduction of supplies, and in the circumstances it is impossible to be unduly hopeful as to the more distant outlook.

COMMENTATOR.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Steel Reservoir.—The Ministry of the Interior, Cairo, invites tenders for the supply and installation of a steel reservoir of 200 cubic metres capacity on a steel frame work tower, etc. December 10. (D.O.T.)

Safes.—The Egyptian Ministry of Finance invites tenders for the supply of 100 small iron money safes, 18 in. by 12 in. by 11 in. December 1. (D.O.T.)

Brass Slide Valves.—The Superintendent of Stores, Saptieh, Cairo, invites tenders for the supply of 250 slide valves brass for engines. November 30.

Signal Materials.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of mechanical signal materials. November 29.

Surgical and Medical Instruments.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of surgical and medical instruments. December 20.

Earthenware Conduits.—The Stores, Egyptian State Railways,

Telegraphs, and Telephones, Saptieh, Cairo, invite tenders for the supply of 5,320 conduits earthenware, salt glazed. December 6.

Telegraph Poles.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 2,535 creosoted and 5,700 uncreosoted telegraph poles December 15.

Light Railway Materials.—Tenders are invited in respect of a contract for the supply of light railway materials, such as rails, sleepers, fishplates, crossings, trolley wheels, etc., required by the Main Drainage Department, Ministry of Public Works, Cairo, for the Gebel-el-Asfar Farm near Cairo. December 1. (D.O.T.)

THE SUDAN.

Electric Generating Set, Etc.—The Inspector-General, Egyptian Irrigation Service in the Sudan, Khartoum, invites tenders for the supply of : (1) One electric generating set and searchlight; (2) one petrol paraffin engine with reversing gear, stern tube, propeller and propeller shaft. November 27.

TURKEY.

Graphite.—The Direction of Posts, Telegraphs, and Telephones in Constantinople invites tenders for the supply of 9,000 kilos of fine powdered graphite and 6,000 kilos of dioxide of manganese. December 10. (D.O.T.)

Zinc.—The Direction of Posts, Telegraphs, and Telephones in Constantinople invites tenders for the supply of 1,500 kilos of zinc in bars. December 11. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Birkenhead, November 22); s.s. Imani for Calcutta (Birkenhead, November 29).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, November 30).

British India Line.—S.s. Domala for Bombay and Karachi (London, November 19); s.s. Morvada for Colombo, Madras, and Calcutta (London, November 19).

Cunard Line.—S.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool December 10, and Swansea December 13); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea December 10).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 3).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, November 25); s.s. Novara for Colombo, Madras, and Calcutta (London, November 26).

Prince Line.—S.s. Korean Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, November 19); s.s. Italian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, November 23).

Ellerman and Papayanni Lines.—S.s. Manchurian for Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool November 19, Swansea* November 19); s.s. Lisbon for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume* (Liverpool November 26, Swansea December 1); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool December 1); s.s. Lesbian for Algiers*, Malta, Smyrna, and Constantinople (Liverpool, December 3); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 30. * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port; Fiume via Trieste.

Merchant vessels entering Port Sudan harbour in September numbered 55 of a net tonnage of 193,871. The corresponding figures for 1926 were 63 vessels of a net tonnage of 215,020.

The value of Palestine's imports for the first half of this year was £2,994,106, as compared with £3,269,095 for the corresponding period of the previous year. The value of the exports was £1,046,657 as against £678,347.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 15.

Except for activity in one or two special sections the stock markets have been rather quiet though fairly steady in tone. Brokers have been busy with the arrangement of the settlement, which was again a heavy one, though smaller than its two predecessors, and no trouble was disclosed. The gilt-edged market has been quietly steady, home rails neglected, and not much going on in the foreign market. German bonds fell in sympathy with the slump on the Berlin bourse which followed the publication of the memorandum to the German Government of the Agent-General for Reparations. In the industrial section the recent popular favourites have been less active, but prices on the whole show no marked reactionary tendency. Gramophone shares naturally benefited from the optimistic remarks of the chairman at the annual meeting and the price of the shares is talked higher. The oil share market shows signs of recovery from its recent malaise, and a further slight rise in the price of raw rubber has imparted a firmer tone to the rubber share market.

While general activity in the markets has received an appreciable check there is considerably less nervousness in most sections than was apparent a fortnight ago.

How Should the Shareholders be Rewarded?

This week an important company, having had a prosperous year, has adopted the unusual course of making a return of capital to the shareholders. Following the return of 10s. per £1 share made last year, Dennis Brothers are this year making a capital repayment of 7s. per share. The more usual practice for a company in this fortunate position is to declare a capital bonus. The action of Dennis Brothers raises the interesting question of which is the better policy. There is something to be said against both and it is finally a matter of choosing the lesser of two "evils." Where a capital repayment is made the shareholder is put to the trouble of reinvesting it. It may be argued against the capital bonus that it may lead to incautious finance. A board may be so anxious to maintain a dividend on a capital enlarged by a capital bonus that they would do this by neglecting reserves and the financial position as a whole, thus impairing the com-

pany's earning power. This may not actually happen with great frequency, but it must be recognised as a considerable source of temptation. In this connexion, it is noteworthy that the North American Company, the largest single producer of electricity in the United States, has in recent years definitely adopted the course of paying the shareholders exclusively in the company's common stock of no par value. Two merits of this practice, it is claimed, are that it is a direct and cheap method of raising capital, while there are no grave dangers of over-capitalisation.

The Future of Tin.

That the past year has been profitable for the tin producing companies is clearly reflected in the report of the London Tin Syndicate, issued this week. This undertaking which has important tin interests in many producing countries, proposes to pay an ordinary dividend of 50 per cent. Moreover, in certain quarters the outlook is evidently viewed with some confidence. It has been reported that a new Australian tin company, having interests in the East, will shortly be formed with a capital of £1,500,000. The confidence underlying this flotation may in part be inspired by the proposals for the formation of a tin "pool." Considerable secrecy is maintained, but it is understood that large producers in Malaya, Nigeria and Cornwall are involved and that valuable support has already been obtained. It is the object of the "pool" to stabilise the price of tin around £300 per ton. But whether the scheme matures and whether, if so, it will meet with the success expected, remains to be seen. There is certainly not general confidence in the proposal. It is pointed out that unless the co-operation of Dutch interests is secured there are small hopes of success, while the price of £300 is regarded as somewhat high. But, apart from questions of detail the principle of the scheme does not arouse great enthusiasm since previous attempts to establish a "pool" have not met with conspicuous success. It is significant that the Stock Exchange is inclined to read into the proposal an absence of confidence in the future of the metal.

The Position of the Cable Companies.

The ordinary stocks of some of the most successful cable companies have recently shown a declining tendency and doubtless this is due—in part at least—to the circumstances that have favoured a rise in the price of Marconi's ordinary shares. From time to time during the past two decades there have been fears that wireless would damage the business of the cable companies. But in the past these fears have proved to be mainly groundless and the ordinary stocks of the cable companies have always recovered their losses after some little time. Of course, it must be admitted that in recent years wireless has made exceptional strides. But the large and successful cable companies are fully alive to the position. They are taking active steps to improve their services, while well-informed opinion holds that there is sufficient traffic for both systems of communications; the two systems will be very largely supplementary. Moreover, the most successful cable companies occupy positions of great financial strength. In some cases reserve and carry-forward exceed the issued share capital and the allocations in respect of depreciation are known to have been made on a most generous scale. The £10 ordinary shares of the Western Telegraph Company yield £5 14s. per cent. free of income-tax, equivalent to £7 2s. 6d. per cent. less tax. A return of £5 15s. per cent. free of income-tax, equivalent to £7 2s. 9d. per cent. less tax is given by the ordinary stock of the Eastern Telegraph Company. The £10 ordinary shares of the Eastern Extension Company yield £5 12s. per cent. free of income-tax, equivalent to £7 2s. per cent. less tax.

Negotiations between Yugoslavia and Greece regarding the Salonika Free Zone are to be reopened.

It is reported that postal rates in Yugoslavia are to be reduced before the close of the current year.

FORESTRY CONSERVATION IN CYPRUS.

The sixth forestry exhibition in Cyprus was opened at Nicosia on October 31 by the Governor, Sir Ronald Storrs. Among those present were Lady Storrs and the Chief Justice, Mr. C. F. Belcher, and Mrs. Belcher. Sir Ronald Storrs, in his speech, said:—

At the risk of wearying you by the recital once more of a twice and thrice told tale, I propose to remind you of the main objects of Forest Conservation in Cyprus. These are:—(1) The conservation of the low rainfall supply of water (justly deplored by all), and the formation of springs moderating the extremes of climate (of which we have annual cause of complaint), inimical to plant and animal life, especially agri- and horticultural crops. (3) The protection afforded (and sadly needed) by forests and plantations to neighbouring fields against storms of all kinds. (4) The supply of timber and fuel to the local population (subject of countless petitions to Government), as well as for export. (5) The supply of minor forest produce, such as charcoal, bark, seeds, hay, bushes for goat food, origanum and other essential oils. (6) The permanent enhancement and improvement of the scenery of the Island with a view to attracting visitors in increasing numbers. (7) The improvement of the soil in the Island by part of the accumulating humus in the forest being carried on to other lands outside by streams rising on it. (8) The affording of recreational areas of wild culture character for the gradually urbanising population. (9) The regulation of the stream and river flow from the mountains.

During the last six years the main work of the Forest Department has been taken up with forming a proper organisation to protect the forests from all dangers, including theft, fire, and, most important, goat and other grazing. Insect and other attacks including storms do very little damage compared to the first three named.

An enumeration and stocktaking survey has also been in progress, for without knowing how much timber the forest contains or how fast it is growing, it is impossible to calculate how much can be cut each year in perpetuity, whilst at the same time improving the growing stock. Already a stock of over 90,000,000 c.ft. of coniferous and about 5,000,000 c.ft. of hardwood timber has been found. The chief coniferous timber is that of the Aleppo Pine and the chief hardwood is the dwarf or alder-leaved oak, only found in Cyprus. The annual growth in all forests is estimated at 3,500,000 c.ft. per annum, but unfortunately it is estimated that goat and other grazing reduces, retards or destroys annually about one million c.ft., whilst fire, theft, and insect attack account for nearly 300,000 c.ft., or a total of 1,300,000 c.ft. It is this annual toll on the forests which is hindering more rapid develop-

ment and making the day more distant when the forests will become self-supporting.

Instead of some 20 nurseries in pre-War days, there are now 52, both for the raising of seedlings for departmental use as well as for distribution to the public. Last year no fewer than 90,179 plants were given away to the public and more are available this year. The Exhibition affords a chance to see what species of trees the Forest Department is growing both for its own use as well as for the public. Each year either new roadsides are planted up or fresh plantations are made.

In order to help the goatherd, who has been allowed to graze his goats in the forest, to change over to a less destructive means of livelihood, preparations have been begun in the Akamas and in the Paphos Forests to clear, plough, and plant up with fruit trees areas suitable as small holdings for these men. With a toolshed, requisite tools, water supply, path to the nearest road, and the holding fenced or walled in, a holding will be ready for occupation by any goatherd who gives up his goats. One donum of land will be given for each ten goats sold or given up. Clearing and preparation of the holding can also be undertaken by the goatherd on payment by the Forest Department if he wishes, so that he may earn money in the intermediate period before taking over the property.

It is very unfortunate that each year recently over 650,000 trees and shrubs have been cut down on privately owned lands, whilst at the same time less than 50,000 forest trees have been annually planted. The number is increasing now, but it has not yet nearly overtaken the annual drain on the privately owned woodlands and trees. This means that sooner or later the public will have to fall back upon the Crown forests only. What is more unfortunate is that the land from which the trees are cut is really not fit for agricultural purposes, so that it remains a bare area, only used for grazing a few nomad goats or other animals for about two months in the year.

It was the sublime doctrine of Socrates that if men really knew what was right, they would do it, and I feel that the time must and will come when Cypriots will demand that the Cyprus forests, long since the admiration and envy of the Mediterranean, with their steadily increasing capital of two and a half million pounds, be so protected that the maximum of growth may be used for the country.

The mines and the forests both represent capitals, but capitals of different kinds. For whereas every ton of copper or asbestos exported must mean that one ton less remains, timber, properly treated, can be simultaneously spent, maintained, and multiplied. In the first, we must live off capital; in the second, we may flourish upon a progressive income.

I await eagerly, but would not dream of anticipating the report of the Forest Commission. But this I will say, that while there are things in life upon which I will admit to having no definite opinion, the forests are not one of those things, and I know the forests are right.

The production of the Attock Oil Co., Ltd., for October amounted to 28,815 barrels.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended October 20 amounted to £E10,963, making the total from April 1 £E157,810.

Barclays Bank (Dominion, Colonial and Overseas) announce that they have received a cable from their Alexandria office stating that the Statistical Department of the Ministry of Finance announces that the total imports for Egypt for the month ending October 31 were £E4,747,985, against £E4,998,236 for the corresponding month last year, and exports £E4,487,967, against £E3,939,305 for the corresponding month last year. Cotton exports were £E3,792,195, against £E3,425,113 in 1926.

An edition of 10,000 copies of the British Industries Fair catalogue, containing classified lists of exhibitors and an index in nine languages, is being prepared by the Department of Overseas Trade for publication on January 2, seven weeks before the opening of the Fair.

THE PROGRESS OF ROUMANIA SINCE 1920.

(From a Correspondent.)

Anyone revisiting Roumania, and particularly the town of Bucharest, now after a lapse of six or seven years cannot fail to be struck by the great improvement which is noticeable in the general conditions of life and of the city. In 1920 the whole country still bore the marks of recent bombardment. In the villages, in the mountain passes, half the houses were heaps of ruins and most of the fine villas at the beautiful summer resort of Sinaia had either been carried away or wilfully smashed to pieces. The streets and houses of Bucharest bore many signs of recent aeroplane bombardment and there was no money to repair them. Most of the houses are cream stuccoed, and with the stucco falling off in places, the roofs and rainpipes in disrepair, they presented a sadly neglected appearance and the general atmosphere of the city was distinctly depressing. The little one and two horse victorias, which play so large a part for passenger transport within the city precincts, were mostly in a dilapidated condition, and the horses half-starved, lame, one-eyed, and altogether wretched. Their drivers were probably not much better fed, but they hid their leanness under thick, padded coats, faded and patched all over, for with the fall of the leu prices of woollen imported materials had begun to soar, while wages remained far behind, so that a piece of cloth was worth its weight in gold to the working classes, and they begged or stole it at every opportunity.

It was not uncommon to see people of the lower middle classes wearing winter coats made of old railway rugs of the brightest tartans, or of soldiers' blankets, or, in fact, of anything they could lay their hands on. If there were workmen in the house it was unsafe to leave a table-cover on the hall table.

There were very few motor cars to be seen on the streets, which indeed were totally unfit for such traffic, being full of huge holes and dents, among which the horses picked their way skilfully.

Another factor in the general disorder was the lack of housing accommodation for the population of the capital which had enormously increased owing to the influx of Transylvanians, Members of Parliament, lawyers, doctors, and crowds of speculators and fortune-hunters seeking to make their way in the capital, besides a great many foreigners, commercial travellers, and missions of the Allied Governments. The congestion was acute and rents were only prevented from becoming prohibitive by restrictive Government measures. Unfortunately building was practically out of the question, in the first place because the requisite money was not available, and in the second because the transport system was so appallingly inadequate that it was impossible to procure the necessary materials.

During the last few years, however, a great change for the better has gradually come about. The transport system has improved to some extent, though it is still far from adequate. In Bucharest the streets—at least the main streets, have been repaired, houses have sprung up in all directions, and whole new quarters have been built in the fashionable outskirts of the city, while masons and decorators are everywhere busy restoring the battered and neglected old ones. Shabby old buildings have been pulled down to give place to handsome semi-skyscrapers. The University and Senate buildings which stood for years half-built surrounded by heaps of stones and rubbish, have now been completed and wide streets opened up round them. The little public gardens in various parts of the city are well kept and gay with flowers. Some seven thousand motor cars now ply the streets, endangering the life of pedestrians by their speed and reckless driving, and more are being sold daily. All the most handsome warehouses in the main streets are occupied by the representatives of a variety of foreign motor firms. Unfortunately there are very few British cars introduced on this market. Some agents state that they sell six cars a day

for months at a time, and it must be admitted that the increase of motor traffic within the last three years is nothing less than amazing.

There are several lines of motor omnibuses, mostly Ford or Chevrolet chassis with long wagonette bodies, and these have greatly relieved the congestion on the tramways which as a means of transport formerly existed but in name for those unskilled in the wielding of fist and elbow.

The electric tramway service, too, has been increased by several useful lines serving new districts and an extensive programme is in course of execution, by which all the old horse trams will be superseded by electric cars, and outlying districts will be included in the system. There now only remain two or three horse tram routes the others having been already converted.

The great improvement in the water and electricity supply is also a matter on which the Bucharest Municipality may be congratulated, as the days are almost forgotten when water was turned on for two or three fixed hours per day and electricity was turned off for two hours from each district alternately, as there was not enough current to go round. Now the city rejoices in a fairly efficient water and electric light supply, and plans are on foot for the further improvement of the latter by the erection of a new power station, which will serve Bucharest as well as Ploesti and Targorrshte.

The rapid increase of motor traffic has also had the effect of banishing from the streets a large number of miserably neglected horses, and the harrowing sights which used to be common are becoming much more rare.

Altogether Bucharest is gradually taking on the aspect of a self respecting metropolis without sacrificing much of the picturesqueness of a semi-Oriental city.

For information as to the improvement in the economic conditions of Roumania in general, the readers may be referred to the recently published report of the Commercial Secretary to the British Legation in Bucharest, Mr. R. J. E. Humphreys.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 29:—

The arrivals of sultanias on the Smyrna market since the opening of the season are estimated at 35,000 tons and the sales to date are put at 30,750 tons. Closing prices, Smyrna, per c.i.f.: type 12, 40s.; type 13, 43s.; type 14, 46s.; type 15, 50s.; type 16, 55s.; type 17, 65s.; type 6, 37s.; type 20, 36s.

Sales for the week are fractionally under 2,000 tons, mainly low and rain-damaged grades a fair proportion of which are against local distillery requirements. Good sound fruit remains in small supply. The market has a weakening tendency.

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 21,547 tons and the sales to date are put at 21,432 tons.

Arrivals are at a standstill: the little business doing being out of stocks which have been almost entirely liquidated during the week.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for October was 51,180 tons.

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

Motors and Motoring

By G. B. B.

During the week-end I have been able to try out one of the latest models of the "Standard Motor Co. I found it all, and more than, it is claimed to be, and we gave it a severe test. One of the things I liked about it is its space allowances; it is one of the "roomiest" models I have tried, and there is ample leg space for four people of over the average height. The "Falmouth" fabric saloon—which was the model I tried—has a "Staulite" opening head, and although the day was cold and, in the district in which we were touring, was windy almost to the point of a gale, we found the saloon draught-proof. In good weather the roof can be folded back. The price of this model is surprisingly low, considering it is cellulose finished and fitted with Dunlop tyres.

Light Cars of the Future.

The view expressed recently in these columns, that six cylinder light cars would be the light cars of the future has received the support of the trade generally. There are, of course, only a handful of light cars with six cylinder engines on the market at present, but more are in contemplation and I am not divulging any secret when I say that a very well known factory is contemplating putting a light car with an engine of the type on the market. The six cylinder engine, for motor car work offers many advantages over the two and the four cylinder types, and our makers may be depended upon to keep, in this as in all other directions except that of advertising their products overseas, well in the foreground.

COMMERCIAL TREATY WITH GREECE.

(From Our Correspondent in Yugoslavia.)

Belgrade, November 4.

The signing of a Commercial Treaty with Greece in Athens on the 2nd inst. has been heartily welcomed in Belgrade as showing a tendency to *rapprochement* between the two countries. The hope is expressed that this may lead to the successful renewal of the negotiations for the signing of a new pact of friendship which were broken off after the fall of M. Pangalos. This change of Greece's attitude to Yugoslavia is considered very significant, as it is interpreted as being a set-back for Italian diplomacy. It is attributed to two main reasons, the feeling of common interests and common danger aroused by the outrages committed by Bulgarian *komitajis* in Greek and Yugoslav Macedonia and the joint action necessary to their suppression; and common indignation against the Italian policy of forced Italianisation of the Greeks of the Dodecanese and of the Slovenes of Istria.

CHESS.

By "CARO-KANN."

The move in the position I gave last week is, of course, R—Q7, which leaves Black without recourse. If QxR then 2, Kt—R6 (ch), PxKt; and 3, QxQ.

The above diagram shows an interesting position in a game played last week in the championship of the Metropolitan Chess Club. Black has just made his 30th move —Q—Kt3, and White replied with the extremely unpleasant rejoinder B—R5, leaving Black no option but to play Q—R2. Play continued as follows:—32, Q—B, B—B3; 33, Q—R6, R—Kt2; 34, R—KKt, Q—Q2; 35, Q—K2, Q—R2; 36, B—Kt6, Q—R; 37, Q—B3, Kt—K2; 38, B—B6, Q—Kt; 39, BxP, Q—B2; 40, B—Kt4, B—K; 41, BxP, QxB; 42, B—Kt7 (double ch.), resigns.

The Egyptian State Railways have given a contract for five self-propelled articulated steam rail coaches to Clayton Wagons, Ltd., Lincoln.

The Egyptian Delta Light Railways, Ltd., have given a contract to the Sentinel Waggon Works, Ltd., of Shrewsbury for twelve "Sentinel" patent locomotives.

An attempt at silk production is being made at Source Yubo and Tembura in Bahr El Ghazal Province, Sudan, where mulberry trees are in leaf the whole year and are easily propagated. Silk-worms have been imported from Syria and are doing exceedingly well.

CYPRUS EXPORTS GOOD.

The Trade Commissioner for Cyprus in London has issued the following report for September:—

Imports were good but may be considered as normal for the time of year. There was a decrease in flour importations and an increase in fertilisers.

Exports continued to be good and prices realised are up to expectation. Owing to the installation of new machinery by the Cyprus Asbestos Company the output of asbestos is increasing month by month. Exportations of other minerals was also good.

The export of pomegranates was in full swing during the month. The price realised was an average of 2d., which is considered fair.

Barley continues to be exported, and there was brisk business in raisins and carobs, the latter especially fetching abnormally high prices.

The potato crop, which at one time promised to be a record, was affected by the severe heat of the summer and will not come up to expectations. It will, however, be quite good and will come in towards the end of October.

There was a slight increase in shipping as compared with September of last year.

It is satisfactory to note that exports exceeded imports by over £10,000.

The following are the detailed statistics of the imports and exports for the month:—

IMPORTS		EXPORTS	
Agricultural implements	£2,503	Animals, living—	
Blasting powder	2,629	Mules	£2,436
Coffee, raw	1,731	Oxen	1,203
Cotton yarn and goods	17,749	Corn, grain, etc.	
Fertilisers	12,784	Barley	12,224
Fish	1,367	Carobs	20,869
Flour, wheat	14,122	Cheese	1,483
Leather and leather manu-		Cotton, raw	1,760
factures	6,179	Cuminseed	4,640
Machinery	4,419	Grapes	3,930
Motor cars	2,322	Hides and skins	1,935
Motor tyres	1,124	Linseed	1,300
Petrol and Benzine	3,802	Minerals—	
Petroleum and paraffin	3,832	Asbestos	28,424
Sacks	3,586	Gypsum	2,355
Silk goods	1,169	Pomegranates	10,304
Soap	1,508	Pyrites	13,069
Sugar	2,527	Terra Umbra	1,120

Woollen goods	11,606	Silk cocoons	3,722
		Spices and seeds	3,254
Total Principal Articles	108,717	Sponges	5,452
Other Articles	37,225	Vegetables—	
		Onions	2,554
		Wine	4,545
		Wool	8,091
		Total Principal Exports	139,900
		Other	16,958
Total	£145,942	Total	£156,598

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains the following quarterly reports:—

Egypt.

The past three months have marked the transition period between an era of really bad trade depression and the dawn of what, it is hoped, may develop into a trade revival. The optimistic feeling prevailing results from the maintenance of the high price for cotton, for, as this commodity is Egypt's most valuable product, the whole trade of the country depends on the size of the crop and the value thereof. Owing to adverse crop reports in America, the market has been sustained at a very remunerative level for the producer, and the Egyptian

grower has taken full advantage of the high prices ruling in the interior; he has marketed at least enough of his crop to meet his pressing requirements and to provide funds for the luxuries which he purchases when more or less well supplied with funds. The sale of so large a portion of the crop has led to a freer circulation of money in the Interior, with its consequent favourable repercussion in all departments of trade.

Manchester goods have been in strong demand, so that old stocks have been cleared at remunerative prices and orders placed for fresh supplies. Outstanding debts in the interior, which at one time might have been considered doubtful, have been met, at least in part, and general confidence has been restored to traders. Unfortunately, many firms, even on the eve of the present revival, had to go out of business, but their withdrawal from the market has certain advantages and trade is becoming concentrated in stronger hands. Colonial produce has not been imported in such large quantities, partly because the market for most articles has been declining, and partly because the local production of rice, wheat and other cereals have supplied the major portion of the country's requirements.

Prospects continue to be favourable and, given good prices for the remainder of the cotton crop, Egypt should recoup some of her losses of the past three years.

The Sudan.

The Sudan has been marking time during the period under review, awaiting the result of the harvests, which promise well, after the abundant rains. A good dura crop, after the poor years experienced, will mean a general recrudescence of business throughout the country. Merchants have commenced to stock cabots, a coarse description of cloth imported from Japan, and the demand for the more luxurious tissues from Manchester suffers accordingly. Flour has been imported in increasing quantities chiefly to supply the needs of the Upper Egyptian workmen engaged on constructional works. Tea is beginning to find favour with the inhabitants and is gradually displacing coffee as a beverage, but improved transport in Abyssinia may lower the price of coffee and reinstate it in popularity. Dealings in cereals have been confined to domestic consumption, and it is probable that, no matter how plentiful the dura crop may be, no permits will be issued for its export until all domestic needs are satisfied and provision made for future eventualities.

The sale of the Sudan Plantations cotton in Liverpool has released a considerable amount of money to the tenants, but this access of wealth has not yet made itself felt on the trade of the country. The rain-grown areas promise to produce good crops of cotton and picking should soon begin. The number of motor cars in use has been on the increase, but whether, in these days of hire purchase on easy terms, this is an indication of prosperity is a moot point. The Sudan Plantations have started work on two new ginning factories at Hassa Heissa and are renovating the one at Wad Medani.

At the time of writing the predominant note in the Sudan is optimistic, but only the future will disclose whether expectations will be fulfilled.

Palestine.

Trading depression has prevailed during the three months under review, partly as a sequel to the earthquake, with its attendant loss of life and destruction of property, and partly because of an absence of ready money. It would also appear that, to some extent, the depression is the aftermath of the wave of immigration which, at its crest, brought great wealth to the country, and which, now that it has receded, is causing some distress. Within the last few weeks, however, conditions seem to have improved slightly and all branches of trade have shown signs of revival.

The Agricultural Show held at Haifa attracted people from all over the country and exhibited to advantage the full resources of that area. It is hoped that such events will stimulate rivalry and lead to an improvement in methods of production. The orange crop is smaller than last year and about one-half of it has been sold forward, but prices are not good. The money paid on account, however, has been helpful during a difficult period. The trade in building material has been fairly satisfactory, owing to the rebuilding of damaged properties, the Government granting loans for the purpose.

Import and export statistics available for the second quarter of 1927, compared with the corresponding period of 1926, show that total imports amounted to £E.1,443,642, against £E.1,619,517 a year ago, whilst total exports were £E.341,624 against £E.287,192. The decrease in imports is due to the decline in arrivals of grain, canned goods, Colonial produce and silk goods and the increase in exports, to the consignments of oranges in April and May, and to larger shipments of olive oil, cement, barley, and almonds.

The exports of gum from the Sudan in September via Port Sudan amounted to 56 tons of bleached of the value of £E3,168, 1,097 tons of hashab of the value of £E36,145, and 173 tons of talh of the value of £E3,462. For the first nine months of this year the exports of gum from Port Sudan totalled 17,448 tons of the value of £E561,285.

An official report by the Statistical Department, Cairo, gives the area of orchards and fruit gardens in Egypt for the agricultural year ended August 31, 1927, as 35,315 acres; a slight increase as compared with the previous year, and nearly 3,000 acres more than for the year ended August 31, 1925. The acreage under onions has increased from 37,200 in 1925-26 to 42,350 in 1926-27.

THE TURKISH MARKET FOR TIMBER.

The heavy duty on imported timber, together with the limited purchasing power of the people, has recently tended to develop timber operations in Turkey (says an American Consular report). However, while the country has quite extensive forest resources along the Black Sea coast, and several fairly important and up-to-date sawmills have been installed there during the past few years, poor transportation facilities in that district and lack of capital have retarded development. As yet, although local wood is supplying the greater part of the country's needs, most of it is of the lowest grades. The greater part of such building and reconstruction as is now going on in the various villages is of a more or less primitive nature, for which the inferior native wood is satisfactory.

Roumanian and Transylvanian pine make up by far the major portion of the existing imports of foreign timber. The proximity of the Roumanian forests, with correspondingly low freight on this timber, which is shipped via the Roumanian Black Sea ports, permits its sale locally at prices which make it virtually impossible for other pine-producing countries to compete on the Turkish market. Hence, Roumanian pine is the wood chiefly used locally where there is a need for a better quality timber than that produced in Turkey.

However, the high duties and low purchasing power in Turkey which drove most foreign timber, except Roumanian and Transylvanian pine out of the local market, also dealt a severe blow to Roumanian timber. According to estimates of one of the leading importers of Roumanian timber in Constantinople, annual pre-War and present imports, respectively, of Roumanian and Transylvanian timber into Turkey compare as follows, in cubic metres: Into Constantinople and Marmora districts, from 100,000 to 120,000 and from 3,000 to 4,000; into Smyrna, from 33,000 to 44,000 and 30,000.

These estimates indicate that imports of foreign timber into Smyrna show a far smaller relative decrease than is shown in the case of those into Constantinople. In fact, according to these estimates, the decrease in the present importation of Roumanian timber into Constantinople as compared with the pre-War period amounts to well over 9 per cent., while in Smyrna imports the decrease is estimated at round 20 per cent.

The heavy consumption of foreign (Roumanian) timber in the Smyrna district at present is largely a result of the requirements of the fig and raisin-packing industries, and the fact that the Turkish Government extends a Customs refund on imported timber which is re-exported in the form of boxes and crates containing figs and raisins. This measure, which was adopted by the Turkish Government to stimulate the fig and raisin industries, is thus primarily responsible for the relatively large imports of Roumanian pine into the Smyrna district. In this connexion, Press reports indicate that the Turkish Government has just authorised the importation of 10,000 cubic metres of Roumanian timber (4,240,000 board feet) on which a Customs refund will be made, this timber to be used in packing the Smyrna fig and raisin crop.

The local selling price of Roumanian (or Transylvanian) pine boards is stated to average between 60 and 62 Turkish pounds per cubic metre, this price including duty and dealer's profit. The duty on one cubic metre of this timber is estimated at approximately 26 Turkish pounds. The dealer's profit may be estimated at 10 per cent. to 15 per cent. of the local selling price.

It is said that unless other foreign timber of similar quality can be supplied in Turkey at prices which will enable it to compete with Roumanian pine, which has been long established locally, no interest can be aroused. Even Swedish pine, which was imported quite extensively during the armistice period, cannot be sold on this market at present, its cost, plus duty, being too high to meet local requirements.

Company Meeting.

BENGAL DOOARS RAILWAY.

Record Gross Receipts.

The thirty-seventh ordinary general meeting of the Bengal Dooars Railway Company, Ltd., was held on November 8 at the offices of the company, Gresham House, Old Broad Street, Mr. Robert Miller (the Chairman) presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditors' report to the stockholders,

The Chairman, in moving the adoption of the report and accounts, said:—When we last met, a year ago, we were under the impression that as a consequence of the severe floods experienced during August, 1926, there would be a decrease in both passengers and goods traffics during the year now under review, but I am pleased to say that in place of the anticipated decreases, the gross earnings from coaching show an increase of Rs.17,959 and from goods an increase of Rs.1,02,150 as compared with the previous year. The aggregate receipts being, from coaching Rs.5,73,753, and from goods Rs.17,18,858, the total gross receipts from all sources being Rs.23,43,707, which constitutes a record in this company's history.

As you will appreciate, this increase was opportune in view of the damage caused by the floods and heavy expenditure which had to be met on protection works, diversions and the construction of a chord line to ensure as far as could be against future breaches and consequent stoppage of traffic.

We were also fortunate in that it was a good season for tea, which gave us an increase in receipts of Rs.96,418. The condition of the tea industry created an increased demand for stores, viz., manure, coal, lime and cement from which we benefited, and a good crop of jute resulted in an increase from that source of Rs.36,730.

Against these there were decreases in food grains Rs.31,320 due to smaller imports, and under the head of "All other articles of merchandise" of Rs.26,927, the result being the satisfactory increase to which I have already referred. Fluctuations under other heads were negligible.

With regard to expenditure, the increase of Rs.18,065 in general administration was due to changes in the personnel of the staff, gratuities, and bonus paid to the staff for work at Barnes Junction during the floods.

Operating expenses show a decrease of Rs.24,956, principally owing to fall in price and improved quality of coal. The main expenditure comes under renewals and replacements, which shows an increase of Rs.92,912, and which was more than created by expenditure in connexion with flood damage and heavy renewals of sleepers off-set by economies in other directions.

Generally speaking, I may say that had it not been for the special expenditure caused by the vagaries of our enemy the Teesta River our expenses, as compared to gross earnings, would have shown a lower percentage than that of the preceding year, which stood at the favourable figure of 49.46 per cent. instead of 52.64 per cent., at which it stands for the year under review.

As shown in Account No. 9, the net earnings for the year amounted to Rs.11,10,107 (as compared with Rs.11,26,941), of which, after deduction of Indian income tax Rs.1,13,614, there remains Rs.9,96,493, which at the rate of exchange of 1s. 4d. equals £66,426 17s. 4d. This, with the addition of £6,344 4s. 5d. exchange difference on remittances, etc., £2,472 19s. 5d. interest earned on deposits, etc., and of the balance brought into the accounts from the previous year, gives a total of £123,596 7s. 5d.

After payment of the dividend on the preference stock, £14,000, and carrying the sum of £2,000 to income tax reserve, the sum of £107,196 7s. 5d. remains, from which an interim dividend of 4 per cent. was paid on April 21 on the ordinary stock, absorbing £16,000, and £20,000 has been carried to reserve, leaving a balance of £71,196 7s. 5d. to be dealt with.

Before dealing with the question of the final dividend upon the ordinary stock, I have a few words to say with reference to the movements of the Teesta River during the monsoon of the current year. I am glad to say that, thanks to the protective works which, under the excellent supervision of our manager and engineer-in-chief,

Mr. Polwhele, have been erected, very little damage has been done during the flood season.

The latest report received from our manager under date October 11 is that the river had cut in considerably, but that up to October 10 had not breached the 1st diversion, and, as the water level must go down soon, he did not think the 2nd diversion in any danger.

Other protective steps will be taken during the coming dry season to, as far as may be practicable, ensure safety to your property. All works have been carried out only after consultation and with the approval of the Government engineers, with whom our manager is in close touch, and who have personally visited and inspected the threatened area.

As I have said, we have done all that is possible and within our financial resources to cope with this recurring danger, and can only hope that these efforts will result in at least comparative immunity for a few years to come and that our earnings will not be affected by a serious interruption to our traffics.

The Board desire most cordially to thank Mr. Polwhele and his staff, European and Indian, for the work they have done under trying circumstances. All over the world the climatic conditions have been abnormal and the hills in India have not escaped. The Teesta River has been giving abnormal trouble and we shall not be free from anxiety until the river resumes its former channel.

With regard to the traffic returns for the current year, you will have seen from the periodical notices in the Press that these are still improving. Our manager reports that up to the end of October our gross receipts show an increase over the corresponding period in 1926 of approximately 2 lakhs of rupees.

After careful consideration of all attendant circumstances we have decided to again recommend that the total distribution of 10 per cent. on the ordinary stock be continued, by the payment of a final dividend of 4 per cent. and a bonus of 2 per cent., leaving a balance of £47,196 7s. 5d. to be carried forward against £48,352 6s. 3d. brought in from the previous year.

Sir Alexander Kay Muir, Bt., seconded the resolution, which was carried unanimously.

The proposed dividend and bonus were approved, the retiring director was re-elected, the auditors were reappointed, and after a vote of thanks to the directors, the company's agents at Calcutta, and the manager and staff in India, the meeting terminated.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson reports as follows for the week ended November 9:—

Egyptian Futures.—Sakel Contract.—Values in this market have shown an advancing tendency during the past week, and mainly through the medium of one or two fairly large Continental orders the level has been consolidated round the 19.00d. basis for the January position. Recently, we have drawn attention to the relative cheapness of the local contract in comparison to Alexandria; very little fresh selling is attracted or can be attracted to our market as long as present differences obtain and consequently, whenever any buying orders of weight make their appearance, as recently witnessed, it is rather difficult to get hold of the necessary contracts. The ruling situation is quite abnormal and would be easier to understand if large stocks of unsold Sudans were now held here as was the case at this period last year. The only explanation we can furnish is that some 2,000 to 3,000 bales of old docket cotton is continually weakening the near positions. When consideration is given to the fact that F.G.F. cotton can be bought out of the local stock at 19.30d. against the shipment price of round 19½d. for the same quality it will be agreed that any material increase in spinners' activities will, sooner or later, be bound to bring about the readjustment of a more normal parity between our contract and Alexandria. Latterly, some local selling of new crops against purchases of American has depressed the November position to a discount of 40 to 50 points with the same delivery in Alexandria; this appears to constitute the basis of a sound straddle, and for those who are prepared to look some way ahead we recommend the operation. Trade reports as far as far as the fine count is concerned, continue to be mainly satisfactory, and producers in this class of yarns are certainly well situated in comparison to other branches of the industry. This week's advance in the raw material however, has we understand been difficult to obtain in the finished article. No special news has come to hand from Alexandria, where prices remain extremely steady in face of large arrivals. Hedge selling continues to be absorbed by speculators and export houses against sales to Continental and other spinners, who apparently are operating more actively than Lancashire. For the time being prices seem sufficiently high and some temporary reactions may be experienced; much depends, however, on the American Bureau Report, which is due for publication later this afternoon.

Upper Contract.—Whilst some advance has taken place in this contract since we last wrote, the tone has been rather heavy, and this rather indicates that for the time being recent operations in contracts and actual have led to the working up of a rather congested local long position. Both spot and forward business has been restricted and at the present juncture the market is feeling rather acutely the absence of legitimate trade support. The basis for competitive outsiders continues to be high. As we are now at that point of the season when supplies weigh heaviest the prevailing apathy of consumers may result in the development of a reactionary tendency; should this be the case, we advise purchases, as we remain of the opinion that the soundness of the position will become more emphasised as the season progresses.

Egyptian Spot.—Trading in this department has again been very quiet, the approach of the American Bureau Report, due this evening, having had the usual quietening effect. Nevertheless, the undertone has been good and prices have hardened all round. Features of interest have been lacking, but reports from up-country indicate with

some persistence that spinners of Egyptian yarns are meeting with plenty of inquiry, particularly where the finer counts are concerned. The general inquiry has been of fair extent without producing anything of especial interest. The now stereotyped lines have been followed.

Interest in Sakel appears to be steadily growing, almost every grade and quality having received some share of attention, even up to the very best obtainable. Unfortunately purchases have continued to be on only a hand-to-mouth scale. Uppers have well maintained their position and the bulk of the inquiry continues to centre on this growth. The Strictly Good Fair quality at round about 15.00d. still attracts most attention, but an improved inquiry for the better grades has also been maintained. Pilon at from 16d. to 16½d. has been in moderate request. There have been several inquiries from the trade recently regarding Algerian Sakel, some parcels of which are on offer here at about pass price January Sakel. Its chief merit appears to be its strength. A small retail trade has taken place in odd lots of Sudan Sakel, which are still to be picked up from speculators or spinners at varying rates.

On the whole, some improvement has again been shown in the amount of c.i.f. business transacted. Forwardings to spinners for the week ending 4th inst were returned as 4,331 bales Egyptian and 3,644 bales Sudan. Estimated sales 1,400 bales Egyptian and 850 bales Sudan. Quotation of Sakel show an advance of 50 points, and those of Upper and Pilon 25 points on the week. F.G.F. Sakel to-day 19.30d. F.G.F. Upper to-day 15.45d. F.G.F. Pilon to-day 15.75d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended November 3, state:—

Since our last report the futures market has been quiet but the tone is firm. The week's summary of price movements is as follows: Sakellaridis: November, 37.06 dollars, 0.12 dollars down; January, 37.40 dollars, 0.12 dollars down; March, 37.72 dollars, 0.01 dollars down; May, 37.82 dollars, 0.11 dollars down; November, 1928, 37.60 dollars, 0.35 dollars up. Ashmouni: December, 28.90 dollars, 0.10 dollars up; February, 29.22 dollars, 0.13 dollars up; April, 29.32 dollars, 0.07 dollars up; October, 1928, 28.35 dollars, 0.10 dollars down.

Sakel.—The long awaited second crop estimate of the Government was issued on 31st ultimo; the figure given is 6,055,633 kantars, of which 2,499,161 kantars Sakel.

Arrivals are still on the heavy side and the futures market has again this week had to absorb a considerable quantity of hedges. In spite of this hedging, prices have been well maintained, but this is almost wholly due to the recent better tone of the American market, which, in turn, has induced speculative buying here sufficient to counter-balance the selling. The demand from abroad has been only moderate; if anything slightly less than it was last week. It is now reported that, but for minor details, an agreement has at last been reached between the Government and the Soviet Delegation for the purchase of about 100,000 kantars of good grade Sakel held by the Government; whilst this report is possibly correct, there is still nothing official on the subject.

November new crop is now quoted on the market but operations are few and the quotation is more or less nominal.

At the first November tender, 1,750 kantars dockets were issued.

Uppers.—This market has been quite firm during the week and the straddle with Sakel shows a further narrowing of about ¼ dollar. The demand from spinners has been fairly good, certainly better than that for Sakel.

America is reported to have bought a fair quantity of Ashmouni during the past two weeks.

The week's receipts amount to 275,615 krs. against exports 86,556 krs.; the stock in Alexandria stands at 3,031,334 krs.

The official figures of arrivals and exports for the period September 1 to October 26 are as follows:—Arrivals: Sakellaridis 604,031 krs., Ashmouni and Zagora 1,160,749 krs., Pilion 92,087 krs., Various 46,986 krs., Scarto 26,907 krs., total 1,930,761 krs. Export: Sakel 352,974 krs., Ashmouni 456,737 krs., Pilion 34,761 krs., Various 24,060 krs., total 868,532 krs.

Spot.—During the week under review a fair business has taken place at Minet el Bassal. Sales amount to about 19,800 bales, of which we estimate 7,300 bales Sakellaridis, 11,400 bales Ashmouni and Zagora, 950 bales Pilion and 150 bales other varieties. Spinners continue to take only a moderate interest in our cottons. The spot situation shows very little change technically from last week.

Sakellaridis.—A moderate business has taken place covering all grades. Spot differences are easier for Good and better, steady and unchanged for Good Fair and Fully Good Fair, and stiffer for the lower grades. Once again the medium grades have attracted most attention.

Ashmouni and Zagora : have once more been in good favour with buyers, chiefly for the medium and lower qualities. Spot differences are generally without much change and very steady.

Pilion.—An improved business has been done, mainly in medium qualities. Spot differences are generally a little dearer.

Other Varieties.—A small business has been done in White at about last week's differences. A fair trade has been done in Nahda and a few bales of Maarad have changed hands.

Crop, 1927.—We maintain our crop estimate of 6,750,000 kantars, of which about 3,000,000 kantars are Sakel.

New areas of wild coffee have been found in the Kenati Valley of Latuka District in Mongalla Province, Sudan.

An order has been placed by the British Tanker Company, London, with Sir W. G. Armstrong, Whitworth, and Co., London, for a steel floating dock for delivery at Abadan in the Persian Gulf. The dock will be of the sectional pontoon type, self-locking.

Notes of the Week.

King Fuad's Return.

The spontaneous warmth of the popular reception accorded to King Fuad on his return from a prolonged tour in Europe may well be symptomatic of a new era in Egypt. It is no disparagement to the country to say that since the grant of independence in 1922 it has not really "found itself." The motive power has been there, but contact has not been established, and the ship of state has remained stationary instead of forging its way ahead. The dissipation of national strength is now, it would seem, to be checked, and instead of wasting energy on matters of more or less academic interest the efforts of the whole nation are to be concentrated on practical affairs. Hitherto the loyalty of the nation to its Sovereign has been correct, but, as far as popular expression has been concerned, it has suffered from rival claims. It was not King Fuad, but someone else who was relied upon to obtain what was held to be the only thing worth having. To-day Egyptians are better able to realise that it is the nation as a whole, rather than one man, that must work out the salvation of Egypt. To this end consolidation of strength is required; in other words the Egyptian people must pull together and not in different directions. King Fuad's tour has brought home the fact that Egypt has its part to play in the comity of nations, and that it is possible for the Sovereign to render conspicuous service, such as no other individual can, in this direction. His Majesty's welcome both in Alexandria and in Cairo, as well as on his journey between these two centres, was testimony of the national appreciation of the service he had rendered to the country by his visits abroad. It has been seen that other countries do not share the view that, whatever the special relationship between Egypt and Great Britain, Egypt's position as an independent State among the nations is in any way impaired; for, without question, King Fuad has been received everywhere with all the honours of a reigning independent Monarch. With this fresh light upon a vexed subject it was only to be expected that formal negotiations between Egypt and Great Britain for the settlement of outstanding questions would have already been assured of a smoother course.

Anglo-Egyptian Relations.

Interest in the speech from the Throne at the opening of the Egyptian Parliament inevitably centred in the passages bearing on the Prime Minister's conversations in London. It is surely significant of the new spirit in Egypt that the scrupulously correct report given should have been received with evident satisfaction by the Chamber. Sarwat Pasha's conversations with Sir Austen Chamberlain, it was stated, had succeeded in consolidating the good understanding between Egypt and Great Britain. A friendly spirit had informed both sides in the conversations, and a sincere effort had been made to reconcile the points of view on the subject of Egypt and the Sudan, and to realise the desire of the British and Egyptian nations for an alliance which, by completing Egypt's independence and settling her relations with Great Britain, would unite them by links of friendship and confidence. Time was—and not long ago—when the Chamber would have been content only with much stronger meat than this, and credit must be given to the Wafd under its new leader for the confidence which it has inspired in Sarwat Pasha that he has succeeded so far in carrying Egyptian opinion with him. Time must now be given for the practical application of the new spirit to the details of the treaty of alliance that it is in the interests of both countries to conclude as soon as possible. The Speech further contained the assurance that Sarwat Pasha had been able to prepare the ground for a conference of the Capitulatory Powers in Cairo with a view to the adoption of a modification of the Capitulatory régime, and very naturally this announcement was particularly well received. It will not have been lost on the Legislative Assembly that the Prime Minister must have met with the cordial encouragement of the British Government in his efforts to bring about a favourable reception among the Powers of his proposals for superseding the Capitulations. This attitude in itself will, perhaps, have suggested to many of the deputies that it may not be a bad thing to keep an open mind in future with regard to Great Britain's intentions towards Egypt.

The Turkish Budget.

The Budget for 1928 which has recently been submitted to the Grand National Assembly of Turkey is represented as balancing with an expenditure of £T.206,291,668. In past years there have been more or less serious deficits, which must have materially increased the floating debt of the country. Next year, however, the measures adopted to increase the revenue must be supposed to be bearing fruit, as equilibrium—at least on paper—has been attained. It is noticeable that more than a third of the total expenditure is devoted to military expenditure; approximately £T.57,500,000 to the Army, £T.5,000,000 to military factories, and £T.9,500,000 to the Gendarmerie. If to this amount is added the cost of the Navy (£T.6,000,000) and of the Police (£T.4,000,000) the total sum is practically forty per cent. of the Budget. This is a heavy charge for any country, but it represents a serious burden for one so backward as Turkey. When only £T.6,500,000 can be spent on education and less than £T.4,000,000 on agriculture, the necessity for a foreign policy which would make the Turks less fearful of imminent designs on the integrity of their country becomes apparent. An item of £T.14,874,709 appears in the Budget for Public Debt payments. How far this sum will go towards meeting the whole of Turkey's indebtedness can be only a matter of conjecture. In view of the fact that so many debts are still matters of dispute, for which the Turkish Government will presumably not have felt called upon yet to make provision in the present Budget, it is probable that a much bigger allocation ought to be made to meet charges on the Public Debt, if Turkey really aims at putting her finances in order. There have also to be taken into consideration the large loans now being incurred for railway construction; a sum of £T.250,000,000 has been mentioned—to be spread certainly over a number of years—and this amount will call ultimately in payment of interest for nearly three times the present total of Debt charges shown in the Budget. The new National Assembly has been warned that it will be expected to devote a considerable part of its attention to economic matters. It will be of interest to see whether, in the absence of an Opposition, the Budget is subjected to that searching analysis that the situation seems to demand. The fear is that out of loyalty to the Party the deputies will feel obliged to perpetuate the cult of make-believe, that is still causing the Government to postpone the day when the financial situation will have to be faced. We are convinced that Turkey has nothing to fear from designs on her independence, whereas her material prosperity is of imminent concern to many countries. If she could reduce her military expenditure, so as to spread the reorganisation of her army over a number of years, she would be better able to devote her resources to the development of the country, and in this way make herself far stronger in the long run.

Communists in Turkey.

Reports from Turkey announce the discovery on a relatively large scale of Communist activities which can be shown to have been deliberately fostered from Moscow. Among those who have been arrested are local officials of Arcos, of the Soviet Bank and of the Soviet Mercantile Marine, who are said to have been acting under orders from the Foreign Organization Office of Moscow. A Communist movement would have little chance of thriving in Turkey, unless it were carefully nurtured from outside. Relations between the Turks and Soviet Russia have been sufficiently correct to justify the former in supposing that they would be free from any direct attempt to work for the overthrow of the existing régime. The Soviet Minister to Turkey is, indeed, the only foreign representative whom the Ghazi has honoured with his personal friendship—a choice which may enhance the amenities of life in Angora, but would not seem to offer the President the advantage of maintaining contact with the best of Western thought

and Western standards. Whether this friendship will be proof against the action of the Soviet Government in trying to undermine the elaborate structure that Mustapha Kemal Pasha has built up remains to be seen. If Turkey had been more advanced in the cordiality of her relations with Western countries, she might have considered herself strong enough to throw down the gauntlet to Soviet Russia. As things are, it is more likely that the Turkish Government will close its eyes to the connexion of Moscow with the recently discovered Communist activities, so that the President need not lose a boon companion.

The Situation in Roumania.

If the Manoilescu incident ultimately clears up the political situation in Roumania it will be only at the price of intensifying it first. The Government's immediate reply to the verdict of the court martial was to proclaim its intention to deal as drastically as ever with all attempts to undermine the constitutional *status quo*; but, as the inference to be drawn from the acquittal of M. Manoilescu was that no such attempts were being made, the Government's intended salvo of artillery seems to have misfired. On the other hand, it is right in pouring ridicule on the reports that find currency in part of the foreign Press regarding the disturbed conditions in Roumania and overtures to Prince Carol to return. There is singularly little desire at present to have the Prince back, although the desire may increase and spread, if what are regarded as the dictatorial measures of the Government are persisted in. On this point Roumanians alone can form judgment; but it is noticeable that allegations of infringement of the liberties of the public and dictatorial tendencies are seldom absent from Dr. Maniu's speeches. The executive committee of his National-Peasant Party has now passed a resolution instructing a committee to begin determined action against the Government "using all legal Parliamentary and extra-Parliamentary means, and in case the Government should persist in illegally misusing its power, to prepare and organize the resistance of citizens." These are sonorous words. It would be much better if the leaders of the Liberal and National-Peasant Party could recall the fact that they are both Roumanians, that neither monopolises all the political virtues, and that the interests of the country require them to have as their goal the common good rather than their own personal interest. It is, however, for the Government to hold out the olive branch.

Iraq and Najd.

The recent raid by the *Akhwan* into Iraq, conducted under the auspices of Mazid, brother of the famous Faisal ibn Dawish, has an ugly look, and, as far as can be gleaned from the present telegraphic summaries, the Wahhabis of Najd have put themselves definitely in the wrong. What happened was this. The Wahhabis, apparently conceiving that the construction by the Iraq Government of a police post at Busiyah, in the Nasiriyah district, was contrary to the spirit of the Bahra Agreement (made between Najd and Iraq in November, 1925), which they held to provide that certain grounds for grazing near the Iraq-Najd frontier should be considered as neutral territory for the tribes of both countries, determined upon a raid into Iraq as a protest against the action of the Baghdad Government. The police post was thereupon destroyed and twenty Iraqi policemen and thirty labourers, including some women, were killed. When the Royal Air Force flew swiftly to the scene of the outrage they found the mutilated bodies of the victims of the *Akhwan*. The frontier tribes of Iraq were not touched, but, hearing the report that the dreaded Ibn Dawish was about to invade, they fled in terror into the interior. Now this kind of thing is quite inexcusable. Before the signing of the Bahra Agreement it was, of course, common enough, and, in the circumstances, perhaps not unnatural; but for the peace to have been thus broken within two years of the giving of King Ibn Saoud's word is something that demands severe investigation. Busiyah is seventy-five miles north of the frontier, and

although it is stated that King Ibn Saoud last year protested against the erection of a police post in the Nasiriyah district, on the ground that the frontier between his State and that of King Faisal had not been properly surveyed, to have followed up a protest with such outrageous action as this is a most unworthy and reprehensible step. Either King Ibn Saoud was cognisant of this raid by Mazid—in which event it would appear that the British Government, with whom, as well as with the Iraq Government, he is now in Treaty relations, might have something to say, or else he was powerless to restrain the impetuous *Akhwan*. However the affair be regarded, it is a sorry business, and calls for prompt explanation. Hitherto King Ibn Saoud has trodden the rungs of his ladder very cleverly, and, in the opinion of those best able to judge, has never made a step which he has not been able to justify. For the first time, therefore, the Wahhabi leader has, as far as we can estimate at present, come down on the wrong foot. It is improbable that the last has been heard of this Busiyah affair.

After Seven Years.

Many changes have taken place in Iraq during the last seven years, but the murder of Colonel G. E. Leachman, just over seven years ago, was one of those black deeds which is not likely soon to be forgotten, even though the name of Mesopotamia itself may have been changed and the ideals held by that gallant officer have been transformed. It is not necessary to recall to any reader of *THE NEAR EAST AND INDIA* the details of that murder, on charge of which Shaikh Dhari of the Zoba tribe was last week captured near Mosul. Shortly after the assassination of Colonel Leachman, this unhealthy tribal leader fled his country, not even stopping, it is understood, to see how the rebellion of his countrymen against the British would fare. That he should have been recognised and arrested now, after seven pregnant years, is, perhaps, an indication of how Arabs have come to see in a better light the real worth of Britons serving in their land. Colonel Leachman was of that band of gallant Englishmen who "buidled better than they knew," and this revived memory of that treacherous deed at Khan Nuqtah in August, 1920, will help to realise that the agents of direct administration, although seemingly disowned, toiled not in vain. It may be said, indeed, that only now, in these peaceful but still complicated times in Iraq, is the fundamental value of the administration of Mesopotamia in the years immediately following the War being adequately realised.

The Turco-Iraqi Boundary.

We have referred more than once to the growing spirit of cordiality between Turkey and Iraq, and the latest evidence of it is provided, in a striking manner, by the success with which the frontier between the two States has been delimited. This Boundary Commission (which is, of course, not to be confused with the Permanent Turco-Iraqi Commission that meets alternately on Iraqi and Turkish soil every six months) began its work, under the presidency of M. Baeschlin, a Swiss Professor, last March, and signed its completed report last September. The two hundred and thirty-five miles, from the Tigris to the Persian frontier, were studded with physical difficulties, and probably with other difficulties also, but the success with which the Commission performed its task speaks extremely well, not only for the tact and ability of its *personnel*, but also for the future of Turco-Iraqi relations. It is particularly pleasing to note that one of the members of the Commission was Mr. L. F. Nalder, an officer whose knowledge of this frontier was gained in precisely that post-War régime to which we have referred in a previous Note. The tendency in Iraq now is to look rather to the eastern and southern boundaries as sources of possible complications, a change which is really remarkable. Manifestations of this new Turco-Iraqi *rapprochement* will be watched with close interest. It is to be hoped, however, that the apparent cordiality which obtains between the

Kemalist State and the Baghdad Government will not induce the Iraq authorities to regard as less necessary than before a thorough and constant understanding with Persia and with Najd.

"Deus ex Machina."

One can understand the respect in which the name of Rothschild is held by the Jewish people, particularly by the Jewish community in Palestine. It is often forgotten, now that a policy of the establishment of a "Jewish National Home" in Palestine has received international sanction, how much the earlier Jewish community in the Holy Land owed to the munificence of Baron Edmond de Rothschild. It is a fact, however, that upon the outbreak of the War in 1914, half the Jewish rural community in Palestine owed their means of existence to Baron Edmond de Rothschild. Three years ago the Rothschild interests in Palestine were transferred to the "Jewish Colonisation Association." But the interest and generosity of the financier in Paris are by no means at an end. For it has just been announced that the Baron, seeing the crisis in Zionist educational institutions, has offered £15,000 to alleviate the crisis, on condition that religion be given greater prominence in the curriculum and changes be made in the membership of the educational committee. We have no means of telling whether the Jerusalem Administration, which recently took to itself closer control over all schools in Palestine, will enable this offer to be received, or whether it will immediately commend to itself to those Jews in Palestine who desire no insistence on the religion of their fathers, but it must arouse lively sentiments of gratitude among a considerable number of Jews in Palestine. Another gift, and one which will benefit the whole of Palestine, nay, the whole world, has just been announced from America. Mr. J. D. Rockefeller, Junior, has offered £400,000 for the building of an Archæological Museum on the site of Karm ash Shaikh, and the offer has been gratefully accepted by the Government of Palestine.

POLITICAL TENSION IN ROUMANIA.

The Manoilescu incident in Roumania has turned out well neither for the Liberal Government nor, at the moment, for the country as a whole. Immediately after the arrest of Prince Carol's emissary, when the contents of the letters found upon him and selected passages from his diary were published by the Government in justification of its action, it was difficult for the impartial on-looker to be convinced of the heinousness of his crime. M. Manoilescu, however, was clearly not an ardent supporter of the existing régime, and it should not have been an impossible task for a skilled lawyer to persuade a regular court of justice that he had committed a technical offence against the law of the land. The reason that prompted the Government to bring M. Manoilescu before a court martial is not apparent. Ministers may have been genuinely alarmed and have believed in the existence of an organised revolution, or they may have had a suspicion of the weakness of their case and have trusted to being able to work more easily on the fears of a court martial than on the judgment of an ordinary court of justice. Whatever the reason, the decision proved an unfortunate one. The trial by court martial gave the Opposition an opportunity of which they made the most; political speeches by leaders of the parties were the main feature of the proceedings, and the climax was reached when General Averescu, who still retains a large measure of personal popularity, although he has had little success as a political leader, gave his testimony on behalf of the prisoner, and endorsed far more emphatically than M. Manoilescu had done the contention which formed the basis of the charge. In the end the court martial in the early hours of the morning decided by a majority of three votes to two that the prisoner had not been guilty of conspiring against the State and had not harboured the criminal intention of upsetting the order of succession to the Throne by a rising of the people. In other words, the Government was adjudged to have made a mountain out of a mole-hill, and the court found that M. Manoilescu had not exceeded his rights in conveying Prince Carol's communications to certain party leaders.

It would be idle to pretend that the acquittal has not been a distinct rebuff for M. Bratianu's Government. Unfortunately, in anticipation of the verdict of the court martial, it sought to emphasize the danger that the Manoilescu incident was supposed to have revealed, by introducing before Parliament an emergency measure designed to strengthen its hands against attempts to interfere in the dynastic question. The passage of this Bill was fiercely contested in the Chamber of Deputies, but the Liberal majority secured its acceptance by both House of Parliament the day before the end of the Man-

oilscu trial. By acquitting Prince Carol's emissary the court martial has endorsed the view of the Opposition that the emergency measure for the maintenance of constitutional order was uncalled for, and is held to have confirmed the Government's critics in their belief that the new law represents yet another move on the part of the Prime Minister in order to rivet his dictatorship more firmly on the country. The political cauldron in Roumania is, accordingly, seething more noisily and more fiercely than ever. Both sides are, no doubt, sincere in their views. The Government, having convinced itself that it is essential to the well-being of Roumania, sees in every challenge to its authority a genuinely subversive movement against the State. The more the Opposition's capacity for action or even for criticism is curtailed, the more evident in its own estimation is its single-minded devotion to the national interests. The view is, perhaps, common to all Governments; but the thoroughness with which effect is given to it in the regulation of the everyday affairs of a nation determines the distinction between constitutionalism and dictatorship. Under the powers that it has acquired the Liberal Government has forbidden its political opponents, the National Peasant Party, to hold a general meeting at Alba Julia because the town "is sacred to national unity," and will allow the executive committee to meet only in the capital under a system of close scrutiny of those attending or, virtually, under police supervision. The censorship, moreover, especially after the verdict of the court martial, is pointed to by the Opposition as in direct conflict with the terms of the Constitution. So far, however, the Government has shown itself adamant in its attitude, and the violence of Opposition speeches is well matched by the unyielding severity of ministerial utterances.

The net result, therefore, of the Manoilescu incident has been to divide the country into two sharply defined camps and to aggravate passions on both sides. In the eyes of the Government the mere mention of Prince Carol's name in relation to Roumania's dynastic question amounts to treason. The Opposition, on the other hand, insists that a law of January 4, 1926, which settled the succession in favour of Prince Michael as a result of Prince Carol's renunciation, partakes of the nature of any other law in being subject to revision. It does not commit itself to saying that it wants Prince Carol on the Throne; but it challenges the irrevocability of the January enactment merely because it considers that the existing Regency serves as a bulwark of the alleged dictatorship of M. Bratianu. That such a situation should find an amicable settlement seems almost too much to hope for. Each side, it may be inferred, is intriguing for the support of the Army, and the history of Greece in recent years is in danger of being reproduced in Roumania. There is much cogency in the Government's appeal that the country in the face of the problems confronting it needs to unite its forces rather than to dissipate its strength; but it does not help to this end to condemn the whole Opposition as committed wholly to subversive aims tending to destroy the State. The pity of it all is that the Liberal Party, which does stand for a definite political policy and has administrative capacity, should have shown itself unable to combine these assets with essentially democratic principles. The Transylvanians, on the other hand, have raised high the banner of democracy and constitutionalism, but have shown not only no talent for administration, but even such political gaucherie as allowed them to be stamped as unconstitutional and disloyal when they refused to attend the coronation of King Ferdinand. At the present time it may be doubted whether they are much better advised when they allow it to be said of them that they are not averse from enlisting the help of Prince Carol in their quarrel with M. Bratianu. *Non tali auxilio* might well be adopted as a slogan by all Roumanian parties in their political feuds, for they are surprisingly indifferent to the nature of the help that they enlist in the furtherance of their quarrels.

The Near and Middle East*

From Our Own Correspondents.

Baghdad, November 11.

Politics.

A Cabinet crisis arose at the end of October over the suppression by the Government of two Opposition newspapers of which the more important was the Shiah organ *Al Nadha*. As Yasin Pasha (the acting Premier) had acted contrary to all precedent in omitting to consult the High Commissioner on the matter, or even to inform him that it was to be discussed by the Cabinet, the Acting High Commissioner felt constrained to ask the Regent to call upon Yasin Pasha to resign. His place as Acting Prime Minister has been taken by Rashid Ali al Gilani; the rest of the Cabinet, after some hesitation, did not resign.

In the absence of King Faisal, Parliament was opened on November 1 by his brother the Regent, ex-King Ali, in the presence of the High Commissioner and a large gathering of notables. The Speech from the Throne referred to the negotiations now going on in London for the revision of the Anglo-Iraq Treaty, and expressed the hope that they would be "successfully concluded in a manner which would guarantee to Iraqis the realisation of their just aspirations." The northern boundary had now been finally delimited, and Iraq had obtained the goodwill of her neighbour the Turkish Republic. Foreign relations had so expanded that Iraq was sending Diplomatic Representatives to neighbouring countries.

The Regent referred to the important discovery of oil by the Turkish Petroleum Company, expressing the hope that "these great resources would shower blessings upon the country, and would open many doors to provide work for Iraqis." An enumeration followed of the measures which were shortly to be put before Parliament, and the Speech closed with the hope that the Assembly would "treat matters brought before it with the care, zeal, and sound judgment for which the Iraq Parliament is renowned."

After the Regent's departure, Yusuf Effendi Suwaidi was re-elected President, and Mohammad Ali Fadhi Effendi was elected Vice-President, of the Senate. Sir Abdul Muhsin Beg as Saadun was re-elected President of the House of Deputies. The Acting Prime Minister then read out a royal *Iradah* adjourning the Majlis for six weeks, by the end of which time the King and Jaafar Pasha may have returned from London. All Senators and Deputies are to receive ten days' salary and their travelling expenses.

Oil.

The oil of which so much has been said and written was struck very unexpectedly on October 15 at Baba Gurgur, five miles from Kirkuk. A great jet of oil shot up vertically into the air, and it is estimated that 50,000 tons ran to waste in the low ground round the workings,

before the flow could be controlled. The delight of the Turkish Petroleum Company at their good fortune was regrettably marred by the death of two American drillers, who on October 20 attempted to return to the flooded area and were overcome by gas fumes; a Persian coolie who gallantly tried to rescue them was also fatally gassed.

News of the discovery of oil caused great enthusiasm in Baghdad, and public opinion is still very optimistic. Those who see Utopia at hand forget that it will take from five to seven years to put this oil on the market, even if (as is not yet certain) the field is rich enough to make worth while the long-talked-of pipe-line to the Mediterranean. The oil is at an unusually shallow depth, which explains why it was struck so much earlier than the geologists had predicted; and several more borings must be made to ascertain the extent of the oil-bearing area. Only if these results are favourable will a pipe-line be considered; then, if the accompanying railway has been built between Baghdad and the Mediterranean, wide vistas of future possibilities for Iraq will indeed be opened up.

Cholera.

A single case of cholera having occurred in Baghdad, and two having been brought into the town from outside, compulsory free inoculation of the inhabitants was carried out during the last week in October. Control posts were established on all the mainways leading out of Baghdad, and every effort was made to prevent the carrying of the disease into neighbouring countries. No further case occurred, and the enforcement of inoculation is now no longer considered necessary. It is hoped that the first spell of really cold weather will put an end to all fear of an epidemic this year.

General News.

A very interesting demonstration of the newest agricultural appliances was given in Baghdad on October 26 by the Iraq agents for the Fordson tractor. Now that the introduction of mechanical pumps—worked by ever-cheaper oil—has made possible the cultivation of much land hitherto desert, the more progressive farmers are turning their attention to the use of machinery for the eking out of their scanty labour. The wooden plough of Biblical times is still normally used, but great interest was shown in the motor ploughs, cultivators, and tractors exhibited by the Ford agents. A machine intended for shallow ploughing was specially interesting, as such ploughing gives excellent results in the soil of Iraq, and also requires the minimum of water for irrigating the crops. Among the spectators were the Acting Premier, Yasin Pasha, the Minister of Irrigation and Agriculture, and the Director-General of Agriculture. Thirty students from the Iraq Agricultural College at Rustum were also present.

The Turkish Permanent Frontier Commission, which is appointed by the Turkish and Iraq Governments and meets bi-annually, reached Mosul late in October. They were greeted by a guard of honour from the Iraq Army, and were met outside the town by representatives of the Government. The immediate object of the Commission is reported to be the settlement of such trans-frontier claims as could not easily be arranged by correspondence.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

The new Turkish Consul-General, Talaat Bey, has arrived in Baghdad to take up his appointment.

Dr. Naji Beg al Asil, formerly Diplomatic Agent in London for the ex-King of the Hijaz, has been appointed Professor of Philosophy in Baghdad University.

Mrs. Keith Miller, with her pilot, Captain Lancaster, reached Baghdad on November 2, staying for two days before continuing the flight to India and Australia. The aeroplane, an Avro-Avian, is a very light machine, the first of its weight to attempt so long a flight. This week there have arrived the four Supermarine Southamptons which left Plymouth on October 17 and are cruising to Singapore and Australia; the airmen spent three days here and left yesterday for Kāfachi, a large number of interested spectators giving them a good send-off.

Severe thunderstorms and heavy rain ushered in November, the chilly south wind putting an end at last to an unusually long-drawn-out summer. The lovely clear weather of autumn in Iraq is now putting new life into many who had "hung up their harps," and the British community has celebrated the anniversary of General Maude's entry into Baghdad with a week of social events in token of revival—Horse show, gymkhana, polo and tennis tournaments.

Cairo, November 12.

Abyssinia and Egypt.

The news of the negotiation with the Abyssinian Government by an American firm of engineers of a concession for the construction of a barrage on Lake Tana came as a tremendous shock out here, and the Egyptian community has not yet recovered from it. It would appear unprofitable to deal with the various aspects of the question, since by this time they must have been fully ventilated in the Home Press. But one result of this incident is abundantly clear from conversations with intelligent Egyptians, and that is that it has brought home to them all their utter dependence on Great Britain to defend their rights, and has deepened the already general desire for an *entente*. Whether Sarwat Pasha will find the political atmosphere sufficiently favourable for putting the final touches to what he has been able to achieve in London is, however, another matter. But it seems likely that any deliberate obstruction of any settlement will not be well received in the country, nor do the obstructors any political good.

The Weather.

At last Cairo has had the rain which normally marks the division between the summer and winter seasons and cooler weather has set in. It has come none too soon, for everyone, even those who took first leave and returned during September, has suffered tremendously from the trying weather which has marked the so-called autumn months. The past summer has been the worst that even the oldest inhabitant can remember. For a period it was hotter than in Khartoum and damper than in Alexandria, a combination which is calculated to try the patience and the powers of resistance of the strongest and most philosophical. And what has aggravated matters has been the fact that it has been inordinately long, the hot weather this year having set in late in May and lasted until this past week, a period of six months, which is an exception. No wonder everyone has longed for the rain heralding the advent of the cool weather with a longing which could not possibly be exceeded by that with which Anglo-Indians look out for the breaking of the monsoon.

In Alexandria the rain assumed such a torrential aspect that within an hour or two the city had become flooded out. Traffic had to be stopped in many directions. People had to be rescued from the lower parts of their houses, which had been invaded by the water, and in many instances had to be conveyed across the streets in hand-carts. The state of affairs in the suburbs was even worse and much damage was done to property in every direction. Water seriously interfered with the railway service and the trains were much delayed, the special by which the Acting High Commissioner returned to Cairo being thirty minutes behind time in leaving Sidi Gaber.

Shakespeare in Cairo.

The venture for which Aly Pasha Shamsy, the Minister for Education, has been responsible bids fair to be an even greater success than its promoters thought possible. Mr. Robert Atkins opened his three weeks' season of Shakespeare on Wednesday night at the Royal Opera House. "Hamlet," which was the piece chosen for the inaugural performance, had an enthusiastic reception from a crowded house. Both as regards staging and acting it was a great event and everyone is looking keenly forward to the other numbers, which include "Twelfth Night," "Measure for Measure," "Othello," "Taming of the Shrew," "Merchant of Venice." Bookings have been excellent and the demands from the Egyptian students—altogether nearly 3,000 applications for seats were received from them—have been so overwhelming that it has already been found necessary to give two extra matinées of "Hamlet," which seems to be the favourite in the schools. It was the intention of the promoters to make a visit from a Shakespeare company one of the features of the winter season, and there seems now no doubt that this would be both a popular and a profitable innovation.

Civil Aerodrome in Cairo.

Arrangements have at last been made for the erection by the Egyptian Government of an aerodrome, where civil aeroplanes can alight. The new aerodromes will be

situated out at Almaza, about two miles to the north-east of Heliopolis, and so ten miles approximately from the centre of the city. Negotiations had to be carried out with the Heliopolis Railways Company, within whose concession the site was situated, and it was agreed to cede it against cession of another and larger area close at hand. It is not expected that the new aerodrome will be ready for two years, so the Imperial Airways and other non-military machines which arrive in Egypt will have to continue to utilise the Royal Air Force aerodrome at Heliopolis.

The Cotton Estimate.

The new cotton estimate issued by the Egyptian Government scarcely affected the market at all. Giving figures about five per cent. less than its last estimate, it is still criticised by growers as being below the mark. But as a matter of fact it is generally admitted by the trade and those who have no axe to grind—the Alexandria General Produce Association's figures confirm this—that the crop will turn out to be somewhere between six and six and a half million kantars. The Government estimates can, therefore, be considered as being as accurate as it is at all possible to be in such cases. This is the first occasion for many years where the official estimate has been within any distance of the real figure, and it is a thousand pities that the Government should have committed such a blunder as not to issue its second estimate on the date which had been announced long before. In spite of explanations by the responsible Minister, the delay gave rise to statements which cast serious doubt on the Ministry's disinterested intentions, and disturbed the market far more than if, owing to inability to frame a fresh estimate due to absence of certain data, as explained by the Minister, the first estimate had been published. One of the urgent recommendations of the recent Cotton Congress was that estimates should be issued at regular intervals and always on the date announced.

An Egypto-American Diplomatic Incident.

A diplomatic incident has recently arisen between Washington and Cairo. Some years ago a local American subject brought a claim against the Egyptian Government for damages. The latter resisted it and in due course the matter came before the Mixed Courts. The First Instance declared that the claim was vexatious, and that the claimant had no right to any damages. He appealed at once. As it turned out, his appeal was irregular, but the higher Court, while recording the irregularity, dealt with the matter and confirmed the decision of the lower Court even to the extent of repeating that the claim was a vexatious one. The claimant then apparently interested Washington in the matter, for orders were sent out by the State Department to its representative in Cairo to open up negotiations with the Egyptian Government with a view to obtaining payment of the indemnity claimed. The Egyptian Government persisted in its refusal, which had, of course, been reinforced by the decision of the Courts, but the State Department officially demanded that the claim for compensation should be at once met by the Egyptian Government. To this the latter has now replied in somewhat severe terms, pointing out that the question had been dealt with by the competent jurisdiction which both in first instance and in appeal had declared the claim unjustified, and that no one has the right to dispute the decision of these Courts, least of all the American Government, which has recognised the jurisdiction and is represented thereon. The attitude of the State Department has caused widespread surprise out here, and it is evident that someone in the State Department at Washington has blundered.

It is reported in Jerusalem that the local Governor and other notabilities in Aleppo are collecting donations to support the grandchildren of the late Sultan Abdul Aziz, who are living in Aleppo completely destitute, and are stated to be on the verge of starvation.

THE SHAH IN NORTH-WEST PERSIA.

BY MIRZA FIROOZ KHAN.

Tabriz, Undated.

His Imperial Majesty the Shah-in-Shah Reza Pahlavi is in Tabriz. His arrival, although known for days before, was rather a quiet affair compared with the arrival of his predecessors in the former days. Since His Majesty is a constitutional and a democratic Ruler, *Istiqball*, or going out of town for a few days' journey to meet him, was strictly forbidden; even a few *parsakhs* were forbidden. The population were to go out just out of the city walls, while the Governor-General of this province had to meet His Majesty only one single *parsakh* (five miles) outside the city to welcome him in the name of his people. It was also strictly forbidden to approach His Majesty's car under the pretext of presenting a petition. Every petition was to be given either to the Governor-General, or to the Amir-Lashgiar.

His Majesty was in the uniform of a Lieut.-General. He wore a khaki coat, but a pair of sky-blue trousers, with two wide red stripes on each side of his trousers. His Majesty wore no sword, no pistol, no cordon, nor any medal. He did not wear even his *Taj* on his military cap. Instead, he had a badge of "The Sun and the Lion," in gold, attached to the front of his khaki cap.

A few thousand school-children were practising for some weeks the following song, which they sang with great success:

Moojdéh ba ahl vatan
Bab Negati
Muhtéh shoodéh ba Mambakati Sasani,
Zindéh badd, zindéh badd Reza Pahlavi,
Zindéh badd, zindéh badd Shah Pahlavi:
(Good news to people of (our) vatan
Door (of) salvation
Has been opened to the Land of Sasanian,
Long live, long live Reza Pahlavi,
Long live, long live Shah Pahlavi.)

The Blue Mosque.

His Majesty stayed in our city for nine days. He celebrated the birthday of the Prophet Muhammad with great pomp. Receptions were held at daytime and fireworks entertainments were given at night. He visited nearly all the places of interest, amongst them the Blue Mosque, which was built by Turks when Sultan Sulayman conquered Persia (under Shah Tahmasib), occupied Tabriz and made it his capital. This was some 300 years ago. The Turk Sultan built this Mosque at great expense and with much labour, the numerous small "stones," or "bricks," of which it is made, are all painted blue—a colour which the present day masters of Persia cannot find in order to paint and replace the many lost "bricks." The blue-colour of these bricks—the chemical composition of which is unknown at present—cannot be washed off by rain or by water. The Mosque, a master architectural building and a reminder of the skill of the past, is in ruins now and is fast going into perfect destruction, because, since it is a Sunni Mosque, the Shiah Mussulmans of our good land consider it an unclean job to renovate it.

The First Match Factory.

His Majesty visited also the match factory of our city, which is the first not only in Tabriz, but, I believe, in Persia. This factory has a story attached to it. At present the factory is owned and is being run by three

Hon. Sec.

brothers, who are Sayyids. It is said that their father was a travelling merchant of Manchester goods. The three sons one day conceived the idea, it is alleged, of stealing some money from their father, to make matches. At first it was a hobby, but as they made good progress later on they carried on their hobby on a business-like basis, until they had stolen quite a round sum from their father's iron safe and had made a few hundred thousand matches in the dark cellars of their large house. After a time, the father came to get an account from his three sons, and found their cash-box short of some 200,000 krans. They were asked for an explanation for this uncalled-for shortage. At first timid and bashful, the sons, later on, decided to confess the truth, and told their stern father the story of their "match factory," and leading the old man down to the cellar, showed him all the fruits of their secret labours. The old man was more than pleased by the skill of his sons, and he not only pardoned them their stealing, but told them to build an up-to-date factory with all the required machinery, promising to supply them with all the cash they might need! It was this factory which His Majesty was pleased to favour by a visit.

In Maragha.

After nine days' stay in Tabriz His Imperial Majesty left for Maragha, which is famous for its fine grapes and numerous fruit orchards. His Majesty was received, five miles out of Maragha, in a special Royal tent in the name of Sirdar-Nasir of Maragha (who is in Tehran himself as a member of the Majlis for Maragha), where His Majesty took a native small glassful of tea and some fruit, and started for the city. The population were out in a body, but, unfortunately, no flags or buntings were displayed, and no sheep were killed as a *qurban* (sacrifice).

His Majesty the Shah stayed overnight in Maragha, leaving for Mianduab the next morning at 8 a.m.

In Mianduab.

His Majesty arrived—it is reported—in Mianduab at 10 a.m., but would not enter the small town, although the dusty streets were being sprinkled with water and were being swept for days and days! He landed, it is said, outside of town, in a small tent, which was large enough to hold two chairs and a table. The tent was erected by the shores of the majestic River Jeghatoo, which is famous for its crystal-pure waters. This river was crossed, formerly, by antiquated boats, but since 1917 the river has had a good wooden bridge, built by

the Russian military authorities. His Majesty rested in this small tent for about fifteen minutes. He ate some grapes, but refused the tea offered to him by the Governor of Mianduab. A glassful of tea, in a silver holder, was given to him by his private orderly from a large thermos which was in His Majesty's own car. His Majesty asked a few questions about this year's crops, and ordered a sugar beet brought to him, which His Majesty tasted. He pronounced it good and told the Governor to encourage the peasants to grow more of it—more sugar-beets and more cotton!

The school children sang a song in his honour, but, unfortunately, the children, being of poor parents, were almost naked, each having a single long shirt on him. His Majesty had inquired why they were so naked, and the schoolmaster had replied, "May I be the sacrifice of your Majesty's shoe-dust, Mianduab is on the enemy (Kurd) road. We are between our own people and the enemy. The people of our town have been looted by Turks, by Russians, by Simko and by our own gendarmes under Khaloo Kurban, hence the people are poor and cannot afford luxurious clothes for their children. . . ." It is said His Majesty assured the people, who were all out on the banks of the river, that hereafter none of the past would be repeated, and that they could sow and reap in perfect peace. . . .

His Majesty left for Sauj Bulak to be there in time for dinner.

In Sauj Bulak.

At two in the afternoon the Shah was at dinner in the Finance office. He had eighteen motor-cars with him. Eight of them were loaded with ammunition and machine-guns and they were in Sauj Bulak at six in the morning of the same day, occupying certain important strategical points upon the hills surrounding the city. On entering the city, just as His Majesty passed a certain spot, the street behind that spot collapsed, as if by an earthquake, thirty feet deep. The remaining cars had to change their course. Kurd princes, with an escort of 1,500 men armed to the teeth, were out of town for a distance of ten miles to meet him. No incident took place, although some of the biggest chiefs had been arrested and imprisoned only recently. In the evening His Majesty gave an address to the Kurd Princes, who had been commanded to be present in a body. He said that they should leave the little ways of profit to their poor (such as gathering gall-nuts in the forests of Sirdasht, and so on) and that they should use their capital united as a company—in erecting factories of match, sugar, calico, and so forth, and help in any and every way the progress and civilization of the country of Persia. The address of His Majesty, spoken in fine Teherani Persian, left a very deep impression upon his noble audience, who were impressed especially by His Majesty's sincere patriotism.

At Urmi and Dilman.

The next morning His Majesty left for Urmi. In Urmi he had something to remember from the past. There His Majesty invited a poor widow and gave her a present of one thousand krans, because she had given him, in days gone by, a supper and a night's shelter when His Majesty was a plain "Reza Cossack." His Majesty, after visiting Dilman and Khoy, returned to Tabriz by way of Marand and Sofian.

There was an Arab in His Majesty's suite, covered in wide stripes of a white and black aba. He was said to be the Shaikh Khazall of Muhammarah. Happy man! He was, so to speak, a "prisoner of war," but was travelling in a one thousand pound motor-car! If he had been living, say, a thousand years ago, instead of sitting in a motor-car, he would be running—bare-footed—behind the chariot-wheels of the King of Kings. . . .

It is reported that the recent outbreak of a blood feud among the families in Cana of Galilee has resulted in 13 persons being wounded.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

THE COMMISSION FOR THE ASSESSMENT OF DAMAGE SUFFERED IN TURKEY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—If I remember correctly it was your valuable paper, which is read here with great delight and pleasure by all sections of Iraqis, which first announced in December last that the British Delegation to the Commission for the Assessment of Damage Suffered in Turkey had commenced payment of advances. There are many British subjects here who received advances between January and March, 1927, but there are others who have not been fortunate enough even to get the first interim payment yet.

Will you, therefore, be so good as to announce through your esteemed paper for the information of the British subjects in Turkey and Iraq:

(1) How long after the receipts of the first interim payment from the Commission at Paris will the claimant receive the second payment?

(2) Those who have not been fortunate enough even to get an advance so far, how long after are they likely to get the first payment?

(3) Will the claims be settled in two instalments or more?

(4) How long the Commission is likely to last at Paris and remain working there?

It is hoped that answers to these questions will be furnished through the medium of your valuable paper for the information of the British subjects here.—I am, etc.,

AHMED ALI KHAN.

Mahalla Tall, Kadhimain, Iraq, November 3.

[The situation in regard to the Commission for the Assessment of Damage Suffered in Turkey is, as far as we are aware, that it is at present paying a dividend of 40 per cent. on the amount at which the claims already dealt with have been assessed. As the claims are assessed, so is the dividend of 40 per cent. paid on them. This applies to the claims of all Allied nationals concerned—British, French, Italian and Japanese. The total number of claims to be investigated exceed 15,000, of which number we understand some 10,000 have already been dealt with, including about 3,000 British claims. We have reason to believe, moreover, that the investigations and reports on many of the claims remaining to be assessed, which have entailed considerable local inquiry, and delays in the procuring of the necessary evidence, are well advanced; in other words, in addition to those claims actually assessed, there are many others already partly dealt with.]

In regard to our correspondent's inquiry as to the payments of further dividends, we have to conclude that the Commission's decision in this matter can be made only when it is in a position to gauge approximately the total sum of the assessment of all claims on which it has to adjudicate. So soon as it is able to say with sufficient precision the extent to which this total is likely to exceed, or to fall short of, the amount of the funds at its disposal for distribution, will the Commission be in a position to decide on the payment of a further dividend, or to determine the total percentage that claimants will receive on the amount at which their claims have been assessed.

We understand that the headquarters of the Commission will remain in Paris until the conclusion of its labours; but, in spite of the good progress that is being made in a big task, it is not at present definitely known when the work of the Commission will be completed.—ED.]

"THE FOUNDER OF ISLAM."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I, as a Muslim, commend your sentiments (published in your issue of November 17) concerning the reviewed book "Muhammad—Biography of the Prophet and the Man." It is very satisfactory to Muslims to find such an impartial attitude adopted by your periodical when dealing with Islamic matters.

The Prophet Muhammad is the cynosure of all Muslim eyes, and his sacred memory is enshrined in the hearts of all his followers. Truly it is a fool who spits at the sun.

The author fails deplorably to engender the interest of the reader and he also promotes a disgust and contempt even in those readers who have assimilated but the first few chapters. The flippant comments relating to the great religious leader will alone create a nausea in the unbiased mind.

The author has offended our religious susceptibilities, but the pain inflicted is mitigated by our knowledge that no sensible, conscientious man will be affected in the least by these profanities.

I am sure all Muslims will heartily endorse my appreciation of your fairmindedness.—I am etc.,

FUELLING MUBARAK AHMAD.

10, Rockland Road, S.W.15., November 19.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—As the "Biography of the Prophet Muhammad," by Mr. R. F. Dibble was in extremely bad taste, so your review of it in the last issue of THE NEAR EAST AND INDIA was wholesome and agreeable. May I thank you, not only as a Muslim, but also as a person who believes in the great need for better understanding between Christendom and Islam, for the sane attitude you have taken on this as well as on previous occasions.—I am, etc.,

Manchester, November 17.

S. M. H.

CAPITULATIONS IN EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Some time ago I gave to your readers some examples of the abuses of the capitulations in Egypt. May I be allowed again to instance other examples?

Now that I am leaving England and returning to my home, will you let me describe my feelings when I think about the capitulations in my country?

I have lived among you for more than four years, have been treated as any other English student, and have been, before the English law, equal with, say, Mr. Baldwin, your Premier.

Now let your readers imagine my feelings when I arrive in my own country and find that the law there does not consider me on terms of equality with even a foreign "shoeblack."

If the latter happen to insult, beat, or even stab me in the presence of a policeman on duty, the law does not authorise our policeman, and Courts, to arrest and to try that criminal. That means that I am going home to be an inferior to and under the mercy of any foreigner living in my own county—so are also the other fourteen million Egyptians!

Supposing that I return to my house one evening and find an inconsiderate foreigner occupying it in pretence that it was his. . . . There is only one solution before me; that is to leave my house and try to find another, unless I go through many tedious and troublesome formalities.

Of course, we have many reasonable and considerate foreigners; on the other hand, there are many other inconsiderate ones, who can, if they like, benefit by the present law. Your readers will, therefore, not find it difficult to imagine my feelings towards foreigners.

Now that we are in the twentieth century, when recent inventions have made the Far East and West one and the same, and we young Egyptians have enlightened our minds with science, literature and civilisation, will your readers not agree with me that it is time for the capitulations to die away?—I am, etc.,

HELMY MATTER.

Zifta, Egypt.

[Our correspondent, it is to be hoped, does not imagine

that he has summed up the whole case for or against the Capitulations in the harrowing recital of his personal feelings. In every country it is to be feared the opportunity exists "to insult, beat or even stab," which weighs so heavily on his mind in connexion with his return to Egypt; and most of us are able to go about our everyday occupations only because we recognise that, if we should be the victim of any such untoward occurrence, the law will come to our aid and punish the evil doer, although it cannot prevent him. In Egypt, we hasten to assure our correspondent, if he should suffer aught at the hands of an evilly-disposed Briton, the law will come to his aid just as effectually. Let him, therefore, take heart, for even in 1921 the British Government expressed willingness to conduct negotiations for the abolition of the Capitulations. —Ed.]

RAILWAYS IN PERSIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Persia has made up her mind to build railways. The question has now entered on a stage of the practical. His Imperial Majesty Reza Shah has laid the foundation of a railway station, presumably connecting Teheran with the Caspian Sea. And I see that advertisements are published in the Teheran papers like the *Gulsham* inviting tenders for railway material deliverable at the ports of Bunder-i-Gez on the Caspian and Muhammarah on the Persian Gulf. The Persians are speaking with one voice in favour of a railway project. In the circumstances, it might be thought indiscreet to offer one's opinion when it clashes with the one held so universally.

Nevertheless, my regard for the country of Persia urges me even at this last hour to enter a *caveat*. For a poor country like Persia, railways for several generations will remain a costly luxury. From our experience in India, we can maintain that the outlay might be much more advantageously applied to the building of motor routes. If Persia had good metalled roads, her problem of transport might be solved without straining her financial resources to the breaking point, or impelling her to contract a foreign loan. There are thousands of miles of roads in Indian Protected States like Kashmir where the country is as hilly as in Persia and where passenger and goods traffic is maintained with such celerity that the need of a railway is scarcely felt. Those who have travelled in America are aware that, given good motor cars, a journey by motor is from every standpoint preferable to one by rail. I still hope, therefore, that my views may yet prevail with those in power, and that they may concentrate in the first instance on the construction of roads strong enough for the traffic of heavy motor trucks, throughout the dominions of the Shah.—I am, G. K. N.

Mazgaon, Bombay, November 5.

It is officially stated in Jerusalem that Umm al Jumal, where the French have recently established a quarantine station, is in the area where the boundaries between Syria and Transjordan are as yet undefined. The establishment of the quarantine station there is essential, as it is frequented by Bedouin traffic from Iraq. British rights at Umm al Jumal are being asserted there by the presence of a detachment of the Frontier Defence Corps.

In the Roumanian Chamber on November 18, M. Duca, Minister of the Interior, informed M. Madgearu, Secretary-General of the Tsaranist (National Peasant) Party, that the Government intended to maintain the ban on the meeting of that party in Bucharest (which was to have taken the place of its prohibited congress in Alba Julia) so long as the party maintained its present attitude, which was a danger to the peace of the realm.

The death is announced of Mr. M. S. A. Walrond, C.M.G. Mr. Walrond was tutor from 1892-1894 to Prince Kemal ed din, and during the next three years served on the Land Tax Adjustment Commission of the Egyptian Ministry of Finance under Sir William Willcocks. Later he served with Lord Milner. In 1905 he was appointed a District Commissioner in Cyprus, but did not take up the post. During the War he was with the Arab Bureau in Cairo, and afterwards lived in Egypt. He did much behind the scenes for the improvement of Anglo-Egyptian relations.

KING FAISAL.

King Faisal of Iraq honoured the Chairman and directors of the Eastern Bank, Limited, with his presence at dinner on November 18 at the Savoy Hotel.

Mr. J. S. Haskell presided, and among those present were:—

Jaafar Pasha al Askari, Reouf Bey Chadirchi, Muzahim Amin Bey al Pachachi, the Hon. Cecil Baring, Major-General Sir Percy Cox, Sir Percy Newson, Major-General Sir Neill Malcolm, Sir Hugh S. Barnes, Sir Harry Goschen, Sir Sidney Sitwell, General W. H. Grey, C.B., Mr. H. A. F. Lindsay, Mr. Samuel Samuel, M.P., Mr. J. S. Wardlaw Milne, M.P., Major Qadry Bey, Mr. J. H. Batty, Mr. H. T. Montague Bell, Mr. Reginald Boulton, Mr. H. E. David, Mr. G. Grinnell-Milne, Mr. C. J. Mill, Mr. John M. Ryrie, Mr. M. S. Sassoon, Mr. F. H. Sutton, and Mr. J. M. Wilson.

This week King Faisal is paying a visit to Liverpool and Manchester. Arriving at Lime Street Station, Liverpool, on Monday afternoon, His Majesty, who was accompanied by Muzahim Bey and Major Qadry Bey, was received by the Lord Mayor (Miss Margaret Beavan) and Corporation. A visit to the Cotton Exchange followed, where the King was presented with an address of welcome, and subsequently His Majesty was conducted to the Gladstone Dock, where he was received by the Chairman of the Mersey Docks and Harbour Board. After inspecting the Dock, King Faisal attended a reception held by the Lord Mayor in the Town Hall, and later left for Knowsley, where he stayed the night as the guest of Lord Derby.

On Tuesday King Faisal left Knowsley for Manchester, where the programme included Luncheon at the Town Hall on Wednesday, a Dinner the same evening given by the British Cotton-Growing Association, and visits to the Stock Exchange and to spinning mills at Bolton.

THE BRITISH SCHOOL IN JERUSALEM.

The annual general meeting of subscribers to the British School of Archaeology in Jerusalem was held on November 18 in the rooms of the Society of Antiquaries at Burlington House. The President of the School, Sir Frederic Kenyon, presided.

Mr. J. W. Crowfoot, Director of the School, spoke of how little was known with any certitude about the ancient topography of Jerusalem. There were hardly any sites except those of the Temple and Herod's palace about which all scholars were agreed. It was certain that we must find new evidence before we could reconstruct the ancient topography. The one modern identification which had been generally accepted was the identification of the City of David with the ridge which stretched away south-east of the present walls, and the general acceptance of this was due to the confirmation which it had received from a series of excavations during the last 20 years.

According to the annual report of the Council the financial position of the School was not very satisfactory. The Treasury had made a further grant of £500 for the year 1927-28, but at the same time had intimated that, owing to the demands of public economy, the grant would not again be renewed. Unless, therefore, the regular income from subscribers could be very largely increased, it would become impossible to carry on the school.

THE SULTAN OF MOROCCO.

The death is announced of Mulai Yusuf, Sultan of Morocco. He came to his Throne, recognising the French protectorate over Morocco, on August 17, 1912. He was the seventeenth of the dynasty of the Alides and the thirty-sixth lineal descendant of Ali, cousin and son-in-law of the Prophet Muhammad. Mulai Yusuf worked loyally with the French, being the personal friend of General Lyautey. Last year he paid a visit—the first occasion on which the reigning Moorish Sultan had left his dominion—to France, in order to inaugurate the Mosque at Paris. His third son, Mulai Muhammad, has been proclaimed successor to the Throne.

Sir Gerald Strickland, head of the Maltese Ministry, arrived in Malta on November 19 from England. The Maltese Parliament opened on November 21.

The growth of the air mail service in many lands is exemplified by several new issues of stamps for prepayment of air postage fees that are impending, according to *The Times*. Bulgaria is to have a set of three values comprising 1, 6, and 20 leva. There is talk of Iraq's following the example of Egypt by introducing a special aero stamp for use in the Baghdad-Cairo service.

Book Reviews

LAWRENCE AND THE ARABS.

"**LAWRENCE AND THE ARABS.**" By Robert Graves. (London : Jonathan Cope. 7s. 6d. net.)

It is time that T. E. Lawrence, a man of indubitable though not easily ponderable importance, were saved from his friends, for unless this spate of uncritical studies of the man ceases, his dwindling reputation may conceivably crumble as completely as his ideals of a great, united Arab movement have crumbled. Who would have thought that Mr. Robert Graves, formerly a Royal Welch Fusilier and still a poet of achievement, could have set himself in the same class, though in another division, as a notorious American travelogist? For a man with soldiering experience and with imagination is by no means badly equipped for estimating so complex a personality as that of Lawrence. Now it is easy to sneer at Mr. Lowell Thomas; but, he poor publicity man, hardly pretended to know Arabia, the theatre of his hero's exploits. Mr. Graves, on the other hand, has had access to completer knowledge, and the fact that he has disdained to make use of his opportunity renders his sin all the more damnable. One feels that Mr. Graves has been no nearer Arabia than Cairo, and the "Arab Bureau" at that. For "Lawrence and the Arabs," though purporting to be a "critical study" is in truth nothing of the sort; where the "Revolt in the Desert" has not been faithfully copied, Lawrence's own story, or the story of his friends, has been accepted without reserve.

Mr. Graves might reply that Lawrence's own version of events in Arabia during the years of the War has been corroborated by all eye-witnesses; he undoubtedly thinks so. And such a defence contains, indeed, a certain measure of justification, but it is the business of the "critical" historian to see all round the problem. To show how Mr. Graves has shirked this essential duty, we need but quote his account of the capture of Wejh, an account which is that of Lawrence himself. One wonders whether our author has seen the account of the actual capturer of Wejh, Major Vickery, "who," says Mr. Graves, carelessly, "was so much a soldier that he did not realise what the Arab Revolt was." Major Vickery's story, which he gave to the Central Asian Society in 1923, is worth recalling:—

The force had now dwindled down (from 800 Arabs) to Saleh and his thirty men; after a few hundred yards more they gave it up and lay down. There we remained throughout the day, a mile from the town (Wejh), sniped at by the Turks, while I prefer to forget some of the signals of the Navy encouraging us to go on.

A plan had been made that a detachment of sailors would land to assist us if we were in difficulties. This party landed, and, after passing a very cheerful night, the town was captured with their assistance next morning.

There was no sign of the Amir (Faisal), so we all re-embarked, leaving the Arabs to the thoroughly congenial task of looting the city. The Amir arrived the following morning, disappointed, so his adviser said, at being deprived of the military triumph of the capture of Wejh. Various journalists, however, have adjusted that point, and I am almost convinced that I am the subject of an hallucination, still less helped to take the town.

It is curious, in the light of this version of the Arab's qualities as a fighter, to read Mr. Graves' implied praise of him and praise of warfare in Arabia. "Because kinship," he says, "is so strong a force in the desert, twenty men killed meant a far wider range of mourning than a thousand names in an European casualty list." A pretty sense of values, this! It is a sense, however, which Mr. Graves manifests even more unfortunately in another passage, where he says, of the Arabs serving "voluntarily" in the War:—

Honour was the only contract and every man was free to draw his pay up to date and go home at any time he liked; only the Ageyl and the small regular army under Jaafar were serving for a definite term, so that the war when fought was fought with goodwill. There were no shameful incidents like those on the Western front where the first dead man that I saw was an English suicide, and the last one also.

This last quotation is perhaps as good an example as any of Mr. Graves' sense of proportion, of his inability to distinguish mere fact from the truth. Yet we should be grateful to him for the phrase, "the war when fought." Does Major Vickery's account contain a more damning charge than that?

Of any real light upon the personality of Lawrence—Shaw, as he now calls himself—this book throws nothing. The dual personality, the dual intention during the War, of Lawrence, was patent, as was pointed out by THE NEAR EAST AND INDIA in its review of "Revolt in the Desert," to all intelligent readers of Lawrence's own book; and to an explanation of it Mr. Graves adds nothing. What he does add to our knowledge of Lawrence is pre-War or post-War details, the more amusing of which have been supplied by the most remarkable burker of publicity of our age, Lawrence himself. For instance, a tale is told of Curzon in tears; it is affecting enough, though the patent for such things had already been taken out by Mr. Harold Nicolson. Another amusing account—chiefly amusing because of Mr. Graves' evident *penchant* for Americanisms—concerns an interpolation in the story of Lawrence's early years. It is worth quoting:—

He is one of the rare people who have a sensible attitude towards money. He neither loves it nor fears it, for he has found it useless to help on the two or three occasions when he has greatly desired things worth while.

"Things worth while!" O, Ella Wheeler Wilcox! Was the revolt of the Arabs, then, one of things not "worth while"? But perhaps Mr. Graves is more justified in his implication than he imagines!

The last page of Mr. Graves' eulogium contains a list of Lawrence's preferences. It is stated that his favourite musician is Mozart, that his favourite author is William Morris, and that his greatest wish is "to be forgotten of my friends." The first two are a nice and significant choice, illustrative of his precision and vague idealism; and than the realisation of the last, were it sincere, no blessing could more happily befall the man who, from being an archaeologist has now become a member of the Royal Air Force in India, and in the meantime has thrown the Middle East into such a skein as neither nihilist nor idealist can now unravel. It is upon this last point that we fain would have light; and in Mr. Graves there is no light. He indeed quotes a letter from T. E. Shaw in which, strangely enough, the régime of King Ibn Saoud in the Hijaz is praised, the Amirate of Transjordan is praised, the Zionist experiment in Palestine is praised, and the Arab State of Iraq is praised. Its last paragraph runs:—

I want you to make it quite clear in your book, if you use all this letter, how from 1916 onwards and especially in Paris I worked against the idea of an Arab Confederation being formed politically before it had become a reality commercially, economically, geographically, by the slow process of many generations; how I worked to give the Arabs a chance to set up their provincial governments whether in Syria or Iraq; and how in my opinion Winston Churchill's settlement has honourably fulfilled our war-obligations and my hopes.

Now if only Mr. Graves had obeyed T. E. Shaw's request even to this extent, to show "how I worked to

TAMIL SELF-TAUGHT

By Don M. de Z. WICKREMASINGHE.

WITH ENGLISH PHONETIC PRONUNCIATION.

give the Arabs a chance to set up their provincial governments whether in Syria or Iraq," he would have performed an original and probably illuminating task, for the accomplishment of which we could well have spared him this re-hash of the "Revolt in the Desert" and the comparatively unimportant details of the earlier days of Lawrence and the later days of Shaw.

MOBERLY BELL.

"*THE LIFE AND LETTERS OF C. F. MOBERLY BELL.*" By his Daughter E. H. C. Moberly Bell. With an introduction by Sir Valentine Chirol. (London: The Richards Press. 15s. net.)

Around *The Times*, as befits a national institution, a bibliography of its own is beginning to grow up. Inevitably, in view of the storms that have surged round it over the last twenty years, during which it has had three different chief-proprietors, special attention is paid to this particular period, and its history is likely to be written from many points of view. Miss Moberly Bell's "Life" of her father will arouse most interest by reason of the "official" account that it may be held to offer of the paper's strenuous years under his management. That side of the book calls for no extended reference here; but the story of *The Times* between 1890 and 1911 will appeal to many who may have passed the greater part of their lives thousands of miles away from Printing House Square. Moberly Bell's connexion with *The Times* began in Egypt, and in that country he worthily upheld the traditions of a newspaper whose representatives abroad have so often played a prominent part in the contemporary history of the country in which they are domiciled. He found himself in Egypt at a time when Egyptian affairs were beginning again to attract special attention in England, and his journalistic flair enabled him to make the most of his opportunity. His knowledge of the country and its people, his personality, which gained him the friendship of all sorts and conditions of men, from Khedive to *fellah*, his shrewd grasp of the country's needs and the confidence which British officials reposed in him equipped him in a special degree for leading public opinion in England on Egyptian affairs during those troublous years. It was a time of hesitancy and vacillation on the part of the British Government; but the messages to *The Times* were direct and forceful, and its correspondent in the end had the satisfaction of seeing much of the policy which he had himself urged ultimately adopted, although after tantalising and often disastrous delay. The crux of those years was incompetence in high places. Moberly Bell never wavered in his advocacy of a policy of governing Egypt for the Egyptians, although at that stage he realised that it could not yet be a case of governing Egypt by the Egyptians. In this respect he was typical of the whole association of England with Egypt, and it is well that the history of this period should be studied by a generation in Egypt that knew not the days of the Khedives Ismail and Tewfik.

Moberly Bell's "Life" is not only a history in brief of Egypt during a critical period and an account of a stormy stage in the long life of *The Times*; it is also a contribution to the history of British journalism, as well as a guide and stimulus to those engaged in the journalistic profession the world over. Not the least among Moberly Bell's services to *The Times* was the importance that he attached to the improvement of its foreign news service, and to his lead in this direction the newspaper-reading public is largely indebted for the increased space now devoted to foreign affairs in the British Press. In this volume some of Moberly Bell's letters give invaluable advice to, and lay down sound principles for the guidance of, foreign correspondents. As Sir Valentine Chirol points out in his Introduction:

If *The Times* attained during that period to a position of pre-eminence which was generally recognised abroad as at home, it owed it, not so much to its political independence, nor even to the fullness and trustworthiness and wide range of the information which it supplied, as to the sense of responsibility with which it was conducted.

Press of to-day, please note.

Side by side with the big vigorous personality that was Moberly Bell in his professional capacity was a man of great personal magnetism in private life, cheery, kindly, with a zest for life and a fund of vitality which caused him to throw himself whole-heartedly into the matter in hand, whatever it might be. In this book, written by a daughter, the reader has many glimpses of a delightfully happy household. Miss Moberly Bell has performed a difficult task well. A labour of love has in no way suffered from lack of discrimination or restraint, and there is a passage (pp. 36-38) devoted to "her who, throughout a married life of thirty-five years, was the principal inspiration of his life, his confidante and helper," which will deservedly rank as a classic in filial tributes.

NEWS IN BRIEF.

The death is announced from Paris of General Toutée at the age of 72. General Toutée, who fought in the campaigns of Tonking and Tunisia, at the beginning of the War was given a command in Salonika.

M. Sophoulis, a former Prime Minister, was on November 16 elected President of the Greek Chamber for the fourth time by 154 votes to the 56 given for M. Tsaldaris, the candidate of the Popular Party, and 24 given to others.

As the result of excavations by the American School of Archaeology in Jerusalem, it is believed that the site of Bethel, the place of Jacob's dream and Jeroboam's golden calf, has been identified. Israelite pottery and other relics have been discovered near the surface.

The news that students at Belgrade University on November 15 paraded the streets, shouting against Italy, roused a demonstration of protest from Rome University students the following day. Their manifestations against France and Yugoslavia was checked by Carabinieri and Blackshirts, and they were dispersed.

At eight o'clock in the morning of November 16 King Fuad opened the new railway station at Alexandria, signing the appropriate documents in the royal waiting-room. Afterwards His Majesty, breaking tradition, shook hands with the notables and officers present. He left shortly after for Cairo.

Dr. Marinkovitch, Yugoslav Minister for Foreign Affairs, returned to Belgrade on November 16 from signing the Franco-Yugoslav Treaty in Paris, and was welcomed at the station by the French, Czechoslovak, and Polish Ministers and the Roumanian Charge d'Affaires. General Bodrero, Italian Minister to Yugoslavia, returned from his visit to Rome by the same train.

A delegation of the League of Nations Finance Committee arrived in Sofia on November 17 to examine the Bulgarian financial situation in connexion with the request for a consolidation loan put forward by the Bulgarian Government at Geneva. Sir Otto Niemeyer is a member of the delegation.

The most difficult problem experienced by the Palestine Administration is, according to *The Times*, the equitable distribution of the big public labour contracts between the Arabs and Jews, because of the vast difference in the scale of living of Arab and Jewish workmen. Lord Plumer has now appointed a Commission to inquire into the position of unskilled labour in Palestine. The president is Mr. J. E. F. Campbell, Commissioner of the Southern District, who will be assisted by a representative Jew and a representative Arab.

Mr. Frederick Richard James Calvert died at Constantinople on October 30, after a long illness, at the age of 72. Born on November 19, 1855, he was acting Vice-Consul at Philippopolis from August, 1879, to November, 1879. He was appointed Consul at Adrianople in 1879, and retired with a gratuity in March, 1887. Mr. Calvert served as Special Correspondent of *The Times* with the Serbian Army from 1915 to 1920, and was attached to the Headquarters Staff in Macedonia from August, 1916, to September, 1918.

PERSONAL AND GENERAL

TO-DAY

November 24, 1927 (New Style).

November 11, 1927 (Old Style).

Jumada I, 29, 1346 A.H. of the Muslim Calendar.

Marcheshvan 29, 5688, of the Jewish Calendar.

Princess Antoine Bibesco left London on November 19 en route for Madrid.

Lady Willoughby de Broke has left 23, Gilbert Street, Grosvenor Square, for Egypt.

Lord and Lady Airedale are returning to London from India about the middle of December.

Lord and Lady Farrer will leave Abinger House, Dorking, on December 29, for India.

Sir Basanta and Lady Mullick are travelling to India in the Ranpura, which left Marseilles on November 19.

Lord Ebury and the Hon. Betty Grosvenor embarked on the P. and O. s.s. Ranpura at Marseilles on November 19 for India.

Sir Dhunjibhoy and Lady Bomanji left London last week to embark in the Ranpura at Marseilles on their return to Bombay.

Captain and Mrs. Derek FitzGerald left London on November 17 for India, where they expect to remain till the end of February.

Mme. Antoine Bibesco, who has been visiting the Earl and Countess of Oxford and Asquith at 44, Bedford Square, left London on November 19 for Paris.

The Right Hon. Sir Laming Worthington-Evans, Secretary for War, is leaving London for India to-day (Thursday). He will be back about the end of January.

Muzahim Bey Pachachi, Iraq Diplomatic Agent in London, has been appointed the representative of Iraq in London upon the board of the Turkish Petroleum Company.

Reouf Bey Chadirchi, Iraq Minister of Justice, left London yesterday (Wednesday). He is proceeding first to Constantinople and Angora, and will return to Baghdad via Aleppo.

Sir Walter and Lady Fletcher left London on November 17 to join the s.s. Ranpura at Marseilles for Bombay. Lady (Herbert) Cook and Sir Seymour and Lady Tritton are also passengers in the vessel for India.

Dr. Felix Valyi, founder and editor of the *Review of Nations*, gave a dinner party last week at the Carlton restaurant, at which the guests included the Maharaja Gaekwar of Baroda, Lieut.-Colonel Sir Arnold Wilson, Sir William Haldane Porter, and Sir Thomas Arnold.

Among the passengers on the Bibby liner Cheshire, which leaves Marseilles on November 26, are Sir Charles Innes and Lady Innes, for Rangoon, Sir Max Muspratt and Lady Muspratt, for Ceylon, Major-General Sir Frederick Robb and Lady Robb, and the Hon. F. Vestey and Mrs. Vestey, for Port Sudan.

Mr. Charles Crane, an American whose name is extremely well known in Western Arabia, will lecture to the Central Asian Society, on November 30, at 5 p.m., on "The Yaman and the Red Sea." The lecture, which will be delivered at the Royal United Service Institution, will be presided over by Lord Allenby.

The Near and Middle East Association will meet on December 1, at 8.30 p.m., to discuss "The Problem of Racial Minorities in Europe." The meeting will be held, by kind permission of Mrs. James Conchie, at 27, Great Cumberland Place, W.1. General Sir Ian Hamilton will preside, and the principal speakers are to be the Right Hon. Sir Willoughby Dickinson, and Mrs. Edmund Garrett.

The King of Iraq honoured Sir Walter and Lady Gibbons with his company at luncheon on November 18 at Kensington House, W.2. The guests to meet him were:—the Marquess and Marchioness of Carisbrooke, the Marchioness of Headfort, Viscount and Viscountess Massereene and Ferrard, Lord and Lady Clanmorris, Mrs. Benjamin Guinness, Mrs. Locker-Lampson, Mrs. McGarth, Miss Poppy Baring, Miss Zita Jungman, Miss Teresa Jungman, Major Tahsin Qadry Bey, Haidar Bey, Viscount Castlerose, Sir Elly Kadoorie, Comte de la Barodiere, Mr. Daly Stanford, M. Mataya, and Mr. Adney Gibbons.

Hil Mosi, late Deputy for Scutari, a Christian, has been nominated Albanian Minister of Public Works and commissioned to inquire into the conduct of his predecessor, Musa Bey Yuka.

Two aeroplanes from Serayevo aerodrome, Yugoslavia, came into collision on November 18 at a height of about 1,000 ft. and crashed. One of the pilots and his passenger, who was learning to fly, were killed. The pilot of the second machine was uninjured.

Sounding now being made by the American School of Oriental Research of Jerusalem at Beitin, a few miles north of Jerusalem, the reputed site of Bethel, have revealed, at a depth of 10 ft., an abundance of early Israelite pottery.

A new party having its headquarters at Jaffa and entitled the Arab Liberal Party has, say the Jerusalem Correspondent of *The Times*, been formed. Its official aims are announced as being the abolition of the Balfour Declaration, but otherwise complete and sympathetic relations and full co-operation with the Mandatory Power. Its more immediate object is to make an end of the Arab Executive, the representativeness of which is being increasingly challenged. The new party has disavowed the findings of previous Arab Congresses which were opposed to most of the terms of the Mandate.

THE NON-OFFICIAL EUROPEAN.

With the appointment of the Statutory Commission the question of the revision of the Montagu-Chelmsford scheme of constitutional reform becomes a practical issue. The present is therefore, as it seems to us, an opportune time at which to review the position of the non-official European in India with reference to the question. Lord Irwin said a few months ago that the political ideals which are rooted in British traditions make it impossible for non-official Europeans to be indifferent to the reforms scheme, and impel them to take a direct and an important part in furthering it. This is unquestionably true, for after all the Europeans belong to the only race in India which has any inherited democratic tendencies, or any practical knowledge and experience of the working of representative institutions. And the statement is also true if it is considered in relation to the attitude of the non-official Europeans towards the scheme since its introduction eight years ago. They doubted then if it could succeed. They thought that it went too far and at too great a pace. They feared that the sudden introduction of representative institutions might widen the divisions between the various communities; and that the absence of trained and responsible electorates would prove to be a serious practical difficulty. Holding these views they believed that a more cautious advance would have a brighter prospect of success. But after the actual adoption of the scheme they co-operated whole-heartedly—as they have since continued to do—in the attempt to make it succeed. For they recognised that it could only be worked in a reasonable and conciliatory spirit, seeing that it established what has been well described by one of the Provincial Governments as a complex and confused constitution. Unfortunately the events of the last eight years have justified the apprehensions felt by the Europeans when the scheme was introduced. Racial and communal tension and strife have been only too prominent, and they obviously cannot tend to the success of responsible government. It seems to be almost established that the reforms have accentuated these differences, although doubtless there have been and still are other contributory causes.

This plain record of fact shows that the Europeans in India have not been and are not now hostile to the reforms. It is all the more to be regretted therefore that the proposal which was made at a meeting of the East India Section of the London Chamber of Commerce last July should have been unfavourably received in some quarters in India. The proposal, stated shortly, was that steps should be taken to ensure that when the Statutory Commission undertakes its investigation the case of commerce and industry should be adequately presented to it. The existing political situation in India cannot be considered to be favourable to the successful development of commercial and industrial enterprise whether European or Indian. And it would appear therefore to be an altogether reasonable proposal that those interests should seek to associate themselves together in order to enable the Com-

mission to be fully informed of the practical needs of India's economic life. That a movement of this kind should have been regarded as an attack on the reforms is strange, but allowance must of course be made for the present excitable state of the political atmosphere in India. We do not intend to comment on all the various criticisms which have been made on the proposal during the last two or three months. But we notice from the Indian newspapers received the other day that even so well informed a publicist as Mr. Bipin Chandra Pal, who is not as a rule an unkindly critic, seems to regard the proposal as hostile. For he remarks, with some severity, that "even if the entire body of the Indian capitalists and land-owning classes join this Indo-British organisation they will ignominiously fail to stem the growing tide of the present unrest and discontent unless they are able to carry the educated intelligentsia with them." No such ambitious idea as is here set forth was ever contemplated by those present at the meeting last July. It will be surely a matter for the Commission and not for them to design measures calculated to allay the present discontents. Their object was much less exalted. They merely hoped, as we have already indicated, that they might be able to constitute a joint body of Europeans and Indians to submit evidence to the Commission, not to take upon themselves its functions. Mr. Pal's misunderstanding of the matter apparently rests on his conviction that the Europeans are opposed to the reforms. According to him, they are against the reforms because they wrongly think that a bureaucratic form of government is of greater material advantage to them. And they consider that the Hindu-Muslim conflict is an argument in support of their opposition. "They cannot, therefore," he continues, "be honestly eager to see this communal problem find any early and effective solution." This is, he contends, a mistake on their part; for it is as much in their interest as it is in the interest of the Indian that communal strife should cease. And he solemnly warns them that the continuance of this strife, and of the general spirit of lawlessness which is now so much in evidence in India, may eventuate in revolution.

Mr. Pal is thus, it will be seen, alive to the dangers of the situation. But he is altogether in error in assuming that the Europeans wish the Hindu-Muslim trouble to continue. On the contrary there is no community in India so sincerely desirous that there should be peace as is the European community. And Mr. Pal is certainly right when he maintains that the preservation of law and order is a condition essential for the promotion and protection of vital European interests. Of course it is; and the Europeans are fully awake to the fact. They are concerned with commerce and industry, and these do not tend greatly to flourish in times of civil dissension and commotion. The enemies of the reforms are not the Europeans. As the Viceroy clearly realised, the political ideals rooted in British traditions induce the Europeans to support, rather than to oppose, representative institutions. Had all the other communities in India co-operated as sincerely in working the reforms as the Europeans have

done the position to-day would have been vastly more favourable for a further advance than it actually is. Nor is it for Indian Nationalism to blame the Government and the Europeans for the existence of that lawless spirit to which reference has been made. Indian Nationalism has been attacking the authority of the Administration for years past; and surely the extension of lawlessness is the measure of its success. And, finally, we cannot refrain from noticing that although Mr. Pal so strongly urges the Europeans to take "a more statesmanlike view of the political problem" he himself—according to the latest information—has declared in favour of non-co-operation as regards the Statutory Commission. To adopt a policy of boycott is presumably therefore—if he practises what he preaches—to take a statesmanlike view of a political problem!

CURRENT TOPICS.

The Future of Sind.

The visit, just concluded, of the Viceroy to Karachi appears to have been an undiluted success. The local bodies of that rising city were distinctly sore about Lord Reading's omission to see it during his term of office, and the early visit of his successor was therefore the more welcome. If Karachi cannot yet claim comparison with the older Presidency cities, it is at least a distinct entity of rising importance and its interests are in many respects distinct from those of Bombay.

Commenting in these notes several months ago on the proposal of the Muslim Conference that Sind should be constituted a separate Province, as the principal condition on which the Muhammadans would agree to a joint electorate, we pointed out that the suggestion for the separation of Sind from Bombay is not new and could be supported on grounds other than those of electoral bargaining. Sind is markedly distinct in racial, climatic and geographical features from the rest of India, and certainly from the Presidency proper, as it is locally described, of Bombay. Its connexion with the latter was originally due to temporary circumstances rather than to any natural link with the Presidency, whose peoples and problems are largely alien to it. Meanwhile the Viceroy's visit, and the attention which Lord Irwin has so rightly given to the problems of irrigation in Sind and the development of Karachi, are likely to draw fresh attention to the present anomalous position of the Province. The Bombay Government, though entirely well meaning towards Sind, inevitably pays greater attention to Bombay itself, whose interests often clash with those of Karachi. In former days, the Commissioner in Sind was allowed certain independent powers. These have been gradually taken from him, and the only satisfaction that he has is to be allowed to entertain, with no increase of emoluments, an ever increasing number of distinguished visitors. Karachi is the Port, not merely of the rising Sind Province, but of Baluchistan, Afghanistan, and the Punjab, and has a considerable share of the trade of Northern India and Rajputana. It would certainly develop more rapidly if it were the headquarters of a separate administration. Local patriotism is strong, and there can be little doubt that the great majority of the population would vote for provincial independence, though the Hindu minority would naturally have some qualms in the matter. It is perhaps a corollary of the Viceroy's visit that increased attention should be given to the question of making Sind into a sub province of Bombay, with increased powers of local administration.

Export Cesses.

According to a Calcutta newspaper a proposal for the levy of a small cess on exported raw hides and skins is being mooted in India. This cess—the proceeds of which would be utilised for the benefit of the industry—would take the place of the existing export duty. It is understood that in any case the duty will be abolished before very long; and the idea is that the trade would be considerably benefited if money could be made available for the teaching of improved methods of cleaning and curing hides and skins before export. Indian industries seem nowadays to favour the method of providing themselves with funds for organisation, research, and publicity by means of small export cesses. None of the disadvantages of export duties attach to these cesses, which are always levied at rates so low as to make any adverse effect on the industry an impossibility. The Indian tea industry started the movement as far back as 1903, when Lord Curzon's Government passed, at the instance of the industry, an Act providing for the levy of a small cess on every pound of tea exported from India. No other industry took action in the same direction for a long time. But some years ago the Indian Central Cotton Committee was formed with the object of improving the staple of Indian cotton and the condition in which the fibre is marketed. And, in order to provide this Committee with funds, the Government of India imposed, by legislation, a cess on all Indian cotton, whether consumed in the mills in the country or exported overseas. Then in 1922 the lac industry established an organisation on somewhat similar lines. The Lac Association for Research was constituted, its objects being to increase the yield of lac and to improve the quality. This Association was likewise provided with funds by means of a small cess on all exported lac. And now it is proposed that the trade in raw hides and skins should follow these examples and equip itself with an organisation having a corresponding end in view. The trade in raw hides and skins is of considerable importance to India, the shipments during the year 1926-27 aggregating upwards of 50,000 tons, valued at Rs. 717½ lakhs. In pre-War times the exports were on a still larger scale.

The Indian tea cess, of which mention has been made, has now been in existence since 1903. At present it is levied at the rate of 6 annas per 100 lb. of tea exported; and it yields, at this rate, a revenue of between Rs. 12 and Rs. 12 lakhs yearly—the amount varying, of course, with the quantity of tea exported. The cess is collected by the Customs Department, who make over the proceeds to an administrative Committee appointed by the Government of India under the Indian Tea Cess Act, 1903. On this Committee—which consists of twenty members—all the various tea districts of both northern and southern India are adequately represented. Its headquarters are at Calcutta, from where its operations are directed. When beginning work in 1903-1904 the Committee concentrated their attention chiefly on the United States, where, to the outbreak of the War, they spent considerable sums of money popularising Indian tea. During the War the operations ceased, as the imports of tea into the United States were so reduced as to make advertising unnecessary. But a few years ago the Committee resumed work in the United States, where they are now engaged on a large scheme of newspaper advertising. Before the War they also worked in Germany and, to a limited extent, in the United Kingdom, and subsequently they conducted a popularising campaign in France. They have in addition, since 1915-16, been working in India itself on a large scale; and these operations are still in progress. As was pointed out by the Indian Trade Commissioner—Mr. H. A. F. Lindsay, C.I.E., C.B.E.—before the Royal Society of Arts in January last, the Indian tea industry is one of the best organised of the plantation industries. And there can be no doubt, as it seems to us, that the work of the Cess Committee has contributed materially to the satisfactory position in which it finds itself to-day.

CALCUTTA LETTER.

*(From Our Own Correspondent.)**Calcutta, November 3.***Statutory Commission.**

It may be taken as certain that the official announcement regarding the Statutory Commission will have been made before my letter has reached London, and then, when it has been made, small interest will attach to the rumours on the subject that are all that we now have to feed our curiosity upon. The Delhi interviews between the Viceroy and the various political leaders are in progress, but their secret is being well kept. All that has been allowed to reach the general public is that the question of the best way to attain inter-communal peace is not being discussed, leaving us to infer that the subject of discussion is the Statutory Commission and its methods of proceeding, for what other subject is there that could have been taken up with such a show of high politics? Friday brought us a Mangalore message, saying that, in view of a pressing invitation from the Viceroy "to talk over urgent and important matters," not disclosed in the message, Mr. Gandhi was to meet His Excellency in Delhi on November 2. The Viceroy, in his telegram to Mr. Gandhi, expressed himself as fully aware of the state of Mr. Gandhi's health, and of the inconvenience likely to be caused by the interruption of his tour, adding that, but for the urgency and importance of the matter, he would not have asked Mr. Gandhi to go to Delhi now.

The interviews began on Monday, when the Viceroy conferred with Mr. Jinnah, Sir Alexander Murray, and Mr. Cocke, the leaders of the centre bloc in the Assembly. The interviews yesterday were with Mr. Gandhi, Dr. Ansari, Mr. Srinivasa Iyengar, and Mr. Patel.

It is said that the Statutory Commission will be a Parliamentary body, composed of a Chairman and seven members, probably five Commoners and two Peers. The question is not only, however, how the Commission should be composed. Indeed, it only begins there. To use the words of the Delhi correspondent of the *Englishman*. "Parliament detailing its own nominees from its own ranks exclusively to conduct an enquiry on its behalf, what form of inquiry that shall be, and how it shall ensure fair play for India, means that with the inquiry must be associated at some stage such men as would keep before the Commissioners the realities of the Indian situation, and the political re-actions of any decisions that the Commission may feel called upon to record." Some have urged that there should be assessors; others that there should be co-opted members; still others that there should be a representative committee chosen from the Indian Legislature. Some have argued that whatever the form of the assistance given, the real issue is at what stage it should come in. Should it come in from the beginning; should it come in only before the Commission considers its recommendations; should it continue until the Parliamentary legislation is finished? These are questions that are being asked everywhere, and probably as much in Delhi this week as anywhere.

The Commissioners will begin their labours with the salutary thought that they must some time bring them to an end. That will be well; for the problems before us are of such magnitude and complexity, that men might go on considering them for ever. Mr. Bipin Chandra Pal has just summed up the situation in the following words: "The inexorable logic of the present creed of the Indian National Congress, which is pledged to strive for Swaraj by 'peaceful and legitimate means,' is that the present authority of Parliament must be transferred to Indian legislatures by an Act of Parliament itself. And it must be equally clear that a fundamental condition precedent of the peaceful abdication by the British Parliament of its position as the ultimate authority in the Government of India is the settlement of the present conflict between the interests which the European com-

munity represent on the one side and the legitimate political and economic interests of the people of India on the other side, of which the Indian politicians are the custodians and spokesmen. All the checks and counter-checks provided in the present Government of India Act owe their real origin to the natural and anxious regard of the British Parliament for those large economic and political interests which the British people have acquired in India through their political sovereignty of this great continent. In the first place, Parliament is not as yet reasonably assured of the protection of British capitalist and commercial interests in India from prejudiced competition of Indian capitalism and commercialism, supported by Indian legislatures. And as long as we have not been able to create in the British mind this reasonable assurance, the British Parliament will never willingly consent to abandon its present control over Indian legislation and the Indian executive. In the next place, British capitalist and commercial enterprise in India require for their safety the existence of peace and order in the country. And as long as the British Parliament has not been reasonably assured of the capacity of a Swaraj Administration for the preservation of this law and order in the country, so long it will never willingly agree to have the powers and responsibilities vested in itself under the existing constitution transferred to Indian legislatures controlling the Indian executive."

Calcutta Unity Conference.

The Unity Conference convened in Calcutta by Mr. Srinivasa Iyengar held two long meetings, attended by prominent Hindu and Muslim leaders, though many were not present whom one would have liked to see there. The good wishes of all of us were expressed by that singularly lovable man, Sir P. C. Roy, when he said that, having gone to the meeting with some apprehension, he was gratified to find a spirit of co-operation displayed by Muslim and Hindu leaders, and he wished success to the deliberations of the conference. The questions considered were three in number:—conversion and re-conversion; cow slaughter; music before mosques. That a great continent should be at strife over questions of that magnitude provokes men to ask what the psychological age of the leading men in the country may be, and such a question has a very close bearing indeed upon the work of the Statutory Commission and its recommendations to the Parliament of Great Britain. On the first day of the conference a resolution on the subject of conversion and re-conversion was passed as follows: "That every individual or group is at liberty to convert or re-convert another by argument or persuasion, but must not attempt to do so, or prevent its being done, by force, fraud, or other unfair means, such as the offering of material inducement." The next day a resolution covering the two questions of cow slaughter and music before mosques was passed with only two dissentients. It occupies thirty-three lines of print, and is too long to quote in full.

The same double question occupied the greater part of the attention of the All-India Congress Committee, which met in Calcutta the next day, and was well attended. The main resolution was moved by Mr. J. M. Sen Gupta, and was seconded by Maulana Mahomed Ali. Among those who supported the resolution were Dr. Ansari and Mr. Subhas Chandra Bose, and it met with little opposition. Too much importance must not be attached to the passing of such resolutions; for who could publicly disassociate himself from intentions so well-meaning as those of the movers? That is more than men could do; but many a man might go home with the private intention of doing nothing to carry out the resolutions, or of not working so hard about them as to kill himself. We must, therefore, wait and see what fruit these conferences bear. If the texts of the resolutions do not penetrate to the villages, or if, when they do, they are not there received with goodwill, the fruits will be nil.

Bengal Nagpur Railway.

Whether there is to be a strike of the Bengal Nagpur Railway employees, with possibly sympathetic strikes on some other Indian railway systems, should be another question that ought to be decided before this letter can reach London, and as soon as it is settled, the news will be cabled to your side. So it is not a matter to write about in detail. All the week there have been grumblings of a storm. The longer the grumbling continues, the more likely it is that the discontent will spend itself in grumbling, and then there would be no strike. A strike is what hardly anyone wants, and already the Anglo-Indian Association has declared against one. The reports of after-strike repentances that have reached us in such plenty from England, together with the news of the end of the railway strike in Queensland, should have had their effect on men's minds here; but they may not yet have penetrated to those minds which it would most concern to know about them. The men generally will not have heard of them, but their leaders may have done so.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, November 5.

His Excellency Sir Leslie Wilson's tour through the Presidency is now nearing conclusion. The tour programme was rather protracted and included several places in the districts where a Governor was setting foot, if not for the first time, after several years. His Excellency's anxiety to understand the people has taken him to remote and insignificant villages. His tour included several minor States in the Presidency, where he was accorded a rousing reception. At Sawantwadi and at Jamkhandi he was entertained to a banquet, when he congratulated the people on their good fortune in having such enlightened rulers. At Jamkhandi, in particular, Sir Leslie Wilson's visit was the occasion for unprecedented scenes of enthusiasm. Huge crowds thronged the hillside and roads to witness the state drive, and the final feature of the visit was a huge crowd of cheering villagers extending over twenty miles, bearing in their hands flaming torches. Sir Leslie Wilson's term of office is coming to a close much to the regret of the people of this Presidency, for Bombay has already accorded him a place of honour on the list of Governors. Perhaps the success of his régime will result in the extension of his term of office. Bombay would certainly welcome such a decision.

The Viceroy's Conference.

It can be said without the slightest exaggeration that during the past week all eyes have been turned to Delhi, where the Viceroy is holding the momentous conference with Indian leaders of all shades of opinion. The deliberations have now concluded and the scraps that have been gathered of the secret conversations confirm the earlier reports of a purely Parliamentary Commission consisting of seven members of whom four will be Conservatives. It is further proposed that expert local advice should be given to the Commission in such a manner as would enable it to understand the situation thoroughly before arriving at a conclusion. It is not yet definitely known what shape this advisory body will take. There are three proposals under consideration. The first is the body of assessors already mentioned, the other co-opted members, and the third, the most likely, of representatives elected by both Houses of the Indian Legislature.

Boycott Proposal.

It is evident that considerable disappointment prevails among the leaders here as a result of the announcement that Indians will be excluded from the Commission. Mr. Gandhi and the Congress leaders have left the conference with a firm resolve to boycott the Commission. In the first

instance, it is an open secret that Mr. Gandhi believed that the subject of the conference would be the communal problem, and he must have been greatly surprised when he found that the Statutory Commission was the subject of discussion. The situation is far from reassuring and it can be stated, without doubt, that when the official announcement of the appointment of the Statutory Commission is made and the lips of the Congress leaders are unsealed, they will have nothing good to say about the decision of His Majesty's Government.

The Viceroy's Appeal.

Notwithstanding this, however, Lord Irwin will have the satisfaction of having personally explained the position to the political leaders. The Provincial Governments have already received a statement and will shortly be sounding their Ministers and political leaders on the question. In the meanwhile, the Viceroy is issuing a personal note setting forth the various considerations that have moved His Majesty's Government to take the step they have decided upon. He will lay stress on the constitutional advantages to India of being associated with the Joint Committee of the British Parliament. It would be open to the Select Committee to place its views before the Commission, and with their knowledge of local conditions to influence considerably the final decision of Parliament.

Attitude of Liberals.

It seems apparent that now that the Congress, which is the largest political organisation in the country, has virtually decided to boycott the Commission, the Viceroy will turn to the moderate section for support. But there seems to be little inclination, even in that quarter, to support the present attitude of Government. Sir Tej Bahadur Sapru, who was the greatest champion of the Royal Commission, has confessed that he has been disillusioned. At the Nagpur Liberal Association a discussion on the reforms resulted in the decision that, if no Indians were appointed on the Commission, the Liberals would not sympathise with it and would retain complete freedom to decide on a boycott. If the truth must be told, leaders of every shade of opinion are very anxious that their attitude towards the Royal Commission should not be mistaken. For instance, this morning the report that Sir C. P. Ramaswami, Law Member to the Madras Government, had accepted a place as assessor was indignantly and hastily repudiated by that gentleman. The Liberal Party is practically non-existent at present, and should they entertain even for a moment the acceptance of a position on the Commission which would give them no opportunity to influence its deliberations, the little influence that they now possess will be lost irretrievably.

The Money Market.

There has been little doing in the markets during the week. The money market has been steady with little improvement in the rates, and call money is still quoted at 2 to 1½ per cent. Government have received Rs. 17.37 crores by the sale of Treasury Bills since the middle of August. All other sections of the Stock Exchange remained dull with the exception of the silver market, where buying orders, towards the middle of the week, on American account together with short covering occasioned a rise in prices, which closed 14 annas above the previous week's rate of Rs. 57-10.

The Royal Commission on Indian Agriculture left Rangoon for Patna on November 17, after spending a fortnight hearing evidence in Burma.

A private meeting of the committee of the Empire Parliamentary Association which is studying Indian affairs was held in the rooms of the Association, Westminster Hall, on November 13, when Dr. Shafaat Ahmad Khan, Professor of History, Allahabad University, who represents the Muslim members of the Legislative Council, United Provinces, in the Punjab Provincial Muslim League, delivered an address upon "The Position of the Muhammadans in the Future Constitution of India." Mr. J. S. Wardlaw-Milne, M.P., was in the chair.

"INDIA TO-MORROW."

This little book appears opportunely, when the announcement of the personnel of the Royal Commission has caused an outcry as unjustified as it is unwise in the interests which the clamorous profess to advance. The author points out that a Commission, to be representative of the various interests involved, would have to comprise a score or two of members from India alone. These would be advocates of the parties they represent rather than judges of the evidence put before them. To the ordinary observer, the advanced parties in India would seem to have a much greater hope of attaining their aims under the Commission now appointed than if their leaders had been members of it with the privilege of attaching dissentient minutes to its report.

There would appear at least a possibility that a Commission composed of important, but not invariably eminent, individuals, with a strong Liberal and Labour element, may be unduly impressed by the arguments of the acute lawyer-politicians of India. The author considers that the members of the Commission should regard themselves as resembling the *rapporteurs* of Committees at Geneva, rather than as a body bound to come to a judicial opinion on the evidence. The comparison is apposite, but incomplete. The business of the Commission is not merely to extract some common basis from the apparently irreconcilable views before it, but to set a theory of government founded on that basis before the final arbitrament of the British Houses of Parliament.

The author states that his book is intended to be indicative rather than constructive: and it is therefore no disparagement to his efforts to observe that he neither suggests how the inevitable difficulties are to be met, nor indeed states their full extent. In this he differs greatly from the brilliant author of "The Lost Dominion." That writer, in his fresh study "The Garden of Adonis," professes himself an optimist: but a note of something like satisfaction seems visible in the uncompromising clarity with which the difficulties of a further emancipated India, and the small chance of their being encountered in the necessary spirit, are set out.

On one point both writers are agreed. The gradual development by decennial revisions of the Indian Constitution originally contemplated by the authors of the Reforms is now impossible. The postulated co-operation on the part of Indian politicians has not been forthcoming. As the author of "The Garden of Adonis" notes they have considered it more profitable to say "This constitution does not work: it must be scrapped." But the author of "India To-morrow" points out that India desires and demands an imitative conception of government, however unsuited to Eastern conditions. If any real advance is to be made, the existing pseudo-responsibility must be changed into real responsibility. The Commission, our author says, should indicate the final course without further transitional constitutions: but he does not suggest how this desirable conclusion can be attained.

The author of "India To-morrow" appears to write

"India To-Morrow." By Khub Dekhta Age. (Oxford University Press. 3s. 6d.)

with little knowledge of the old Presidencies, and perhaps an insufficient appreciation of their point of view. He assumes that the functions of a Provincial Government are to a great extent already, and should increasingly approximate to, those of an English County Council. History and tradition, leaving aside present extent and importance, render the comparison inadequate: and those only who have worked in Calcutta and Bombay can realise the annoyance caused by the appearance, if not the existence, of ignorance and delay at Delhi or Simla. Certainly no one with knowledge of the administration of Bengal or Bombay would agree that "the open sore of the Meston Settlement is a thing of the past." The further suggestion that the Police Service should be administered from the headquarters of the Government of India seems to indicate an imperfect view of local administration.

The author is perhaps somewhat vaguely optimistic when he hopes that the politicians will regard the Indianisation of the services as a distinct matter from political evolution, and that the anxiety of Indians of all classes to obtain service under Government will be relaxed.

But this spirit of optimism is undoubtedly that in which the problems before the Commission should be faced. Constructive statesmanship is imperative: but there should be no complaint if the construction includes a margin of safety somewhat greater than was considered necessary in the oft quoted but scarcely parallel cases of Canada and South Africa.

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

The procedure by which the Government of India (Statutory Commission) Bill was first introduced in the House of Lords, there to pass through its various stages before its consideration in the lower House, necessarily caused the major interest in Indian affairs in Parliament last week to be centred "in another place." The reason for this reversal of the usual order is, of course, a matter of common knowledge. While such an arrangement possesses obvious disadvantages it is on the whole a not inconvenient method in cases, such as the present, when vital issues are at stake.

As the Opposition in both Houses had earlier agreed to the Government's suggestion that the full debate on the broad questions of general policy raised by its proposals might conveniently be deferred until assent was asked to the personnel of the Commission, the proceedings in the House of Lords, where the Bill was read a third time and passed on Thursday, were of a more or less formal character. At the same time while the agreement was faithfully, albeit somewhat reluctantly, observed the discussion on the second reading was by no means devoid of interest on that account. For the same reason the Secretary of State, in a speech which was largely a reiteration of the Viceroy's earlier statement in the Gazette of India, refrained from "any argumentative justification" of the Government's decision that "the moment had arrived when they might usefully approach the greatest constitutional problem which had faced the

statesmen of this country for many generations."

Although Lord Olivier thought that the best justification for the Bill was to be found not so much in the improved situation in India, upon which Lord Birkenhead had laid so much stress, as in the persistent demand of Indians for constitutional advance, and the failure of dyarchy, he concluded with a handsome acknowledgement of the "integrity, public spirit and sincere desire to meet Indian aspirations" which had inspired the decision.

This tribute to the disinterestedness of the Government's motives was warmly echoed by Lord Reading who, as a Parliamentary correspondent succinctly remarked, "was so convinced that the method adopted was prompted solely by consideration for the interests of India that he begged for an explanation at the earliest possible moment which would carry the same conviction to Indian politicians." And yet, as I have said, Lord Birkenhead's speech was merely a reproduction in miniature of Lord Irwin's more comprehensive and reasoned statement which, far from carrying conviction, seems only to have intensified their suspicions.

As it is necessary for the Bill to become law before assent to the personnel of the Commission can be sought, it is hoped that the efforts made to expedite its passage will enable the necessary resolutions to be submitted to both Houses on Friday. Meanwhile, Lobby gossip, while refusing at this juncture to believe that the Opposition to the proposals is sufficiently united or strong enough to effect any material alteration in the present plans views none the less with very considerable misgivings the trend of recent developments in India.

In this connexion stress is laid upon the fact that the significance of the Bombay meeting, if the cabled reports are correct, lies not so much in the actual speeches made as that it was apparently organised and addressed by such well-known public men as Sir Dinshaw Petit, Sir Chimanlal Setalvad, Sir Phiroze Sethna and Mr. M. A. Jinnah. The presence on the platform of two such prominent representatives of the Parsee community incidentally raises quite a new issue. Are we to assume from this, and the attitude of Mr. H. P. Mody and others of his co-religionists that this small but wealthy sect are ranging themselves as a body on the side of the opposition?

As a result of the question and answer in the House of Commons on the opening day of the session, and the more detailed statement made by Lord Onslow, in reply to Lord Forester's motion in the House of Lords on Friday, the fog surrounding the Secretary for War's projected visit to India, which has aroused considerable interest in both countries, is now lifted to some extent.

After being at some pains to remove the impression abroad that the tour was in any way in the nature of a holiday trip, Lord Onslow equally deprecated the suggestion that "this visit to India is in any sense of the word an official inspection of the British troops in that country." Sir Laming Worthington-Evans, he

emphasised, would have no concern with military matters of a purely technical character. The real reason of the trip was that the British Army in India consisted of 60,000 officers and men of all ranks, and it must be obvious that when so large a proportion of the British Army was stationed in India there were very many important problems of organisation, finance and policy which depended for successful solution, both here and in India, upon the closest co-operation between all those connected with the Government and the Army at home, and the Government and the Army in India.

For example, the lines upon which mechanization of the Army was to proceed involved financial and political issues of a very important nature which had to be solved before any definite policy could be evolved. The future of the cavalry was an instance in point. The composition of a cavalry regiment had been altered over here to two sabre squadrons, with a mechanised squadron of 16 machine guns and mechanical first-line transport. Clearly it is desirable that the Army in both countries should be on the same footing. It would make a very considerable financial difference in the home estimates if we could keep the regiments in this country at a strength sufficient to find the drafts for India, while obviously if they were all composed on the same lines there would be a very great simplification of organisation and some saving of the taxpayers' money. The explanation, it will be observed, makes no reference to the Bolshevik menace to the N.W. Frontier. Are we to assume that this comes under the heading of "military matters of a purely technical character," and therefore is beyond the scope of the inquiry?

NEWS IN BRIEF.

A contract for thirty-three sluice gates for the Panjnad Barrage on the River Sutlej has been given to Glenfield and Kennedy, Kilmarnock, by the Government of India.

Resolutions were passed by the House of Commons on November 17 directing that, among others, the Indian Church Measure should be presented to His Majesty for the Royal assent.

The Secretary of State for India has appointed Mr. C. M. Scott to be an Assistant Divisional Engineer in the Posts and Telegraphs Department of the Government of India.

The Northbrook Society held a reception on November 17 in honour of the new President, Lord Harris, a former Governor of Bombay, at the Indian Centre, 21, Cromwell Road, South Kensington. Sir Mancherjee Bhownagree was in the chair and those present included Sir Atul Chatterjee, the High Commissioner for India, the Dowager Lady Boyle, Lady Bennett, Sir Muhammad Rafique, Sir Selwyn Freemantle, Colonel A. D. Bannerman, Mr. and Mrs. J. C. Nicholson, Mr. C. E. Buckland, and Mr. N. C. Sen.

ARMY APPOINTMENTS.

The following appointments are announced by the War Office:—Colonel E. C. Gepp, D.S.O., to command the Ambala Brigade Area, in succession to Colonel D. Deane, C.B., D.S.O., Indian Army (December 25, 1927).

Colonel C. M. Wagstaff, C.M.G., C.I.E., D.S.O., to command the Nowshera Brigade, in succession to Colonel S. F. Muspratt, C.I.E., C.B.E., D.S.O., Indian Army (February 5, 1928).

Colonel G. H. Harrison, D.S.O., to command the Poona Brigade Area, in succession to Colonel G. S. G. Craufurd, C.B., C.M.G., C.I.E., D.S.O. (February 15, 1928).

Colonel W. R. Paul, C.B.E., to be Director of Artillery at Army Headquarters, India, in succession to Colonel C. C. Palmer, C.B.E. (April 1, 1928).

The following British Service officers were successful in the last competitive examination for admission to the Staff College, Quetta:—Captain C. McV. Gubbins, R.A.; Lieutenant A. N. Skinner, R.A.; and Captain H. R. B. Watkins, Royal Tank Corps. The following British Service officers qualified, and have been nominated by the Commander-in-Chief in India, for admission to the college:—Captain A. L. Pemberton, M.C., R.A.; Lieutenant G. G. Mears, M.C., R.A.; Captain, W. C. Newstead, M.C., West Yorks Regt.; Captain W. N. Haugh, Cameronians; Captain G. E. Mirehouse, Gloucester Regt.; Captain L. B. Green, Wilts Regt.; Lieutenant J. T. Crocker, D.S.O., M.C., Tank Corps.

THE ORDINARY MAN'S INDIA

By A. CLAUDE BROWN, M.B.E.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Yugoslavia's Progress.

I had an interesting interview this week with Mr. Bark, managing director of the Anglo-International Bank, Ltd., who has just returned to this country from a visit to Yugoslavia. His previous visit to that country was two years ago, and he expressed himself as greatly impressed with the progress which has been made. "Beyond question," he said, "there has been a very great advance, and the country is trying very hard to improve and stabilise its position. Politically everyone is agreed that a policy of continuity should be maintained. Peace is recognised as an essential, and the statesmen of Yugoslavia are trying to keep on good terms with all other countries and particularly with their own neighbours. Personalities may change, but this policy of Yugoslavia will continue."

Finance and the Currency.

Mr. Bark went on to discuss the financial and economic position of Yugoslavia. "The Budget," he pointed out, "has been balanced since 1922, and the resultant surpluses have been used for railway construction and other productive purposes. Of course it cannot but be said that the total of the Budget is a little high for the country, and the responsible people there fully realise this, and are in entire agreement as to the policy which ought to be pursued—the reduction as far as possible of the Budget total by making economies and the reduction of taxation. The rate of the dinar has been stabilised since 1925, and while the deflation has led to a crisis it is quite a natural development and one which all the countries—Austria, Czechoslovakia, Hungary, Germany, and so on—which have tried to stabilise their national money have had to face, but out of the crisis will come complete financial recovery, and we see to-day that adjustments are going on in trade, banking, and all economic domains. Admittedly deflation is a painful process, but it is a necessary evil which has to be borne."

Yugoslavia's Natural Resources.

This question of economic recovery naturally turned the conversation to the subject of Yugoslavia's potentialities. "Yugoslavia is a very rich country," Mr. Bark declared, "rich in natural resources and in everything connected with the land. The principal exports include timber, cattle, wheat and maize, and since 1924 with the exception of the first half of the present year, there has been a favourable trade balance which is quite a good sign. The result in the first half of this year was due to a bad harvest, and may be regarded as merely a temporary phase, for usually the harvest is very much better. I look with complete confidence to the future of the country. The Kingdom of the Serbs, Croats and Slovenes consists of a homogeneous population, and there are no minority problems. All the people are Slavs, and although the new provinces belonged to Austria the whole population is absolutely loyal to the King and Constitution."

Developments in Belgrade.

In conclusion Mr. Bark touched on some of the external signs of progress which he noted during his visit. Both in Belgrade and Zagreb, he pointed out, there have been great changes in the past two years. "In Belgrade," he added, "it was difficult two years ago to drive in the streets. Now some of the streets are as good as those of

the most progressive capitals in Europe. There is a great deal of building going on in Belgrade. The Mayor is working very hard to improve the town, which has an efficient tramway system and has electric light everywhere."

Kassala Cotton Company.

At the last annual meeting of the Kassala Cotton Company attention was drawn to factors which have combined to bring about a serious reduction in those anticipations of earnings from the working of the company's concession in the Gash Delta, which were the basis of the terms of the company's concession agreement and of its capitalisation, and it was pointed out that the company would be placed in a very difficult position unless some adjustment could be made, and it was reported that negotiations were in progress with the Sudan Government. A circular has now been issued to the shareholders stating that the negotiations have resulted in a settlement which the directors regard as satisfactory. Under the settlement the company is to be relieved from January 1 next from all liability in connexion with possible deficits on the working of the Kassala Railway, and is to resign its concession in the Gash Delta, receiving in lieu thereof (in addition to certain compensation for its capital expenditure in the Gash Delta) a concession for cotton growing by irrigation from the Blue Nile on an area of the Gezira Plain. The irrigation of the new concession area is to be made possible by economy of the Sudan's allotment of Nile water, so that Egypt's rights may not be infringed. This area in the Gezira Plain adjoins the land managed by the Sudan Plantations Syndicate, and the terms of the company's concession are on lines generally similar to those ruling between the Sudan Government and the Sudan Plantations Syndicate. The Company's experience illustrates very plainly the uncertainties attending on cotton growing when it is dependent on a fluctuating water supply. In the case of the Gash flood it has been, however, not merely a question of the fluctuations of the flow. An important factor has been the development of cotton growing by the Italians in Eritrea. It is understood that the acreage under cotton there has been increased this year to 7,500 acres, and while the water abstracted by the Italians in years of high flood might not be a serious matter, it would be highly important in years of low flood. I think it probable that this Italian enterprise has been the predominant factor in the developments now announced with regard to the company's future. In the

BANK OF ROUMANIA LIMITED (FOUNDED 1866).

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.
A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Gezira the company will be faced with very different conditions, and while shareholders may have to wait a little for an adequate return, they can have reason for confidence as to the future.

Sudan Plantations.

As usual, Mr. F. Eckstein had an excellent account of the year's working to give at the meeting of the Sudan Plantations Syndicate. The gross receipts of the company totalled nearly £903,000 as against £706,000 for the previous year, and the final dividend and bonus bring the distribution to 30 per cent. for the year, leaving a carry forward of about £419,000. As regards the area under cotton, the total this season is 105,622 feddans. Mr. Eckstein stated that in the 1928-29 season it is hoped to have 135,000 feddans and in 1929-30 150,000 feddans. Mr. Eckstein, who has been Chairman of the company for twenty years, announced at the meeting that he is about to retire from that position, and there could be no surer sign of the realisation of what his leadership has meant to the company than the fact that following the meeting the shares displayed a weaker tendency. He has been privileged to see the company develop until to-day it is well on the way to being one of the most important companies in the Empire, and it is eminently satisfactory to know that he hopes to remain on the board, so that the Company will continue to have the benefit of his advice in the future.

Turkish Postal Service.

It is an essential for trade development that communications must be safe and certain, and the complaints made by two correspondents to *The Times* with regard to the Turkish postal service suggest that that organisation certainly does not come under that category at present. It is in regard to the outgoing mails that the difficulties arise. One correspondent quotes a case in which three

letters out of four posted in Constantinople and addressed to London were lost, while the other correspondent states that out of some 80 letters dispatched to England during a stay of some months in Turkey he had "only about 60 successful arrivals. Of the 20 total losses, two at least were registered." It would not be surprising, if these instances were to be taken as typical of the conditions, that our traders should complain of the difficulties of trading with Turkey. But are they? And may not these correspondents have been exceptionally unfortunate? The Turkish authorities are surely as fully alive as those of any other country to the need for a safe postal service, and it is unthinkable, especially in view of the care they have taken in reorganisation in other economic domains, that they would tolerate an unreliable postal system. It may be noted in this connexion that the Turkish Ambassador in London, replying to these letters, declares that "the most perfect order and punctuality prevails in the Turkish Postal Service," and states that if the necessary information with regard to the lost correspondence is provided he will advise his Government and request them to institute an inquiry.

A Rubber Revival?

It looks very much as if my forecast of developments in regard to rubber in the immediate future is going to be borne out. For some time now the commodity market has shown a hardening tendency irrespective of the movement of the London stocks, and during the past week there has been quite a sharp rise to 1s. 6½d., a figure which has quite an encouraging sound about it when one thinks of what the commodity stood at a few weeks ago. That the share market has so far been more or less unaffected by the improvement in the commodity is easily to be understood. There is not likely to be any pronounced development in this direction until the stocks in London have been reduced by several thousand tons. As I have pointed out before, however, it is not what is happening now that matters, but what will be the position when production is again at its maximum. As to this it is impossible at the present time to feel any great confidence.

COMMENTATOR.

A new rubber factory has been established in Bucharest for the production of goloshes and snow-boots.

So far under the Roumanian land reform scheme 3,191,281 hectares have been distributed among 1,206,136 peasants and small farmers.

The traffic receipts of the Egyptian Delta Light Railways for the eleven days ended October 31 amounted to £E12,485, making the total from April 1 £E170,295. The totals for the corresponding periods of the previous year were £E12,406 and £E184,542.

Yugoslavia's exports for September, 1927, amounted to 432,630 tons, of the value of 53.1 million gold dinars. The principal item of export was timber.

The municipality of Angora has decided to undertake the construction of a modern slaughter-house and it reported that bids for the necessary construction have already been submitted and are under consideration (says an American Consular report). The new establishment is expected to cost approximately 500,000 lire.

The report of the Oriental Gas Company for the year ended June 30, 1927, states that the revenue from the sale of gas and rentals shows an increase of £6,651, but the receipts from residuals are again below those of the previous year, due to the continued fall in the market prices of coke and breeze. The receipts from all sources, excluding exchange, show an increase of £3,378. The profit on exchange is less by £305. The directors recommend a dividend of 4½ per cent., less tax, again making 8 per cent., less tax.

Although the existing facilities of the free zone of the port of Salonika, augmented by the important improvements recently completed, may easily take care of the present traffic, further improvements are now being studied (says an American Consular report). These include the enlargement of the port, the construction of new jetties, the installation of lifting equipment, and the erection of a silo. It is estimated that the cost of the contemplated work will approximate 400,000,000 drachmæ and that it will take ten years to carry the scheme to a satisfactory conclusion.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

Motors and Motoring

By G. B. B.

The Commercial Motor Show.

The International Commercial Motor Show at Olympia has demonstrated once more the marked lead which British manufacturers have established over all competitors, not only in connexion with steam-driven vehicles, in which they have always had the lead, but in the heavy petrol-engined lorries of the multiple wheel and drive type. It may be said that the commercial motor vehicle has shown on many occasions the important part it has played in opening up fresh fields of commerce, and as economical transportation of products is an essential factor in the success of every industry and in the development of every country, it follows that the value of the motor lorry is constantly increasing.

In many parts of the Near and Middle East, for instance, the motor vehicle is practically the only economically sound means of getting produce to rail and port. The number of vehicles in commission is so far lamentably few, and it will be many years before the supply even begins to overtake the demand. The chief reason for that is the reluctance of British makers to advertise their models in those countries, and the American maker, keen as he is on obtaining the business, is so occupied in filling orders elsewhere that he has little time or attention as yet to devote to either the Near or the Middle East. Doubtless when he is at liberty to do so, he will simply swamp the Eastern markets with four-wheel and six-wheel drive lorries, eminently suited to the buyers' requirements, and the British industry will once more lament the fact that it is a very difficult matter to get their goods into a foreign country owing to the absence of some form of reciprocal tariff, or something of that kind.

Four-wheel Drive.

It is not possible to deal fully with the number and variety of British motor vehicles shown at Olympia that would be suitable for Eastern requirements. The number of new models on view reminded one forcibly of the fact that it is two years since the previous exhibition and that during that time advances have been very great. When I last wrote here regarding the Olympia Commercial Motor Show particular stress was laid on the advantages of the four-wheel over the two-wheel drive. It does not, to-day, require any great amount of prescience to see that within a year or two the four-wheel drive will have been almost universally adopted for overseas vehicles and that the six-wheel drive will be the thing for heavy transport duty over rough roads. One of the six-wheel vehicles shown is so constructed that no road is necessary for it, or at any rate only about as much road as would be needed for the average Tank. This is not fitted with

caterpillar track or anything of that kind, but has six independent wheels, each separately driven, sprung, and moving free of the others. To see this amazing vehicle climbing over boulders, loose sand, mud, rocks, clay soil, or moving shingle is a revelation as to the capabilities of the modern motor vehicle.

The adoption of dropped chassis frames by so many makers has not only allowed low loading heights but has added greatly to the appearance of the vehicles. The chief advantage is, however, the improved factor of safety and no purchaser to-day need feel that this modern design is either untried or unsound. There has also been a considerable reduction in the weight of bodies, particularly in those designed for passenger transport. This means a corresponding saving in petrol consumption, whilst engines also are lighter and more powerful in comparison with their size.

In tyres, too, there has been marked improvement, and, as they have always kept abreast and more than abreast of the times, the Dunlop Company have easily kept the lead, both as regards cheapness and quality, which they established so many years ago. Suspension systems also have been improved and vehicles hold the road better than they did. Steering gears and control roads can be and are made lighter than they were, and the modern braking system, usually of the four-wheel type with servo assistance, is much more powerful and positive.

NEWS FROM ALL SOURCES.

The Commission which is being sent by the Government "to investigate the possibility of securing more effective co-operation between the Governments of the Eastern and Central African Dependencies." consists of Sir Hilton Young, M.P. (Chairman), Sir Reginald Mont, Sir George Schuster, and Mr. J. H. Oldham. Mr. H. F. Downie, of the Colonial Office, has been appointed Secretary. The Commission is to leave England on December 22.

The directors of the Egyptian Markets, Ltd., have declared an interim dividend (No. 46) of 5 per cent. (less income tax at 4s. in the £) in respect of the year ending December 31, 1927, on the ordinary shares, payable on and after November 19, at Barclays Bank (Dominion, Colonial and Overseas), 37-39, King William Street, London, E.C.4.

A circular has been issued by the Secretary of the Chartered Bank of India, Australia and China to shareholders in the P. and O. Banking Corporation, stating that Lord Inchcape advises his company that he has received acceptances for the purchase by the Chartered Bank of shares in the P. and O. Bank representing over 51 per cent. of its present share capital. He accordingly confirms the offer of his company to purchase the shares of the P. and O. Banking Corporation at £10 16s. per share, payable on December 31 next.

The numbers are announced of 48 bonds of £100 each of the Bengal Telephone Corporation Seven per Cent. First Mortgage bonds, which, in accordance with the terms of the trust deed dated August 24, 1922, have been drawn for redemption, and will be paid off at par at the office of the P. and O. Banking Corporation, 122, Leadenhall Street, E.C.3, on December 31 next, after which date interest thereon will cease. The drawn bonds, with all unmatured coupons attached, must be lodged at the office of the P. and O. Banking Corporation, Ltd., three clear days for examination.

THE CINEMATOGRAPH IN ADEN.

Arabia has not yet become a good market for motion pictures, and the existing demand has not yet justified the establishment of theatres, except in Aden and its immediate environs (says the American Vice-Consul at Aden, Mr. James Loder Park, in a recent report). The factor militating against the display of pictures in the Muslim-ruled countries of Arabia, such as the Hijaz, Asir, the Yaman, and Mokalla, is the opposition of the rulers to the ideas of pictures of the human face or form, according to the strict interpretation of Muslim law, which counts such representations as sacrilegious. Italian activity in the Yaman (south-western Arabia) has been marked in the direction of establishing motion pictures in the coast city of Hodeida, but up to the present the consent of the ruler (the Imam) has not been obtained. He, and even more certainly his northern neighbour, King Ibn Saoud of the Hijaz and Najd, are believed to be opposed to motion pictures, even as they have always been firmly opposed to paintings, photographs, statues, or other representations of human beings. Arabia, therefore, promises to be a difficult market, with the exception of the British administered Aden Protectorate, and the rather liberal Sultan of Mokalla on the southern coast of the Arabian Peninsula.

Aden is the only part of Arabia where pictures are actually shown, and up to the present they have generally been pictures of an exceedingly common or archaic type, modern plays being too expensive for the local public to support. The result has been weekly exhibitions of pictures several years old. The theatres are poorly attended for this reason. If better films were shown, and corresponding increases of admission charges were made, there would be a better attendance.

Approximately 70 per cent. of the pictures shown in Aden are American. Of the four picture houses, three use the same films, the fourth being for native use, with a dominant proportion of American plays.

Aden people are fond of strong romances, ink-bottle cartoons, and lively comedies. They are very anxious to see news reels, of which they have of course been deprived up to the present, and an occasional travel picture would be welcome. They are none too fond of tragedy, mystery, crime, detective work, or anything savouring of the creepy or gruesome. The effort should be to provide an evening of cheerful, instructive, and humorous entertainment every week. It should be calculated to release the strain to nerves, which are sorely tried in this latitude. Serious drama of the best quality should be offered as the basic film of the evening.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Steel Beams, Etc.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of rolled mild steel beams, Section 1, mild steel flat and round bars, cement tiles and blue bricks for paving, homra, etc., required for Segn el Gabal buildings at Tura. December 13.

Motor Lorries, Etc.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of motor lorries and cars, tractors and trailers for Cleansing and Transport Service. January 15.

Steel Reservoir.—The Ministry of the Interior, Cairo, invites tenders for the supply and installation of a steel reservoir of 200 cubic metres capacity on a steel frame work tower, etc. December 10. (D.O.T.)

Safes.—The Egyptian Ministry of Finance invites tenders for the supply of 100 small iron money safes, 18 in. by 12 in. by 11 in. December 1. (D.O.T.)

Surgical and Medical Instruments.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of surgical and medical instruments. December 20.

Earthenware Conduits.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invite tenders for the supply of 5,320 conduits earthenware, salt glazed. December 6.

Telegraph Poles.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 2,535 creosoted and 5,700 uncreosoted telegraph poles. December 15.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, December 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Imani for Calcutta (Birkenhead, November 29); s.s. Malancha for Calcutta (Birkenhead, December 6).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, November 30).

British India Line.—S.s. Domala for Bombay and Karachi (London, November 26); s.s. Gamaria for Colombo, Madras, and Calcutta (London, December 3).

Cunard Line.—S.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool December 10, and Swansea December 13); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea December 10).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 3); s.s. Quermore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 17).

P. and O. Line.—S.s. Kaiser-i-Hind for Bombay (London, November 25); s.s. Novara for Colombo, Madras, and Calcutta (London, November 26).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (Manchester, December 3); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, December 10).

Ellerman and Papayanni Lines.—S.s. Lisbon for Algiers, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona, Venice, Trieste, and Fiume (Liverpool November 26, Swansea December 1); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 1); s.s. Algeria for Algiers*, Malta, Smyrna, and Constantinople (Liverpool December 3, Swansea December 3); s.s. City of Oxford for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 8); s.s. Lesbian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 24); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 30). * Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek out-ports via Piræus or other convenient port; Fiume via Trieste.

Mr. Munemura, an official from the Japanese Embassy at Stamboul, has arrived at Sofia to investigate the prospects for commercial dealings between Japan and Bulgaria, and the possibility of holding an exhibition of Japanese goods (says a Reuter message).

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 22.

There have been no developments in the Stock markets of any outstanding interest during the past week, and business can only be described as patchy. Even in the industrial sections the volume of trading has fallen off appreciably from its recent high level and the tone has, with only a few exceptions, been dull. Investment stocks however, keep steady, in spite of the competition of new issues, the latest of which is the Kenya Colony 5 per cent loan, for £5 millions. This issue was well received and is being dealt in at a premium.

The slightly more encouraging trade figures have as yet failed to stimulate any vestiges of activity into the home railway market, and prices in many cases remain at a level at which they look cheap, in view of the approach of the dividend season. The gramophone section has become a little irregular, but Vocalions have attracted a great deal of attention and Victor Talking Machines have been in the limelight. Activity in the new issue market continues and a large number of prospectuses is expected in the near future. The majority of those issued in the past week have met with a ready response.

Crown Colony Loans.

The success of the Kenya Loan, as witnessed by the early closing of the subscription lists and the commencement of dealings at a premium, serves to call attention to the existing stocks issued by the Crown Colonies. These stocks are more numerous than is often supposed and constitute, in fact, a by no means inconsiderable proportion of the securities quoted under the generic heading, "Dominion Stocks." The yield given by the Kenya Loan, on the basis of the price of issue, is £5 os. 6d. per cent. A number of Crown Colony loans give a higher return, while some give a less favourable return. The economic

position of the borrower varies from Colony to Colony, but the stocks are mostly regarded as well-secured investments which are available for all trustees. The Ceylon 3½ per cent. inscribed stock, finally redeemable 1959, yields £5 3s. per cent. A return of £5 2s. per cent. is obtainable on the Gold Coast 3½ per cent. inscribed stock finally redeemable 1959. The Jamaica 3½ per cent. inscribed stock, finally redeemable 1949, gives a yield of £5 1s. per cent. A return of £4 19s. per cent. is given by the Straits Settlement 3½ per cent. inscribed stock, finally redeemable 1967.

Catering Companies.

The report of Slaters for the year ended September 30, throws an interesting light on conditions in the catering trade in the past year, for it states that the volume of trade was considerably in excess of that of any previous year, but that increased rents, rates and taxes, as well as intensified competition, did not permit the making of proportionate profits. The net profit was virtually the same as a year ago, the figure being £30,724, against £29,020; the ordinary dividend is maintained at 9 per cent. There is again a supplementary profit due to sale of investments, the figure this year being £17,252. The ordinary shares return £6 17s. per cent. and appear to be fully valued. The reference in Slaters' report to the condition of the catering business lends exceptional interest to the report of the Aerated Bread Company which is expected next month. This Company, it will be remembered, absorbed J. P. Restaurants some months ago and it is considered that this fusion will strengthen the A.B.C. undertaking. What the forthcoming accounts will disclose, however, remains to be seen, but it seems unlikely that the ordinary shares, which return £6 8s. per cent., offer much scope for appreciation in the immediate future. The undertakings such as Slaters and the A.B.C. undoubtedly have a formidable competitor in J. Lyons and Co. This concern has gone from strength to strength and the confidence of investors in continued expansion is indicated by the fact that the ordinary shares return no more than £5 3s. per cent. For those who cannot afford to hold shares which thus discount the future, the company's 7 per cent. cumulative preference shares returning £5 12s. per cent. offer considerable attractions.

Greyhound Racing—A Warning.

During recent months hardly one week has passed without a greyhound racing company being floated, while other companies are projected. In these circumstances, the question of the policy to be adopted in regard to this form of enterprise is bound to suggest itself to the investor. That there is some money in the business is indisputable. For instance, this week the figure of £7 10s. has been mentioned as the price to be paid by a new company for the 1s. shares of the Greyhound Racing Association. But this is the reward of those who were first in certain selected cases. It by no means follows that there will be fabulous profits for every shareholder in every greyhound racing company. Admittedly greyhound racing is widely regarded as something more than a passing craze. But the conditions of financial success are appreciably more difficult than the promoters of many greyhound racing companies admit. "We believe," says Brigadier General Critchley, of the Greyhound Racing Association, "that greyhound racing, properly handled, has a great future, but only in cities possessing big populations. Our experience teaches us that to meet expenses a greyhound racing track must be able to draw upon a population of at least 300,000." Yet a number of companies have been formed to serve communities of a few thousand souls! In the main, the ordinary investor would be well-advised to leave greyhound racing companies to those with expert knowledge and ample financial resources.

Near East Markets

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna report as follows for the fortnight ended November 12:—

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 21,547 tons and the sales to date are put at 21,543 tons.

Market Conditions.—There is nothing of interest to report. Operations have ceased.

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 35,600 tons and the sales to date are put at 33,200 tons.

Closing prices, Smyrna, per cwt. c.i.f.: Type 12, 38s. 6d.; type 13, 40s. 6d.; type 14, 42s. 6d.; type 15, 49s.; type 6, 35s. 6d.; type 19, 37s. 6d.; type 20, 35s. 6d.

The market is quiet. Prices have weakened all round since our last report on October 29. Demand has slowed down considerably, but this is a normal phase during the month of November to about middle December. The total quantity remaining in the country is estimated at about 15,000 tons of which probably 10 to 12,000 tons will be available for export. The Alcohol Monopoly has so far bought about 4,000 tons and its remaining requirements, yet to be covered, are estimated at between 3,000 to 5,000 tons further. Fine grades are disappearing. Types 16 and 17 are practically exhausted. Type No. 15 is getting scarce and even type 14 is not too plentiful.

GUM TRAGACANTH PRODUCTION IN TURKEY.

Although the production of gum tragacanth in Turkey during recent years has shown a considerable decline as compared with the period immediately preceding the World War, it still represents a source of considerable income to the country (says the American Assistant Trade Commissioner at Constantinople, Mr. E. P. Keeler, in a recent report). This gum is the product of shrubs of the Astragalus family, which grow in the mountainous central plateau of Anatolia, as well as in various districts of the neighbouring countries of Persia and Syria.

The collection of gum tragacanth has long been an occupation of the rural inhabitants of the Central Anatolian Plateau, serving to supplement their activity as peasant farmers and herdsmen. In years when labour is plentiful, and at times when agricultural production is not particularly favourable, more attention is devoted to the collection of gum tragacanth, and its production accordingly shows an increase. Correspondingly, when crops are good and when there is a shortage of labour, the production of gum tragacanth shows a tendency to decline.

The method of collection of gum tragacanth is tedious and labour-consuming. A small incision is made at the base of the shrub, from which the juice exudes and solidifies. On the following day, the solidified juice, or gum tragacanth, is collected and a second small incision made. This process is repeated on the third day for the last time.

The gum derived from the first incision, known as "Fiori," is made up of clear white flakes and represents the best quality of gum tragacanth. The second incision produces a yellow gum of somewhat inferior quality, known as "Biondo." The third incision produces the poorest quality gum, of dark colour, known to the local trade as "Sari."

Gum tragacanth is ordinarily collected in Anatolia during July and the first half of August. The quality of the gum produced is largely dependent upon climatic conditions during this period. If the weather is rainy when the incisions are made at the base of the stem, the gum is damaged by rain and dirt and is of correspondingly inferior quality. On the other hand, if dry weather prevails, the gum is correspondingly clean and of superior quality.

After the flakes have been collected by the peasants, they are dried and packed in bags containing around 60 oke (1 oke equals 2.8 lb.). Gum tragacanth is usually sold to a jobber in a near-by village, who is often the agent of a Constantinople or Smyrna exporter. It is then shipped to one of these two ports, through which practically all exports of Turkish gum tragacanth pass, for final grading and packing. The best grades for export are usually repacked in wooden cases holding approximately 120 kilos (1 kilo equals 2.2 lb.), while the inferior grades are repacked for export in bags holding 75 to 100 kilos.

Gum Tragacanth is graded locally for export, according to quality, as follows: Fiori—finest white clear flakes. White I and white II—somewhat inferior white flakes. Biondo I and Biondo II—best quality clear yellow flakes. Sari I and Sari II—dark yellow flakes. Djalo—refuse and inferior flakes of all cuts. Tchamourlou—earthy gum, which has been damaged by dirt and rain.

While no accurate figures are available, the best estimates obtainable place the annual production of gum tragacanth in the Ottoman Empire during the years preceding the World War at approximately 20,000 bags. Of this figure Anatolia produced at least 6,000 bags in an average year. During the War the production is reported to have fallen to perhaps 1,000 or 1,500 bags per year.

Present conservative estimates place the 1927 crop at 3,000 to 4,000 bags—a considerable increase over the annual production of the past few years. The drought which has prevailed over much of the central Anatolian plateau this summer, while damaging various agricultural crops, released a certain amount of gum tragacanth as a source of livelihood. This year's crop should be clean and of good quality, as a result of the dry weather which prevailed during the collection period.

It is believed that practically all of the Cesarea production will now be sold through Constantinople, whereas the Cesarea crop formerly was largely disposed of through Smyrna.

Among the major ports of destination of export shipments of Turkish gum tragacanth were Odessa, Marseilles, Hamburg, Antwerp, London, and New York.

At the present time the Constantinople trans shipment trade in foreign-produced gum tragacanth is almost exclusively confined to occasional lots of the Persian product, which is of excellent quality and is in demand for medical and confectionary uses. Syrian gum tragacanth, which was frequently seen in the Constantinople market in the days of the Ottoman Empire, is now exported direct from the Syrian ports. Similarly, Bitlis gum, produced in the regions about Bitlis, is almost unknown on the local market.

Company Meeting.

SUDAN PLANTATIONS SYNDICATE.

Continued Progress.

Prospects for Current Season.

Mr. F. Eckstein to Retire from Chairmanship.

The twentieth ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held on November 16 at Winchester House, Old Broad Street, E.C.

Mr. F. Eckstein (the chairman of the company) presided.

The Secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—I propose, subject to your approval, to take as read the statement of accounts relating to our past financial year and the directors' report, both of which have been in your hands for some time. (Agreed.)

It is my privilege to address you for the twentieth consecutive time. (Cheers.) Fortunately, I can give you once more an excellent account of our past year's work and of our financial position, so that I need not detain you long to-day. Results can speak for themselves.

The longer I witness the work done and being done by our syndicate in the Sudan the more I realise and the more clearly I see demonstrated the beneficial effects of the co-operative arrangement under which we are working, not only for the chiefly interested parties, but also for the country generally. (Hear, hear.)

This fact makes me venture to say that other tropical countries, if they more freely adopted this system and took a leaf from the book of the Sudan Government in this respect, would surely accelerate the development of their natural resources and likewise add greatly to the prosperity and contentment of their native populations. (Hear, hear.)

Further Visit to the Sudan.

Although it had not been my intention to go to the Sudan this year, circumstances arose which made it necessary to alter this decision and to pay one more visit to the field of our operations.

My sudden departure in January last gave rise, so I was told afterwards, to certain rumours that all was not well with the S.P.S. May I say at once that all is well, in fact very well indeed. (Cheers.)

The reason of my being called to the Sudan was that on closer investigation our managing director (Mr. MacIntyre) and our manager (Mr. Poyntz-Wright) formed the opinion that the soil of certain northern areas included in the extension programme was less suitable for cotton than that of certain other areas to the west.

After a thorough investigation and lengthy negotiations, the Sudan Government agreed to our recommendations and modified their programme of canals accordingly. (Hear, hear.) The result is that our new areas, instead of lying mainly to the north of our existing plantations, will lie mainly to the west, where the soil gives better promise.

On behalf of my syndicate, I signed in Khartoum at the end of February an amended agreement, and I gladly take this opportunity of acknowledging gratefully and publicly the manner in which the Sudan Government met our representations and agreed to these alterations. (Cheers.)

All our discussions and negotiations were carried on in the best possible spirit, and I sincerely hope that the same reciprocal feeling will continue for all time. (Hear, hear.)

I believe that the active part which Mr. MacIntyre took in prompting this alteration of areas has been of the utmost value to all concerned, and I feel sure that you will all share the gratitude which your directors feel for this further instance of his devoted care for the interests of the syndicate. (Hear, hear.)

These changes of areas will make no difference in the time programme of our development work, which was laid down and explained by me at our last annual meeting.

The Balance-sheet.

Our balance-sheet is made up in the usual clear way, but there are one or two items to which I want to draw your attention.

Our capital has been increased, as you know, by the issue of

750,000 reserve shares, of which the final payment is due on November 30. With the exception of one very small shareholder, all our 5,000 and odd shareholders have taken up their pro rata allotment. This is indeed a pleasing feature, as in this way every holder has received a not inconsiderable bonus.

This new issue will not only enable us to pay for our extension programme, but will also provide the necessary funds to finance to some extent the vast crops we are producing.

You will perhaps be surprised to learn that the total value of the cotton and cotton seed grown and marketed by us last season, all of which came to this country, amounted to about 4½ millions sterling. (Cheers.)

This does not include the value of the Durra and Lubia crops, which belong entirely to our tenants.

Reserves.

The share premium account has been raised from £565,000 to £1,256,000. To the Gezira reserve account, which in our previous balance-sheet we called general reserve account, we have added this year £100,000, making same £150,000 in all. As mentioned on a former occasion, we have established this fund for the purpose of gradually amortising the amounts credited to general development and canalisation accounts, for which we receive no compensation at the end of our concession.

The Hosh and Wad El Nau pumping installations, which figured last year on both sides of our balance-sheet at £353,000, have been eliminated altogether, as these installations now belong to the Sudan Government.

Creditors and credit balances, £2,083,000, against £1,337,000, chiefly represent our indebtedness to the Sudan Government and to our tenants. A very considerable amount of this has been paid since we closed our books.

On the credit side you will find our Zeidab property valued at about £7,000 less than last year, due to writings off.

The various headings under Gezira areas all show certain increases due to the work begun and done for our extended areas.

Disposal of Crops.

Stock of cotton on June 30 figures at nearly £3,000,000 sterling, and this requires some explanation. Out of the 113,169 bales shipped from the Gezira, we had sold up to that date 49,653 bales. Of the balance up to the beginning of September, when we started making up our accounts, we had sold a further 42,274 bales. These 91,927 bales figure in our accounts at actual sale prices, while the remaining 21,242 bales we have valued at a conservative figure. I may mention that at this moment there are only about 2,000 bales unsold. (Cheers.)

As we did not put our cotton on the market until about the middle of May, you will see that we were able this year to dispose of practically the whole crop within six months.

Kassala Cotton Company.

Our investments in other companies are exactly the same as last year. Kassala Cotton Company had a good flood, and consequently a good year. They picked 54,128 kantars and shipped 8,430 bales, all of which are sold. On previous occasions I told you quite frankly that I did not feel very happy about this child of ours. However, during the last few weeks new arrangements have been made with the Sudan Government regarding this enterprise, which should give it a fair chance of earning moderate profits. (Hear, hear.) Details of these new arrangements were posted to the Debenture and share holders of that company last night. Regarding our Brazilian interests, I can add nothing to what we have stated in the directors' report.

Our financial position is, as you will see from the balance-sheet, very strong.

Profit and Dividends.

Turning to the profit and loss account, our gross receipts amount to nearly £903,000, against £706,000 last year. From this we have to deduct our running expenses, writings-off, etc., and £100,000, which, as already mentioned, we have added to our Gezira reserve account, leaving us with a net profit of £588,000, compared to £482,000 last year. (Cheers.)

Out of this sum we have paid you in July an interim dividend of 10 per cent., and we now propose to pay you a final dividend of 15 per cent., plus a bonus of 5 per cent., making 30 per cent. in all for the year. This will absorb £450,000. The rest we add to our

carry forward, which will then stand at the respectable figure of about £419,000. (Cheers.)

It may be necessary to dip into this useful carry forward to help out dividends during the coming years, and even so you must not count upon our usual rate of dividend being maintained. The capital on which, henceforth, we have to earn dividends is £2,250,000, or half as much again as it was in the period covered by these accounts.

Area Under Cotton.

This season we have under cotton 105,622 feddans. Next season—that is, 1928-29—we hope to have 135,000 feddans; and in 1929-30 150,000 feddans, so that we shall not have the whole of our new areas in bearing before the season 1929-30.

It will no doubt be a satisfaction to you to hear that Mr. Charles Fletcher, a partner of Messrs. Cooper Brothers and Co., our auditors, paid a visit to our headquarters at Barakat in January last.

The chief object of his visit was to advise us on certain accountancy matters affecting the Sudan Government and our tenants.

We came to a full agreement on all points, but what I want chiefly to tell you is that Mr. Fletcher found our bookkeeping and accountancy departments in Barakat in remarkably good shape and order, and he has authorised me to make this statement. (Cheers.)

Work on the Fields.

This much regarding our accounts, and I will now review our field work during the past year. At Zeidab we had a fair crop—we picked 15,028 kantars—which we disposed of at satisfactory prices. Cotton was planted on about 5,000 feddans, and we shipped 3,109 bales against 2,243 bales last year.

In the Gezira we had under cotton 100,058 feddans, against 80,031 feddans the previous year; under Durra 50,188 feddans against 30,833, and under Lubia 50,000 feddans, against 9,178. All these crops show, therefore, considerable increases.

The cotton crop amounted to 474,738 kantars, compared with 384,106 kantars in the previous season.

Average Yield.

The average per feddan was 4.74 against 4.79 kantars last year, which we then considered a yield beyond our most sanguine expectations. Please do not look for such averages every year.

The whole of this crop—namely, 113,169 bales—was shipped to Liverpool and is finding, as I already told you, ready and willing purchasers, due to the excellent quality and even grading of our cotton. (Hear, hear.)

In this connexion I wish to record my deep appreciation of the assistance we received from the British Cotton Growing Association in Manchester, to whom we consign our cotton, and from our brokers in Liverpool—Messrs. Wolstenholme and Holland and Messrs. Reynolds and Gibson. The interest these firms take in the disposal of our cotton is of great help to us. (Cheers.)

In addition to these heavy cotton shipments, we also shipped to this country 45,875 tons of cotton seed, which was all sold at satisfactory prices. Here again I wish to record my thanks to Messrs. Campbell and Phillips, Limited, for the excellent way in which they handled and disposed of these considerable quantities.

But, ladies and gentlemen, my appreciation does not finish here, because I must add to this list our shipping agents in Port Sudan—Messrs. Contomichalos Darke and Co. and Messrs. Gellatly, Hankey and Co. Regularly every day throughout the ginning season a special train, loaded with cotton and seed, leaves our ginning factories for Port Sudan; and the fact that from first to last shipping arrangements for these thousands of tons of cargo went through punctually and without a hitch reflects great credit upon the work of our shipping agents. (Hear, hear.)

Excellent Work of Ginning Staff.

I must further include in my appreciation our very competent

staff at our four ginneries at Meringan. They all worked well and hard during the entire season, and I think a good deal of the ready demand shown for our cotton is due to the excellent work done by our ginning staff.

In scientific research work, too, much has been achieved by the Sudan Government. As I informed you on a previous occasion, we are contributing to this necessary expenditure.

We also contribute to the cost of the seed farm, where under our supervision pure strains of seed for sowing are propagated. Here, too, much useful work was accomplished during the year.

By way of new work for our extension area, we completed during the past year the development of about 45,000 feddans in the north-east. This will come under cultivation as the irrigation system gets completed, and we have also provided the necessary housing accommodation for our staff in this area.

Present Season.

Now I come to the work for the coming—or rather the present—season. At Zeidab we have under cotton about 5,100 feddans—very much the same area as last year.

The crop promises to be a fair one, and we have already picked about 14,000 kantars and shipped 1,000 bales, of which we have disposed of 400 bales.

In the Gezira we have under cotton 105,622 feddans, being 5,564 feddans more than the previous year. We have also planted 52,902 feddans Durra and 55,331 feddans Lubia.

I find it impossible to make at this time of the year an accurate forecast of the probable yield of our growing crop. To illustrate this difficulty I have only to give you our experience of last year.

In October last year our then growing crop looked splendid. During November we had an exceptionally cold spell, which damaged the plants to a great extent, so that if I had given you an estimate at our annual meeting it would have pointed to a poor crop.

In January and February this year, when I was on the spot, weather conditions were good, and the crops were improving rapidly, but we did not expect to pick more than just under 4 kantars. In the end, as I have already told you, we did much better.

Promising Prospects.

Profiting from this and previous experience, I shall not attempt to prophesy what our crop will be, but this much I can say, that at the moment the prospects are promising. We have had this year an unusually heavy rainy season, which necessitated a lot of resowing, and consequently indicates a late crop.

We have contracted with Messrs. Sayer and Colley, of Cairo, for the erection of two further 80-gin ginneries at Hassa Heissa, which will have to deal eventually with the cotton picked from our new areas.

We are likewise remodelling our old Wad Medani Ginnery to 80 gins, so that when all is complete we shall possess 560 gins in working order, which, I think, is the largest ginning installation in the world under one management. (Cheers.)

We have added to our report this year a picture showing you how the seed cotton is stacked outside one of our ginneries.

The Proposed Dam at Lake Tsana.

The announcement in the newspapers of the proposed construction of a dam at Lake Tsana has, I believe, perturbed some of our shareholders. I take this opportunity of assuring them that there is no cause for apprehension as far as we are concerned. (Cheers.) Quite apart from the fact that at present only a small percentage of the waters of the Blue Nile is derived from Lake Tsana, the Sudan and Egypt alone are in a position to make use of any additional supply resulting from the building of a dam, and in any case such a dam could only be built with the consent of H.M. Government.

You will have seen from our report that our esteemed colleague, Lord Lovat, has had to resign his seat on our board in May last, on having joined H.M. Government. Lord Lovat has been a director since we changed our name from the Sudan Experimental Plantations Syndicate, 21 years ago. During all this time he has taken the keenest interest in our work, and he made, particularly in the early and critical stages of our existence, many trips to the Sudan in your interests and to your advantage. His leaving is a real loss to us and to me particularly, as he had been my colleague for so many years. I wish to thank him, on behalf of my co-directors and myself, for the great help and assistance he has given us during all that time.

We have not filled this vacancy, as we hope that at a future period he may be able to rejoin us. (Cheers.)

Tribute to Staff.

My duty now is one which gives me increased pleasure with every recurring year. The oftener I visit the Sudan the greater the pride I feel in the loyalty and capability of our heads of departments, our inspectors, and our headquarters staff at Barakat.

Much of our success depends, as you know, on climatic conditions and absence of pests, but it also depends very largely upon our manager and inspectors. They have worked well—results prove this—under trying conditions, and I wish to thank them all most heartily for all they have done for us. (Hear, hear.)

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester.

and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

"You will have noticed that we are again distributing a well-deserved bonus, which I am sure you will gladly agree to."

The Chairmanship.

This finishes practically all I have to say regarding our stewardship for the past year, but with your permission I wish to add two personal remarks.

At the annual meeting last year you did me the great honour of asking me to accept my portrait painted by an eminent British artist. I am glad to say Sir William Orpen has undertaken this task, and although the portrait is not quite finished I am sure it will be all that one can desire, coming from such a master of his craft. (Hear, hear.)

May I express once more my heartfelt thanks for this splendid gift and appreciation of whatever service I may have been able to render our syndicate.

My second remark is a really painful one as far as I am concerned, because it is the last time that I shall have the honour of addressing you as chairman.

My health has not been good for some time past, and my medical advisers strongly urge me, not to give up City life altogether, but to take it easier.

It is closer on 50 years since I started work in the City. It has been my proud privilege to be chairman of our syndicate since its inception, and I am happy to say I have never missed being in the chair at any of our meetings. (Cheers.) I feel the time has come when I must hand over my office, which entails a fair amount of work, to a younger man. The foundations of our syndicate are well and truly laid, and you need have no fear as regards the future.

Future Policy.

Were I asked to define the policy to be pursued by my successor in office, I would reply: Cultivate to the utmost extent a loyal and harmonious working in letter and spirit with the Government in Khartoum, and show every consideration to the native population in the Sudan. (Hear, hear.) If this policy is continued and adopted, all will be well.

Let me thank you, one and all, for the great courtesy you have shown me during my long spell of office, and ask you to extend the same to my successor when appointed. (Loud cheers.)

I now move:—"That the report of the directors and statement of accounts to June 30, 1927, now laid before the meeting, be and the same hereby are received and adopted."

Mr. J. A. Hutton: Mr. Chairman, ladies, and gentlemen,—In seconding the resolution I must congratulate the shareholders on the excellent results of last year's working. I must, however, utter a word of warning. Cotton-growing, like all other forms of agriculture, is dependent on circumstances over which we have no control. There are two main factors on which its prosperity depends—weather conditions and the market price of the commodity. Last year we had most favourable climatic conditions, with the result that we had a bumper crop. In addition to this, the quality was excellent, so that we were able to obtain very satisfactory prices.

So far this season the weather conditions have been satisfactory, but one can never be sure of any crop until it is actually harvested, and this applies more particularly to the quality. This is a most important factor, for any falling off in quality means not only lower prices but also greater difficulties in finding buyers.

Marketing Arrangements.

In this connexion I should like to draw your attention to the present arrangements for marketing the crop. It is all shipped to this country and is sold under the superintendence of the British Cotton Growing Association, through their brokers, Messrs. Wolstenholme and Holland and Messrs. Reynolds and Gibson. As you all know, the B.C.G.A. is a philanthropic body run on sound commercial lines. They have only one object in view—namely, the extension of cotton-growing throughout the British Empire—and they are well aware that the best means of attaining this object is to make it a profitable occupation for the grower. Consequently, thanks to their experience, and also to their close touch with the Lancashire spinning trade, we are able to obtain the very best prices for our cotton. I am also glad to say that, thanks very largely to the B.C.G.A., Sudan cotton has now obtained a well-deserved reputation in the market.

It has been suggested in some quarters that the crop is not being marketed to the best advantage. Perhaps you will take it from me that these suggestions could only be made by people who are not acquainted with all the facts.

Elimination of Middlemen.

I do not suppose it would be possible to find in any part of the world a better arrangement for marketing the crop. I do not know whether you realise that, thanks to the co-operation of the B.C.G.A., the crop is sold by the man who actually grows it direct to the spinner who is going to use it. The whole of this work is done for a commission of 1 per cent., and the usual army of middlemen, each of whom wants his profit, is entirely eliminated. (Hear, hear.) I should also mention that the B.C.G.A. guarantee the payment for the cotton—a very important point with the present deplorable conditions of the cotton trade.

I am sure you will agree with me that, so long as this arrangement works satisfactorily, it would be very unwise to disturb it. We must, however, not forget that the crop is not solely our property, and that we only have an interest in a proportion of the proceeds. In its disposal we are acting as agents for the Sudan Government and

the native growers. We are, therefore, in the position of trustees, whose duty it is to look after the interests of other parties, and we are therefore bound to do all in our power to secure the best possible price for the crop.

The present arrangement is working in a most satisfactory manner, and I have no hesitation in saying that, as far as one can judge at present, it would be most difficult, if not impossible, to improve on it.

The Chairman has dealt very fully with the details of last year's work, and it is unnecessary for me to say anything more, but I feel bound to support all that he has said about the work of all our staff, both here and in the Sudan. The excellent results are very largely due to their energy and loyalty, and you can rest assured that we have a staff of which you may feel proud.

Tribute to the Chairman.

Nothing has been said by the Chairman about his own part in the work. I doubt if you all realise how much we owe him, a debt of gratitude which we can never fully repay. (Hear, hear.) I find it difficult to find words to express my admiration for all that Mr. Eckstein has done for the company. (Hear, hear.) He has sacrificed his time, his health, and his leisure, and there is no doubt the wonderful success of the company is almost entirely due to his untiring devotion to the cause of cotton-growing in the Sudan. (Hear, hear.) It is not only the shareholders who ought to thank Mr. Eckstein for what he has done; his work goes far further than that, for he has rendered invaluable services both to the Sudan and to the Lancashire cotton trade.

It is, therefore, with all the more regret that I have heard that he intends to resign from the chairmanship. I am sure you will all agree with me that this news will be received with the greatest regret by everyone. (Hear, hear.) We should all wish to ask him to reconsider the matter, but I am afraid it would be hardly fair to press him, for his health must be the first consideration. I can only hope that he will be able to remain on the board so that we shall have the benefit of his advice for many years to come. (Cheers.)

I have great pleasure in seconding the resolution.

The resolution was put to the meeting and carried unanimously.

The Chairman next moved:—"That a final dividend of 3s. per share plus a bonus of 1s. per share (together 20 per cent.), less income-tax, be declared for the year ended June 30, 1927, payable on November 17, 1927, to holders of shares numbered 1 to 1,500,000 registered at the close of business on November 5, 1927."

Mr. D. M. Hannay seconded the resolution, which was unanimously adopted; and the Chairman announced that the dividend warrants would be posted that evening.

The retiring directors (Mr. D. M. Hannay and Captain Bernard Eckstein) were re-elected, and Messrs. Cooper Brothers and Co. were reappointed auditors.

Vote of Thanks.

Mr. William Mosenthal, in moving a vote of thanks to the chairman, said:—This is not an ordinary occasion of a meeting of shareholders. I know that as a rule, towards the end of a meeting, especially when the luncheon hour is approaching, shareholders wish to get away, and I do not intend to delay them for any length of time; but I feel that on an occasion like this they will bear with me for a few moments in what I am now about to say. My firm has been connected with South Africa for nearly 100 years, and it was our privilege and pleasure to be associated with the firms that Mr. Eckstein has been connected with long before the Sudan Plantations Syndicate was heard of. I have been a shareholder, together with my partners, in this company since its inception—I admit, to great advantage from a pecuniary point of view, quite apart from anything else. Therefore I do not think you will consider it inappropriate on my part on this occasion, when Mr. Eckstein, much to our regret, is presiding for the last time at our ordinary meeting, to express, on behalf of the shareholders present—and I am sure those who are absent would share in it—our great regret that he is resigning the chairmanship, and particularly on account of the reason—namely, that he feels that his health will not warrant his carrying on the work—which we know has been laborious and incessant—which he has for so many years carried on to the advantage of all concerned. (Hear, hear.)

It is not only a matter of regret so far as the shareholders are concerned, but I think we can go farther and say that there is a sentimental value attached to this business because of what he has done to further the interests of the British Empire as a whole. (Hear, hear.) It is to me a pleasure and a privilege, and yet it is tinged with regret, that I have had the honour of saying these few words, and, in bidding adieu to Mr. Eckstein as our respected and honoured chairman, may I express the hope that in his retirement he may live long and enjoy good health and a certain amount of rest, to which he is fully entitled, but that he will not withdraw entirely from the board, so that the value of his services and knowledge may be at their disposal in the future? (Hear, hear.) I will ask a shareholder to be kind enough to second this resolution, which I am sure will be received with acclamation. (Cheers.)

Mr. King-Hamilton seconded the motion, which was cordially approved.

The Chairman thanked Mr. Mosenthal for his kind words and added that, although he had to give up the chairmanship because the work had become too heavy for him, he hoped to remain on the board as an ordinary director, in which position he would be able to give his colleagues the benefit of his experience and advice. (Cheers.)

The proceedings then terminated.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 16 :—

Egyptian Futures.—Sakel Contract.—This market has rather lacked any features of outstanding interest during the past week, and throughout fluctuations have only been on a moderate scale, with the result that practically no change in the level has to be reported since our last report. During the earlier days the position was sympathetically affected by the after effects of the rather "bearish" American Bureau figures published during the later trading last Wednesday, and, with this rather unsettling sentiment, some liquidation of long cotton was in evidence; thus, just prior to the week-end, Januarys declined to 18.25d.; latterly from Alexandria reports have induced a steady undertone and the earlier decline has been gradually made up. Whilst trade reports in the fine spinning section can still be termed satisfactory, little fresh business appears to have been placed recently; no doubt the pessimistic tone prevailing in the other branches is responsible in some measure for this. In the meantime, however, our market is beginning to feel the effects of the somewhat curtailed mill demand and, unless increasing support from this source is not soon in evidence, accumulating stocks will begin to exercise pressure on the contract positions, both locally and more especially in Alexandria. In the latter market receipts since the beginning of the season total just over 600,000 kantars and exports 350,000; private sources are inclined to place recent official crop estimates as too low and consider that a yield of 3,000,000 new crops have caused this option to tighten up materially in relation to other positions on the board and similarly the Liverpool/Alexandria difference for the month in question has closed to 30 points discount. Whilst probably owing to its relative cheapness with the overseas market our contract will not be subject to any severe pressure, we consider for the immediate future, at any rate, that prices are quite high enough, certainly we would not recommend purchases until definite signs of more active trade support begin to be in evidence.

Upper Contract.—Only nominal price alterations have taken place in this contract during the past week, but the undertone continues to be rather heavy owing to further tenders and the moderate amount of trade support accorded. Some weakening in the basis of competitive outsiders is beginning to be manifest and, whilst later on the cotton covered by this contract will probably attract increasing attention, for the time being an accumulated "long" interest has to be worked off. This may result in a temporary easing and should our anticipation of this prove correct we would recommend purchases for those prepared to hold well into the spring months.

Egyptian Spot.—The past seven days have been dull and featureless, with the single exception of the publication of the American Bureau report last Wednesday evening. The sentimental effect of the comparatively small increase over the previous figures was considerable and affected all markets to a greater or lesser degree.

The Alexandria market alone has shown remarkable steadiness in face of the increased estimate and has proved to be rather a puzzle to operators on this side. Standing as it does at present at some 20 points over Liverpool, it follows that cotton hedged there is almost impossible to sell over here on spot terms. Frequently of late it has been our experience that after a spinner has been induced to make what on the face of it appears to be a very reasonable bid, to cable out, disappointment has ensued, and the replies in some cases have even shown an increase over the previous limit.

The inquiry throughout the week with the exception of to-day has been of a very moderate character and the feeling appears to be gaining ground that lower prices are

inevitable in the near future. Reports from up-country indicate that the Egyptian section of the trade are still doing fairly well, although margins these days are naturally not all that they might be. To-day, quite a healthy spot inquiry cropped up—the first we have witnessed for some days. The bulk of it referred to Upper 14½d. to 15d., of which there is a quantity of very attractive looking cotton available here, and Sudan Sakel at about 100 off futures. More attention has recently been paid to Sakel cotton at 150 to 200 off January. A little business has again been reported in the top Sakel quality at prices up to 25.45d.

The inquiry for low and inferior cotton has not been very active. C.i.f. business was fair at the beginning of the week, but has since rather slackened off. Forwardings to spinners for the week ending the 11th inst. were returned as 6,395 bales Egyptian and 2,355 bales Sudan. Estimated sales 1,900 bales Egyptian and 1,050 bales Sudan. Quotations of Sakel show a reduction on the week of 35 points. Upper are 25 points lower and Pilon 20 points lower. F.G.F. Sakel to-day, 18.95d. F.G.F. Upper to-day, 15.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended November 10, state:—

Since our last report the futures market has been fairly active; the tone was good during the early part of the week but easy at the close. The week's summary of price movements is as follows:—Sakellaridis: November 36.92 dollars, 0.14 dollars down; January, 37.30 dollars 0.10 dollars down; March, 37.58 dollars, 0.10 dollars down; May, 37.80 dollars, 0.20 dollars down; November 1928, 37.23 dollars, 0.37 dollars down. Ashmouni: December, 28.30 dollars, 0.60 dollars down; February, 28.64 dollars, 0.58 dollars down; April, 28.80 dollars, 0.52 dollars down; October 1928, 27.85 dollars, 0.50 dollars down.

Sakel.—The firm markets of the first days of the week were the direct result of speculative purchases on the belief that the American Bureau Report would be bullish. On the 9th instant the Bureau Report was published, estimating the crop at 12,842,000 bales against a figure of 12,678,000 bales a month ago, this figure being higher than expected; the contracts which had been bought during the few preceding days were promptly liquidated and prices are now below those ruling when last we wrote.

The demand from abroad continues to run on very moderate lines and with cotton still coming down in large quantities from up-country, the stock in Alexandria is again up on the week. The continued poor demand from consuming centres, especially Lancashire, is beginning to have a depressing effect on our market, and both the big discount of the near positions and the weakening of the spot premiums of tenderable cotton are clear indications of the effect of the heavy accumulation of cotton here. There is still no official confirmation of an agreement between the Soviet Delegation and the Egyptian Government for the purchase of part of the latter's stock of Sakel.

Uppers.—The publication of the figure of 12,842,000 bales as the probable production of the American crop just picked was followed by a sharp decline in New York prices, and this drop was naturally reflected in the Uppers market here. Nevertheless, the decline here has not been on the same scale as in New York, and, as a result, the difference between the two markets has widened out to 8.41 dollars, a difference, in our opinion, rather exaggerated.

The demand from spinners has, this week, been poor. Our overseas agencies report that spinners consider Uppers dear, and are, as far as possible, taking their requirements from the cheaper competing growths.

The week's receipts amount to 245,695 krs. against exports 205,157 krs; the stock in Alexandria stands at 3,071,872 krs.

The official figures of arrivals and exports for the period September 1 to November 2 are as follows:—Arrivals, Sakellaridis 718,238 krs., Ashmouni and Zagora 1,288,671 krs., Pilon 104,307 krs., Various 60,864 krs., Scarto 34,296 krs., total 2,206,376 krs. Exports: Sakel 391,223 krs. Ashmouni 500,592 krs., Pilon 38,388 krs., Various 24,912 krs., total 955,115 krs.

Spot.—During the week under review Minet el Bassal has been quiet and a very mediocre turnover has resulted. Demand from abroad continues poor. Sales amount to about 15,600 bales, of which we estimate 6,700 bales Sakellaridis, 7,700 bales Ashmouni and Zagora, 900 bales Pilon and 300 bales other varieties. The spot situation is about as last week.

Sakellaridis.—A small business has been done covering all grades. Spot differences are generally without much change. Such demand as there is is mainly for medium qualities. The good grades, except the best, continue neglected and pressed for sale.

Ashmouni and Zagora.—Demand has been much quieter this week and only a fair business has been done,

though all grades have been dealt in. Spot differences are generally unchanged.

Pilon.—A good business has been done in all grades at about last week's differences.

Other Varieties.—A fair business has been done in White. Spot differences are rather easier. A few bales of Maarad have changed hands. Nahda has been in good demand but actual business has been restricted by small supplies and the high prices asked by holders.

Up-Country.—The movement of the crop has somewhat slackened this week, due to the rainy weather of the last few days which has stopped work in the ginning factories. Merchants are not keen to buy and are rather tighter in the matter of price. The 3,071,000 krs stock in Alexandria against 2,168,000 krs at the same time last year is very eloquent evidence of the poor spot demand and this is no incentive to merchants to buy further cotton. True, a certain proportion of the Alexandria stock is held by the exporters and the Government, but nevertheless the amount of cotton daily on offer is considerable, and much of it goes the round of the market without finding buyers.

Crop 1927.—There is nothing more to say on the crop: except for a few isolated cases the whole of the crop has now been picked and the plants uprooted.

Notes of the Week.

The Anglo-Iraqi Negotiations.

The departure last Sunday of Jaafar Pasha, Prime Minister of Iraq, who will be followed at intervals of a few days by Sir Henry Dobbs, High Commissioner, and by King Faisal and his suite, marks the conclusion of the negotiations in London between the Iraq and British Governments for the régulation of the position arising from the expiry in 1928 of the first four-year period from the date of ratification of peace with Turkey. It was stipulated in the Military and Financial Agreements, Subsidiary to the Treaty of October 10, 1922, that were signed at Baghdad on March 25, 1924, that Iraq should "accept as soon as possible, and in any case not later than the year 1928, full military and financial responsibility for the preservation of internal order and for the defence of Iraq against foreign aggression;" it had been, moreover, an undertaking on the part of the British Government in the Treaty of 1922, confirmed in an "Explanatory Note attached to the Treaty of January 13, 1926, "to use their good offices to secure the admission of Iraq to membership of the League of Nations as soon as possible." Inasmuch as the Treaty between the two countries would be terminated by the admission of Iraq to membership of the League of Nations, it was only natural that hopes should at once concentrate upon the country being able to shoulder to the full all the responsibilities foreshadowed for it in 1928. In order that Iraq should be equal to her military task King Faisal and the Government of Jaafar Pasha favoured conscription, but when the inevitable opposition to the proposal in the country found support in a warning issued by the British High Commissioner, the Iraqi authorities will have realised that the chance of carrying through this measure had become remote. Preliminary negotiations in Baghdad, however, must have held out to King Faisal and Jaafar Pasha sufficient prospect of achieving practical results in London (that would meet to some extent the expectations raised in Iraq by the emphatic insistence of the British Government on the necessity of its being relieved of military and financial responsibility) to justify personal negotiations with His Majesty's Government. Whether the issue has come up to their expectations would seem to be doubtful

in the absence of an assurance to this effect, which would hardly have been delayed by the two parties, if it could have been made; and it must be concluded that the British Government, being satisfied with the substantial reductions already made in the cost of the British share of the Iraq administration, is disposed to relieve the Iraqis of the necessity of accepting next year full military and financial responsibility and to accord them a further period within which to consolidate still more thoroughly the young State, which under King Faisal's leadership has already made such striking progress.

The Egyptian Parliament at Work.

Following upon the significant welcome accorded to King Fuad on his return to Egypt the Wafd has lost no time in waiting upon the King in deputation, and the meeting is reported to have given great satisfaction to both sides. King Fuad laid stress on his desire to serve the country within the limits imposed upon a constitutional Monarch and to work with any party that supports a constitutional régime. There was much in the Speech from the Throne that reflected the improved atmosphere in Egyptian politics, and the Wafd deputies will have been encouraged by the King's words to devote themselves with some confidence to the details of the full programme of legislation and of public works that the Speech outlined. In connexion with this programme mention was made of the Nag Hamadi Barrage, the completion of which is promised within three years; the Gebel Aulia Dam, in regard to which, as well as in regard to the heightening of the Assuan Dam, a decision is to be reached this year; an electric power station at the Assuan Dam; the development of railways, telephones and telegraphs, and of inland navigation; the improvement of agricultural roads; the completion of the extensions of the Port of Suez and the inauguration of similar works at Alexandria. Parliament will also be called upon to sanction expenditure for the extension of education and for considerable judicial reform. Even from this abbreviated summary it is evident that the Legislative Assembly will have its work cut out for it during the present session in regard to matters of practical administration.

The Italo-Albanian Alliance.

The desire of the Yugoslav Government to protest to the League of Nations against the Treaty of Alliance between Italy and Albania, on the ground that it is not in conformity with the spirit of the Covenant of the League, may be technically correct, but is in the nature of an attempt to shut the stable-door after the horse has been stolen. Whether the Treaty is accepted by the League or not, the understanding between Italy and the Albania of Ahmed Bey Zogu holds good and will not be affected by negative action on the part of Yugoslavia. There will be more wisdom in the adoption of a policy that will render any further extension of Italian influence in the Balkan Peninsula impossible. Late in the day the Yugoslav Press appears to have discovered this elementary fact and has begun to talk about the joint opposition of all free Balkan States and peoples against encroachment upon Balkan independence. So far, however, Balkan independence has been used by the Yugoslavs very largely to prevent any joint action between themselves and the Greeks and Bulgarians. The Italo-Albanian Alliance may yet prove a small price for the Peninsula to pay, if it is the means of putting an end to harsh and domineering action on the part of some States towards others. Their common interests, now brought into strong relief by Italy's successful efforts to detach Albania, require a much more charitable view towards mutual failings. Only last week the Yugoslav Foreign Minister informed the Skupshtina that the time was not ripe for a Balkan Locarno. The truth is that such a pact is long overdue, but that the misguided policy of certain States has hitherto made it impossible. Yugoslavia's position calls for a policy of *noblesse oblige*. If the Belgrade Government will now take its stand on the doctrine that a Balkan Locarno must be brought into being, and that by its own action, without any loss of time, perhaps it will find such an agreement easier of attainment than it had anticipated.

Death of M. Bratianu.

The tragedy of the suddenness of M. Ion Bratianu's death is enhanced by the fierceness of the political storm in the midst of which he has passed away. For a moment the voice of controversy in Roumania will be hushed, and the late Prime Minister can be recalled as one of the chief artificers of Greater Roumania, an outstanding leader, an ardent patriot and a friend, of unswerving loyalty, of the Royal House. His later work has been interrupted before the evidence on which a sound judgment as to its

real value to the country can be based is complete. With a rigid outlook on home, as well as on foreign affairs he appears to have combined a conviction that Roumania still needed to be driven rather than to be led. How far in these latter years his vision was clouded by uncertainty regarding the Dynasty owing to the failure of the Crown Prince to live up to his responsibilities will never be known. With his brother, M. Vintila Bratianu, he was responsible for a far-reaching system of industrialisation, which may have been sound in principle, but in practice proved to have retained in the hands of his own political party more ropes than it was in the interests of Roumania to concentrate at a single point. Government support for industry under such conditions meant the application of State resources for the benefit of his own followers, and no leader's personality could be strong enough to enable him to escape the charges that the policy evoked. It was unfortunate that M. Bratianu's inflexibility rendered him a difficult colleague in any international gathering. He was unable to adapt his views to the wider purposes of the Allied Governments with which he was associated at the Peace Conference, and he allowed, it is to be feared, his dissatisfaction with the imposition of the Minority clauses on Roumania to commit the country to a policy that sought to challenge Roumania's dependence on foreign help in any direction. This policy was based on a definite economic theory, however mistaken under the actual conditions in the country, and no one imputed self-interest to the responsible head of the Liberal Party.

A Bratianu a Bratianu Succeeds.

To the post of Prime Minister left vacant by the death of M. Ion Bratianu the Roumanian Regency has appointed his brother, M. Vintila Bratianu, Minister of Finance. It is satisfactory to find that the country's undoubted loss in the death of its leading statesman has given pause to the political controversies that have been raging for the last few months. Negotiations between the Government and the leaders of the Opposition are taking place, and it is possible that the advantage which the acquittal of Prince Carol's agent gave the latter may induce a wiser attitude on all sides. The National-Peasant Party can have no wish to be identified with a policy of recalling Prince Carol to take his place either on the Throne or in the Regency. It was genuinely concerned over what is regarded as M. Ion Bratianu's dictatorial tendencies and has more or less committed itself to withhold formal acceptance of the *status quo* on the ground of the alleged flagrant abuses which marked the conduct of the last elections. M. Bratianu's death opens the door to a compromise. The Government would be manifestly relieved, if it could satisfy itself that there was no chance of any serious movement to reopen the dynastic question. It has a good case against new elections at this particular moment; but it could with safety promise a fresh appeal to the electorate in six months' time. To ensure a free election it seems essential that a Coalition Government should be in power, and possibly the existing electoral law should be modified. Personal bitterness will have been tempered by the passing of M. Ion Bratianu, and both M. Vintila Bratianu and Dr. Maniu have an opportunity of showing an equal concern in the interests of the country by coming to an amicable arrangement for the introduction of a Coalition Ministry as soon as the Budget has been passed through Parliament.

The Wahhabis and Iraq.

The more one looks at the position on the frontier of Iraq and Najd, at least as it is telegraphed from Iraq, the more difficult it is to understand. As we recorded last week, Shaikh Mazid raided the post at Busiyah, nominally as a protest against the action of the Iraq Government in constructing a police post within what was considered by the Wahhabis as neutral territory. In effect, that protest was made against the action of the British, who, of course, advised the Baghdad Government in this matter. But with that form of protest the

THE ITALO-ALBANIAN TREATY OF ALLIANCE.

With the conclusion on November 22 at Tirana of a Treaty of Defensive Alliance between Italy and Albania the wheel of treaty-making, so misguidedly started by the Little Entente, has come full circle. By linking themselves with Czechoslovakia in the belief that an exiguous Hungary was capable of activities more dangerous than social agitation, Roumania and Yugoslavia allowed themselves to be drawn into the vortex of European politics to the neglect of their more immediate Balkan interests. Since that time the rivalry of France and Italy has loomed large on the Balkan horizon, and the two Great Powers have schemed hard to stake out claims in the Peninsula. The crux of the situation has been the Italian desire to prevent Albania from lending herself to any grouping of States that might utilise her coastline for hostile operations against Italy. Instead of devoting every effort to make a friend of Albania, successive Yugoslav Governments have contrived to throw that country more and more into the arms of Italy. Economic penetration—difficult for Yugoslavia in the financial circumstances in which she has been placed to counteract—proceeded apace, to be followed in November, 1926, by an Italo-Albanian Treaty of Friendship and Arbitration, which pledged the two countries to mutual support and cordial co-operation in the event of any disturbance directed against the political, juridical and territorial *status quo* of Albania. In spite of the warning that this agreement provided, Yugoslavia pursued her aggressive policy towards Albania and allowed the incident of a dragoon's arrest to run a course which could only further antagonise Albanian opinion. The logical sequence of her mistaken attitude towards Albania has been reached in the new Treaty of Tirana. By this agreement Italy and Albania conclude a defensive alliance for twenty years, subject to renewal in the event of its not being denounced in the eighteenth or nineteenth year. They pledge themselves each to protect the interests of the other with a zeal equal to that shown in the protection of its own; their mutual efforts are to be directed towards the maintenance of peace and tranquillity; they undertake to employ all the means in their power to guarantee each other's security and to defend each other from external aggression. In the event of either being threatened with a war of aggression the other party shall use all possible means to prevent hostilities and to secure just satisfaction for the menaced party; and, if the efforts to maintain peace fail, each party is bound to provide the other with whatever military, financial or other assistance may be requested. Finally, it is arranged by an exchange of letters that, for the more effective use of this military co-operation, the command of the allied forces in the event of war shall be confided to the commander-in-chief of the country attacked.

The significance of this Treaty is unmistakable. It follows hard on the signing of the Franco-Yugoslav Treaty and for the moment in any case definitely entrenches Italy and France in hostile camps in the Balkans. The Treaty between France and Yugoslavia

entailed for both countries a minimum of commitment; but it was hailed by Yugoslavs as a valuable asset in regard to their strained relations with Italy. The latter has lost no time in countering the unwise complacency with which the policy of identifying Yugoslavia with France's European designs was received in Belgrade. Any quarrel between France and Italy is of far less importance to Yugoslavia than the maintenance of good relations with Albania. Yet, instead of concentrating all its attention on promoting an understanding with the Albanians, the Belgrade Government preferred to take advantage of Franco-Italian estrangement to obtain little more than the empty parade of Yugoslav friendship with and economic indebtedness to France. With far more statesmanship Italy has followed up her Pact of a year ago by a military alliance with Albania, which must inevitably have the effect of weakening Yugoslavia in any attempt to bring about an understanding with Italy on a basis that will give some satisfaction to Yugoslav claims. With a more discreet policy towards Albania, it would have been possible for the Belgrade Government to have influenced a more marked tendency towards conciliatoriness on Italy's part from fear of a Yugoslav-Albanian pact that left the Adriatic question an open matter.

Although the policy of hostile camps in Europe, to which France and Italy are so light-heartedly lending themselves, increases the ultimate danger of war, there is no reason to regard the Treaty between Italy and Albania as any immediate menace to the peace of Europe. It may, indeed, work in the opposite direction, as, however much it may exasperate the Yugoslavs, it imposes upon them the necessity of taking stock of the new situation that the Treaty creates. We prefer to give both the Italian and the Yugoslav Governments, as well as Albania, credit for desiring peace; where they part company is as to the means by which security for the maintenance of peace is to be obtained. The more genuinely Yugoslavia feared Italian designs on the Balkans the greater the necessity imposed on her statesmen to prevent Albania from falling into the arms of Italy during the period when the Yugoslav army was being reorganised and re-armed. Now that the opportunity of reserving Albania solely for Balkan ends has been thrown away by Belgrade Governments, the only sound policy is to avoid complications with Italy, to give her credit for peaceful intentions in the Balkan Peninsula, and to make sure that the methods that have been employed in regard to Albania are not adopted in any other direction either by Yugoslavia or by Italy. It requires little foresight to realise that, unless the Belgrade Government modifies its policy towards Greece and Bulgaria, both these countries may be compelled to seek in some measure, if not in identically the same way, the protection that Albania has obtained by her latest Treaty. There has undoubtedly been an improvement in Yugoslavia's foreign relations; but the Yugoslav Government, as far as can be judged by M. Marinkovitch's first speech to the Skupshtina since he assumed control of the Ministry for Foreign Affairs, is still far from adopting a policy of constructive friendliness. The remarks addressed to Greece and Bulgaria may be correct in substance, but they are calculated to give more satisfaction in Italy than in either of the two countries concerned. This can hardly have been the Foreign Minister's intention. The fault lies with the Belgrade tradition that reckes little of the *suaviter in modo*. Bluster and dragooning, however, have failed conspicuously in the case of Albania, and in the interests of the future development of the Balkan Peninsula it is to be hoped that, before it is too late, other tactics will be employed by Yugoslavia to bring about a better understanding in the Balkans. It will prove of comparatively little moment that Albania under Ahmed Bey Zogu should have opted herself out of such an understanding. When the four other countries have arrived at a political and economic federation, Albania will, doubtless, find a way of proving her loyalty to the Balkan cause, which is now subordinated to fear of Yugoslavia.

The Near and Middle East

From Our Own Correspondents.

Jerusalem, November 19.

A Museum at Last.

The gift by Mr. John D. Rockefeller, Jr., of two million dollars for building an archaeological museum in Jerusalem ranks as by far the most notable piece of news that Palestine has had to report for many years. The cynic might even say that it is the only event since the Occupation against which not a single community, in our Palestinian mosaic of conflicting interests, has found reasons for lodging a formal protest.

Palestine, of course, badly needs such a museum though, but for such a windfall as the present, there seemed not the remotest hope of its ever getting one. The Department of Antiquities has for years had to struggle along with a perfectly ludicrously tiny budget; its energies and aspirations have from the beginning been confined to the most meagre administrative detail; and for obvious reasons it failed to retain the services of an archaeologist of such eminence as Professor Garstang. Equally lamentable, though not so notorious, was the Government's failure to retain the services of Mr. W. J. Phythian-Adams, who resigned some three years ago and who was responsible for creating the existing Palestine Museum of Antiquities, a masterpiece in miniature, although it has to be housed in a dark room in a hired house.

The new museum, however, should have every chance. An admirable site has already been sequestered opposite Herod's Gate, known as Karm ash-Shaikh, an unspoiled quarter of the City; half of the gift is to be devoted to building and preliminary equipment and the other half to maintenance; the Antiquities Ordinance provides that the Palestine Government shall have, if it chooses, its half share of all antiquities discovered and all unique objects; and the present staff, containing such authorities on Muslim art and antiquities as Mr. E. T. Richmond and Dr. L. A. Mayer, is assurance enough that the somewhat neglected page of Christian and Arab Palestinian archaeology will be adequately provided for.

A minor consequence will be a stimulus in the building trade and (what is really far from being a minor consequence in this country where some of the greater modern buildings simply sneeze at you with their grotesque outlandishness) a model will be provided of what a large-scale building true to its Palestinian setting ought to be. We are sure to get involved in the seemingly insoluble difficulty of Arab or Jewish labour. We can only hope that the Anglo-Arab-Jewish Commission just appointed to study the question of the wage-scale for local labour will have settled the problem in time.

The Zionist "Crisis."

The "crisis" in the local Zionist world shows signs of becoming less acute. Labour seems to be less distressed, and the problem of the Jewish schools is on the point of a settlement that will be satisfactory to all interests. The danger of having to close down certain schools and classes has passed with the offer of Palestine's great benefactor, Baron Edmond de Rothschild, to provide £15,000 towards the Zionist Education Budget on terms that are scarcely likely to be refused. He is reported to have expressed the wish that the traditional Jewish religious element should not be overlooked in the school curriculum, and that certain persons of whom he had knowledge should be on the educational Council. But, in actual fact, whatever is good in traditional Jewishness has never been ignored—to an outsider it seems rather to have been stressed—in Zionist education; the widespread suppositions to the contrary are based mainly on the hostile propaganda of a section among the ultra-Orthodox anti-Zionists who, themselves, emerged only a generation ago from the tradition which excluded most secular subjects from their schools.

Zionists and England.

Attention ought to be called to a new departure in the Hebrew literature of the "Jewish National Home." There has recently been published in Hebrew a carefully written volume entitled "The English Constitution." The author is Mr. S. Ussishkin, a son of the well-known Zionist leader. Very few of the Palestine Jewish community read English, and very few indeed have any knowledge of things English—history, constitution, literature, customs, or the general make-up of the English character. Hence these many tears shed periodically at the obtuseness, misunderstanding and (what is interpreted as) ill-will among their British administrators in Palestine, when a full half of the trouble lies with the failure of the Jews to comprehend the tradition of a government under which fate has thrown them. The fundamental grievance arises from the fact that the Jews think that their rulers have a predetermined policy which they pursue or ought to pursue with unwavering consistency to its logical conclusion; and they believe themselves to be suffering wrongfully in that they fail to find either the policy or the consistency which they consider should determine the acts of the holder of the Palestine Mandate.

This book by Mr. Ussishkin they have seized upon with avidity—there are no such slaves of the book as Jews—to learn how even without predetermined policy and with the supreme contempt for consistency the British State has muddled through to its ideal of constitutional and personal freedom. It is much to be desired that this will be only the first of a series touching upon English history, life, thought and literature; and that such a venture should be given all possible moral (and one even dare say, financial) encouragement. The exact moral responsibility of holding a Mandate is not definable; but it seems obvious that it should include the making accessible of as much of what is peculiarly English as the Mandated people care to learn. At present the Jews of Palestine find, more often than is really necessary, much in the mind of British officialdom that is simply incomprehensible and irritating.

TRANS-JORDAN.

Amman, November 16.

The Amir's K.C.M.G.

The Order of K.C.M.G. and appointment as Hon. Colonel of the Trans-Jordan Frontier Force were conferred on November 8 on the Amir Abdullah by Field-Marshal Lord Plumer, High Commissioner of Palestine and Trans-Jordan. The ceremony took place at the Aerodrome at Amman, and was concluded by a march past of Royal Air Force, Frontier Force and Arab

Legion. Crowds of *Badawi* and Arabs, who had come to their capital to see a spectacle that they hardly understood, added much to the picturesqueness of the scene.

The Earthquake.

The recent earthquake, which did so much damage in Palestine and Trans-Jordan, may be the source of much improvement in the towns. More than three hundred old houses, which had become unsafe, have been pulled down in Amman alone, and new ones are being built on more healthy sites on the hills. Roads are being made, and a purer water supply has been brought to the town by re-opening an old pipe line from Ras al Ain, the only good spring in the neighbourhood. The stream Zarka (the Jabbok of the Old Testament) which runs through Amman, though used as drinking water, is totally unfit for the purpose.

Historical Sites.

For the first time in history excavations are being made in the ancient Citadel of Amman, which is famous, among other things, for having been the scene of the death of Uriah, the Hittite. The work is being carried out by an Italian Archaeological Society, and will, no doubt, be of great interest.

Trans-Jordan has been greatly opened up, of late years, to tourists, and its antiquities, little known before the War, are becoming famous. There is hardly a village in Trans-Jordan which does not contain treasure for the archaeologist. The two best-known ruined cities, Jerash, which, like Amman, was one of the towns of the Decapolis, and Petra, are now quite accessible, as Messrs. Cook and Sons arrange parties to both places, and, during the tourist season, run a camp at Petra. Unfortunately, in summer the heat is too great to travel in comfort, and during the rains the roads are impassable, so that the season is confined to a few weeks before Christmas, and to March, April and the first part of May, when the rains have ceased and the summer heat has not begun.

General News.

Lieutenant-Colonel Peake, C.B.E., is acting as British Resident in the place of Lieutenant-Colonel Cox, D.S.O., who is at present in England on sick leave, following an operation.

Mr. Reading, O.B.E., Assistant British Resident, has left, in order to take up a new post in Palestine, and has been replaced by Mr. Kirkbride, who comes from the Secretariat in Jerusalem. Mr. Kirkbride has already an intimate knowledge of this country, having been here in the days of Colonel T. E. Lawrence.

A cloud-burst near the Jordan valley, in Palestine, has destroyed the road between Jerusalem and Jericho for a distance of more than a mile, with the result that all motor traffic between Palestine and Trans-Jordan is confined to the old, disused road through the Wadi Kelt.

Armistice Day was marked at the Royal Air Force camp by a Parade Service in the morning, and a most enjoyable dance at night. Lieutenant-Colonel Peake

gave a dinner and dance to the British residents of Trans-Jordan on the eve of Armistice Day.

It is hoped that an International Club, the first of its kind to be started in Trans-Jordan, will be opened in Amman during the course of this month.

CYPRUS.

Nicosia, November 14.

Cypriots Abroad.

The reply of the Colonial Secretary, Mr. Amery, to the despatch of the Governor, who transmitted for consideration a resolution of the elected members of the Legislative Council on behalf of Cypriots living in Egypt and elsewhere abroad, who seek to acquire British nationality, has been communicated to the members, and has been published in the Press. While the difficulties, chiefly due to recent legislation in Egypt (which requires that those in the position of Cypriots should acquire Egyptian nationality after a certain date) are recognised, it is still hoped that it will be found possible to reconsider the question, and to arrive at a solution favourable to Greek aspirations by means of some arrangement between the British and Egyptian Governments.

Sir Ronald Storrs and Egypt.

The Governor has received from the President of the Society of Greek Cypriots in Cairo (20,000 in number) a letter expressing their gratitude for all that he has done for Cyprus. In acknowledging it, through his Private Secretary, Sir Ronald states that he hopes to have the opportunity, in December, of expressing in person his appreciation of their goodwill.

Administrative Districts in Cyprus.

From time to time consideration has been given to the suggestion that the six administrative divisions into which the island is divided should be reduced to three, a Commandant of Police, in such case, acting as assistant to the District Commissioner in each division. The island would thus be grouped, as it is for electoral purposes (Legislative Council), by uniting Nicosia and Kyrenia, Larnaca and Famagusta, Limassol and Papho. It would appear that the proposal is now again under serious consideration. The Greek Press is strongly opposed to the scheme, the principal object of which is presumably economy. The Greeks are again urging that Cypriots should now become eligible for appointment as District Commissioners. The Commissionship of Kyrenia is now vacant by the retirement of Mr. McDonald, and the Press advocates the appointment of a Greek to the post.

The Leper Farm.

The lepers of Cyprus are cared for in a rural asylum near Nicosia. Their condition is receiving special attention. The Chief Medical Officer, Dr. Corsellis, is in communication with the Secretary of the Society in

London, who proposes to visit Cyprus, after a sojourn in Palestine. Lady Storrs is interesting herself in the welfare of the inmates, by a better provision of books and amusements, and in other ways. The Governor is consulting an expert of the Colonial Office, Dr. Horn, now in Cyprus. There will no doubt be a favourable outcome for increasing the comfort of the sufferers from this terrible malady, now happily on the decrease in the island.

Memorial to Kiamil Pasha.

On November 4 the Governor unveiled a memorial to the late Kiamil Pasha, Grand Vizier and staunch friend of Britain, who was a Cypriot and who died while on a visit to his native island. The ceremony took place in the Turkish cemetery of Arab Ahmet. Sir Ronald was accompanied by the Chief Kadi, the Turkish Delegate of Evkaf, Munir Bey, M.L.C., and other leading Turks.

General News.

The now annual exhibition organised by Dr. Unwin, Principal Forest officer, has been a very successful one, and was largely attended.

reception in the great tent. It was an inspiration to which the people responded as one man. Never have I witnessed such a scene as then ensued.

The King took up a position in the middle of the tent with the Princes, headed by Prince Omar Tussoun, at his back, and Tewfik Pasha Nessim to his right. In front were Ahmed Bey Hassanein and Ingram Bey to introduce those who wanted to salute the King. But their efforts to control proved powerless to stop the rush that was made as soon as it became known that the King was receiving the guests. A dozen or so soldiers had quickly to be requisitioned to try by joining hands to keep some space clear in the royal presence. Their work was similarly difficult. Beturbaned and grizzled-haired notables from the villages pushed and elbowed and fought their way through the crowd and argued and wrestled on the threshold of the reception circle just like schoolboys or street-urchins. But they were no worse than well-dressed gentlemen from the towns. It would have been an unseemly scene had it not been for the fact that it was prompted by the eagerness to reach the Royal presence and the excitement of the prospect of shaking hands with the Sovereign. And His Majesty and his household fully appreciated this fact, for throughout their faces were wreathed in smiles, and from time to time they could not help bursting into laughter at the humorous spectacle which presented itself to them. The reception lasted a full hour, and, since those present came from all parts of the country, it can be said without fear of contradiction that that hour did more good to the Royal cause than any amount of official ceremonies or visits or receptions in more formal circumstances.

In the evening the King was the guest of honour at a banquet given by the Municipality. This was the first time that His Majesty has accepted a meal outside from any public body, and the gesture was fully appreciated by the city. The banquet was a wonderful affair given in the Council chamber. What made it all the more remarkable was that there are, of course, no culinary

Cairo, November 19.

Official Ceremonies.

After a long period of inactivity we have this week had more than our fill of official ceremonies, starting with the arrival of the King at Alexandria on Monday and ending on Thursday with the opening of Parliament. They have been four days replete with interest.

The festivities organised in honour of the return of King Fuad proved in every respect a fitting conclusion to the round of visits which His Majesty paid to the European capitals this summer. There had been some anxiety in regard to the nature of his reception here and in Alexandria owing to the campaign carried on by the Wafd Press against any special celebration on the ground that the country was still in mourning for Saad Zaghloul Pasha and to the efforts made by leading members of the Wafd to prevent the notables from participating. But almost from the moment His Majesty set foot on Egyptian soil at Ras El Tin it was clear that these manœuvres had been unavailing and that the people were determined to demonstrate both their pleasure at their Sovereign's return and their appreciation of the success of his tour and the attention paid to him wherever he went in Europe.

It was a wonderful gathering that had assembled in the grounds of the Palace adjoining the quay. Every element in the population was represented there, from every part of the country, and in large numbers too. It is always difficult to count a crowd and various estimates have been made, which it is not possible to check. But it would be on the safe side if I say that over three thousand people were within the Palace precincts when King Fuad arrived. Indeed, so struck was the King by this unexpected demonstration of interest that he spontaneously altered his programme, which had been to walk through the gathering straight from the landing stage to the Palace and hold no reception, and decided to circulate among those gathered there and hold an informal

arrangements in what is a purely business building, nor any facilities for manipulating a large number of waiters as are required for an event of this nature. Yet everything went without a hitch. A very fine menu had been prepared. It was served piping hot in record time, and everyone, from the King downwards, seemed to be thoroughly enjoying themselves. The greatest praise is due to M. Bolliger, the manager of San Stefano, not only for the admirable manner in which the banquet was served, but also for the artistic decoration of the Council chamber and the entrance to the building, which completely transformed them into a bower of flowers, as well as for the decorations at Ras El Tin's landing stage.

The next afternoon the King attended a tea party in the Antoniadès Gardens organised by a committee of notables, presided over by Prince Omar Tussoon and Emin Yehia Pasha. It was a glorious afternoon, and again the ceremony proved a great success. Both on the evening of the King's arrival and the following night Alexandria was illuminated. The city was one blaze of light, and the streets leading from the Municipality to Ras El Tin presented the appearance of an avenue covered by a network of fairy-lights broken here and there by an illuminated crown above the centre of the roadway or by a triumphal arch. Altogether the reception of the King in Alexandria was a triumph in organisation and the heartiest congratulations are due to the committee concerned and especially to the Governor, Hussein Pasha Sabri, and the Director General of the Municipality, Ahmed Bey Saddik, on whom the main responsibility lay and to whom the main inspiration was due.

From Alexandria to Cairo.

On the occasion of his departure for Cairo the King took the opportunity of officially inaugurating the new station terminus, where he had a great reception. All the way up to Cairo the ovations continued, the *fallahin* congregating along the line to greet the royal train as it passed. There was a great gathering at the station, including Sarwat Pasha, who had arrived about an hour before from Port Said where he had landed that morning from the P. and O. Rasmak, and the King shook hands with practically everyone. Along the route to Abdin, which had been well decorated, there was a vast concourse of people who gave him a great ovation as he passed. In the evening a committee of notables had arranged a reception in a tent at Gezira which was attended by Lord Lloyd, who had arrived from England that afternoon and had been very warmly received at the station

and as he drove to the Residency. His Majesty drove over from Abdin for the occasion, listened to speeches of welcome, watched some fine fireworks and returned to Abdin to witness a torchlight tattoo by his bodyguard, being accorded a splendid ovation both going and coming. In the evening the city was illuminated and presented a wonderful spectacle. It is difficult, owing to the different conditions in the two cities, to compare—and in fact on such occasions comparisons are odious—but the Cairo illumination was certainly in every respect worthy of the great occasion.

The Opening of Parliament.

Next day we had the opening of Parliament. For this the King, as usual, proceeded in state from Abdin Palace, Sarwat Pasha riding with him in the royal *calèche*. His Majesty was received with great applause all along the route, which was kept in remarkably good style, and the Speech from the Throne was exceedingly well received. There had been great speculation on what would be said about the London conversations, speculation which had been heightened by the speeches made by Mr. Baldwin and Sir Austen Chamberlain, and there seems little doubt that the good impression made by those speeches has been confirmed by the words which Sarwat Pasha put into the mouth of the King.

It was a long Speech, much longer than usual, but couched in language which revealed in every word the able brains and hands of Sarwat Pasha and his head of Contentieux, Abdel Hamid Bedawi Pasha, and it is a tribute to their skill that no criticism has been heard of the references to what went on in London. On the contrary everyone, except, of course, the Nationalist Party, which will be satisfied with nothing short of immediate evacuation, seems very pleased with what they have been told, and it is noteworthy that, while the first two-thirds of the Speech were listened to amid a stony silence, loud applause greeted the reference to the reception which the King had had in Europe, applause which was continued throughout the subsequent references to the results of the London conversations and reached its climax when the final statement was made with regard to the favourable attitude of the Powers towards the reform of the Capitulatory régime.

ROUMANIA.

Bucharest, November 22.

The Political Situation.

The political situation has been considerably disturbed ever since the arrest of M. Manolescu by the Government on a charge of fostering conspiracy and carrying seditious letters from Prince Carol to the leaders of the Opposition parties in this country. After a trial, at which he was eloquently defended by General Averescu and M. Yorga among others, M. Manolescu was acquitted, but a feeling of deep indignation has been awakened in the hearts of the whole of the Opposition, and the arbitrary action of the Government appears to have had the effect of uniting the various factions of the Opposition as nothing has even done before. A great congress of M. Maniu's party (Transylvanian Nationalists) was called to meet at Alba Julia towards the end of this month. The Government forbade this congress. Thereupon a meeting was called in a large hall in Bucharest for a date last week. This also was prohibited by the authorities. The result is that the Nationalists have publicly declared that they will hold their meeting in Alba Julia in spite of the prohibition of the Government. It looks, therefore, as if there were trouble ahead and there appears to be a very general conviction that the Liberal Government is in a very insecure position, and may be tottering to a fall. It is, however, impossible to make any predictions at this stage, as the Liberals have a very strong organisation and will be hard to overthrow, now they are established in power, especially by an Opposition which has less experience and less money at its disposal, to say nothing

of other disabilities which may be rather to their credit than otherwise.

Should the fall of the Liberals be brought about there is little doubt that the Nationalists will come into power, with M. Maniu at their head. He is a man who enjoys universal respect, for the integrity of his character and of his political dealings.

PETRA IN WATER-COLOUR.

It is in no way derogatory to the art of Mrs. P. A. F. Stephenson, who is until December 6 exhibiting water-colours of the Holy Land, Transjordan, and Hong Kong, at the Alpine Club Gallery, Mill Street, Conduit Street, W.1., to say that the *clou* of the show is unquestionably the section devoted to Petra. Petra is known to lovers of the picturesque chiefly, perhaps, through the lines of Dean Burgon, who, incidentally never visited it, but who wrote of it, nearly a hundred years ago, as "a rose-red city, half as old as Time." It has, of course, been extensively photographed, both from the ground and from the air; but no artist has before set to work upon it with the success which has attended Mrs. Stephenson's four days' efforts. She went to Petra alone, perhaps the best way in which to allow the magnificence of the place to soak in. Incidentally, she upholds the theory that the colour given out by the rocks in the sun's setting light is, in strict accuracy, "rose-red," a description which by some observers is held to err.

However that may be, her representations of Petra are without doubt very beautiful. The two that are possibly the best, alike in visualisation and in poetry, have already been purchased, it is understood, by Sir Alexander Kennedy, our first authority on Petra: they are "The Treasure House of Pharaoh, Al Khazna," and "The Rose-Red City." Another sketch that is extremely attractive is that of "The Colombrarium," which the Arabs think was used as a shop, and other observers imagine was a receptacle for ashes: in which suppositions both are probably wrong. In a sketch of "The Palace of Pharaoh's Daughter" can be seen the tent in which the artist actually slept for four nights.

For an artist who feels intensely the historical significance as well as the natural beauty of Palestine and Transjordan, it was inevitable that the fineness of Amman would appeal. The Roman Amphitheatre at the Amir Abdullah's capital was, of course, an inevitable prey; but perhaps even more satisfactory is a delightful sketch of the little river flowing through the town. Mrs. Stephenson, with Biblical zest and poetic aptitude, calls it "The City of Waters."

Of the water-colours of Palestine itself it is not easy to say anything new, at least to those who are aware of the artist's attained mastery in the representation of the glories of the Holy Land, whether natural or man-made. To pick out but a few which illustrate her comprehensive skill, whether in architecture, or Nature, or colour, we would mention, "The Kilns of the Pro-Jerusalem Pottery," "The Land shall yield her increase," "Threshing Floor at Bethsaida," "On the North Shore of the Dead Sea," "The Great Mohammedan Festival at Nebi Musa," "The Galilee Skull," and "The Site of the House of Caiaphas." Certainly this is an exhibition to which everyone who knows Palestine and Transjordan, either through personal visit or through the printed word, should attempt to go. It may be mentioned, by the way, that Her Majesty the Queen inspected these water-colours last week.

M. Régner, President of the Greco-Bulgarian Mixed Commission for voluntary emigration, will refer to the juridical section of the League at Geneva the question of the interpretation of the word *communauté*, as a dispute has arisen owing to uncertainty as to its meaning in connexion with the liquidation of ecclesiastical and scholastic property in Macedonia, against which the Macedonian refugees protest.

ITALY AND ALBANIA.

A Treaty of Defensive Alliance was signed between Italy and Albania on November 22. This Treaty will be registered with the League of Nations.

The Treaty was signed by Ilias Bey Vrioni, Albanian Minister for Foreign Affairs, on behalf of Albania, and Signor Ugo Sola, Italian Minister at Tirana, on behalf of Italy. It bears a preamble worded as follows:—

Italy and Albania, wishing solemnly to reaffirm and develop the bonds of solidarity which happily exist between the two States and to devote all their efforts to the elimination of causes which might disturb the peace between them mutually and with other States, recognising the advantages that may result from close collaboration between the two States and once more affirming that the interest and security of the one are reciprocally bound up with the interest and security of the other, have resolved to covenant by this Treaty a defensive alliance of which the sole object is to stabilise the natural relations happily existing between the two States with a view to ensuring a policy of peaceful development.

The terms of the Treaty are as follows:—

Article 1.—All former Treaties between the high contracting parties after the admission of Albania into the League of Nations shall be fully and faithfully observed in accordance with the terms of the said Treaties in such a manner as to assure complete amity between the two peoples and Governments. Each of the high contracting parties shall support the interests of the other with the same zeal as each supports its own.

Article 2.—There shall be a defensive alliance between Italy and Albania for twenty years. This alliance may, however, be denounced during the eighteenth or nineteenth year of its life. Unless this be done the alliance shall be automatically renewed for a further period of the same length. The two high contracting parties shall devote all their energies to guarantee the security of their States and to mutual defence against any attack from abroad.

Article 3.—In consequence of the engagements undertaken in the preceding articles the high contracting parties undertake to work together for the maintenance of peace. In the event of one of the two parties being threatened by a war not provoked by it the other party shall use all means at its disposal not only to prevent hostilities, but also to secure just satisfaction to the threatened party.

Article 4.—When all efforts at conciliation have failed, each of the high contracting parties undertakes to throw in its lot with the other and to put at the disposal of its ally all the military, financial, and other resources at its disposal if such aid is requested by the threatened party.

Article 5.—In all the eventualities foreseen by Article 4, the two high contracting parties undertake not to conclude nor to enter into negotiations for a peace, armistice, or truce without mutual agreement.

Article 6.—The present Treaty is signed in four original texts, two of which are in the Italian language and the other two in Albanian, all of which are equally authoritative.

Article 7.—The present Treaty shall be ratified and then registered with the League of Nations. Ratifications shall be exchanged in Rome.

Concluded at Tirana, the 22nd day of November, 1927.

(Signed) ILIAS VRIONI.
UGO SOLA.

As soil pollution contributes so largely to the propagation of bilharziosis, ankylostomiasis, typhoid, and other intestine-borne diseases, and the study of this subject is essential to the success of the campaign against these diseases, the Egyptian Government, according to *The Times*, has accepted the offer of the Rockefeller Foundation of the services of a sanitation engineer, whose salary and travelling expenses will be provided by the Foundation, to ascertain the best means of preventing soil-pollution and eventually to co-operate with the Egyptian Department of Public Health to devise measures to this effect. The Foundation will also provide £E2,000 in the first year to meet the cost of experiments.

THE LEBANON HOSPITAL near BEYROUT.

This Hospital, founded twenty-seven years ago, for the treatment of mental disorders among the poor of Syria, is still the only such hospital existing.

It is open to all, of whatever nationality or religion, and is unsectarian.

**FUNDS ARE URGENTLY NEEDED
for upkeep and for extension.**

Particulars will be gladly sent by the General Secretary Miss Hilda Fox, 139, Marylebone Road, London.

KING FAISAL IN LANCASHIRE.

It was a happy inspiration that prompted King Faisal's visit to Liverpool and Manchester last week. His Majesty has seized eagerly upon the potentialities of cotton-growing in Iraq and has given a lead to the country by cultivating the plant on his own estates. There is, however, much room for experimenting in the cultivation of cotton, and in these early years it is not to be expected that the industry should have reached any even approximately stereotyped stage. The King's presence served the double purpose of bringing Iraq more prominently before the cotton interests in Lancashire—already the relatively small consignments of Iraqi cotton are known for the high prices that they fetch—and of familiarising King Faisal and those who accompanied him with the intricacies of the industry, in regard to both cotton mills and cotton exchanges. That the King entered fully into all that he saw was shown in a practical way by his "deal" on the Liverpool Cotton Exchange, when he testified to his confidence in the market by refusing to realise the profit that he had already made before his tour of the building was completed.

For the rest, His Majesty was enthusiastic over everything that his hosts had selected to show him in the two or three crowded days that he was able to devote to the county. Naturally, the cotton industry loomed the most prominently; King Faisal inspected the different grades of cotton stored in the sheds, and followed the various processes of weaving, printing and so on. With the Liverpool Docks and Manchester Ship Canal he was particularly impressed, and repeatedly assured those with him that he could never forget his experiences during these days.

At Manchester King Faisal, who was accompanied by Muzahim Beg al Pachachi, Iraq Diplomatic Representative in London, Rustam Haidar Bey, and Major Tahsin Kadry Bey, was entertained at luncheon by the Lord Mayor in the Town Hall on November 23, and at dinner in the evening by the British Cotton Growing Association. At dinner the Chair was taken, in the absence of Lord Derby, by Alderman H. Astley-Bell, and among others present were: Captain W. C. Bacon, Sir Frederick Chance, Sir James Currie, Sir Thomas Filcroft, Hakim Bey, Sir Sydney Henn, M.P., Cecil Hilton, M.P., Sir William Himbury, William Howarth, J. Arthur Hutton, Sir William Milligan, M.D., Sir Christopher Needham, and Sir Edwin Stockton. In proposing the health of King Faisal the Chairman drew attention to the steady growth in the export of Iraq cotton, which had increased from sixty bales in 1921 to some three thousand in 1926. King Faisal, in his reply, referred to the help already given to Iraq by the British Cotton Growing Association. He added that his Government was doing all it could to promote the cultivation of cotton and was widening the scope of its activities by means of experimental farms. Attention was being paid to the extension of the education of the people in regard to the importance of the cotton-growing industry.

THE MOTOR ROUTE FROM INDIA.

Colonel T. Nisbet lectured to the Central Asian Society on November 23 upon "The Motor Route from India." General Sir George MacMunn presided over the lecture, which was delivered in the Royal United Service Institution.

Colonel Nisbet said that the whole motor journey from Duzdap (a train service between Quetta and Duzdap ran twice a week) could be accomplished without much hardship. He gave details upon the kind of car desirable, of money, of clothes, and so on. A fairly high-powered car was necessary; the trip would cost, roughly, about £100 per head; and the fewer clothes the better—a "plus-four" suit, and a dinner jacket for the society of Meshed, Teheran and Baghdad. The various stages—Duzdap, Bir-

jand, Meshed, Shahrud, Teheran, Khaniqin, Baghdad, Rutba, Damascus, Beyrout—were taken in detail, and lantern slides were shown illustrating the various kinds of road, from the nullahs between Duzdap and Shahrud, to the metalled road between Hamadan and Qasr-i-shirin, the different kinds of accommodation and of climate encountered. For each place, whether it were Teheran, where the caviare was good, or Beyrout, where it was advisable to lock up one's tool box, separate hints useful to the traveller were supplied.

In the subsequent discussion, Colonel Skelton protested that the lecturer had minimised his difficulties, but had abundantly brought out the value of Persia as a motoring country, in which an increasing number of British officials serving in the Middle East might spend their leave. But his estimate of motor travelling in Persia was—largely owing to the absurdly high price of petrol—about £30 a week.

The Chairman spoke of the orographical nature of Persia. All the mountain ranges ran from East to West; all the old roads, whether the Chinese silk trade route, or the Imperial route, ran in that direction. It was curious, therefore, that the Persian Government had recently decided to build a railway from north to south, in defiance of natural obstacles. But whatever were the cost and the fate of this Caspian-Persian Gulf Railway, it was certain that Persia would be increasingly opened to motor traffic. In this connexion, he mentioned that the price of petrol in Persia was bound to come down.

M. ION BRATIANU.

The death occurred last week of the Roumanian Prime Minister, M. Ion Bratianu. He was born in 1864, at Florica, the eldest son of Ion C. Bratianu, one of the founders of the modern Roumanian Kingdom. In 1895 he entered Parliament, and soon became prominent in political circles. When the Great War broke out, he was Prime Minister, and negotiated with the Allies and with Russia the terms on which Roumania might enter the War. The defeat of Roumania in the War and the conditions imposed by the Central Powers caused Bratianu to resign, but at the end of the War he was again called to office by King Ferdinand. He attended the Peace Conference at Paris, but on his failure to obtain all that he thought was the due of Roumania, resigned. In 1922, however, he again emerged, and since that date has been the ruling spirit in Roumania. Together with his brother, M. Vintila Bratianu, he governed the country in an increasingly arbitrary manner. His chief reforms were connected with the introduction of universal suffrage, the agrarian law dividing large estates among the peasants, and the so-called settlement of the Jewish question.

Bratianu's political career was one of continual advancement. In 1896 he was appointed Minister of Public Works in the Sturdza Cabinet, and five years later became the Minister for Foreign Affairs. In 1907 he was Minister of the Interior, and a year later became Prime Minister.

Criticism of the Bratianu régime was abundant in Roumania itself, and it was in recognition of this fact that in March, 1926, the two brothers resigned. It appeared, however, that there was no one else capable of assuming the direction of the State, and in June of this year he was recalled.

M. Bratianu's second wife was a sister of Prince Stirbey, the close friend of the Royal House.

As the outcome of a discussion of the Lotus affair (the arrest and imprisonment by the Turks of an officer of the French steamer *Lotus* following the sinking of a Turkish vessel in a collision), a general meeting of the French Union of Master Mariners engaged in long distance services has adopted a resolution making a fresh protest against the attitude of the Turkish Government, and instructing the Union's executive to take steps to get the question brought before the International Labour Office.

Book Reviews

THE PROBLEM OF ITALY.

"*THE MEDITERRANEAN AND ITS PROBLEMS.*" By E. W. Polson Newman. (London: A. M. Philpot, Ltd. 15s.)

Major Polson Newman has already made a name for himself as a painstaking and conscientious journalist; and, having written comprehensively upon the Middle East, he now turns his attention to the Mediterranean, which he is convinced "will be the political storm centre for the next few years."

This book is, however, an unsatisfactory contribution to what admittedly is a capital political problem. The author's main thesis, that Italy was unjustly treated in the distribution of territory consequent upon the Great War, and that her "teeming millions" must, willy-nilly, find some outlet—either peaceably or violently—may be sound enough. Nor can there be any quarrel with his statement that Great Britain stands pre-eminently in the rôle of possible solver of the difficulty. But he neither illustrates the questions fully, nor does he, when he stands, so to speak, next to the question, have the imagination to suggest a definite answer. To something positive or constructive the nearest that he gets is this:—

In an article recently published in the Press Lord Rothermere put forward the suggestion that the Palestine and Iraq Mandates should be handed over to Italy, and, although I do not agree in detail with such a proposal, I strongly support the principle on which it is based.

What this precisely means it is difficult to discover. Lord Rothermere's principle, if principle there were in his suggestions, is that it is counter to British interests to retain control over Palestine and Iraq. If one does not agree with his "details," how can one "support" his "principle"? And if Iraq and Palestine are not the countries to be yielded, which territories should be placed under Italian charge?

We are afraid that informed students of Eastern problems will find infrequent stimulus from these chapters, many of them being diffusely written and loosely connected. Some of them, or parts of them, were sound journalism at the time of their appearance in different periodicals, but their reproduction in the form of a volume is another matter. Abundant padding, in the shape of long quotations, is an irksome thing to find in a work of serious intention; and a certain amount of the material, e.g., on Egypt, is accessible elsewhere in more authoritative form. Nor can one well account for the very inadequate space given to Italian activities in such places as Albania (even though this be not Mediterranean) and the Dodecanese. For a book which deals primarily with the overseas problem of modern Italy, the omission of reference to the Dodecanese is remarkable; all the more so in that a totally superfluous and irrelevant chapter is devoted to "Glimpses of the Levant," which include, most notably, the island of Cyprus.

One's sense of disappointment in this book is not lessened by the inelastic style of its writing. Major Polson Newman would infinitely add to the interest of the facts which he prefers were he to tighten up his style. The number of times which such phrases as "I think," "I am inclined to think," "I am of opinion," "I am convinced," and so on, recur is lamentable.

But as we have said, the author is fair-minded and conscientious. He never becomes a partisan, and holds the scales evenly between the nations. This quality of his is particularly gratifying in his account of Franco-Italian relations. Another point which is certainly to his credit is, that, although he is a staunch advocate of a Turco-British *rapprochement*, he is under no illusions upon the deficiencies (and the consequent dangers to Turkey involved) of the Kemalist régime.

In fine, this book is like the curate's egg. We would suggest that, if the author intends to bring out another edition, he should omit some of the long quotations, par-

ticularly compressing the pages devoted to an exposition of Fascism, should omit the chapter on Cyprus, substituting for it one on the Dodecanese, and should furnish the book with an index. An even better step, and one more worthy of Major Polson Newman's knowledge, would be to suppress all second-hand information and to set out only original impressions and ideas.

ROUMANIA AND HER RULERS.

"*ROUMANIA AND HER RULERS.*" By Mrs. Philip Martineau. (London: Stanley Paul and Co., Ltd. 10s. 6d. net.)

As a friend of the Roumanian Royal Family, Mrs. Martineau has paid many visits to Roumania, where she has enjoyed the hospitality of the late King Ferdinand and of Queen Marie. Her love of flowers and devotion to gardening formed a close link between her and her Royal friends and led to her undertaking to reorganise in many particulars the grounds and gardens of the Royal Palaces at Sinaia and Cotroceni. In this book we have a series of intimate portraits of the different members of the Royal Family, for whom Mrs. Martineau soon acquired a deep affection. Queen Marie, as might be expected, occupies the centre of the stage, and there is little to challenge in the glowing homage that the author pays to a very striking and attractive personality. When it comes to matters on which Mrs. Martineau's generous sympathies have been stirred by one-sided accounts, her critical faculties are apt to lie dormant; but it is her informants who are speaking and their version is not without interest. Some references to Prince Carol throw light on the young man's wayward career.

In view of the title of the book it is perhaps unnecessary to follow Mrs. Martineau too closely when she wanders from her immediate subject. There are, however, several occasions on which the author leaves the reader guessing; for instance, as to the locality of that "paraffin wax, of which there is a great hill somewhere in Roumania"—possibly near where the oil refineries distil salt—or as to how, on a journey from Constantinople to Athens, she was fortunate enough to have "our voyage . . . very much shortened by passing through the Corinth Canal." A further statement in a reference to the Danube that Constantza is "the next town to Galatz" suggests a more comfortable night's sleep than the description of conditions on board lead one to suspect.

NOTES OF THE WEEK

(Continued from page 674.)

Akhwan are apparently not content. For it is reported from Basra that at a place called Bir as Safra, in Najd, Faisal ul Dawish is organising a force in order again to violate the frontier, that the Royal Air Force and Iraqi troops have prepared for such an emergency, and that, if the Wahhabis do venture on such a raid, the example made of them three years ago near Amman will be repeated. Incidentally, it may be remarked that, if there is one place in Arabia where the supremacy and efficiency of the Royal Air Force are demonstrable to the most sceptical, it is precisely in such a terrain as contains the Iraq-Najd frontier. But even more curious than this is the report that Hafidh Wahba, Adviser to King Ibn Saoud, has arrived in Kuwait to confer over frontier questions with Iraq. In this circumstance it was but natural that Air Vice-Marshal Sir Edward Ellington, who has been acting as High Commissioner, should have postponed the conference until it was seen what the *Akhwan* leader was going to do. It almost looks, from the arrival of Hafidh Wahba, as if the *Akhwan* were preparing to take action without the consent of their King. But rumours fly over the desert with incredible speed and in shapeless formation, and it is just possible that these organisations on the part of Shaikh Faisal are seated deeper in fear than in fact. If not, there will be serious complications, both for Najd itself, and for its relations with Iraq.

Zionist Industries and Syria.

The Zionists in Palestine have many points of complaints at the present time, some reasonable, others unreasonable. It is in the first category that their protest could be placed concerning the proposal to levy certain customs between Palestine and Syria, and as proof of this statement can be alleged the report from Jerusalem that the proposals have now been abandoned. Zionist manufacturers, it will be recalled, were aghast at the Government's proposals; and those of the less sentimental sort, notably from Tel Aviv (whence come the loudest of the Jews' complaints), actually suggested the necessity of transferring to Syria their enterprises. To young industries, they averred, the proposed tariffs would be fatal. Their protests, or rather that of Dr. Weizmann, leader of the Zionist Organisation, have now apparently had effect. This is certainly a feather in the cap of the Zionist leader, who was being increasingly accused by other Zionists of being subservient to the British Government. When in Palestine recently, he had an interview with the High Commissioner on the subject, and the abandonment of the proposals cannot but be due to his persuasiveness with Lord Plumer. Possibly the most interesting feature of the Zionist effort for Palestine at the moment is the division among the Zionists themselves—illustrated, as we mentioned in our issue of November 10, by some not too intelligent speeches at the Cleveland Conference of the United Palestine Appeal of America. It is to be hoped that the successful action of the Zionist leader will send up the stock of Dr. Weizmann among his own people, and that they will henceforth desist in the incompletely informed attacks which they are wont to make upon him.

NEWS IN BRIEF.

It is announced that Dr. Israel Wilfenson is to be appointed professor of Hebrew and Syrian to the Egyptian University.

Bulgaria will be represented at the coming Session of the Council of the League of Nations by M. Bouroff, Minister for Foreign Affairs, and Professor Molloff, Minister of Finance.

The Chamber of Shipping of the United Kingdom was last week advised by the Board of Trade that H.M. Consul-General at Bushire had stated that Basra had been declared free from cholera.

The sum of 14,000 dollars (about £2,750) was the winning bid made in New York on November 25 for a copy of Mr. Rudyard Kipling's "Smith, Administrator," published at Allahabad in 1891.

It is stated in Jerusalem that the recent proposals for establishing Customs barriers between Palestine and Syria calculated to affect several local manufacturing industries have now been abandoned.

M. Venizelos, who is convalescent after his recent attack of phlebitis, arrived in Athens on November 24 from Canea, Crete. He will remain in Athens for three weeks and then go to Italy for the winter.

Vicomte D'Aumale, who has been Secretary to the French Legation in Cairo for the last ten years, has been promoted to the rank of Counsellor of Legation. Vicomte D'Aumale is the doyen of the Legation Secretaries in Egypt.

In pursuance of their policy of rounding up all persons engaged in Communist activities, the Turkish police have arrested 22 men in Adana and eight more in Smyrna. They have all been brought to Constantinople for examination.

On November 19 a bomb exploded and wrecked a goods train near Alexandrovo, a station between Skoplye and Kumanovo, in Yugoslav Macedonia. There were no casualties, but two other bombs were found on the line. The affair was attributed to the Macedonian Revolutionary Organisation.

The Greek Archaeological Society, during its excavations on the site of the ancient Midea, in Argolis, about five miles from Tiryns, has found many Mycenaean relics, including 48 golden medallions forming a necklace or belt, some ivory vases, and a quantity of pottery.

Two of the *komitajis* arrested at Salonika in September owing to information given to the police have been sentenced to death. One of the men is reported to have confessed that their intention had been to blow up the Yugoslav Consulate, the exhibition, a bank, and other buildings.

A new railway which has been built between Levsky, in the district of Plevna and Lovetch, was opened on November 20. King Boris, who is a skilful engine-driver, drove the first train along the new line, and received an enthusiastic welcome from the crowds which had assembled at the stations.

Dr. Sidney Smith, the Egyptian Government's medico-legal expert, has accepted the Chair of Forensic Medicine at Edinburgh University. He leaves Egypt on March 31 next with a most distinguished record. He played many notable parts in the detection of criminals, not the least among them being his share in bringing to justice the murderers of the late Sirdar, Sir Lee Stack.

In order to celebrate the centenary of the foundation of the Kasr al Aini School of Medicine and Hospital, the Egyptian Government is about to invite foreign countries to send representatives to an international medical congress to be held in Cairo in December, 1928. The congress will study tropical diseases, sanitation in the tropics, and other branches of medicine, and there will also be an exhibition provided by the medical and chemical trades.

A new scheme has been organised under the direction of the Bishop of Egypt and the Sudan for the work of the Arabic branch of the Anglican Church in Egypt. It is announced that the object is to bridge the gulf between the English and the Arabic sections of the diocese, and to interest the former in active missionary work; and that it is believed that this will pave the way for the time when the Anglican Church in Egypt will have an Egyptian bishop.

SIR MALCOLM STEVENSON.

Sir Malcolm Stevenson, Governor of the Seychelles, died on November 27. Sir Malcolm entered the Ceylon Civil Service in 1901, and became Chief Assistant Colonial Secretary there fourteen years later. He afterwards served for seven years as High Commissioner or Governor of Cyprus, and he succeeded Sir Joseph Byrne at the Seychelles in August last. The K.C.M.G. was conferred on him in 1923. He leaves a widow, a daughter of the first Lord Chalmers, and a son and daughter. Sir Malcolm was the first Governor under the new régime of Cyprus as a Crown Colony.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of

74, Grosvenor Street, W.1.

 Kisley 6, 5688, of the Jewish Calendar.

Earl Cadogan is a passenger on the P. and O. s.s. Naldera to Port Said.

Lord Headley left London on November 25 in the Kaiser-i-Hind for Bombay.

Lady Maffey left London last week to join the Naldera at Marseilles for Port Sudan.

The Aga Khan left London on November 24 to join the s.s. Naldera at Marseilles for Bombay.

Lord Charles Cavendish left Tilbury on November 25 in the s.s. Kaiser-i-Hind for Bombay.

Mr. and the Hon. Mrs. Michael Buller left for Egypt on November 24 and will be abroad for a few months.

The Dowager Lady Buxton, who is on her way to Aden, left London on November 24 to join the s.s. Naldera at Marseilles.

Lady Constance Milnes Gaskell left London last week for The Residency, Cairo, and expects to proceed to India in January.

Mr. K. M. Pannikar left London last week to take up his appointment as secretary to the Maharajah of Kashmir.

Madame Yovanovitch, who recently met with a serious accident, is making satisfactory progress towards recovery.

Lady Constance Milnes Gaskell joined the s.s. Naldera at Marseilles last Thursday on her way to Cairo. She is proceeding to India.

Sir John and Lady Norton-Griffiths and Miss Phoebe Norton-Griffiths have left Marseilles in the Naldera for Colombo.

Prince Andrew of Greece visited the King and Queen at Buckingham Palace on November 23, and remained to luncheon.

The Countess of Ilchester leaves this week for India on a visit to her son-in-law and daughter, Captain and Lady Mary Herbert. She will be away until April.

Sir Laming Worthington-Evans, Bt., M.P., Lady Worthington-Evans, and Miss Worthington-Evans left 6, Eaton Place, on November 24 for India. They are expected to be away about three months.

Dr. Shaafat Ahmad Khan, who has been representing in this country his fellow Muslim members of the United Provinces Legislature, left London on November 24 for Venice, from where he sailed on November 26 for Bombay.

The Greek Minister left London on November 26 for Geneva to attend the meeting of the Council of the League of Nations. M. K. A. Collas is acting as Chargé d'Affaires during the Minister's absence.

Sir Henry Dobbs, High Commissioner and Commander-in-Chief, Iraq, who had the honour of being received by the King at Buckingham Palace on November 25, left London yesterday (Wednesday) on his return to Baghdad.

General Jaafar Pasha el Askeri, Prime Minister of Iraq, left London on November 27, on his way back to Baghdad. Among those at the station to see him off were Lieutenant-Colonel H. V. B. de Satge, representing the Colonial Office, and Muzahim Bey Pachachi, Diplomatic Agent of Iraq in London.

Brig.-General Sir Gilbert Clayton, K.C.M.G., K.B.E., C.B., former Chief Secretary to the Government of Palestine, was to address the Anglo-Palestinian Club last night on "The Yaman," at Swedenborg Hall, Hart Street, W.C.1. The Chair was to be taken by Mr. Nahum Sokolow.

King Faisal of Iraq honoured General the Right Hon. Sir John and Lady Maxwell with his company at luncheon on November 26 at 34, Belgrave Square. Those invited to meet his Majesty included Jaafar Pasha, Prime Minister of Iraq; the Earl and Countess of Cromer, the Earl and Countess of Northbrook, Lord and Lady Carson, Lord Frederick Hamilton, the Hon. Lady Bailey and Lady Weigall.

Sir Austen Chamberlain, Secretary of State for Foreign Affairs, entertained the King of Iraq at luncheon at Claridge's on November 28. Others present included:—Mr. Churchill, Earl Winterton, Brigadier-General Sir Samuel Wilson, Mr. L. Oliphant, Air Commodore C. L. N. Newall, Captain V. Holt, Lieutenant-Colonel H. V. B. de Satgé, Mr. J. H. Hall, Mr. H. T. Fass, Sir John Risley, Air Vice-Marshal Sir John Higgins, Rustem Bey Haidar, Major-General Sir Percy Cox, the Marquess of Salisbury, Muzahim Bey Al-Pachachi, Sir William Joynson-Hicks, Sir Henry Dobbs, Viscount Peel, Sir Philip Sassoon, Sir John Shuckburgh, Captain Euan Wallace, Mr. E. E. Beare, Lord Monteagle, Major Tahsin Kadry Bey, Air Marshal Sir John Salmond, the Hon. William Ormsby-Gore, Sir Samuel Hoare, and Mr. Raoul Dandurand.

The Skupshtina last week unanimously ratified the trade agreement with Great Britain.

The Council of the Royal Geographical Society, at their meeting yesterday afternoon, appointed Colonel Sir Charles Close to fill the office of President until the Anniversary general meeting in June next.

The King of Egypt has issued a Rescript expressing his appreciation of the loyal welcome accorded to him by the nation on his return from Europe and thanking the foreign communities in Egypt for their share in that welcome.

On November 20 the Bulgarian authorities carried out a house-to-house search in Kustendil, the capital of one of the frontier Departments which is under martial law. The town was entirely surrounded by troops. Many Macedonian refugees were arrested. This step was taken in order to rid the border of militant members of the Macedonian Revolutionary Organisation.

M. Kaphandaris on November 22 informed the Greek Chamber that, while the Budget authorised an expenditure equivalent to £24,000,000, he hoped that it would only amount to £22,927,000, against which the revenue promised to be £24,635,000. The reserves of foreign currencies now held by the Treasury amounted to £3,334,000, as compared with £914,000 when the dictatorship of General Pangalos was overthrown in August, 1926.

THE STATUTORY COMMISSION.

The unanimity with which both Houses of Parliament approved of the appointment of the Statutory Commission ought to have the effect of steadying public opinion in India. It is probably too much to expect the extreme section of the Nationalists to relinquish the boycott. But it is difficult to see how the moderate politicians who have threatened non-co-operation can persist in their resolve. For it must now be evident to them that no slight upon educated India could possibly have been intended by the Government. There might be ground for resentment on the part of India if there were any likelihood of Indian opinion not being fully considered. But far from this being the case it is manifest that every effort is to be made to enable the Indians to bring all their influence to bear. The Central Legislature, and each one of the Provincial Legislatures, will be invited to appoint a Committee; and the members of these several Committees will co-operate as colleagues with the Commission. They will not be asked to give evidence only. They will be in a position to discuss questions with the Commissioners, and to urge their own views. And, what is more, Indian opinion is to be again taken into account after the report of the Commission has been framed. For critics of the report will then be invited to sit with the Joint Committee of the two Houses of Parliament to develop any grievances or objections that they may wish to bring forward. This being the procedure to be followed, Lord Olivier was right when he pointed out in the House of Lords that the Indians will obtain more through the Commission than they can possibly secure after years of turmoil, by a boycott. Lord Olivier has never been other than sympathetic to the aspirations of educated India; and when he speaks in this way moderate Indians can scarcely continue to regard the Commission as a slight and an insult. Nor can the views of Lord Chelmsford be disregarded in India. For as one of the authors of the Reforms scheme he presumably knows what their intentions were. And he made it clear in the debate last week that he is deeply committed to the view that the inquiry should be undertaken through the medium of a Parliamentary Commission.

There would appear to be signs that the threatened boycott is by no means generally supported throughout India by the educated classes. The Muhammadans outside Bengal seem to be opposed to it; and we can hardly believe that any but the most extreme among the Hindus in any province can really favour it. As we remarked in a previous issue, the first announcement of the appointment of the Commission was made in such an unfortunate fashion as to be calculated to excite resentment. But there can be no question, after the debates in the two Houses of Parliament, that His Majesty's Government are animated in the steps which they have taken by a sincere and earnest wish to solve the Indian problem. Moreover, the Prime Minister made it abundantly clear that the Government welcome the help and co-operation of all classes of Indians. They earnestly desire, as he put it, that "the opinion of every man of good will,

Indian or British, who has anything to contribute to the very difficult problem of India's future shall be accessible to the Commission and be given the fullest weight in their conclusions." It would not be easy to frame a more comprehensive welcome; and we simply cannot believe that the Indian peoples will refuse to respond to it. But we agree with Sir Frank Nelson in holding that, however disastrous the consequences, the possibility of non-co-operation cannot, and should not be ignored. The next step is for the Commission to begin its investigation; and this step will presumably be taken without delay. There is a wide field to cover, with numerous intricate and, to the Commissioners, unfamiliar problems to examine and, if possible, to resolve. The ground has been already traversed to some extent by the Reforms Inquiry Committee which was appointed by the Government of India in 1924. Unfortunately, however, the Inquiry Committee issued a majority report and a minority report, its members failing to arrive at unanimous conclusions. This detracted from the value of the recommendations made; and moreover the Committee was precluded, by its terms of reference, from recommending any remedial measures inconsistent with the structure, policy and purpose of the Government of India Act. No such restriction is of course laid on the Statutory Commission, its terms of reference being defined in the Act itself. They were discussed, it will be remembered, in recent issues of this journal by Sir Phiroze Sethna. They require the Commission to investigate "the working of the system of government, the growth of education, and the development of representative institutions in British India and matters connected therewith." Further, the Commission is required to "report as to whether and to what extent it is desirable to establish the principles of representative government or to extend, modify, or restrict the degree of responsible government then existing therein including the question of whether the establishment of second Chambers in the local legislatures is or is not desirable."

The difficulties arising from, and the defects inherent in, the working of the scheme of responsible government introduced by the Reforms are discussed in the Majority and Minority Reports of the Inquiry Committee. The Majority Report in particular formulates numerous recommendations having for their object the removal of such of these defects and difficulties as were within the scope of the terms of reference. It also goes further and specifies several other difficulties for which it prescribes no remedies. The Statutory Commission will doubtless deal with these. Finance is one of the chief of them. No doubt the financial situation has greatly improved since the Majority Report was written. But it is hardly likely that the question of revising the Meston Settlement will not be raised. The electorate is another difficulty which will have to be faced. The want of education and political training on the part of the electors is unquestionably a great difficulty in the way of constitutional advance. Then there is the question of the unwieldy and heterogeneous character of certain of the provinces to be considered. And last, but not least, there is the difficulty of working the Constitution because of the existence of religious and

communal differences. All these problems, and many more in addition, will have to be exhaustively examined and considered by the Commission before it can come to a conclusion on the question of the extent to which it may be desirable "to extend, modify or restrict the degree of responsible government" which now exists in India.

CURRENT TOPICS.

The Secretary of War's Visit.

The postponement of the Secretary of State for War's visit to India has not proved of long duration. Sir Laming Worthington-Evans, who was accompanied by Lady Worthington-Evans, Miss Worthington-Evans, Major Ropner, M.P., and Major-General J. R. E. Charles, of the Indian General Staff, left London last week on the first stage of his long journey. From Bombay the party will proceed, via Karachi, to Quetta, where a halt of several days will be made. Afterwards Darya Khan, Dera Ismail Khan, Rajmak, Kohat, Peshawar will be visited and Christmas will be spent at Calcutta, thereby following the example of the Viceroy and the members of the Executive Council whose tour arrangements invariably include a visit to probably the most attractive Presidency town at that season of the year. In January Sir Laming will proceed to Delhi, and after a stay of eight days at the capital will return to Bombay via Rawal Pindi and Lahore. Leaving Bombay again on January 28, he will arrive in London in the middle of February. Meanwhile, although, as Sir Frank Nelson pointed out in last week's issue, the visit is in no sense an official inspection of the British troops in that country, recent events in Arabia, Afghanistan, China, Java and Sumatra show that Russian policy is still directed towards the "encirclement" of India. The circle is nearly complete. Russia is making arrangements for a large fleet to establish "commercial" intercourse with the Arabian coast. The Afghan air force, admirably equipped and staffed, is largely under Russian direction. The plans in China have to some extent misfired, but Java and Sumatra are known to be seething with sedition inspired by "Red" agents. On the Burmese frontier and in French Indo-China the Soviet emissaries have shown increasing activity, and cases are multiplying of arms and ammunition traceable to Soviet sources which have "infiltrated" into these provinces. Soviet activity has also increased in Persia, Teheran being an excellent distributing centre for propaganda. In India itself there has been a fresh outbreak of the revolutionary movement, conducted, indirectly at any rate, under Russian auspices. Great Britain is still the only barrier to the schemes and the Soviet International has made no secret of its campaign to undermine our Asiatic possessions as a prelude to the overthrow of the British Empire itself. India, and the North West Frontier in particular, as the Maharajah of Burdwan rightly observed, at the Nelson Day Dinner, is the pivot on which the Russian menace turns and it is there that British statesmen must concentrate their attention, if the myth which has become an ugly reality is squarely to be faced.

"Mother India."

We are glad to see that Lord Birkenhead took the opportunity afforded by last Thursday's debate categorically to repudiate the statement in the House of Commons last week that "Mother India" had been inspired either by the Government of India or by the Government at home. He would not, he said, have dealt with the matter if he had not been so struck by the complete irresponsibility which would enable a member of the House of Commons to make a statement so completely false without a single shred of evidence. The comment, which ended with an express invitation to Miss Wilkinson to withdraw the charge or produce the evidence upon which it was based, was severe but not unjustified.

Meanwhile politicians and "leaders," are still busy condemning Miss Mayo's work in no unmeasured terms. The somewhat exaggerated statement by two leading

Liberal politicians, at an interview on their return to India last month, that the book was to be found everywhere in Great Britain and on the Continent; and that it was poisoning the minds of Europeans against the country has added fuel to the flames. One or two responsible leaders of Indian public opinion have, it is true, suggested counter-propaganda in categorical repudiation of Miss Mayo's allegations, and one prominent public man has actually urged all Indians to read the book and eradicate from the social system the weaknesses which Miss Mayo has exposed. But, in general, the criticism is devoid of all constructive proposals for combating even the evils, existence of which is widely recognised. Significant therefore is the decision of the Baroda State Assembly, following the example of other progressive Indian States, to raise the marriageable age for girls from 12 to 14, and for boys from 16 to 18 years respectively. Infringement of the law is to be punishable with imprisonment and only individual exceptions will be allowed, to be decided on the merits of each case.

It is encouraging, however, to find that a similar effort is shortly to be made in British India as well. Mr. B. V. Jadhav, an ex-Minister of the Bombay Government, has given notice of three resolutions to be moved in the Legislative Council, one of which seeks to prevent early marriages, or marriages between infants. Mr. Jadhav has produced statistics to show that in the Bombay Presidency—and similar conditions may be presumed to exist all over India—there are 74,000 married children under five years, of which 3,574 are widows. The total number of married children between the ages of five and ten is nearly three and a half lakhs, and fourteen girls out of every hundred are married between the ages of 6 and 10. As a condition precedent to the operation of the projected measure compulsory registration of all marriages is contemplated.

Travel De Luxe in India.

Those whose experience of railway travel in India is confined to the early days of the present century, or even the immediate post-War period, will have difficulty in appreciating the enormous advance made in recent times in that particular sphere of development. Mention has already been made in these notes of the luxurious Imperial Indian Mail which makes the journey between Bombay and Calcutta scarcely distinguishable, in point of comfort and amenities provided, from the trip across France in the luxurious P. and O. Special, or its prototype in this country. But that is not all. Last month the competition between the two great railways serving the western capital for the mail passenger traffic to Delhi and Peshawar entered upon an entirely new phase when the Punjab Limited Express and the P. and O. Punjab Express left the Ballard Pier on their "maiden" runs to Delhi and the North. The latter train, which follows the shorter B.B. and C.I. route, is designed to complete the first stage of the journey in just under twenty-four hours, while the Great Indian Peninsula Punjab Limited, which has an additional ninety miles to cover, including three heavy Ghat sections, is timed to arrive at Delhi and Peshawar, respectively, 6½ and 10 hours behind its rival. A Correspondent who was present at the departure of both trains on October 7 enthusiastically observes: "The Punjab Limited looked beautiful in cream-white colour and the interior of the train was as attractive as the exterior. There were in all six coaches, including one restaurant car and one brake-van. The four coaches reserved for passengers were divided into coupés and ordinary compartments with room for three. In each of the latter were two lower berths and one upper, the wooden berth opposite being set aside for luggage. The P. and O. Punjab Express was similarly made up, the passenger compartments being ordinary first-class coaches with various additional amenities. Here, too, there were berths only for three passengers in each compartment. The total accommodation in this train is for 29 passengers, the Punjab Limited taking a maximum of 42."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 10.

For a State secret the secret of the Statutory Commission was not well kept. Though the Viceroy's statement was not published until Tuesday, the *Englishman* was able to announce as early as last Friday that the Statutory Commission was to be a body of seven members of Parliament; that it would be aided by a Joint Select Committee of the Indian Legislature; that it would hold a preliminary inquiry this cold weather; and the names of five of the seven members were divulged.

The decision having been made, the supreme task is to reconcile India to it. As we were to have a purely Parliamentary Commission, it was wise statesmanship to anticipate the date fixed in the Act of 1919; for if Indian leaders hold aloof from the Commission during its first sittings, as some are sure to do, they will have the best part of a year in which to see the error of that course. Error one cannot but think it. The Government of India is too firmly established to be overturned; no one can really doubt that those who inspire its counsels have a sincere wish that the constitution should be improved in any direction that would make for the better government of the country, and for the welfare and happiness of the people; all must therefore wish that the best minds in the country should be applied to the problem.

The terms of reference of the Royal Commission must already be well known in London, seeing that they have been for eight years on the Statute Book. The personnel must also be well known. I may pass, then, at once to the Viceroy's plea for an acquiescence in the decision in the spirit of good-will, and to the public reaction to that plea.

The keynote of the Viceroy's view of the problem is struck in these words:—"Indian opinion has a clear title to ask that in the elaboration of a new instrument of Government, their solution of the problem, or their judgment on other solutions which may be proposed, should be made an integral factor in the examination of the question, and be given due weight in the ultimate decision. It is therefore essential to find means by which Indians may be made parties to the deliberations so nearly affecting the future of their country."

The opportunity given to Indians to take part in the elaboration of the new instrument of Government is not to be confined to the sittings of the Royal Commission in India. When the Commission has reported, and when its report has been considered by the Government of India and the British Government, proposals will be made to Parliament, the procedure that is to be followed being that the proposals should be considered by a Joint Committee of the two Houses of Parliament. The British Government is not to ask the Joint Committee, in the words of the Viceroy, "to adopt these proposals without first giving a full opportunity for Indian opinion of different schools to contribute its views upon them, and to this end it is intended to invite Parliament to facilitate the presentation to the Joint Committee both of the view of the Indian Central Legislature by delegations who will be invited to attend and confer with the Joint Committee, and also of the views of any other bodies whom the Joint Parliamentary Committee may desire to consult."

The Viceregal statement, using words that can rarely have found a place in a State document, ends with:—"I do not think I am mistaken if I assert that it is the fixed determination of the overwhelming majority of the citizens both of India and Great Britain to hold firmly by the good-will which, through many trials and it may be through some false steps on the path of each, has meant much to both. In each country there may be from time to time misunderstanding of the other. Let us not mag-

nify such things beyond their value. Least of all let us permit such transient influences to lead us to lose sight of the rich prize of achievement of a common purpose, which we may assuredly win together, but can hardly win in separation. It is my most earnest hope that this joint endeavour to solve a problem, on the wise treatment of which so much depends, may be inspired by such a spirit as shall offer good hope of reaching an issue to the great and abiding good of India and of all her sons."

The leaders of European opinion in Calcutta, and some Indian leaders, have been interviewed. Sir Hubert Carr's statement began as follows:—"The constitution of the Royal Commission closely approximates to that which many of us hoped for. The absence of Indians from the Commission itself will undoubtedly cause disappointment at first glance in several quarters, but on consideration it will probably be agreed that the manning of the Commission only by Members of Parliament affords the only really satisfactory method by which Parliament can judge for itself the practical working of a scheme of government which it forced upon India against the advice of most people, Indian and British, who knew the country."

Sir Hubert Carr's contentment is shared by both Sir John Bell, Sir Alexander Murray, and Mr. Langford James. On the other hand both Sir Abdur Rahim and Mr. Bipin Chandra Pal, apparently entirely unmoved by the Viceroy's reasoning, and as if an Indian leader's speaking as a member of the Royal Commission would have some magic to influence the decision of the British Government in framing its proposals, and upon the Joint Committee of both Houses of Parliament in deliberating upon them, which that same leader's voice would not have as a delegate, have expressed strong discontent. Sir Abdur Rahim has said:—"It amounts to this: India's sons are not to have any responsible part in co-operation with men of the British race in recommending a suitable constitution for their country. This is a violation, to start with, of the policy of the very Government of India Act of 1919 under which the Commission has been appointed." Mr. Pal's language is much stronger:—"The whole thing is an insult to India's political sense and an outrage upon her awakened national self-respect. I cannot say what steps Nationalist politicians will take in the matter, but I think if the old spirit which was manifested during the anti-Partition agitation in Bengal is not completely dead, the answer that Bengal gave to Lord Curzon India to-day ought to give to Lord Birkenhead. I shall be very much surprised if Bengal—I cannot speak of the other provinces—takes this insult to her intelligence and national self-respect lying down."

The Bengal Swarajists have issued a manifesto, the concluding words of which are:—"No, this is a deliberate display of imperious authority, unconcerned about popular consent and assured of their grasp of the situation. This moment of triumph is really a weak moment for them; for the call of this hour is to rally all the forces of nationalism and re-establish that national determination, the potency of which has no limit. The country has suffered much and suffered long. An ancient people, with roots so deep down in history, may sometimes take a little time to resume its growth; but it has withstood many a blast and will never wither." That word of history brings to my mind the thought of Babur and Akbar, and I ask myself what they would have thought of so much word-making for its own mere sake.

There is no word-making in what Sir R.N. Mukherjee may have to say on any subject. What he has had to say on the subject of the Royal Commission is worth quoting in full, but cannot be quoted in full. "I realise that while, on the one hand," he has said, "in order to give satisfaction to all India, it would be an impossible feat for any Viceroy to select a body of less than a score or even more, representing different shades of political opinion in this country; on the other hand, the prevailing atmosphere in India is as bitterly suspicious and hostile to constructive co-operation as it can ever be. In the circumstances it was perhaps inevitable that the authorities should decide upon a purely Parliamentary Commission."

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, November 12.

Like the rest of India, Bombay has been eagerly awaiting the announcement of the personnel of the Reforms Commission and now that it has been officially announced, Bombay, it must be admitted, has unanimously proclaimed for boycott. Every Indian leader in Bombay, from the die-hard Liberal to the most rabid Swarajist, has unhesitatingly declared the terms of the inquiry to be humiliating to Indians, and, strange to say, the Liberal voice has been loudest in condemning it. While the eloquent appeal of the Viceroy has achieved something in the nature of a personal victory, it has been suggested that he should have utilised his powers of persuasion in inducing Parliament to meet India half way. Mr. Baldwin's exhortation that race prejudice should be set aside and the Commission welcomed, has evoked the retort that His Majesty's Government had failed to do so when it set itself to the task of appointing the Commission. The *Times of India* is the only newspaper that supports the Commission. Mr. M. A. Jinnah, a Muslim leader, has appealed for joint action and a conference of all parties will be held in Bombay on the 15th instant to decide upon a common line of action. Opinion seems to favour the setting up of an independent Commission of Inquiry to formulate India's demand for Swaraj, just as a Congress Commission was constituted to inquire into the Jallianwallah massacre simultaneously with the Hunter Commission.

The Protest of the Liberals.

The most significant feature of the unanimous protest against the exclusion of Indians from the Commission is the uncompromising attitude taken up by the Liberals throughout India. On the very morning that the Viceroy's appeal was published in the papers, Sir Tej Bahadur Sapru denounced, in the most emphatic terms, the decision of the British Government. Mr. Bipin Chandra Pal, the foremost Liberal leader in Bengal, declared that the time had come for Liberals to join the Swarajists in their policy of total obstruction. But the most powerful condemnation comes from Madras. Sir P. S. Sivaswamy Iyer, an Indian Liberal statesman of the very first rank, India's representative at the League of Nations, and a staunch supporter of Government during the height of the Non-Co-operation movement, declares that the decision is complimentary neither to Parliament nor to Indians. "Opportunities for hearing to be accorded, as in the case of litigants before courts, cannot possibly be regarded as a compensation for the denial of membership on the Commission." He believes that Indians were excluded "to emphasise as a matter of principle that India has no right to share in the determination of her own destiny, and to impress upon the Indian public that notwithstanding the camouflage of her admission to the League of Nations and the Imperial Conference she must not delude herself into the belief that she is anything but a supplicant at the door of Britain. . . . As a matter of principle and in assertion of our self-respect, I am in favour of a complete effective boycott of the Commission." This is the most powerful condemnation of the Commission and, strange to say, it comes from a staunch supporter of the British connection.

Commercial.

Throughout the week the money market has been easy with the call rate at about 2 per cent. There has been decline in the trade demand to the extent of about Rs. 7 lakhs, which is probably of a temporary nature. Quietness with a steady undertone has characterised the sterling Exchange. Total imports during the week amounted to nearly two lakhs.

THE PORT OF KARACHI.

(From a Correspondent.)

In his reply to the address of the Karachi Port Trustees, on the occasion of his recent visit to Sind, the Viceroy struck a note which must have appeared to many to involve something of condemnation, although it was doubtless intended as salutary advice, founded, as Lord Irwin was careful to add, on a sincere desire for the welfare of the Port. The Viceroy asked whether the Port authorities had taken sufficiently long views for the provision of the facilities necessary for the handling of traffic, and particularly for the use of mechanical devices, and arrangements for sorting and storing traffic. He further suggested that an examination of the methods of other ports might be of value. The implied reproof, if such it was, was not without foundation. For many years the administration of the Port has been sufficient only for the day, and its method somewhat primitive. An important addition has been made to the accommodation and resources of the Port, by the creation of the West Wharf. But no final conclusion has, we believe, been arrived at regarding the provision of a satisfactory layout without which the West Wharf cannot attain its full usefulness, nor as regards the provision of storing and transit sheds. At the same time, it would be unfair to disregard the difficulty of the choice which has lain before the Trustees.

Karachi has always been a cheap port. No rushing tides make docks necessary, as in Calcutta or in Bombay. Reclamation is easy, and the material dredged from the harbour makes the best possible filling, in vivid contrast to Bombay's disastrous experience of Back Bay. The climate, in which rain may not fall in appreciable quantity for years at a time, enables goods to lie in the open, and the cost of sheds to be saved, through the disastrous loss caused by an occasional cyclone makes the economy a risky one. The cheapness of Karachi is bitterly contrasted by traders in Bombay with the high charges of their own Port. The Trustees may well hesitate before they incur expenditure which will reduce the advantage, especially when they have to face the competition, not generally regarded as altogether legitimate, of the State financed Kathiawar Ports. Nor can the experience of the Bombay Port Trust in the provision of mechanical devices be regarded as encouraging. Such devices have there been provided at the merchants' request: but they are either left unused, or bitter complaint is made of the extra charge necessary to recoup their initial cost.

The Karachi Trustees, moreover, have not been altogether happy in their railway arrangements. The desire of the Railway Department to control the trade of the Ports is well-known and is natural enough. But railway interests are not invariably identical with those of the merchants or of the Port itself. The much more powerful Port Trust of Bombay can barely hold its own against railway pressure, though it has two railway systems to deal with, keenly emulous of each other. The Karachi Port Trust can hardly stand up against the North

Western Railway with the full strength of the Railway Department behind it. Has that railway itself taken the long view, regarding the development of Karachi trade? The Trustees also may well ask when the promise, given in 1914, of direct broad gauge communication with Delhi and Cawnpore is to be implemented. The promise may have been a rash one: but, once given, it should be fulfilled and should not be relegated to a dimly distant period of financial prosperity.

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

It is surely necessary to go back very many years to find India's problems engaging the attention of the members of both Houses to anything approaching the same extent as during the past week. But even more noteworthy than the length of time devoted, in a particularly crowded session, to their consideration was the encouraging breadth of vision and the strong sense of political responsibility which marked practically every speech.

It was perhaps inevitable that at question time on Monday the position of the political prisoners in Bengal should again come under review. In reply to Mr. Kelly, who asked whether any steps had been taken to carry out the assurance given by the Governor of Bengal in August last in that connexion, Lord Winterton referred to the answer made on November 9, from which, he said, it would be clear that many of the persons detained in gaol earlier in the year had since been released. Pressed again to say whether there was any prospect of a general release in the near future, the Under-Secretary refused to add anything to his previous answers to the same question, namely, that the Government are releasing these prisoners as and when it is desirable to do so in the interests of public security in India.

In spite of the general understanding that the main discussion should be deferred until the introduction of the motion approving the personnel of the Commission on Friday, the proceedings on the second reading and subsequent stages of the Government of India (Statutory Commission) Bill were by no means devoid of interest. Lord Winterton's speech on the earlier occasion, like that of his Chief to which I referred last week, was mainly a defence against a hypothetical charge of precipitancy. He pointed out that the Commission would probably finish taking evidence in the spring of 1929, coincidentally with the end of the present, or third, Assembly. As it would not report before the summer of that year, and the subsequent proceedings would probably occupy at least another twelve months, more than ten years would therefore have elapsed between the introduction of the reformed Constitution and its revision.

On the narrow issue of accelerating the appointment of the Commission, the Leader of the Opposition supported the Bill and made the interesting disclosure that he had contemplated the adoption of precisely the same course when he was in office in 1924, but had been deterred by the

disturbances in that year. His remarks were endorsed by the Liberal Party in the person of Mr. Macpherson and, in spite of the opposition put up by Mr. Saklatvala and several malcontents in the Labour ranks, the second reading passed without a division. The Committee stage, which was taken on Wednesday, began with a sharp clash between Mr. Saklatvala and Lord Winterton, following the former's amendment to provide that the appointment of the Commission should be deferred until the Indian Legislature demanded it. Lord Winterton rightly described the mover's suggestion that the Government's proposals were a breach of the 1919 Act as "a piece of effrontery perpetuated by a person repudiated by every responsible organisation in India." Although the incident was made an excuse for three hours' persistent obstruction, the Bill was finally read a third time without a division and, together with the Indian Church Measure, received the Royal Assent on the following day.

Meanwhile it had become evident that a more serious division of opinion had developed in the Parliamentary Labour Party than that revealed by the action of the back-benchers responsible for the opposition to the new Act. Pandit Motilal Nehru, the nominal leader of the Congress party in the Legislative Assembly, had forwarded a message from the Congress executive to all Labour Members urging their participation in the Indian boycott of the Commission by the withdrawal of their representatives and rejection of the Government's proposals. Although it was known that a committee of the Labour Party had been in frequent consultation with Lord Birkenhead regarding its original declaration of policy, many members of the executive were understood to be opposed to any compromise.

Fortunately, as was early revealed in the debate on Thursday in the House of Lords, and by Mr. MacDonald the following day, wiser counsels prevailed. The Government's decision to appoint a purely Parliamentary Commission, Lord Birkenhead emphasised, was founded on the history of the British connexion with India, which no Indian, however hostile to this country, or critical of our proposals in relation to India's development, desired to terminate. The responsibility for Indian affairs had rested since the days of John Company on the British Parliament, and the Act of 1919 itself emphasised the fact. It was sometimes said by men whose opinions were entitled to serious consideration that it was for a round-table conference or congress in India to decide upon the form of Constitution suitable to themselves, and it was for the British Parliament formally to pass it. "I can only make this comment," Lord Birkenhead said. "I have twice in three years during which I have been Secretary of State invited our critics in India to put forward their own suggestions for a Constitution, to indicate to us the form which in their judgment any reform of the Constitution should take. That offer is still open. It is most expressly repeated in the proposals which we make for the association of Indians with the activities of the Commission." But, Lord Birkenhead continued, "if anybody seriously supposes, either here or in India, that we are mechanically to accept a Constitution without our own primary and ultimate responsibility for judging upon it, they have no contact with the realities of the actual situation."

The case for the Government's method of approaching the more difficult problem, namely, how best to secure Indian co-operation consistent with the inalienable responsibility of the British Parliament, has been set forth on several occasions since the Viceroy's original announcement and Mr. Baldwin's Guildhall speech. Last week's debate must greatly have strengthened the very general impression that not only the right road, but the only road to that important goal has been chosen. Both Lord Olivier, in the House of Lords, and Mr. MacDonald were agreed—the latter on the strength of his personal experience as a member of the Islington Commission—that while the claims of the numerous Indian minorities must be heard and their rights secured, a Commission on which

those minorities and other no less important interests were represented would be altogether too unwieldy and discordant a body to furnish Parliament with any useful guidance. The cordial endorsement of the Government scheme by Lord Reading and Lord Chelmsford was another feature of what the Secretary of State rightly characterised as this "very remarkable debate," and prompts the hope that the message of "so remarkable a unanimity of opinion among men of such vastly different experience and so representative of every political thought in this country may travel to India."

Lord Winterton, introducing the same motion in the House of Commons on Friday, had few new arguments to recommend the Commission to Indian opinion except that the expenses of the inquiry, estimated at £20,000, would be met by the British Treasury, but he expanded considerably several of those advanced by Lord Birkenhead on the previous day. Both the mover and the Leader of the Opposition set the tone of the debate with admirable examples of the same spirit which prevailed "in another place," and the Prime Minister, who has seldom been heard to better advantage, concluded it in the same key. Even the few unofficial dissentients in the ranks of the Labour Party gave no support to the inevitable amendment proposed by the Communist member for Battersea. "Nothing, in short," as *The Times* appropriately remarked in its leading article the following day, "could have been more satisfactory than so signal a proof that all parties in Parliament have agreed to treat the composition of the Statutory Commission as an issue transcending party differences, and at the same time to make it clear that the restriction of its membership to members of the British Parliament was never intended as a slight to the Indian Legislatures or as an affront to Indian susceptibilities." "Let Indians dismiss from their minds," said Mr. Baldwin, "any thought of inferiority. They will be approached as friends and as equals . . . and I take this opportunity of assuring them that His Majesty's Government earnestly desire that their opinion, and the opinion of every man of goodwill, Indian or British, who has anything to contribute to the very difficult problem of India's future, shall be accessible to the Commission, and be given the fullest weight in their conclusions."

Personally, while I look back upon the events of the past week with feelings of gratification at the breadth of vision displayed by home politicians of all parties, I cannot altogether divest my mind of an under-current of misgivings in respect of the threatened boycott. The names of those who have already identified themselves—seemingly without leaving any opening for reconsideration—cannot be characterised as anything if not influential in the particular spheres of activity in which they are severally engaged. "I shall have nothing to do with the Commission," declares Sir Tej Bahadur Sapru, the Liberal leader, who is especially well qualified to advise on many aspects of the proposals. Sir Chimanlal Setalvad, Sir Phiroze Sethna, Sir Abdur Rahim, Sir M. Shafi, Sir Purshotamdas Thakurdas, Sir M. Ramji, and Mr. M. A. Jinnah, to name only a few, are men of authority and substance whose evidence cannot be taken by default.

If even a tithe of this opposition matures and co-operation is refused, what weight will the Commission's report have? Be that as it may, and the issue must be frankly faced, the die is now cast. Meanwhile in the interim period it rests with those who, with Sir R. N. Mukherjee, feel that "the blunder of the first magnitude" lies not in the scheme but in the precipitancy with which many of their distinguished countrymen have committed themselves to a course of action which can only prove disastrous to the very interests they profess to serve, to assert their claims to be heard. This is not a time for mental reservations and those—numerically stronger—who honestly believe that the authorities both here and in India have shown a truer appreciation of the difficulties surrounding the inquiry than public opinion in their own country alone can ensure its success.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Harvests of 1927.

In a year of such extraordinary weather as has been the gift of 1927, one needs no statistics to proffer the information that this year's harvests have in many regions been inferior to those of the previous year. It has fortunately been by no means the case throughout; otherwise we should be faced with a period of soaring prices; but then the weather too has been uncertain with its favours. Some regions have had perfect climatic conditions, but unfortunately in south-east Europe, which has so much to look for from the crops, the weather has been, broadly speaking, inclement. Our Bucharest Correspondent, in a letter which is given elsewhere in these columns, says that the conditions have been most unfavourable for the sowings for next year's harvest, and it is anticipated that they will be much below the average. From the results of the past harvest in the Near East generally it will be apparent that it has largely been affected by the weather. Thus as regards wheat Roumania's production in thousands of bushels was 98,425 as against 110,882 for 1926, but on the other hand Bulgaria, Egypt and Syria all show moderate increases, that of Bulgaria being most substantial, the figures being 49,247 as against 41,064. As regards barley Roumania's production of 61,136 compares with 77,391 for 1926, while the same country's output of maize was 145,475 as compared with 239,496. Evidently Roumania has suffered particularly from the conditions, though other countries in the Balkans, notably Yugoslavia, have also been affected to a greater or lesser degree.

Roumania's Position.

It is particularly regrettable that Roumania should be handicapped by a harvest which can only be described as indifferent since she, owing to reasons which are well known has more leeway to make up than some of the other Balkan States. Her great asset the oilfields is not of the value to her that it would be normally, not so much because of the handicap imposed by the inadequate communications, but because of the conditions in the oil market. Roumania's production of oil has continued to expand, and has now reached the neighbourhood of 1,000 tons a day, but the prices of oil have declined to a low level, and while this has not affected Roumania so much as other oil producing regions its effect, added to other factors, has been quite sufficient to bring about a critical position in the Roumanian oil industry—a situation which, it may be hoped, will be to some extent alleviated by the various measures which have now been taken. Roumania's present position, as I have pointed out, is an anachronism. She has the resources which will ultimately make her by far the most prosperous country in the Balkans, but the tantalising play of circumstances is delaying their utilisation. Communications are the key to the situation, and once they are improved so that they can deal with the country's transport trade

Roumania will be in a position to profit by her resources as soon as world conditions permit, and it may be pointed out in this connexion that the rapid growth of motor transport is a sure indication that low oil prices are not likely to continue for an indefinite period.

Suez Canal Traffic.

Details of the traffic of the Suez Canal for the first nine months of this year show that the figures for that period established a record. The net tonnage of the transits for the nine months was 21,457,000 tons, which was 1,125,000 tons in excess of the record total recorded for that period in 1925. There was a substantial increase in the traffic in both directions through the Canal, but the increase was more pronounced in the southward traffic. The traffic southwards totalled 10,117,000 tons, an increase of 1,215,000 tons on the corresponding figures for 1926, while the traffic northwards amounted to 11,340,000 tons, an increase of 1,074,000 tons. The merchandise transported through the Canal was more than 22,000,000 tons and compares with the previous record of 20,243,000 tons for the first three quarters of 1925, while it was 3,179,000 tons more than the total for the first nine months of last year. The increase was mainly in the homeward traffic. The outward traffic totalled 8,342,000 tons, an increase on the 1926 figures of 925,000 tons, while the homeward traffic amounted to 13,730,000 tons, an increase of 2,254,000 tons. As regards the share of the various countries in the shipping the British tonnage at 12,223,000 showed an increase of 1,273,000 tons, Holland being second with 2,232,000 tons, an increase of 96,000 tons, while the third place is occupied by Germany, whose total of 2,003,000 tons shows an increase of 465,000 tons and points to the way in which that country is rapidly regaining the place she occupied in world commerce before the War.

Egypt's New Company Law.

While it may be easy to understand the opposition manifested by the European community in Egypt to the new companies law with regard to limited companies registered in Egypt, which the Egyptian Government promulgated by decree last June, it is less easy to sympathise with it. To the onlooker it cannot but appear that it entirely fails to take into account not merely the alterations in world conditions since 1914, but also the changes which have taken place in national sentiment. Briefly, the law enacts, *inter alia*, that boards of directors

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

of limited companies must include at least two members of Egyptian nationality, that the personnel apart from workmen must be one-fourth Egyptian, and that one-fourth of the capital must be publicly subscribed in Egypt, and that of this amount four-fifths must be reserved for Egyptians. On the fact of it it may be assumed that the law is not retrospective in effect, and if that is so the opposition is even less intelligible than it would be if it were so. It has to be remembered that it is open to companies to put themselves out of the operation of this law by constituting themselves as foreign companies under the laws of their own countries. Of course, in a number of cases that will mean liability to the taxation of the country concerned, but citizens of countries who took part in the War will surely not object to sharing the burden that those at home have to bear. That is, however, a side issue. What we have to attempt is to visualise the Egyptian side of the matter. In promulgating this law the Egyptian Government is animated by the desire to widen the field of employment for Egyptians and Egyptian capital. Each year numbers of educated Egyptians are being turned out of the schools and the problem of what to do with them is becoming more onerous. It is a common problem in the world to-day and it is not in the least peculiar that Egypt should be experiencing it. Can the foreign communities in Egypt justly object to a measure designed to promote wider avenues of employment for Egyptians; and, if they do object, have they any reasoned alternative to put forward which will conduce to the same result?

Turkish Debt Negotiations.

If it was permissible to wax facetious in regard to a serious subject, one might almost say of the negotiations over the Turkish debt that, like the poor, they promise always to be with us. A preliminary agreement was arrived at about four months ago in regard to the details of the

debt payments, but an important matter was left over for subsequent settlement. It has been proposed that the functions of the Ottoman Debt Council should be vested in a new body which would lack the legal responsibility and control of the Council, and it is over this proposal that a further deadlock has been reached. The objection of the countries concerned to acquiesce in any departure the effect of which would be to impair the security of the loans is easily understandable, and it may be hoped that the Turks will not persist in a proposal which after all, from their point of view, is merely a matter of *amour-propre* and is without practical importance if they really intend to fulfil the terms of the debt settlement. If this desire to replace the Council by another organisation were to be agreed to, the effect, it must be emphasised, would go far to counteract the good results that would naturally accrue to Turkish credit from the settlement, and without improved credit it is certain that it would be futile for Turkey to attempt to look abroad for further financial assistance.

The Rubber Recovery.

My recent notes on the rubber position have been in a sense prophetic. The past week saw a steady and continued rise in the price of the raw commodity due to the development of the demand for America and the Continent, and yesterday came the welcome announcement that the London stocks were reduced on the week by 2,532 tons. Admittedly that substantial reduction makes only a relatively small inroad in the existing stocks, but it is in the promise that it holds out for the future that this development has its influence on the market. There is no doubt now that one of the main causes of the depression of the commodity price during the past year has been the closing down of the Ford works for six months pending arrangements to place the new car on the market. Now

that that factor no longer operates and as the Continent has now commenced to absorb much larger quantities of rubber, it is reasonable to anticipate a sustained demand for the commodity in the next few months on a scale sufficient to bring about substantial reductions in the London stocks. It must be remembered that the price must average 2s. for the quarter or 1s. 9d. for three quarters for an increase of 10 per cent. in the export percentage. If it should fail to average 2s. for the current quarter, as to which eventuality it would be extremely unsafe to prophesy in view of the movements in the past week, then we are likely to see high prices in the succeeding quarter.

COMMENTATOR.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, November 22.

The Economic Situation.

The economic situation is less bright than last year owing largely to the fact that the harvest was a poor one in general and the maize crop in particular was the smallest recorded for many years. Added to this the transport charges are so high that Roumanian grain cannot compete on the world market this year with that from other countries.

Messrs. Watson and Youell report that considerable quantities of wheat are stored at the Danube ports, but almost no business is being done. There are few boats in the river and even those have difficulty in finding cargoes. The Government has made a concession to circumstances by granting some reduction in transport charges on grain for export coming from districts lying over 500 km. from the port. This, however, apparently only affects a few western districts, whose natural ports would probably be on the Adriatic.

The Sowings.

The autumn sowings for next year's harvest have been carried on under great difficulties this year, as owing to the long drought the ground in most districts long remained too hard for ploughing and it is feared that the area sown is considerably below the average. The dry weather continued up to the beginning of November and on November 22 the first snow fell. Nevertheless it is reported by the Ministry of Agriculture that wherever it was possible ploughing and sowing has been carried out with energy. On the other hand, in some parts of the country it was found possible to sow the autumn wheat, etc., early in the season, and in those districts the crops have grown a foot high owing to the mild weather that ensued and it is doubtful whether they will survive the winter cold. Thus the unseasonable mild and dry weather experienced this autumn has been disadvantageous to agriculture in every respect.

Difficulties of the Oil Industry.

The petroleum industry has also passed through a crisis this autumn, and many of the companies have been obliged to reduce their staffs, owing apparently to the enormous increase in the cost of production consequent upon the general rise in prices and wages. Nevertheless the production of oil is still on the increase and is now reported to have reached 1,000 tons a day. During this month an agreement has been signed by the principal refineries with a view to regulating the sale of products in Roumania, on the other hand, by arranging the saving of unnecessary transport, and on the other fixing the quota to be supplied by each refinery (according to the amount of its total production) for home consumption, for the refiners are required to give a formal undertaking to the Government, that the needs of the home market will be provided for before any oil products are exported. Standardisation in regard to the quality of products sold is also aimed at

by the agreement and it is hoped that it will do away with many existing anomalies. The total exports of petroleum products during the first nine months of this year are reported to have amounted to 1,378,818 metric tons.

CHESS.

By "CARO-KANN."

I give this week another ending, also from a game in the Metropolitan Chess Club Championship. White has just played Q—B7 which leaves Black, despite his preponderance of force in an absolute hopeless position. Play continued . . . R—B3; 2, P—B5! Q—R3 (there was nothing else); 3, P—K6, RxP; 4, PxR, Q—Q3 (ch); 5, K—R4, resigns. It is a good example of a case in which a player has a piece completely shut off from the vital field of operations, and so for the time being is no better off than if he were merely equal, and in this case White had also the initiative and that was the decisive factor.

At long last the match for the world championship is drawing to its close. It looks now as if Alechin, who leads by 5—3 must be the winner, but in view of the number of games which will have been necessary to obtain a decision the victory will be indecisive, and it is to be hoped that another match will be arranged later on which will have what can justly be regarded as a decisive result. A feature of the match has been the adherence of both players to one opening throughout. One would like to have seen at any rate a few games which commenced with P—K4.

A second oil exchange is to be established in Roumania, at Ploesti.

A new mortgage and credit bank under the title of Banca Ipotecara Rurala has been promoted at Bucharest with a capital of 20 million lei.

Yugoslavia's exports in the first nine months of this year amounted in value to 420,300,000 gold dinars. The chief countries of destination, and the value of the exports to each (in millions of dinars) were as follows:—Italy, 1,215.1; Austria, 1,012.1; Czechoslovakia, 533.4; Greece, 457.9; Germany, 397.6; Hungary, 350.6; Switzerland, 178; France, 130; Great Britain, 60.3.

ABYSSINIAN COFFEE.

The current issue of the monthly journal of the Sudan Chamber of Commerce contains an interesting article on Abyssinian coffee, from which we take the following:—

With the steamer arriving in mid-October, the Gambeila season may be considered for all practical purposes closed, and, as by general agreement, imports of coffee were restricted in comparison with last year, we shall probably see a steadier market. This is all to the good as no useful purpose is served by over-stocking, especially on a market where the flow of ready money is slow and uncertain.

It might be otherwise, however, if the scheme at present under consideration by importers of installing a plant at Gambeila for cleaning and grading reaches maturity, as we feel convinced that, provided the trade is not handicapped by heavy duties and expensive freights, exports to overseas markets could be almost indefinitely increased. The cost of transport from Gambeila to Khartoum works out at about P.T.26 per kantar of 100 rotls, and from Khartoum to Port Sudan at P.T.20½, as compared with only P.T.13½ all the way from Port Sudan to London.

The coffee has a fine flavour and aroma and, if improved methods of cultivation could be introduced, it is conceivable it might be preferred by connoisseurs to the real Mocha. This fact is emphasized by Sudan residents visiting other countries, who find that few other coffees suit their palates, although the quality imported to the Sudan (Habashi) is considered by some to be slightly inferior to that grown in Harrar. The latter is grown in a soil of extraordinary fertility and the quality excellent. It commands a higher price than genuine Mocha. The crop this year of Habashi is of exceptionally good quality, and it has been observed that the natives are becoming better skilled in collection.

The plant is indigenous in Gomo, Harrar, Kaffar and many other districts, and the yield varies in quantity considerably according to the district and the rains. Unfortunately, no reliable statistics are available, but we have been informed that about 300 rotls is a fair average per acre. The crop begins to ripen in August and picking is carried on until about December. The bean is composed usually of two seeds, and varies, of course, in size, but, up to the present, no attempt has been made by Sudan importers to grade according to size, or to separate the broken and imperfect beans. After picking, they are simply dried and bagged indiscriminately in gunnies containing 4 farsulas, or 150 rotls, and transported by donkeys to Gambeila. Shipment to Khartoum is effected between June and October.

The question of transport by donkeys became more serious during the past season, owing to the high rate of mortality among these animals. The average buyer must advance approximately 10,000 dollars at the beginning of the season for their purchase, and a loss of £E300 out of this sum, due to deaths, is no uncommon

occurrence. The cost of hiring a donkey for the journey is usually 3 to 3½ dollars, but towards the end of the season, this is sometimes raised to 6½ dollars. We shall probably witness an improvement next season when the Ethiopian Motor Transport Company completes the road between Gambeila and Rocca. The Morris six-wheel, two-ton, lorries recently purchased appear eminently suitable for local conditions and they were urgently required.

The price paid by buyers at Burei when the buying season started in December last was 4½ to 4¾ dollars per farsula, but, owing to scarcity of ready money in Khartoum and a fall in Braillian, this rate was reduced to 3½ dollars in January. In past years the erratic movement in the exchange value of the Maria Theresa dollar with the pound sterling has been the cause of considerable anxiety, but fortunately this season we had a steady exchange of about 9½.

Shipping Intelligence.

REVISION OF DANUBE NAVIGATION DUES.

The existing tariff of dues levied on shipping by the European Commission of the Danube has been revised. The new tariff, which comes into force on March 1, 1928, provides for the following tonnage dues:—(a) Sea-going vessels which load or discharge above Sulina, 3.70 gold francs; (b) sea-going vessels which load or discharge in the port of Sulina, 3.50; (c) sea-going vessels which load or discharge in the Sulina Roads, 0.65; (d) river vessels which load or discharge in the Sulina Roads, 1.15; (e) river vessels which load or discharge in the port of Sulina, 0.40.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, December 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, December 6); s.s. Media for Calcutta (Birkenhead, December 13).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 14).

British India Line.—S.s. Hatarana for Bombay and Karachi (London, December 14); s.s. Mulbera for Colombo, Madras, and Calcutta (London, December 17).

Cunard Line.—S.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool December 10, and Swansea December 13); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea December 10).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 3); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 17).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, December 9); s.s. Trevean for Colombo, Madras, and Calcutta (London, December 10).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (Manchester, December 3); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, December 10).

Ellerman and Papayanni Lines.—S.s. Algerian for Algiers*, Malta, Syra, Smyrna, and Constantinople (Liverpool December 3, Swansea December 3); s.s. Serbino for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 8); s.s. Gerano for Bari, Gruz, Ancona*, and Fiume (Liverpool December 24, Swansea December 30); s.s. Lesbian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 24); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 30). *Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 29.

The tone in the Stock markets this week has been quite good, but the volume of business has been smaller. So far as individual markets are concerned the story has been much the same as in the previous week, investment stocks keeping steady, home rails dull, and activity in a few sections of the industrial market. A material advance in the price of raw rubber has been reflected in a rise in the prices of the leading shares, but oils have once again been depressed on fears of an "oil war" in the East. A feature of the week has been the large number of new capital issues of all descriptions, the most prominent of which was the Australian Commonwealth Government 5 per cent. loan for £7 millions, issued at 97½. This loan came as something of a surprise, seeing that the Commonwealth raised a 5 per cent. loan in the London market for a similar amount as recently as July last, but this is explained by the fact that borrowing for the individual States is now centralised. Only 25 per cent. was subscribed by the public.

The Iron and Steel Trades.

The past few days have provided noteworthy illustrations of the light and shade that exists in the iron and steel trades; and they have also indicated the path which, according to many competent judges, may lead to more light and less shade. For the year ended September 30 Dorman, Long and Co. show a profit of £273,338, which compares with a loss of £178,962 for the preceding year. Moreover, this result is the more favourable since the profit was earned in the last six months of the financial year. On the other hand, the report of Baldwins for the year ended June 30 shows a net loss of £129,970, as compared with a net profit of £11,168 for the previous twelve months. The report of the Advisory Committee is expected early next year, and since it is presumed that a revaluation of assets will be based upon this report, shareholders will await its publication with the greatest interest. These reports are fairly typical of the uneven conditions that exist in the iron and steel trades. To many the remedy—in part at least—is suggested by the

publication of the terms of the Vickers-Armstrong amalgamation, which have, on the whole, been well received. The view that "rationalisation" offers the iron and steel trades one of their chief hopes of a return to a fair measure of prosperity certainly deserves the most careful attention.

The Outlook for Boot Companies.

In recent years a number of the leading boot and shoe manufacturing companies have enjoyed marked prosperity. But whether or not they are faced with less favourable times is at least arguable. This is partly due to the substantial rise which has recently occurred in the price of leather, the advance in some lines having been as much as 40 per cent. in the past few months. Some centres appear to have been hit more heavily than others, but doubtless all manufacturing companies will be adversely affected, in greater or less degree. This year's export trade in boots and shoes is certainly not so good as that of a year ago. And for some undertakings these difficult circumstances follow a year in which industrial troubles were a very disturbing influence. The financial year of many of the companies ends on December 31, so that some few months must elapse before the results for the current year are available. It remains to be seen whether these are better or worse than for the preceding year, but it is possible that the somewhat unencouraging outlook may even in the most favourable circumstances suggest to directors that the time is not opportune for pursuing a liberal financial policy. Freeman, Hardy and Willis and J. Sears and Co. are the two leading companies and both have excellent dividend records. The ordinary shares of both undertakings, however, return no more than approximately £5 per cent., less tax.

Attractive Oil Investments.

The market in oil shares remains virtually neglected. Admittedly the position of the industry, from the standpoint of the producer, continues to be unsatisfactory. But while only the bolder spirits are buying ordinary shares, it by no means follows that the ordinary investor should neglect all the securities of oil companies. The prior charge stocks of some of the big companies, in fact, are well worth attention. These companies, though they cannot entirely escape the consequences of the present circumstances of the industry, are in an extremely strong financial position and are well able to await the return of better times without undue qualms. The following are among the more attractive of the prior charge stocks issued by oil companies. The Anglo-Persian Oil Company's 8 per cent. cumulative first preference shares return £6 2s. per cent. A yield of £5 17s. per cent. is given by the Burmah Oil Company's 6 per cent. second cumulative preference shares. For those desiring a well-secured short-dated investment there are the 5½ per cent. debentures of the Anglo-American Oil Company, which return £5 10s. per cent.; they are repayable on or before July 15, 1937.

Messageries Maritimes have issued a booklet describing the thirteen Mediterranean tours which the company has arranged for 1928.

A Note from the Roumanian Government sent last week to the Secretary of the League of Nations says that the Council of Ministers has accepted the report and conclusions of the League's Council Committee of three, of which Sir Austen Chamberlain is rapporteur, regarding the Hungarian optant dispute.

The traffic receipts of the South Indian Railway Company, Ltd., for the week ended October 29 amounted to Rs.11,05,777, making the total from April 1 Rs.3,56,85,221. The totals for the corresponding period of the previous twelve months were Rs.11,67,516 and Rs.3,43,04,803.

An area of 11,120 acres was under beet cultivation in Yugoslavia this year as compared with 10,480 acres last year. The yield of sugar is expected to amount to 85,000 tons, as against 78,000 tons last year, giving a surplus of about 25,000 tons available for export.

CYPRUS CROPS.

The following report has been issued on Cyprus crops for October:—

Rain has fallen in some parts of the island and sowing has begun. Sowing of barley and wheat is progressing.

As stated in the report for September, potatoes have been and are now affected by insects and fungoid diseases which have caused considerable damage. Lifting potatoes has begun, and the price has fallen to rs. 5d. per stone and in certain places less. The crop is expected to be good.

Onions.—Large demand and high prices for seed.

French beans.—Crop now finishing but price steady.

Cotton.—The weather during the month was favourable and the collection of cotton finished. Damage to cotton by disease is much less than last year; production and quality good; prices steady.

Pomegranates.—Crop gathered and mostly exported; prices satisfactory.

Olives.—Yield and quality very good, except in one district where *Dacus oleae* has caused damage. Collection continued during the month, and extraction of oil began.

Carobs.—Nearly all carobs have been sold, prices have fallen to £4 per ton.

Almonds.—Crop good and all sold.

Citrus trees.—Damage by fruit fly and scale is reported.

Vines.—Export of grapes to Egypt continues.

Tobacco.—It is anticipated that large areas will be under tobacco next year.

Hemp.—Drying and retting continued during the month but on account of rain the quality has been affected.

Olives.—The fruit is maturing in some places and picking has already commenced. Heavy yields are expected, though a rather high incidence of disease is reported from the Acre sub-district.

Cotton.—The fields at Huleh are developing well.

Rice.—At Khalso, where this crop was sown early, the grain is almost ripe. Elsewhere germination has been very good.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Water Works.—Tenders are invited for a contract for the installation of water works at Samanoud (Gharbieh Province). December 15. (D.O.T.)

Steel Beams, Etc.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of rolled mild steel beams, Section 1, mild steel flat and round bars, cement tiles and blue bricks for paving, homra, etc., required for Segn el Gabal buildings at Tura. December 13.

Motor Lorries, Etc.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of motor lorries and cars, tractors and trailers for Cleansing and Transport Service. January 15.

Steel Reservoir.—The Ministry of the Interior, Cairo, invites tenders for the supply and installation of a steel reservoir of 200 cubic metres capacity on a steel frame work tower, etc. December 10. (D.O.T.)

Safes.—The Egyptian Ministry of Finance invites tenders for the supply of 100 small iron money safes, 18 in. by 12 in. by 11 in. December 1. (D.O.T.)

Surgical and Medical Instruments.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of surgical and medical instruments. December 20.

Earthenware Conduits.—The Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invite tenders for the supply of 5,320 conduits earthenware, salt glazed. December 6.

Telegraph Poles.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of 2,535 creosoted and 5,700 uncreosoted telegraph poles. December 15.

Lamp Standards.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 148 electric lamp standards with armature and globes. December 10.

Tyres.—The Superintendent of Stores, Egyptian State Railways, Telegraphs, and Telephones, Saptieh, Cairo, invites tenders for the supply of 300 carriage and wagon tyres. January 4.

PALESTINE CROP PROSPECTS.

The Director of Agriculture in Palestine, in a report on the crop at the beginning of October, states:—

Durra.—The yield is the highest recorded for some years. Prices are normal.

Maize.—The yield is good and quality satisfactory. In the Huleh area the first crop has been harvested and the second crop is well advanced.

Sesame.—The crop is reported to be the best seen for thirty years. Harvesting is in progress. In some places a yield of 80 kails per feddan is anticipated.

Tobacco.—Picking is almost completed. The average yield should be 60 kilogrammes per dunam. The quality is generally high, especially at Tershina. Small areas were planted to tombac at Acre and Kufr and Kara.

COMPANY NOTES AND REPORTS.

BRITISH BURMAH PETROLEUM.

The report of the British Burmah Petroleum Company for the year to July 31, 1927, shows a profit on the revenue account of £260,953, as against £301,845 for the previous year. With the addition of agency fees £2,135 and interest £22,265, transfer fees £891 and profit on the sale of investments £829, the total credit is £287,074, against £349,529. Sundry charges absorbed £55,665, interest on Debenture stocks £45,400, and depreciation £54,059, leaving £131,889. Adding the net balance brought in £5,395, and the refund in respect of taxes £8,578, the balance is £145,863. The directors have again placed to the Debenture sinking funds accounts £67,000, and to the reserve and contingent reserve account £25,000, leaving £53,863, nothing being placed to the development reserve, which last year received £18,666. The directors recommend a dividend at the rate of 4½d. per share, free of tax, absorbing £46,701. The policy of vigorous drilling pursued has been continued, nevertheless production of crude oil during the year has again declined. Economies and the improved extraction instituted would have fully counteracted the loss of revenue from the reduced output had not a fall in the prices of refined products supervened. Since the close of the financial year a productive well has been brought in at Singu, which indicates the extension of the drilling area to a point further south than had been anticipated. The directors are encouraged to hope that the falling off in the production of crude oil which has taken place during the past few years will be arrested. Considerable expenditure must be incurred in drilling the area referred to, and such expenditure will only be justified if remunerative prices are obtainable for the products of the company.

Motors and Motoring.

By G. B. B.

The great lesson of the Commercial Motor Show was that the trend of development is towards the six-wheeled vehicle. It may be felt that the statements should be qualified to read "so far as commercial vehicles are concerned." But the reservation should not be made: the six-wheeled passenger vehicle is already with us and in large and increasing numbers. As a matter of fact six-wheelers may be divided into three groups, the first of which comprises all types, steam, petrol or electric, of vehicles for carrying large and heavy loads of goods, and the second of which is made up of vehicles that will, if necessary, travel across rough country, and which are, provided the conditions are not too severe, practically independent of roads. The third group consists of vehicles intended to carry a greater number of passengers in greater comfort than has been possible with vehicles of the four-wheeled type.

The commercial type of six-wheeler has been dealt with already, though briefly in the columns of THE NEAR EAST AND INDIA, but so far little has been said about the six-wheel, passenger-carrying type. These are, however, of peculiar interest to our readers as the motor vehicle is practically the only method of passenger transport of an economical and time-saving type, possible in many Eastern regions. The field for the passenger vehicle in the Near, Middle and Far East promises to be very great, and it may be hoped British manufacturers recognising that will advertise their products in the districts where they are likely to become purchasers.

Six-Wheel Passenger Vehicles.

The six-wheel passenger carriers that were to be seen at Olympia were designed for private ownership as well as for assisting municipal enterprise, and it was interesting how many were designed primarily for the purpose of enabling municipal tramway undertakings to stand up against the competition of the motor omnibus. There were many makes of trackless trolley cars on view; perhaps that of Messrs Richard Garrett and Sons, Ltd., Leiston, Suffolk, was one of the most interesting and most suitable for use in connexion with electric tramway undertakings in India and other parts of the East. But speaking generally, the six-wheeled chassis shown were just the thing for luxury long distance travel, or for single or double deck omnibus work. The bodies, too, of the various types, were the last word in finish and comfort.

New Tilling-Stevens Chassis.

Space does not permit of extended notice of any particular type, but something must be said regarding the new petrol-electric Tilling-Stevens which is just the type to lend itself to six-wheel work. The form of transmission, which to my mind is not yet sufficiently well known nor its true value recognised, can be accommodated better in that form of chassis as its weight rather handicaps it for four-wheel work. The petrol-electric drive is too well known to need description here, but the six-wheeled Tilling-Stevens chassis shown at the Show demonstrated its suitability for that design of frame. It had a new type of four-cylinder engine giving out, at ordinary speeds, about 95 h.p., but rated, according to our curious and old-fashioned Treasury scale at 36 h.p. The chassis weight was about 5 tons with a wheel base and track of 18 ft. 9 ins. and 6 ft. 3 ins. respectively. The maximum load capacity including, of course, the body weight, is seven tons and, provided the chassis were fitted with the best

design of passenger body, from 68 to 72 people could be carried. The springing of the chassis is excellent and in addition, the vehicle runs on pneumatic tyres, 8 in. in thickness by 36 ins. in diameter. The braking system is particularly robust and a pedal applies internal brakes on the rearmost axle, on the Westinghouse air pressure system, a hand lever operates expanding brake shoes in drums on the middle road wheels, and an emergency pedal, when operated, throws on all brakes at once, applied by air pressure. The springing is as follows: an ordinary half elliptic spring under each axle sleeve, and the rear ends of the two springs on either side are concealed by two bell crank levers and a coupling rod.

The Dunlop Rubber Co., Ltd., announces a reduction in the price of motor car tyres as from November 23.

At the request of the Egyptian Ministry of Agriculture, the Egyptian Minister in Washington has obtained the names of some experts in tobacco growing who are willing to proceed to Egypt to carry out experiments in tobacco growing.

The British Vice-Consul at Damascus reports that imports into Syria during the June quarter of the current year amounted to 104,303 tons, as against 96,956 tons in the previous quarter, while re-exports totalled 3,433 tons. The latter went chiefly to Turkey, Palestine, Transjordan, and Iraq. Of the total imports 85,000 tons passed through Beyrout, as compared with 66,000 tons in the March quarter. The incidence of the feast of El Adha and the summer demand for silks and light cottons caused a briskness of trade, which only flagged when harvesting began to occupy the country people on their land. Prices were steady, and there were no bankruptcies during the period under review. Owing to the fall in imports corn and flour prices rose shortly before the harvest.

Company Meeting.

BENGAL-NAGPUR RAILWAY.

Increased Net Earnings.

The sixty-ninth ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held on November 24 at the offices, Gresham House, Old Broad Street, E.C.

Mr. Robert Miller, chairman of the company, presided.

The Secretary (Mr. R. C. Volkers) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said that the results of the working of the railway for the year were that while the gross earnings—namely, Rs.832 lakhs—were slightly under the point reached in the previous year—namely, Rs.842 lakhs—the working expenses were less by Rs.45 lakhs. In consequence the net earnings showed an increase of Rs.35 lakhs and the company's share of surplus profits an increase of Rs. 47 lakhs over the previous year's figures.

The failure of the gross earnings to progress beyond the figures of the previous year need cause no misgivings as to the earning power of the railway on the one hand, or the capacity of trade to continue to develop on the other. The year was not a good one for Indian railways generally, owing to trade conditions. Had it not been for two fortuitous circumstances, quite unconnected with general trade conditions, the gross earnings would certainly have overtaken those of the previous year, which were a record for the railway. In September, 1926, the company suffered from a cyclonic storm of great intensity, and they had the misfortune to experience a strike of a month's duration in February and March, 1927.

Turning now to working expenses, in which the large saving of Rs.45 lakhs occurred as compared with the figures of the previous year, some 30 per cent. of the saving represented deferred renewals and replacements, principally of track. Fifty per cent. of the saving occurred under operating expenses, and here it was satisfactory to be able to say that quite half of this amount represented real and, he hoped, permanent savings brought about by the fall in the market price of locomotive coal, combined with lower consumption of coal and better methods of coal distribution, resulting in less freight charges. Ordinary repairs and maintenance of coaching and wagon stock accounted for another 10 per cent. of the saving and was the result of the suspension of work in the shops during the period of the strike.

He had been at pains to analyse this large difference that occurred under working expenses, as otherwise the erroneous conclusion might have been drawn that it was due entirely to genuine economies, the effect of which would continue to be apparent in the results of subsequent years.

The direct effect of this reduction in working expenses had been to raise the company's share of surplus profits to Rs.7,38,879, which gave a return of 1.6 per cent. on the company's Ordinary Capital stock, as compared with the return of 1.04 per cent. obtained in the previous year. This enabled a dividend of 1½ per cent. to be paid to stockholders in addition to the guaranteed interest of 3½ per cent., and also allowed of an addition to be made to the reserve, which would then stand at approximately £106,800 on January 1, 1928, as compared with the figure of £92,000 at which it stood on January 1, 1927, a result which, he thought the shareholders would agree, was satisfactory.

He had every reason to believe that the gross earnings of the year now running, 1927-28, would show a substantial increase, notwith-

standing the fact that, like its immediate predecessor, it had not been free from misfortune in the matter of heavy flood damages. The agricultural situation was reported to be generally good and the trade outlook was brighter, as was evidenced by the progressively marked improvement that had occurred in the gross earnings of the principal Indian railways.

The working expenses of the year 1927-28 were not expected to exceed 62 per cent. of the gross earnings, which might be regarded as fairly normal. At this rate the company's share of surplus profits for that year should again be sufficient to provide a dividend similar to that proposed for the current year.

Sir Charles Stewart-Wilson, K.C.I.E., seconded the resolution, which was unanimously adopted.

TURKEY'S ECONOMIC SITUATION IN 1926.

There was little change in the general economic situation in Turkey during 1926 (says an American Consular Report). Agricultural production was lower than in 1925. The trend of Turkish exchange was downward. With a view to increasing Government revenues and achieving a balanced budget, new taxes were imposed and the Government monopoly was extended. Lack of capital and consequent high interest rates continued to hinder business expansion. Both imports and exports decreased, but the unfavourable balance was reduced.

Agricultural production during 1926 was, in general, below that of 1925, owing chiefly to adverse weather conditions. The tobacco crop, which constitutes the largest export item in value, was estimated to be 20 per cent. less than for the previous year, producing 84,000,000 pounds as against 104,500,000 pounds. The quality was reported to be poorer. Estimates of the cereal crop indicated a decrease of 20 per cent. The total cotton crop was expected to be less than for the preceding year; the Smyrna region reported an increase, but decreases were indicated in all the other districts. Olive-oil production for 1926 was also reported to be less than in 1925, but a larger fruit crop was expected. Estimates for the 1926 crop of raisins give 35,000 metric tons as against 25,000 metric tons in 1925; for figs 28,000 metric tons as compared with 20,000 metric tons. The nut crop was reported to be much below that of 1925. The opium crop was stated to be equal to that of 1925; the wool and mohair clip showed an increase.

Financial progress during the year was slow. Business expansion was hindered by high interest rates and lack of capital. The rehabilitation programme for public finance, as well as the measure for balancing the budget, have been given precedence over other national problems, although the methods employed for increasing State revenues were often in conflict with the best interests of commercial enterprise. New tax legislation was promulgated, and the Government monopoly was extended to include sugar and petroleum.

Actual results of recent budget operations are not available and budget estimates indicate only roughly the condition of State finances, although they do show a trend towards budget equilibrium. The 1927-28 budget, as voted by the Grand National Assembly, anticipates

receipts at £T194,580,544 and expenditure at £T194,454,620, which compares with a balanced budget for 1926-27 and a deficit of about £T16,000,000 for 1925-26.

Of the Government railway construction programme, about 300 kilometers were completed during the year. Arrangements were also concluded with two foreign financial groups for new railway construction. The transportation system of the country is entirely inadequate for normal economic development, and appropriations for new work from budget revenues have been insufficient. With a view to expediting the Government programme, the assembly authorised at the close of 1926 a bond issue of £T200,000,000, to be earmarked for railway and port construction and for irrigation works.

Statistics covering the port of Smyrna, the principal export shipping point of the country, show slightly less activity during 1926 than in the preceding year. In 1926 a total of 2,227 vessels of an aggregate tonnage of 1,935,200 called at that port as against 2,554 vessels of 1,999,000 tons in 1925. The vessel movement through the Straits at Constantinople, however, totalled 12,781,400 tons, exceeding that in 1925.

NEW COMPANIES.

The Port Sudan Syndicate has been registered as a private company with a nominal capital of £2,500, in £1 shares, to acquire a concession to manufacture salt at Port Sudan. The registered office is at Bevis Marks House, Bevis Marks, E.C.3.

The Egyptian Power Syndicate has been registered as a private company, with a nominal capital of £10,000, in £1 shares, to carry on the business as indicated by the title.

It is understood that the Bulgarian Minister of Finance will attend the meeting of the League of Nations Council on December 5, when the new Bulgarian loan will be discussed.

AGRICULTURAL DEVELOPMENT IN GREECE.

During the present year determined efforts have been made to encourage various agricultural activities in Greece, and it is probable that considerable credits will be granted to further this work (says the *Economic Review*). There has been a marked development of the system of small holdings and the agricultural co-operative movement has been making steady advance among the peasants. A certain improvement has also been observed in the technical field and gradually modern machinery is being introduced. There is, however, still much room for further progress in this direction, for Greek agriculture is far from being worked on an intensive system. Among other measures that have been taken to improve the agricultural products of this country, it should be mentioned that the Government recently made an agreement with the National Bank for the supply to State account of 30,000 tons of Australian Canberra wheat, 500 tons of Guaritah wheat, and 500 tons of rye for sowing purposes, with a view to raising the quality of home-grown grain. According to *Eleutheron Vima* the tax on agricultural products has been reduced from 6 per cent. to 3 per cent., the reduction applying retrospectively, as from April 1, 1927. Another outstanding feature has been the increasing interest of American financiers in the cultivation of tobacco in Greece.

It is estimated that on an average the production of wheat and other cereals in Greece is about 750,000 tons per annum and that 540,000 tons are imported. The production of leguminous fruit and potatoes together totals a yearly average of 90,000 tons and imports 37,000 tons. Recent reports from Athens state that the embargo placed upon the importation of potatoes has already had disastrous results, inasmuch as this commodity has become extremely scarce and dear upon the home market. The number of olive trees in Greece is variously estimated at between 50 million and 70 million. The olive crop during the past four years has fluctuated between 115,000 tons in 1924 to 45,000 tons in 1925. Last year's crop amounted to 76,800 tons. It is yet too early to make a definite forecast of this year's crop, but the fruit is said to be in good condition and the quantity satisfactory. The tobacco crop last year was about 57,000 tons of a total value of 3,065 mill. drachmæ; exports amounted to over 55,300 tons. The raisin and fig crop was lower in 1926 than in the preceding four years, attaining a total quantity of 140,000 tons only, as against 168,000 tons in 1925, 178,000 tons in 1924, and 144,000 tons on 1923. The cotton crop now satisfies about half of the demand of the Greek spinning mills.

THE PALESTINE ORANGE CROP.

A report on the Palestine orange crop received from the Empire Marketing Board's correspondents at Jaffa, states that although shipments of early fruit have already been made the shortage of rain has prevented the colouring of the fruit and the crop is very backward in this respect. It is reported also that information from England has been discouraging and that there has been little activity as compared with previous years. Usually the bulk of the crop has been sold to packers, or other arrangements for shipments have been made by the end of October, but this year it is estimated that at the same date about 45 per cent. of the crop had not been disposed of.

Shipments this season are expected to be much lighter than last season. It is understood that extensive arrangements have been made for shipments to the Continent, but the quantities likely to be available for shipment to Great Britain and Ireland are estimated at 1,400,000 cases, or some 400,000 cases less than last season.

The Sinai Mining Company announces an interim dividend of $3\frac{3}{4}$ per cent., free of tax, on the ordinary shares.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 23:—

Egyptian Futures.—Sakel Contract.—During the past few weeks this market has shown a heavy undertone without registering any material decline, mainly owing to the holding powers shown by Alexandria. Throughout this period, however, stocks have been steadily accumulating, and with the weakening of the statistical position becoming more generally recognised during the past few days values here and at the other side have steadily declined. At to-night's close our market shows losses of 63 to 72 points for near and 45 to 60 points for distant positions on the week. For some time past, movements in American values have reacted sympathetically on our contract; however, this has not been the case recently, a feature particularly noticeable on Monday when, owing to smaller ginning figures than anticipated a sharp reaction in the first-named department had practically no effect on Egyptian prices. Increasing pressure has been particularly noticeable during the past two sessions, and apart from short covering on the down scale, very little purchasing power has been in evidence. The present situation is not surprising to those who have been closely following the "into sight" and export figures in Alexandria. Whilst the crop movement has certainly been very gradual, the combined activities of Lancashire, the Continent and America have evidently failed to take a sufficient quantity to relieve the near positions in the respective contract markets. A feature to be noted is the fact that a considerable quantity of cheap docket cotton is offering locally at a very attractive basis compared to its replacement value in Alexandria, but even this fails to attract any weight of spinners' business. Trade reports in the fine count section have not been quite so satisfactory, and whilst mills have still orders on hand fresh business is only offering in moderate quantities and at less favourable margins than those obtainable hitherto; consumers are only buying their near-by commitments, a policy they will probably adhere to for some little time. For the immediate future, we are rather inclined to anticipate lower markets and some narrowing-in of the American/Egyptian straddle difference.

Upper Contract.—This contract has had to face a fair amount of liquidation during the past week, and under this pressure prices have declined 42 to 52 points for near and 29 to 47 points for distant positions since we last wrote. The chief features influencing the situation for the moment are the increasing stocks, closing of old long accounts, and the very moderate amount of trade support latterly experienced. Trade reports covering the counts spun from cotton covered by this contract leave something to be desired and spinners are now in process of using up purchases made earlier in the season. We still consider that some further easing may take place, and should this prove correct would advise moderate purchases for those prepared to hold.

Egyptian Spot.—Business in this department has again been on a disappointing scale, the somewhat meagre spot inquiry having resulted in nothing better than purchases of a hand-to-mouth character. A sagging tendency in the futures market has naturally not tended to encourage trade buying, although here and there a little buying on declines has been noticeable. The American ginning figures published last Monday, though meriting a "bullish" interpretation, failed to arouse more than a passing interest, and the general decline in prices has made further progress to-day. Alexandria, which has been for so long now a comforting source of strength to those with "bullish" proclivities, has begun to show signs of weariness, in spite of purchases on that side of spot Sakel by the Soviet agents. Stocks are mounting up, and trade reports get worse each day; in fact, look where one will, the situation at the moment appears to be full of depressing features. Nevertheless, the takings by Egyptian

spinners have been maintained on at least an average scale, and, with prices cheapening daily, there is always the hope that the turn cannot be long delayed.

Sakel has been in moderate request at from 10.00d. to 20½d., with some emphasis possibly on the 14.00d. to 15.00d. cotton. Uppers have again attracted most attention, inquiries ranging from 13.00d. to 15½d., but interest has been chiefly displayed (as heretofore) in cotton about Strict Good Fair in grade which, to-day, can be purchased here on the spot at about 14½d. Uppers, at to-day's prices, appear reasonable, but in some quarters the opinion is still maintained that the present difference with American contracts (about 400 points) will narrow.

C.i.f. business, as far as we can gather, has been generally on the quiet side. Forwardings to spinners for the week ending 18th inst. were returned as 7,098 bales Egyptian and 1,717 bales Sudan. Estimated sales 1,500 bales Egyptian and 90 bales Sudans. Quotations have been reduced 65 points all round, with the exception of Extra Fine Sakel, which shows a reduction of only 35 points. F.G.F. Sakel to-day 18.30d. F.G.F. Upper to-day 14.45d. F.G.F. Pilon to-day 14.70d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended November 17, state:—

Since our last report the futures market has been quiet but fairly firm. The week's summary of price movements is as follows:—Sakellaris, November, 36.93 dollars, 0.01 dollars up; January, 37.29 dollars, 0.01 dollars down; March, 37.63 dollars, 0.05 dollars up; May, 37.88 dollars, 0.08 dollars up; November, 1928, 37.18 dollars, 0.05 dollars down. Ashmouni: December, 28.22 dollars, 0.08 dollars down; February, 28.58 dollars, 0.06 dollars down; April 28.79 dollars, 0.01 dollars down; October, 1928, 28.00 dollars, 0.15 dollars up.

Sakel.—The market has been featureless during the whole week. The demand from abroad is very poor but this, for the time being, does not seem to worry holders. Hedging by up-country merchants continues but on a smaller scale than during recent weeks.

The difference between November Sakel and December Ashmouni is maintained at about 9 dollars, but we look for some narrowing of this difference in the near future. The Sakel crop will in all probability be not less than 3 million kantars and with a carryover from last season of more than a million kantars we get a total supply of about 4 million kantars of Sakel in Egypt this season. Spinners have so far taken only about half a million kantars and with the remaining 3½ million kantars Egyptian Sakel, the half million kantars Sudan Sakel which will be on the market within three or four months and the present stocks abroad, the available supply would seem to be more than ample for requirements.

Reports from the consuming centres are not very comforting; spinners are buying from hand to mouth, and in view of the statistical position as set out above, it is not likely that, for the time being, they will change their policy. Present prices are more than 10 dollars over those ruling at the same time last year, whilst, on the other hand, conditions in several consuming centres, especially Lancashire, are not good.

At the second November tender, 1,500 kantar dockets were issued. The total of the November tender to date is 3,250 kantars.

Uppers. The Uppers market has been quiet and prices have more or less followed the fluctuations of New York. Business has been only moderate and apart from professional jobbing has consisted principally of straddling with Sakel here or America in New York. We consider Uppers prices rather dear in comparison with American; on the other hand, we look for a narrowing of the Sakel-Uppers straddle.

The week's receipts amount to 231,664 krs. against exports 184,323 krs.; the stock in Alexandria stands at 3,119,213 krs.

The official figures of arrivals and exports for the period September 1 to November 9 are as follows:—Arrivals—Sakellaridis 21,989 krs., Ashmouni and Zagora 1,394,555 krs.; Pilion 117,022 krs.; Various 78,181 krs.; Scarto 40,325 krs; total 2,452,072 krs. Exports: Sakel 473,543 krs.; Ashmouni 612,161 krs.; Pilion 45,069 krs.; Various 29,586 krs.; total 1,160,359 krs.

Spot.—Demand from abroad continues very moderate and the past week has witnessed a series of quiet markets at Minet el Bassal. Sales for the five business days amount to about 14,200 bales, of which we estimate 5,600 bales Sakellaridis, 6,700 bales Ashmouni and Zagora, 1,200 bales Pilion, 250 bales White, 250 bales Nahda and 200 bales various growths, principally Sekina. The spot situation shows on the week little change technically.

Sakellaridis.—Business continues very mediocre. All styles except the best have been dealt in. Spot differences are unchanged except Fully Good and better, which have eased a little. With steadily increasing stocks and no apparent signs of activity on the part of spinners it is difficult to understand how either prices or spot differences maintain their present levels or can continue to do so.

Ashmouni and Zagora: Have been in moderate demand

chiefly for medium and low grades. Spot differences are without much change from last week.

Pilion.—A good business has been done, mainly in the medium qualities, at about last week's spot differences.

Other Varieties.—An improved business has been done in the medium qualities of White, at last week's differences. There has been a good inquiry for Nahda and a good business has been done, restricted, however, by small supplies of this growth. A few bales of Fouadi have changed hands and a small business has taken place in Sekina.

Up-Country.—All the factories are crammed full of cotton, but, in spite of this, some of them are not working, as many of their clients, seeing the accumulation of stock in Alexandria and the poor demand from spinners, prefer to keep their stocks up-country, it costing appreciably less to carry cotton there than in Alexandria.

So far the Government has again this year shown itself very severe in the matter of the planting seed submitted for inspection; no Sakel seed is allowed to be sold for planting unless previously submitted to and passed by the Government inspectors.

Many growers are objecting to the maintenance of the law restricting the acreage, but, for the present at any rate, it does not seem likely that the Government will repeal or modify the Act.

Notes of the Week.

The Italo-Albanian Alliance.

Echoes of the troubling of the diplomatic waters of Europe as a result of the conclusion of a treaty of alliance between Italy and Albania are now to be found more in Franco-Italian relations than on the eastern shores of the Adriatic. Indignation in Yugoslavia may not have spent itself, but there is a tendency to realize that nothing is to be gained by an over-vigorous kicking against the pricks. Italy continues to protest an injured innocence, while continuing to warn all and sundry that, if it ever came to a case of Fascism *contra mundum*, there could be no other issue than the victory of Fascist Italy. On the principle that the darkest hour of night is just before the dawn, these fulminations are being followed by the signing of an arrangement between France and Italy for the regulation of the position and rights of the nationals of each domiciled in the other's country. This agreement disposes at least of one cause of friction between the two countries, and may, perhaps, be regarded as an earnest of a desire to deal with the root-causes of Franco-Italian rivalry and antagonism.

The Situation in Roumania.

There has not been time yet for the political situation in Roumania to react to the death of M. Ion Bratianu. The mantle of the late Prime Minister and leader of the Liberal Party has fallen on his brother, M. Vintila Bratianu; but few of his fellow-countrymen seem to believe that the new Prime Minister will succeed in holding the country in a firm political grip as his predecessor did. M. Vintila Bratianu, it is true, has been the financial and economic power behind the Liberal domination of the country. He cannot, however, bespeak the popularity that was his brother's, and it is likely that there will be more outspoken criticism against his economic policy now that the prestige of M. Ion Bratianu has been lost to the Liberals. The new Prime Minister has done the right thing in approaching the Opposition with a view to the formation of a Coalition Government. He is met, however, by the fixed resolve of the National-Peasant Party not to yield on the question of the illegality of the last elections. Great as is the need in Roumania for co-operation among the political parties, it is difficult for any Western observer

not to sympathise with the stand taken by Dr. Maniu—a stand which is almost certainly based on the genuine conviction that electoral abuses will continue until they are shown to react adversely on the party practising them. Recent events have shown that Roumania has still some way to go before the administrative system has been completely purged of rather flagrant abuses and, without doubt, the first step in this direction ought to be the reform not only of the electoral system, but also of the general attitude towards elections. It is difficult to establish any moral distinction between the action of a Government using its authority to make elections serve its own ends and the action of individual officials in using their position to serve their own ends financially and otherwise. Until Ministers both in their individual and in their corporate capacity preach and practise the doctrine of service for the good of the State and not in their own personal interests, they cannot expect an underpaid Civil Service to set them an example. Dr. Maniu may well consider the moment opportune to insist that no arguments in favour of a Coalition Government can outweigh the urgency of an administrative purge.

Minorities in the Dobruja.

In a letter from Sofia that we publish in this issue the Bulgarian side is given of the situation in the Dobruja arising from the Roumanian policy of introducing into that territory a population whose loyalty to the Roumanian régime can be regarded as more reliable than that of the former Bulgarian subjects who form a large proportion of the inhabitants. The question is one of the post-War problems. Roumania wrested from Bulgaria a tract of territory in the Dobruja called the Quadrilateral, as the price of her co-operation in the defeat of Bulgaria in the Second Balkan War, and she was confirmed in her possession of it after the Great War. In keeping with Balkan traditions the system employed for the assimilation of this largely alien region in the Roumanian Kingdom was one of "Roumanianisation." Instead of realising that the best way of making good citizens of her foreign population was by ensuring their contentment with their new lot, the Roumanian authorities preferred to coerce them into loyalty and obedience. The applica-

tion of agrarian reform lost none of its rigours for Bulgarian landowners at the hands of local officials, and even the distribution of land provided the Bulgarian peasants with little cause for satisfaction with their new lot. A further occasion for discontent was provided when the Roumanians introduced into the Dobruja their Vlach compatriots from Macedonia (Aroumani, or Tsintsars, as they are called from the sibilant character of their dialect), who showed a tendency to possess themselves of the best lands where these still remained in Bulgarian possession. A fresh outbreak of lawlessness on the part of these people of ingrained nomadic tendencies has been too serious to be overlooked in Bucharest, and an investigation into Bulgarian grievances has been promised. An opportunity is thus offered the Roumanian Government of dealing on sound lines with the minority question in the Dobruja—the least dangerous of their frontier problems. A generous, or even fair, settlement would go a long way towards making the correct relations between Roumania and Bulgaria actually cordial.

Greco-Turkish Relations.

The recent incident at Kuleli Burges, when a Turkish railway carriage bedecked with Turkish flags, in which a delegation was travelling to Adrianople to attend the celebrations in honour of the recovery of the town by the Turks, was refused passage over the Greek section of the railway, had no importance in itself, but was of interest in its bearing on the relations between the two countries. It was typical of the national pettiness that still handicaps Near Eastern peoples. As the Turkish delegation represented the Grand National Assembly, its members ought to have had the good sense to remove the flags from the coach before they reached the Greek frontier. As they had not done so, the Greek officials ought to have ignored the flags, or, at most, have placed a couple of Greek flags on the engine and smiled upon the Turks. Both parties to the incident, cordially supported by their respective Press, endeavoured to make of it an event of first-class importance. The Turkish Government, however, refused to take the matter to heart or to endorse the view that the Turkish flag had been insulted. The Greek Government, on the other hand, made official representations at Angora on the violence of the references to Greece in the debate on the subject in the Grand National Assembly, but does not appear to have carried the matter any further. Thus the incident was speedily closed to the credit of both Governments. It has, however, served to intensify Turkish dissatisfaction with an arrangement which gives Greece jurisdiction over part of the railway line that has to be traversed in reaching Adrianople from Constantinople. The Greek officials, therefore, who stopped the Turkish coach because it carried Turkish flags may yet be found to have done their country a disservice. Public opinion abroad will be tempted to sympathise with Turkish attempts to obtain control of this stretch of the line when it is learned that the Greek railway authorities place a live bomb on the permanent way, in case a locomotive ignores the signal to stop, the removal of the bomb being the Greek equivalent for an "all clear" signal.

The Yugoslav Prison System.

The Yugoslav prison system recently came in for some severe handling in the Skupstina on the occasion of a motion to introduce as a matter of urgency the question of the Belgrade prison. To what extent the allegations made during a stormy sitting could be substantiated did not emerge, as the debate tended to resolve itself into a series of vituperation contests between a number of deputies, in which M. Stepan Raditch played a prominent part, while the honours went to two Montenegrins who were in opposite political camps in regard to the events in that country. The main burden of the complaint against the prison system was that the police were a law to themselves, that they were subject to no overruling authority in their dealings with prisoners, that torture and flogging were freely indulged in and that no police official had ever been held responsible for what went on. A former

Minister of Justice declared that the Belgrade prison resembled the Bastille at the time of the French Revolution, that he had in his time tried to cope with the matter and had forbidden prisoners to be interned in underground dungeons. He made an impassioned appeal to the Chamber to remove a blot on Yugoslav culture. The Government, however, used its majority to defeat the motion for urgency, and the Chamber passed to the Order of the Day. Reference to the absence of personal freedom and ordinary civil rights in Yugoslavia gave M. Stepan Raditch his opportunity to declare that that was one of the reasons why Croatia could not throw in her lot with Serbia, so long as she could not guarantee liberty of person and sanctity of property. The debate can hardly fail to arrest attention both inside Yugoslavia and abroad, the more so as the recent Macedonian outrages were alleged to be based on reports that Macedonian students, who had been arrested for anti-Yugoslav propaganda, had been subjected to torture in prison.

Dead Sea Concession.

The possibility of extracting salts from the Dead Sea has long occupied the attention of scientists from all parts of the world. When Palestine came under British occupation the question was examined more closely, and a report was made on the subject by the Geological Adviser to the Palestine Government in 1923. Subsequently a Committee appointed by the Secretary of State for the Colonies investigated the matter and published its conclusions in 1925. It found that there were no insuperable difficulties in the extraction of the salts from the technical point of view, but it was clearly sceptical of the possibility of the enterprise being successful on a commercial scale. In the meantime M. Novomeysky, a Russian engineer, who has since become a Palestinian subject, had been going more thoroughly into the matter, and, as the result of exhaustive investigations, satisfied himself as to the commercial soundness of the proposition. Working independently of him, Major Tulloch had arrived at the same conclusion, and when applications for the concession were invited, the two engineers decided to combine forces and to apply jointly for the concession. References to the subject in Parliament have elicited the information that the Crown Agents favour this application and that the details of the concession are now being worked out with a view to the safeguarding of all the interests concerned. As far as is known, an essential part of the scheme is that it should begin on a very small scale, and leave the "astronomical" potentialities of the Dead Sea, which have been estimated at fourteen thousand million tons of salts, to a problematical future.

Perplexity in Syria.

It is not only the censorship which inhibits the proclamation to the world of events in Syria, but also, apparently, the fact that so very little of striking importance is taking place in the French mandated country. In the political sense the High Commissioner, M. Ponsot, is as silent as certain Syrian Nationalist politicians have hitherto been noisy; and most of his endeavours, it would seem, are being concentrated on the economic problem. Already a certain amount to this end has been done, and the attempt is now being made increasingly to interest French capitalists, and, above all, Syrian capitalists who have made fortunes, and are now living, outside Syria, to invest in enterprises in the mandated State which shall bring to it prosperity, and (it is argued) hence content. That tranquillity has been achieved, or, perhaps, imposed, in Syria, is now patent, and the time is obviously mature for a forward and progressive economic policy. But it is to be hoped that political advancement also will not be lacking, for the time is no less ripe for showing to the peoples of Syria that their now separate lives are inevitably to be fused into one. To emphasise the differences of Syria is natural enough to those who have failed, or partly failed, in administering it; but the policy of insisting, first, that the Lebanon is one country, and secondly, that the other constituent parts of Syria

should have Constitutions similar to that which now appears to be unpopular, with the Lebanese is, it seems to us, not the highest wisdom. The French have now sufficient prestige in Syria to hammer their charge into a unity; that it is to say, their just recognition of differences within Syria should imply their being gradually smoothed out, not their being continually emphasised. Syrians in general are looking for a lead, but have still to knit their brows in perplexity.

The Middle Eastern "Bloc."

There is a certain type of alarmist mind which regards as the inevitable work of the Bolshevik Government any manifestation of "solidarity" between the various Middle Eastern peoples, and it is not to be doubted that the Treaty of Friendship and Security signed, at Kabul on December 2, between Afghanistan and Persia, will be judged in some quarters, not only, though mainly Russian, as a set-back to British influence in the East. Now there is no question that one of Russia's aims in the East was, at any rate until recently, the creation of a Middle Eastern bloc as against Great Britain; nor can it be denied that the Treaties which have been concluded between Russia, Turkey, Persia, and Afghanistan, have been drawn up on the approved Bolshevik model. But a Treaty of Friendship is one thing, and fundamental friendship is another. As we in Europe know very well, Treaty-making has become in the last few years something in the nature of a fashionable indulgence. There is really no reason at all why the four independent States just mentioned should not make Treaties between themselves; but it is another matter to regard such Treaties as providing mortar which indissolubly links them together. It was not so very serious a complication which recently caused the old suspicion between Persia and Turkey, for instance, to fan itself into fierce vocal flame; nor can it be supposed that the Amir Amanullah of Afghanistan, who has just embarked upon his notable visit to Europe, is not seized of the real motive of the Soviets in promoting these Middle Eastern "understandings." For realist purposes it is probably not very wide of the mark to regard a Middle Eastern bloc as a myth, proper and comforting enough though all these Treaties be to the dignity and independence of the various Muslim States. For, despite the natural sympathy which Turks, Persians, and Afghans may have for a Power which nominally was the first to recognise their full independence, it is certain that the more perspicacious Sunnis and Shiah of these countries realise that, if their integrity is to be threatened, it can be threatened only by the Bolsheviks of the North.

Persia and Great Britain.

Although, however, one may be reassured upon the awareness of Persians to the potential danger to their country from their northern neighbour, that is by no means to imply that the relations of Great Britain with Persia are quite satisfactory. That they notoriously are not. The present condition of Anglo-Persian relations dates from the rejection by the Teheran Majlis of the projected Anglo-Persian Agreement and from the policy thereafter indicated by the Foreign Office as the one to be followed by British representatives in Persia. Now modesty is a virtue, but to suppose that it is synonymous with the adoption of a weak policy, or of no policy at all, is a hypothesis which seems to occur more readily to Whitehall than it does to students of the East. The agent of a policy is indeed of more account in the East than the policy itself, yet personal popularity is futile unless it signifies the prestige of the country which is personally represented. The plain fact of the present situation is that British prestige in Persia is so low that an official from the Government of India has thought it worth his while to go to Teheran personally to investigate matters. As things are now in Persia, the Teheran Government can afford practically to ignore

British opinion; one need mention only the persistent refusal of Persia to recognise Iraq, and her procrastination in regard to confirmation of the agreed Imperial air-route to India. The time has surely come for the adoption of a policy, to be unswervingly followed, which shall ensure the consideration by Persia of British advice, without, of course, the suggestion that any return be made to the impossible policy adumbrated by Lord Curzon after the War. For a time, it would seem, the personal popularity of British representatives in Persia should conceivably be sacrificed to the re-establishment of British prestige. We write this in no sense of hostility or even of impatience towards the Persian people, whose future greatness is a world, and not only a British, interest; but because we feel that Anglo-Persian friendship is the surest bulwark of the people of Iran, and that in their reiterated disregard of the right of British claims they are unconsciously and, possibly, disastrously, falling back into the arms of a Power whose historical urge is certainly not towards tenderness and restraint. It was a tremendous work for Persia which Reza Khan accomplished, and if that is to be minimised by the work of Reza Shah, there will be British as well as Persian laments.

Palestine and Industrialisation.

Whatever be the political future of Palestine, the legal historian of the Holy Land will surely find few more significant documents than the industrial ordinance the draft of which was published in the *Jerusalem Official Gazette* of November 30. This draft is designed for the protection of women and children employed in industrial occupations, scheduling certain dangerous occupations, and forbidding the employment of children under twelve years of age, and of those under sixteen for more than eight hours a day. Agriculture, the basic industry of the country, is not to be affected by this legislation. The ordinance is, of course, a concession to the Zionists, who have for some time past been agitating in this direction. Thus are essentially Western conceptions imposed on an Oriental land. Such an ordinance must have derived either from the general desire of the Jews more and more to industrialise the Holy Land, or from the fact that certain industrialists in Palestine have actually overstepped the limits commonly imposed by social opinion in the West in matters of female and child labour. If the latter be the explanation, and it is the "Labour" element among the Zionist immigrants which has per-

IRAQ AND GREAT BRITAIN.

Less than a fortnight ago the negotiations which had been in progress in London throughout November between the British and Iraq Governments were regarded as at an end. They had been begun in Baghdad in virtue of the British Government's insistence in the Agreements of March 1924, repeated in the Explanatory Note attached to the Treaty of January 1926, that Iraq should accept as soon as possible, and *in any case not later than the year 1928*," full military and financial responsibility for the preservation of internal order and for the defence of Iraq against foreign aggression. At a comparatively early stage in the discussions in Baghdad difficulties had arisen over the question of military responsibility. Placing a literal interpretation on the explicit terms used in the various Agreements, the Iraq Government seems to have held that only by means of conscription could it assume in their entirety its responsibilities in regard to internal order and defence against foreign aggression. In this view it was supported by the Military Mission lent it by the British Government for the purpose of helping to bring the Iraqi Army to an adequate state of efficiency in 1928. The introduction of conscription, however, not only threatened to arouse hostility among the tribesmen of Iraq, but was also opposed to the views held by the British Government regarding the country's needs. The General Officer at the head of the Military Mission resigned, and the Iraq Government was invited to consider a gendarmerie scheme as a means of coping with its military obligations. In view of the fact that both King Faisal and some of his chief advisers are military men, it is not a matter for surprise that they should have difficulty in reconciling their interpretation of Iraq's needs with the more modest point of view which the British Government must be supposed to have favoured when it rejected General Daly's opinions. At the same time it was impossible to disguise the fact that the wheels of the mandated machinery had not been running quite as smoothly since the conclusion of the Mosul Treaty with Turkey as they had before the fate of the northern frontier of Iraq had been settled. The near approach of the date when Iraq was to be left more to her own unaided efforts spurred King Faisal and his advisers to equip themselves with the necessary experience betimes. In so doing they seem to have outdistanced the policy of the British Government, to which the year 1928 became considerably less of an epoch-making landmark, as public opinion in Great Britain tended to forget the restiveness artificially created a few years previously in regard to the Middle East and to show more faith in the future of Iraq.

It was in these circumstances that the negotiations between the two Governments were transferred from

Baghdad to London, and with the Iraqi Prime Minister, Jaafar Pasha, came King Faisal in the hope that personal touch might remove any misunderstandings that, unremoved, might tend to cloud Anglo-Iraqi relations. As was made known last week, the course of the negotiations did not respond to the expectations of the Iraq Government, which approached the subject mainly, if not solely, from the standpoint that by next year, *coûte que coûte*, it was, in terms of the agreements, to assume full military and financial responsibility in its own country. The British Government, on the other hand, may be supposed to have travelled some distance from the time, a few years back, when its eyes were fixed intently on Parliament or the British electorate, and it was primarily concerned to see Iraq forge ahead, in order that Great Britain's burden in respect of her commitments there might be eased as much as possible, if not entirely removed. To-day other considerations may be held to enter the picture from the British Government's point of view. The conscription issue has raised the uncomfortable question whether the measure of success achieved by the present régime in Iraq has been due mainly to the association with Great Britain rather than because it has been firmly based on the convictions of the Iraqi people as a whole. It would be a grave reflexion on the Mandatory Power, when handing over its charge on the admission of Iraq as an independent member of the League of Nations, if the country was suddenly torn by dissensions between Shiah and Sunni or between tribesmen and townsmen, or if complaint were made that, instead of helping the Arabs to govern themselves, the British had fastened on them an autocratic régime from without. Accordingly the Anglo-Iraqi negotiations in London, inaugurated from two different planes, as it were, spent much time in trying, without success, to find a common meeting ground. On King Faisal's return from his Lancashire visit the attempt was acknowledged by both sides to have failed. The negotiations were terminated, Jaafar Pasha started for Iraq, with the certainty of having to resign, and preparations were made for the departure of King Faisal.

At this point occurred an unexpected development, which must at least have confirmed King Faisal in his belief in the value of personal touch. The negotiations confined to the chilling atmosphere of a Government office had broken down. Three days later a farewell luncheon was given by the British Government to King Faisal. Sir Austen Chamberlain presided and several other Cabinet Ministers were present. Before the gathering dispersed the possibility of reconciling the British and the Iraqi point of view, which had defined the official negotiations for a month, had suddenly been grasped. An unsuccessful attempt to recall Jaafar Pasha from Marseilles was made, and in his absence King Faisal had to conduct the new discussions. Within a few days an understanding had been reached, as a result of which a new treaty is expected to be signed on Jaafar Pasha's return to London. The British Government was able to satisfy itself that, in seeking to give effect to obligations laid upon him by Treaty, King Faisal had no desire to out-dictator either of his neighbours in Turkey or Persia, and accepted the obvious point of view that Great Britain's success in Iraq depends on the successful working of all the machinery that she has set up. Instead of the half-hearted promise to take into active consideration the question whether it is possible for Great Britain to press for the admission of Iraq into the League of Nations, the Iraq Government has the assurance that the country's admission in 1923 will be pressed for by Great Britain. The final adjustment for the military and financial questions is postponed, but there is no longer any doubt that it will be considered under happier auspices than ruled during the earlier negotiations. Mistakes on both sides there may well have been; but Great Britain would have incurred a grave responsibility, if she had deliberately weighted the scales against the régime which she herself had set up in Iraq.

The Near and Middle East

From Our Own Correspondents.

Cairo, November 26.

Royal Popularity.

Since its inauguration Parliament has been occupied with the election of its officials and of the various commissions. Consequently there has been no debate, nor, indeed, any occasion for questions of importance. In fact the only events of any political interest since my last letter have been the issue by King Fuad of a rescript thanking his beloved people for their warm reception on his return from Europe, the election of Nahas Pasha as President of the Chamber, which had become a foregone conclusion, and his long interview with Sarwat Pasha. The royal rescript, which is an entirely new departure, came as a welcome surprise, and has been very well received. Together with the speeches made by His Majesty to the various deputations which have waited upon him since his return, it is looked upon as a further earnest of the King's intention henceforth to take every opportunity of associating himself with his people, and of giving proof of his lively interest in their welfare, and it is clear that from that point of view the royal gesture has been fully appreciated.

The Agreement.

Nothing is yet known on what took place at the interview between the Premier and the head of the Wafd. Beyond the reference in the Speech from the Throne no further details have become known with regard to the conversations in London and the result attained. Except for a certain disappointment, due to not unnatural curiosity, this secrecy has not aroused any criticism, for it seems to be recognised that Sarwat Pasha, on whom the main responsibility lies not only for the defence of the national interests but also for the attainment of the Agreement which everyone in the country so greatly wants, must be left to choose the time and place for taking the public and political parties into his confidence.

The Speech from the Throne.

The Speech from the Throne itself has been received with remarkable approval. The only criticism that has been heard has been in Wafd circles and that only in regard to the reference to the late Saad Pasha Zaghoul, which they consider was not sufficient. While one fully sympathises with the feelings of his followers that no occasion should be lost for paying a tribute to the great work he did for his country, yet one cannot help feeling

that they are taking up a somewhat mistaken attitude in this particular respect. In no country is the Speech from the Throne made the place for panegyrics—as an example might be cited the recent Speech from the Throne in Roumania where reference to the late King Ferdinand was restricted to about three lines—and the extolling of the virtues of and services rendered to the country by a departed statesman is normally left to the leaders of the various parties and to individual members—which is what happened in this instance.

Beyond doubt the Speech has been the most important delivered since the introduction of parliamentary government into this country. In fact one might almost go so far as to say that it is the most important pronouncement made in this country for many years. On the one hand, it elaborated a series of internal reforms and development schemes, some of which have already been embarked upon, which are of far reaching character and the execution of which will have an enormous effect on the future of the country and of its people. On the other hand, in addition to the references to the conversations in London and the happy result they have brought about, it brings good tidings in regard to questions on which the Egyptians feel very strongly, viz., the more adequate handling of non-Egyptians implicated in cases of white-slave and drug traffic and the reform of the Capitulations.

The Capitulations.

The necessity for some changes in jurisdiction in the matter of the former has already been dealt with in this correspondence, so there is no need to go fully into the question. It has all along been felt that the unsatisfactory situation, reflecting severely on the foreign communities, had only to be brought to the attention of the Powers for them forthwith to assent to the principle of the transfer of jurisdiction in such cases from the Consular to the Mixed Courts, and the news, that Great Britain, France, Belgium and Italy have given this assent, has afforded much satisfaction. But it would be unwise to expect that the promised conference will be summoned forthwith. It should be borne in mind that there are the other Capitulatory Powers whose assent must also be secured before any meeting can be arranged. This may, it is true, only be a formality, yet it is a very essential one, so that there must be some little delay before the summons for the international conference can go out, and it is improbable that it will be found possible to hold it much before the coming spring.

As regards the Capitulations it is likewise recognised that some time must elapse before even the conference for the consideration of the reforms can meet. The principal Powers may have expressed sympathy with the proposal and readiness to study the reforms, but before any conference can be held their agreement must be secured not merely to the principle but also to the broad lines of the reforms. That step itself must be expected to require some considerable time, while there is a mass of detailed work to be done before any conference can possibly be summoned. Meanwhile it is to be hoped, that the limited transfer of jurisdiction already referred to will be adopted, for the handling of these criminal cases by the Mixed Courts will serve as a very useful and instructive demonstration of the extent to which their present

procedure would meet the requirements of extended jurisdiction and the alterations and additions which may be necessary therein.

Child Welfare in Egypt.

On the 15th of next month a grand bazaar and fête will be held at the Residency to raise funds for the promotion of infant welfare in Egypt. It has been organised by Her Excellency the Hon. Lady Lloyd with the assistance of leading Egyptian and European ladies most of whom are taking stalls, and it will be opened by His Majesty King Fuad, who has taken great interest in the enterprise. The object is to bring assistance to the poorest mothers and their babies. There are already many institutions in the shape of dispensaries and clinics as well as hospitals which are doing yeoman work among the sick children. The aim of this enterprise is, however, to carry the campaign against disease a step further and ensure that a larger proportion of the children shall be healthy at birth and be kept free from preventable illness during their early years. This can only be done by education and care of the expectant mother and constant watchfulness and advice after the baby is born, and the funds which it is hoped to raise by this bazaar are to be devoted to enabling the existing institutions to undertake the necessary preventive work in addition to the curative work which they are now doing by giving them more facilities and staff, including trained Egyptian nurses, who will visit the homes. The enterprise seems sure of success, for the idea has caught on, and in Egyptian circles it has been received with cordial approval.

Shakespeare in Cairo.

Mr. Robert Atkins and his Shakespearean company continue to move from success to success at the Royal Opera House. Since I last dealt with them they have given "Twelfth Night," "Merchant of Venice," "Taming of the Shrew" and "Measure for Measure,"—the latter new to most students of Shakespeare—each time to enthusiastic houses. Indeed the more we see of this Company the more we appreciate both the artistic nature of the production and the excellence of their individual performances and the only regret is that their stay cannot be longer. When they close their season in Cairo on the 29th instant they will give a series of six shows at Alexandria, where a guarantee fund has been arranged thanks to the efforts of the Governor, Hussein Sabri Pasha, supported by leading British residents.

Sofia, November 24.

Bulgarian Minorities in the Dobruja.

Added to her anxiety over the fate of Bulgarians in Serbian Macedonia, Bulgaria has now to experience serious concern over what is happening to her nationals in the Dobruja under Roumanian jurisdiction. This territory, as is known, is peopled mainly by Bulgarians and in part by Mussulmans, whom the Roumanians are doing their best to denationalise by means of the colonisation, growing more and more intense, of Aroumani, or Tsintsars, from Macedonia. For the last month or so it has become the scene of anti-Bulgarian excesses of the worst type, which have created a profound impression in Bulgaria and threaten seriously to embroil the relations between the two countries.

Under the system of colonisation by which the new inhabitants are transferred to the Dobruja, they arrive with the conviction, if not with a clear and definite promise given them by agents of the Roumanian Government, that they are to be the masters of the province, and, apart from their predatory instincts, they are encouraged to molest the settled population by every means in their power to compel them to expatriate themselves and abandon their property, their fields and their homes. It is in this way that the convention for the protection of ethnic minorities is applied in the Balkans—an application that culminated in the attack on and destruction of the offices of the Bulgarian newspaper, *Nov Glass*, at Silistra, for having published the first news of the excesses.

Of the instances given by the Silistra paper only a few can be mentioned here; cases of extortion of money and arbitrary levies are too numerous to be recorded. On October 25 a group of armed Tsintsars (every Tsintsar carries arms in the Dobruja, and these arms are distributed to them by the authorities themselves) invaded the village of Denizler (in the district of Silistra) and there arrested 40 villagers, men and women, and subjected them to brutal cudgelling. As a result of this cruelty several peasants (men and women) succumbed, and a crowd of others hastened to secure permission to leave for Bulgaria without even waiting to liquidate their properties. Others clandestinely crossed the Bulgarian frontier immediately.

Several days later the same group presented themselves at the neighbouring village of Belitza, and there repeated the same tactics with redoubled fury, under the pretext of searching for *komitajis*. These searches give a tangible advantage to the aggressors, who collected more than 100,000 lei by way of contributions extorted from the molested peasants.

On October 30 (a Sunday), *à propos* of the marriage of a colonist of the village of Tatar-Atmaja with an Aroumanian of the village of Arabajilar, all the Tsintsars of the district met at Sarsanlar and, as they entered the village, rushed on the unfortunate Bulgarians, whom they attacked with sticks and rifles, robbing the houses under the eyes of the authorities, who did nothing to check these acts of vandalism.

A Tsintsar Orgy.

At the beginning of November a group of some seventy Tsintsars, all from the same district, assembled in the village of Kasimir and there began to conduct searches, arresting the men, whom they beat cruelly, and abandon-

ing themselves to a systematic plundering. They then organised a barbarous orgy, in the midst of which they took a man named Dimitri Koleff and suspended him by his feet, then set fire to a pile of straw under his head. Thus, with the knowledge of the authorities, this unfortunate man was burned alive, after atrocious sufferings. The names of a score of other victims are given in the Press.

Similar outrages are reported in the district of Dobritch and Kavarna, where an even more brutal aggression took place against the village of Yali-Youtchorman, near the small town of Schabla. The aggressors, at first checked by the resistance of the inhabitants, who had time to warn the police of Schabla, withdrew for a short time; they returned to the attack after the departure of the latter, and hurled themselves on those who had been wounded in the first attack, and were on their way for treatment at Schabla. At the same moment another group of Tsintsars attacked Bulgarians working in the fields of the neighbouring village of Gorgalik.

All these misdeeds, a list of which could be prolonged indefinitely, are causing great irritation in Bulgaria, and already committees have been formed which have arranged protest meetings throughout the country to denounce what they call Roumanian cruelty and barbarity. Government is urged to have recourse to the League of Nations for an impartial inquiry into the excesses committed and to assure for the persecuted Bulgarians the benefit of the clause inserted in the Peace Treaty relative to the protection of ethnic minorities.

The Government has already had representations made to the Roumanian Government through its representative at Bucharest, and it is expected that it will soon proceed with a similar application in Geneva to the Council of the League of Nations.

ROUMANIA.

Bucharest, November 30.

Death of M. Ion Bratianu.

The sudden death of the Prime Minister and leader of the Liberal Party, M. Ion I. C. Bratianu, has plunged the whole country into a state of consternation. He was a leader with an iron will who demanded from his followers loyal obedience; and so long as they faithfully carried out his wishes he was satisfied with their services, but any recalcitrants were immediately put on one side. Thus he had made of his party an organisation that worked with almost mechanical exactitude towards the attainment of his ends; a very perfect machine controlled by his powerful mind and will, which has produced innumerable benefits for his country. But such a machine cannot work without the controlling engineer; hence the dismay caused by his disappearance.

There is no doubt that M. Ion Bratianu was the greatest living figure in Roumanian political life, and his removal from the scene of action has deprived his country of an indefatigable and valuable servant. It has come also at an inopportune moment, when a certain amount of smouldering discontent demanded a strong hand at the wheel. The incident of the arrest of M. Manoilescu created a great deal of bitter feeling and the Opposition parties seemed on the eve of finding the long-sought basis of co-operation, with a view to presenting a united front to the Liberals, and attempting to bring about their fall. Now that the great leader of the Liberals is no more it is possible, nay probable, that the aim of the Opposition will be more easily achieved. Indeed, some people go so far as to predict the disintegration of the Liberal Party itself, but this seems

unlikely to the writer, as it has too many strong institutions behind it with experienced men as their heads.

The Question of His Successor.

Immediately after the death of M. Ion Bratianu his brother, M. Vintila Bratianu, took the oath before the Regency as Prime Minister, but it is not expected that he will retain this post permanently. It has been suggested that he might possibly cede the Presidency of the Council of Ministers to M. Duca, the former Minister for Foreign Affairs and present Minister of the Interior, but this has not been confirmed. Though both these Ministers have high merits they are considered to be lacking in certain amiable qualities, which are a great asset in a Prime Minister. They appear to have the faculty of commanding respect rather than affection.

M. Vintila Bratianu's first act was to call upon all the leaders of the Opposition parties with a view to attempting once more to inaugurate negotiations for the constitution of a National Government representing all the political parties in the country. His idea was to appoint the new Government without having recourse to a General Election, but in this he was thwarted by the consistent refusal of M. Maniu (National-Peasant Party) to join any Government not brought into power by *free elections*.

It is an undoubted fact that a feeling of uncertainty prevails on what the immediate future may hold in store for the country. There are many who deplore that their land has been deprived of its rightful Ruler, whether by his fault or that of others, they do not greatly enquire, but they feel that the Regency is an unsatisfactory substitute for the human figurehead which their simple souls could look up to with pride as the incarnation of their country. Many, again, prefer the ills they have to the possibility of others that they know not of—but can imagine with a certain amount of conviction.

So the political fate of the Roumanian is at present in the melting pot and it is extremely hard to predict what form the hand of the Potter will choose to mould it in. One thing is certain, that the Roumanians are a peace-loving people, more proud of discussion than of action, and it is most improbable that any disturbances will take place.

Press Fiction.

In this connection the writer considers it *à propos* to enter a vote of censure upon a certain English daily paper which published some weeks ago a series of the most astounding inventions relating to the Roumanian situation. At no time has there recently been any sign of revolution or disturbances in the streets, and it is most regrettable that any publication of the British press should adopt the methods of the least respected and most sensational American papers.

Belgrade, November 25.

The Speech of M. Marinkovitch.

The statement made by M. Marinkovitch on the 23rd inst., in reply to an interpellation by the Opposition on Foreign Affairs would have been rather too optimistic in tone had he known at the moment that a Defensive Treaty between Italy and Albania had been signed the day before in Tirana, and that M. Bratianu, the strongly pro-Little Entente Premier of Roumania, was on the point of death. In view of the Italian criticisms of the Franco-Yugoslav pact of friendship Marinkovitch's speech was very cleverly balanced. His assurances of the pacific nature of the Pact with France, coupled with his categorical denial of the truth of the Opposition statements that Italy was pursuing a policy of isolating Yugoslavia and destroying the Little Entente, should have had a soothing effect on public opinion throughout Europe, and his references to Italian policy in Albania were calculated to make possible the re-opening of negotiations for the settlement of all outstanding questions between Yugoslavia and Italy which were suspended owing to the strained relations resulting from the signature of the Tirana Pact. The whole tone of M. Marinkovitch's speech was reassuring, and despite fairly strong Opposition disagreement with his references to Italy and Hungary the whole Parliament was visibly affected by it. The statement was accepted by the House unanimously, on the motion of M. Pribitchevitch, in order to show the Skupshtina's full approval of the Pact with France. This tends to strengthen belief in the theory that the main reason for choosing the present time for the signature of the Pact was to strengthen the internal position of the present Yugoslav Government and prevent its being defeated in the debate on foreign policy which was to have been held on the 11th inst.

The situation as set forth by M. Marinkovitch seemed very satisfactory. The formal sealing of the old friendship with France, good relations with Britain, the steady growth in strength and solidarity of the Little Entente, improved relations with Greece, and Hungary, the restoration of normal relations with Albania together with the refusal to believe in the Italian bogey erected by his opponents offset the "not quite so good as we could wish" relations with Italy and the sharp note of warning to Bulgaria that criminal activities planned on Bulgarian territory and carried out in Yugoslavia by Bulgarian citizens must cease. His declaration that he intended during his term of office to work whole-heartedly for the improvement of relations with Italy might have had an excellent effect had it been made earlier. But the death of M. Bratianu had marred the beauty of the scene which M. Marinkovitch depicted, and the news of the signing of the Defensive Treaty between Italy and Albania, pledging each to give the other full military and financial support in case of attack by any third Power during a period of twenty years, has spoiled it considerably. The Italo-Albanian Pact is considered here as a directly provocative answer to the Franco-Yugoslav Pact; nevertheless, public opinion is not greatly disturbed at the prospect of Italy's being reinforced in case of trouble with France and Yugoslavia by all the military, naval and financial resources of Albania.

GREECE.

Athens, November 28.

The Refugees.

Interesting and at the same time depressing details of the housing conditions among the refugees are given by M. Pallis in a recent number of the *Eleftheron Vema*. As the result of a careful systematic investigation, it appears that 21,249 families are living in State-owned or privately owned houses in bad condition, 720 families in single rooms in these houses, 5,700 families in apartments or houses belonging to the Commission, 2,674 in requisitioned houses, 2,777 in depôts, all the above being in bad condition; 645 in huts with tin roofs, 361 in huts made of reeds, 413 in barracks, 382 in tents, 131 in schools, 100 in factories, 70 in railway carriages, 50 in mosques, 27 in churches, 41 in caves, 151 in various lodgings, while 160 have no home of any kind. That is to say, that nearly 36,000 families are either inadequately housed or not housed at all. Those in Southern Greece may congratulate themselves that the climate is comparatively mild: upon those in Salonika and its neighbourhood, the horrors of the Macedonian winter are already closing. It is clear that a large proportion of the loan will have to be devoted to the provision of houses (which cost about £100 apiece), and, while the plight of these unhappy people can scarcely be improved this winter, it is unthinkable that they should have to face another under the same conditions. Yet that may well happen, if the conclusion of the expected loan is much longer delayed. M. Pallis also draws attention to the fact that owing to the mistaken policy of building small houses with only one story, the refugee suburbs of Athens and Salonika have spread to such an extent that the provision of roads, tram-lines and water will become an intolerable burden upon the municipalities and the rates. At present little provision is made. Consequently the difficulties and discomforts of those living in outlying settlements grow greater and greater, and as Athens will soon extend to the foot of Mt. Hymettus, and Salonika to the slopes of Mt. Hortiac, the position of those whose work lies in the centre of these towns will go from bad to worse. These things will no doubt be remedied as time goes on.

In illustration of the kind of work which requires doing in order that the situation of the refugees may become tolerable, the case of Chalcidice may be cited. This large peninsula, now thickly settled with refugee villages—50 in all—is practically roadless. Apart from a road from Salonika to Epanomé, on the west coast, and one of about 35 kilometres which is intended to reach the capital Polygyros but actually stops short 4 kilometres from it, the whole area is traversed by nothing but mud roads which become impassable in winter and, in the mountainous districts, by mule-tracks. Thus the whole population is isolated for several weeks at a time, except for precarious and irregular communication by sea. Now that a scheme is on foot for a systematic road policy throughout Greece, it is to be hoped that this region will not be neglected. Unfortunately, the usual dissensions have arisen among the Ministers about the allocation of the contract, and there is reason to fear that the scheme will go the way of others.

General News.

It was surely unwise of M. Venizelos to time his arrival in Athens almost to coincide with the anniversary of the execution of the six royalist Ministers. The result was that an excited mob tried to make a demonstration in the neighbourhood of his hotel on Sunday last, and but for the behaviour of the City Police a serious situation might have been created.

Rumours of an intended revolution are going about. Should anything of the kind occur at the present critical moment, when the labours of the Government promise to be crowned with success, it would indeed be time for her friends to despair of the future of Greece.

THE MUSEUM OF ISLAM.

Mr. Charles Crane lectured to the Central Asian Society upon "The Yaman and the Red Sea," on November 30, at the Royal United Service Institution. Lord Allenby presided.

Mr. Crane said that he had been visiting the Near East for fifty years. His earlier visits were paid in company with Miss Marion Lee, the daughter of the great Confederate General, whose officers, after the defeat of the South in the American Civil War, had offered their services freely in the East, notably to the Khedive in Egypt. In these circumstances, he and his fellow-travellers met with a ready welcome in the East. He recalled the day when, a mere boy, he found in Damascus the burial place of one of his heroes, Buckle, that no worthy provision had been made for the marking of the spot where the author of the "History of Civilisation" lay. At Damascus, too, he one day met Burton, who strolled in to have tea with Lady Digby. Constantinople, of course, he was constantly haunting, for he had close connexions with the American missionaries there, and also Egypt, in whose service a distinguished General, a relative of his wife, had fought, in the Abyssinian campaign. But from all these places, Damascus, Constantinople, and Cairo, he found the light fading. Arts that had been handed down for centuries had disappeared thence for ever. But a trip to the Red Sea, four years ago, induced him to think that he might catch it up again down in this ancient highway.

Mr. Crane then went on to describe that "museum of the Muslim world" which is still to be found in the Red Sea. For although the Sea is one of the highways of world communication, the little harbours, at any rate on the eastern side, yet retain unchanged the life which they have led for centuries. There, at Yenbo, Jidda, Hudaïda, and so on, the vital processes of life are as they have always been, at any rate since the beginning of the *Haj*. He described some of the reforms which King Ibn Saoud has made in the interests of the pilgrims in the Hijaz, but he emphasised the differences which the ordinary pilgrims feel towards the harsh Wahhabi tenets. The leader of the Wahhabis, so successful in his attempts to reform Najd, had, he said, an almost impossible task in the Hijaz. Already his *Ikhwan* were grumbling at the compromises which he had been forced to make with the rest of Islam. The Wahhabi movement in essentials was a return to the conditions prevailing in Arabia at the time of the Prophet Muhammad.

Hudaïda he found a delightful little town, with pleasant and constant breezes, unlike Jidda. The welcome that he received there was such as had been given to everybody for many, many years. The Army was drawn up to receive him, and a chant, in favour of the Imam Yahia (though really an immemorial tune), was raised in his honour, just as it had been raised for thousands of years. The place had an open roadstead, like Jidda, but still it was the port of the Yaman. The lecturer then described in some detail the vessels (square-sailed boats from the Yangtze

Valley) which since early times brought merchandise to the southern end of the Red Sea, whence it was transported up in Arab sailing boats. He himself had sailed these Arab boats, which were fore and aft boats, and were sailed very close to the wind, and were always admirably made, although without any previous design or plan. Before narrating his journey up to Sanaa, Mr. Crane went across to Suakim, in which, he said, the glories of purely Muslim life were already diminishing. Between the prosperity of Port Sudan on the north and of Massowa on the south, the flourishing community of Suakim was being squeezed out. Many of the Muslim houses were now unoccupied.

The lecturer then described his journey up the precipitous way to Sanaa—so steep that only the unshod mule could attempt it. Sanaa he found a most interesting town, over which the Imam ruled as monarchs had ruled there since long before the time of the Queen of Sheba. Sanaa had three distinct communities, the indigenous Arabs, the Arabs who were said to have come from the north (though they might have been there as long as the first class), and, of course, the Jews. These three people had kept absolutely distinct. The Imam he found to be a man of great energy, like King Ibn Saoud in his desire to scrutinise the smallest detail in the activities of his subordinates. The Imam was very jealous of his country's independence, which, however, was not likely to be seriously threatened because of the inaccessibility of the region. The Yaman was at one with the Hijaz in this, that robbery and murder were unknown: a state of affairs that contrasted oddly with Mr. Crane's own "home town," Chicago. Incidentally, Mr. Crane found a great difference between the Hijaz and the Yaman. In the former place he found everywhere the desire to please; in the latter place, he found the whole social attitude one of suspicion. The houses in the Yaman were constructed primarily for the purposes of defence, the ground floor being reserved for the beasts (without windows), the first floors being reserved for the storing of grain (also without windows), and the other stories, in which the people lived, had only small apertures. The one vice of the people was in regard to *kat*. One art Mr. Crane found totally neglected in the Yaman, the art of medicine. This was surprising in view of the general facility of most Muslims in medicine. But in the Yaman if one was sick, one suffered; and if one was "sicker," one died. The infant mortality was enormous, but the children who survived grew up to be very fine men and women. In some inns in the Yaman might be seen the sight of beasts lying at one end and children being born at the other—very much in the same way, Mr. Crane supposed, as the Lord was born. In conclusion he recommended all those who wished to see the remnants of the real Muslim world to see them in the only available place, the Red Sea.

Afterwards, Sir Gilbert Clayton said that he thought the lecturer had somewhat exaggerated the fanaticism of the Wahhabis. He himself was tremendously impressed with the potentialities of King Ibn Saoud, and thought that, if the ruler of the Hijaz were given a number of

years, he would succeed in his task. Of the Yaman, he said that the two things which struck him most were the extraordinary sense of remoteness which overcame one when in Sanaa, and the general sense of stability in the country. The inhabitants were a fine people, not nomadic Arabs, but a genuine peasantry. He further suggested that it would be an excellent thing if all British officers serving in the Red Sea area endeavoured to make themselves better acquainted with this country. The Imam was not an unreasonable man, and the display of interest in his perplexities would be well repaid.

"THE PSYCHOLOGY OF ASIA."

The Persia Society met on November 28, at the Geological Society's Rooms, Burlington House, to hold their general meeting and to hear a paper by M. Felix Valyi, Editor of *The Review of Nations*, entitled "The Psychology of Asia." Lord Lamington presided.

The lecturer set up in opposition to the thought of the mechanical West that of the spiritual East, which, he said, was concerned with the profundities of the human soul. At some length he explained the sublimities of primitive Buddhism and Islam, remarking, incidentally, the deplorable practice by India of a degenerated Hinduism. Of the beauties of the psychology of Asia the West knew nothing, and cared to know nothing; the West looked upon Asia solely as a "market." In America, Chairs had been created for the art, forsooth, of salesmanship. What the West should do was to show to the East the real glories of Orientalism, and to check the soul-destroying effect of Western impact upon Oriental minds. The revolt of the Asiatics fundamentally derived from a desire to reproduce the creative power of the Asiatic mind. The élite of the West must co-operate with the élite of Asia to that end, basing their efforts upon the spiritual unity and equality of mankind.

In subsequent discussion Sir Arnold Wilson remarked, in approval of the lecturer's thesis, that if he had to choose between what America had to bring to mankind and what Asia had to bring, he would have little difficulty. There was considerably less difference between the Occidental and the Oriental mind than was commonly imagined, a fact which was easily discovered by anyone who took the trouble to overcome the barriers of language, customs, and mental habits.

Sir Denison Ross protested that the East had done so little to make itself known to the West. Not until last century, for instance, were the Sacred Books known of. As for the value of "mechanisation," he reiterated his belief that not all the railways in the Middle East were worth one line of Hafiz.

Sir Thomas Arnold differed from the lecturer in his estimate of Hinduism. Even Akbar, who was one of M. Valyi's heroes (and who, incidentally, might with profit be compared by Europeans with Frederick II (Hohenstaufen) in his love of tolerance and delight in exploring little known ways), had a higher opinion of Hinduism than apparently the lecturer had.

M. Valyi subsequently explained that his opinion of the Hinduism of the "Bhagavadgita" did not coincide with his opinion of Hinduism as at present largely practised in India.

NEWS IN BRIEF.

It is reported from Athens that M. Venizelos has decided to settle there.

M. Lazar Markovitch, Yugoslav delegate to the Preliminary Disarmament Commission, left Belgrade on November 28 for Geneva.

Circulation of three Communist organs, *Pravda* and *Izvestia* (published in Russian) and *Emes* (published in Yiddish), has been prohibited in Palestine.

The Egyptian Government has accepted the British Government's offer of the services of R.A.F. aircraft to combat the invasion of locusts which is expected in February. The civil air authorities in Egypt are now arranging the details of co-operation.

A tradesman of Ghevgheli (Yugoslavia) was last week shot at and seriously wounded in a street there. He recently refused to work for the Macedonian Revolutionary Organisation, and it is supposed that the crime was committed by one of its emissaries.

According to reports from Amman, the French last week evacuated their temporary quarantine station which was established at Umm al Jumal, on debatable land near the frontier between Syria and Trans-Jordan, owing to the hostile attitude of the local tribes.

Ahmed Mukhtar Bey, the new Turkish Ambassador to America, arrived at New York in the *Leviathan* on November 29. He was taken aboard a coastguard cutter at the quarantine station and escorted to the Battery under a guard of four State Department officials, who took precautions against any possible demonstrations by the Armenian element.

Field-Marshal Lord Plumer, High Commissioner for Palestine, has appointed a Museum Committee, consisting of the Directors of Antiquities and of Public Works and the Assistant District Commissioner of Jerusalem, to arrange and supervise the building of the new Archaeological Museum, according to Mr. J. D. Rockefeller's prescribed conditions, and to report progress to the High Commissioner and the donor.

A draft agreement has been approved by the Egyptian Council of Ministers, authorising the Eastern Telegraph Company to lay two multiple core underground lines from Port Said to Suez. The arrangement, which has been reached after negotiations lasting two years, will considerably accelerate communications between Europe and the Far East, which at present are exposed to delays on the land lines across Egypt.

The Financial Committee of the League of Nations, meeting at Geneva on November 29, under the chairmanship of Sir O. Niemeyer (Great Britain), examined the tenth quarterly report of the Greek Refugee Settlement Commission. Mr. Jeremiah Smith (United States), who was appointed to the Committee by the Council in September, took part in its deliberations for the first time.

Lieutenant-Colonel Alfred Cecil Jaffe, who died on December 1, at the early age of 43, was, in 1914, a captain in the Westminster Dragoons. He went out with his regiment to Egypt in 1914 and later to Palestine, and, after having been invalided home, he acted as A.P.M. in Italy for some months. He obtained his lieutenant-colonelcy and went out to Egypt again as O.C. Remounts at Kantara.

MINORITIES IN EUROPE.

At a meeting held on December 1 under the auspices of the Near and Middle East Association at the house of Mrs. James Conchie at 27, Great Cumberland Place, and presided over by General Sir Ian Hamilton, Sir Willoughby Dickinson dealt with "The Problem of Racial Minorities in Europe." He explained that this problem was one of considerable magnitude and of grave importance to the ultimate peace of the world. It was necessary to bear in mind that these minorities were not ordinary political minorities, but were composed of persons who differed fundamentally in race, religion or language from the rest of the population of the States where they reside. They were very widely distributed. Going through twenty-four States in Europe he showed that there was hardly one in which this question did not arise in a more or less acute form. The total number of people who might be included under this word "minorities" amounted to at least 30 millions and of these he believed that very few could be said to be contented with their lot. This fact alone constituted a serious menace to peace.

There were, he said, two main classes of minorities—those who had been established in their present States for many years—in some cases for centuries—as, for instance, the Bulgarians in Bessarabia or the Wends in Germany, or the Flemish in Belgium, and those millions of people whom the re-arrangement of territory after the War had transferred from one State to another, as for example the Germans in Poland, or the Austrians and Slavs in Italy. There was, indeed, a third class, namely those who both before and since the War had held the position of racial minorities but had been transferred by the War from one allegiance to another.

The second class constituted the most serious problem. They had been torn from a State in which they had been the rulers and incorporated in one in which they became the ruled. It was only natural that they should resent this change, but for this reason it was the more important that their new rulers should do all in their power to reconcile them to their altered circumstances. This had been done in a very few instances. A generous policy might have succeeded but in most cases the rights of the minorities were either refused altogether or given most grudgingly. This policy, in his opinion, had been due to two causes.

First, the excessive growth of national sentiment which seemed to assume that the only patriotic method of dealing with the minorities was to keep them under and to do all that was possible to bring about their absorption into the race with whom they were newly associated. The idea seemed to prevail that in order to convert their new fellow subjects into loyal citizens it was expedient that the State should use its powers to bring about compulsorily rapid changes of language and culture. The most recent example of this was contained in the public announcement of the Italian Government of its intention to "Italianize" the German-speaking and Slav-speaking minorities in Northern Italy. Even in countries where such a policy was not openly announced it was clearly the guiding principle of the subordinate officials and the general public constituting the majority. Such a policy was, of course, foolish. It could only defeat its own ends. It was the policy adopted by the Hungarians and the Germans in Slovakia and Poland before the War and had contributed largely to the break-up of the Austrian Empire and the separation of Poland from the Prussians. It was unfortunate that this policy of racial absorption had met with the approval of certain members of the League of Nations and this fact had done a great deal to increase the anxiety of the minorities through Europe.

The second cause of this policy has been the inaction of the Council of the League. The speaker explained the provisions in the Minority Treaties by which the rights of religion, language, etc., were intended to be

safeguarded by constituting the League as the "Guarantor" of the minorities and he quoted the letter of M. Clemenceau to the Polish Government in which he explained that the intention of the Allies was that the minorities should have the protection of a judicial body. The Permanent Court of International Justice was intended to be available to the minorities; but it had been on only rare occasions that the League had called it into action. The Council of the League had tried to adjust differences behind closed doors instead of having important questions of law settled by the principles of justice and the results had been unfortunate. Hundreds of complaints sent into Geneva had never seen the light, and most of the minorities considered it hopeless to apply to the League for redress. The League had adopted the policy of "letting sleeping dogs lie," but the dogs were not asleep. They might wake at any moment with dire results to civilisation.

The following were among those present:—Lord Lamington; Lord and Lady Strathspey and Miss Grant of Grant; the Hon. Lady White-Thomson; Prince and Princess Blucher; Lady Ian Hamilton; Lady Dickinson; the Dowager Lady Boyle and Sir Edward Boyle; the Hon. Mrs. Clegg-Hill; General Blakeney; Sir Frank and Lady Newnes; Commander and Mrs. Kenworthy; Monsieur Nelky; Sir Thomas Arnold; Herr Dieckhoff; Sir Henry and Lady Burt; Sir Harry Eyres; Hon. Sir James and Lady Connolly; Sir William Clark; Herr Karl Zeileisseu; the Rev. Chancellor Ponsonby; Sir John Stavridi and Lady Tighe.

Book Reviews

SPARTA, THEBES, ATHENS, MACEDON.

"CAMBRIDGE ANCIENT HISTORY." Vol. VI. (Cambridge University Press. 30s. net.)

In this volume Mr. W. W. Tarn plays the leading part, in that it falls to him to tell the thrilling stories of Xenophon's Ten Thousand and of the career of Alexander of Macedon. He also follows the history of Alexander's generals and of Greece after his death till the defeat and death of Antigonus. His task was no light one and he has carried it through most successfully. We do not know of any account of these events which, in spite of its load of learning and close scholarship, makes a narrative so engrossing or so easy to follow. If this book contained nothing else, it would be cheap at the price.

But it contains much more. Dr. Cary takes us through the period of Spartan supremacy following on the Peloponnesian War, the short-lived revived sea-empire of Athens, the meteoric rise and fall of Thebes, the Arcadian Federation, and prepares us for the end of true Greek freedom at the hands of the Macedonian kings. Dr. Bury (alas that we have him no more!) gives a fine account of the times of Dionysius of Syracuse, which Mr. Hackforth brings us down to the times of Timoleon. Dr. Hall takes the last days of Persian rule in Egypt, the brief re-appearance of a native dynasty and the final engulfment of the country in the empire of Alexander. This period has a real interest of its own and few except scholars have any knowledge of it, so that Dr. Hall's chapter will be new to many readers. Dr. Cook continues his admirable account of the Jews, having this time as his theme the

"inauguration of Judaism," an extraordinarily difficult subject on which, as usual, he is able to throw much new light. Mr. Pickard Cambridge tells us the story of Philip of Macedon and the gradual growth of Macedonian supremacy in Greece, continuing and supplementing Dr. Cary's chapters.

Two chapters, by Mr. Cornford and Dr. Ernest Barker, give us an excellent account of the Athenian philosophical schools and of Greek political thought during the fourth century. But here we have a serious fault to find. The splitting up of Plato and Aristotle into two different personalities involved by this treatment has inevitably marred the completeness of the presentation. Mr. Beazley brings his account of Greek Art up to date. As usual, however, he has been given too little space in which to do himself justice and the same remark applies to Mr. Robertson's scholarly essay on Greek architecture of the period.

With every succeeding volume this great work is establishing itself more and more as the handbook for the student.

ANCIENT HISTORY IN PICTURE.

"THE CAMBRIDGE ANCIENT HISTORY. FOUR VOLUMES OF PLATES." Prepared by C. T. Seltman. (Cambridge University Press. 25s. net.)

This volume was the one thing wanting to make the first four volumes of the Cambridge Ancient History as nearly perfect as we have any right to expect in this world. We only wish that it had been before us as we were reading these volumes, and it is certain that it will make us turn to them again so that the written word and the picture may tell their story together. There are nearly two hundred plates and many of them contain two or more subjects. They are beautifully reproduced and their selection has been made with the utmost care by some of the greatest living specialists on the various subjects.

So much must suffice as a slight indication of the value of the volume as a companion to the history proper. But the book is perfectly able to stand on its own merits. Without further supplement it is in itself a complete Ancient History up to the sixth century B.C. This very remarkable feat has been achieved not only by the careful selection of the examples to be illustrated, but by entrusting each separate group to a scholar specially qualified to deal with it, whose duty it has been to write the explanatory notes printed on the page opposite each plate. Thus Professor Peet and Dr. Hall annotate the Egyptian plates; Professor Langdon and Dr. Campbell Thompson those concerning the ancient Mesopotamian empires; Mr. Seltman takes charge of those on Coinage and Persian art; Professor Beazley explains the plates illustrating early Greek art; Mr. Robertson those concerned with early Greek architecture, while other equally eminent authorities take charge of the other divisions of the book. A great feature of the plan has been the provision of consecutive plates illustrating the development of various specially interesting matters.

Altogether a most delightful book for which warm thanks are due to the Editor, Mr. C. T. Seltman. We hope that we shall not be looked on as ungrateful if we say that the references to Vol. II of Plates in the current volumes of the History are more than a little tantalising and that its early publication would be a boon to many.

NOTES OF THE WEEK

(Continued from page 707.)

sued the Administration of the desirability of reproducing in Palestine the conditions to which the immigrants were subject in the countries which they left for the Holy Land, there may be a certain grieving among the sentimentalists, who would rather that Palestine should develop like any other Arab country, that is, without such industrial ordinances as are found to be necessary in the "capitalistic" West. It certainly will be a thousand pities if the same social system, with its possibly artificial but widely accepted division into the interests of "Capital" and "Labour," as has grown up in the West, be found to be riveted upon the primitive life of the Holy Land. Surely in the Jewish section of Palestine's life, where rich and poor are presumably animated by the same ideal, we should be spared the bitter sociological friction which so often mars the countries of the immigrants' origin?

The Amirate of Trans-Jordan.

A new régime for the State of Trans-Jordan has been prophesied for some time past, and at last, it appears, the prophecy is to be realised. A Treaty between the Amir Abdullah and the British Government will, it is understood, shortly be concluded, by which there will be established in the Arab Amirate a régime similar to that in Iraq. A Constitution is to be promulgated, and a Parliament, half of whose members will be elected and half nominated, will thereupon be convened. So, at last, runs the latest and the most credible report. Such formal recognition of an autonomous Government in Trans-Jordan has been long in coming, and even now the administration is still to be carried on under the terms of the Palestine Mandate. The British Resident, Colonel Cox, who has made remarkable improvements in the country, directly represents Lord Plumer, High Commissioner for Palestine and Trans-Jordan, and it is really he, rather than the Amir Abdullah, who is the actual ruler of the country. It would not appear that the prestige of the Amir had increased since the elimination from his State of the Nationalist Syrian element—owing to the French suppression of the Druse Rebellion—or since the capture by the Wahhabis of the neighbouring State of the Hijaz. It is true that certain idiosyncrasies of the Arab Amir which were formerly apparent have been to some extent curtailed under the stricter régime now prevailing, but the British hand in the progress of Trans-Jordan is one not likely to be missed or minimised by any impartial observer of this region. Trans-Jordan is, of course, far more backward than Iraq, but its problems are very similar, and it may well be that lessons learned from the short history of King Faisal's State will be of considerable use in gauging the future of his brother's Amirate.

KING FAISAL OF IRAQ.

The King of Iraq left London on December 5 for Baghdad. Among those present at Victoria Station to bid him good-bye were his son, the Amir Ghazi, the Earl of Lucan (representing the King), Muzahim Bey al Pachachi, Iraq Diplomatic Agent in London, the Hon. W. Ormsby-Gore, Colonel de Satgé (representing the Colonial Office), Sir Henry Dobbs, High Commissioner for Iraq, Sir John Shuckburgh, Field Marshal Viscount Allenby and Lady Allenby, Mr. J. B. Monck (representing the Foreign Secretary), Lady Richmond, and Sir Elly Kadoorie.

King Faisal intends to fly from Cairo to Baghdad.

An appeal for the Armenian refugees in camps in Syria is made by the "Friends of Armenia" Society. Donations should be addressed to "Friends of Armenia," 47, Victoria Street, Westminster, S.W.1.

PERSONAL AND GENERAL

TO-DAY

December 8, 1927 (New Style).

November 25, 1927 (Old Style).

Jumada II, 13, 1346 A.H. of the Muslim Calendar.

Kislev 14, 5688, of the Jewish Calendar.

Sir Andrew Caird left London on December 1 to join the *Kaisar-i-Hind* at Marseilles for Bombay and Calcutta.

The Greek Minister has left London for Geneva. In his absence M. K. A. Collas will act as *Chargé d'Affaires*.

Sir M. M. Bhownaggee has gone to Mentone, where he will stay for the next three months.

The Rt. Hon. Lord Grenfell has arrived in London from Bombay, sailing from India by the P. and O. s.s. *Ranchi*.

The Maharaja and the Maharani of Baroda left London last week to join the P. and O. s.s. *Kaisar-i-Hind* at Marseilles for Bombay.

The King has approved the appointment of Mr. R. A. C. Sperling, his Majesty's Minister at Berne, to be Minister at Sofia.

Sir Henry Dobbs, High Commissioner for Iraq, leaves London to-day (Thursday) for Baghdad. He is travelling *via* Aleppo.

His Excellency the Persian Minister (Hovhannes Khan Mossaed) had the honour of being received by the Queen at Buckingham Palace on December 1.

Dame Clara Butt left Marseilles on December 2 in the *Kaisar-i-Hind* for India, where Mr. Kennerley Rumford will join her early in the New Year.

The King of Egypt has conferred the Grand Cordon of the Order of the Nile on Sir George Schuster, the Financial Secretary of the Sudan Government.

Prince and Princess Andrew of Greece, with Princess Theodora of Greece, visited the King and Queen at Buckingham Palace on November 28 and remained to luncheon.

Sir Montagu Butler, Governor of the Central Provinces, accompanied by Lady Butler and Miss Butler, joined the s.s. *Kaisar-i-Hind* at Marseilles on December 2 on their way to Nagpur.

His Royal Highness the Prince of Wales received at St. James's Palace on November 29 the Afghan Minister (Shuja-ed-Dowleh Khan), and the Persian Minister (Hovhannes Khan Mossaed).

Sir Basil and Lady Blackett, who are returning to their residence at Simla, left London on December 1 to join the s.s. *Kaisar-i-Hind* at Marseilles for Bombay. Sir Archibald and Lady Birkmyre, and Colonel William and Lady Mabel Smith were among the other passengers for India.

Viscount Chilston, K.C.M.G., H.B.M., Minister in Vienna, whose appointment to be his Majesty's Minister in Copenhagen was announced last week, has also served, among other places, in Cairo, Constantinople, Athens, Sofia, Cettigne (twice), and Bucharest, as well as in the Foreign Office from 1915 to 1921.

Sir John Stavridi and Sir Edward Boyle are to be the main speakers at a meeting of the Near and Middle East Association on December 16, at 8.30 p.m. The gathering, over which Captain E. N. Bennett will preside, will take place, by kind permission of Sir John and Lady Brunner, at 43, Harrington Gardens, S.W.7.

Lord and Lady Vestey, Sir Courtney and Lady Manifold, Sir Stanley and Lady Reed, and Sir Ernest Bell left London on December 1 for Marseilles, where they joined the P. and O. s.s. *Kaisar-i-Hind* for Bombay.

Sir E. Denison Ross will lecture to the Central Asian Society on December 14, at 5 p.m., on "The Invasions and Immigrations of the Tatars." The meeting, which will be presided over by Viscount Allenby, is to be given in the Royal Society's Rooms, Burlington House, W.

A Treaty of Friendship and Security was signed at Kabul on December 2 between the Afghan and Persian Governments. The duration of the Treaty is for three years. The contracting parties undertake to refrain from aggressive measures against each other's countries and to remain neutral in the event of attack by a third Power.

The agreement dated October 19, 1925, for the settlement of the Roumanian war debt to Great Britain has been published by H.M. Stationery Office as a White Paper (Cmd. 2990, price 1d.).

Lady Stair opened in Edinburgh on December 2 a bazaar to raise funds for the Scottish Churches' Memorial and Hospital in Jerusalem. Already £11,000 has been raised, but £8,000 more is required to complete the scheme. The foundation-stone of St. Andrew's Church and Hospital was laid last May.

The Egyptian Ministry of Public Works has issued a report by Mr. P. M. Tottenham on "The Irrigation Service, its Organisation and Administration," and the Second Part of the report by Dr. H. E. Hurst on "The Lake Plateau Basin of the Nile." Copies can be obtained, directly or through any bookseller, from the Publication Office, Ministry of Finance, Cairo.

On November 30, under the supervision of the Departments of Antiquities and of Public Works, the Cross of the Dome of the Church of the Holy Sepulchre was removed preparatory to the dismantling of the dome, which was seriously damaged in the earthquake in last July. A temporary roof is being put up and the new dome will be erected last spring.

In Tirana on November 30 the Albanian State unanimously ratified the Treaty with Italy. The proclamation announcing the ratification of the Treaty was greeted with the greatest enthusiasm by the public.

THE PROBLEM OF THE INDIAN STATES.

In view of the fact that constitutional changes in British India may react in an important manner on what Lord Irwin has described as "this unique and profoundly absorbing problem," the relations between the Indian States and the Government of India have lately come into considerable prominence. We are aware that opinion is by no means agreed as to the extent to which the question may properly be regarded as the concern of a Commission required primarily to deal with matters pertaining to the Government of India Act and to the future of constitutional development in British India. On the one hand it is maintained with justice that so far as his Majesty's Government and the Government of India, and so far as the technicalities of the position, are concerned, there is no reason at all why the forthcoming inquiry should affect in any way the status or circumstances of the Indian Princes. No less strongly is it contended in other quarters that the question furnishes one of the outstanding problems for the Commission to examine. The Princes themselves are in some degree responsible for the belief, which we share, that it is becoming increasingly evident that the Commissioners will find it impossible adequately to deal with the wider issues remitted to their charge without taking into earnest and early consideration the problems presented by the Indian States. Although the late Mr. Montagu and Lord Chelmsford in their Report rightly insisted upon the continuation of the policy of non-interference to which successive Viceroys have scrupulously adhered they emphasised that India is in fact, as well as by legal definition, one geographical whole. The integral connexion of the States (which comprise one-third of the territory of India, and contain one-fourth of its total population) with the British Empire not only consists in their relations to the British Crown but also in their growing interest in many matters common to the land to which they and the British provinces alike belong. Hitherto the Princes have mainly concentrated upon the preservation of their separate status, but the common interests are daily increasing in bulk and in complexity by the irresistible force of circumstances. Moreover, there is always the thought that one day the idea of a federal India may assume more definite shape than at present seems practicable.

And yet until last summer so little had been said of the position of the Indian States in relation, particularly, to the possible grant of a further measure of self-government in the area directly under British administration that this aspect of the whole question of the reforms hardly seemed to have received the attention that its importance merited. It is true that the Maharajah of Jammu and Kashmir might almost have been accused, in his address of welcome to the Viceroy on the occasion of the latter's visit in April, of trying to draw some statement of policy from Lord Irwin. Beyond, however, emphasising the need for devoting serious thought to

that very delicate question, Lord Irwin naturally refused to commit himself, or even to disclose whether he had any definite proposals in his own mind. At the same time it has long been a matter of common knowledge that plans for what the Viceroy described as "clearing the ground before we can begin to build" have been slowly maturing and the Conference of Indian Princes, which was held at Simla in the beginning of May, was, we presume, one of the first steps in the direction indicated. Although the reports laid emphasis upon the informal nature of the conversations, we pointed out at the time that if the discussions did no more than clear the air and help to clarify the real issue they would have served an eminently useful purpose. The attitude of the Princes towards the Reforms is generally known. They profess every sympathy with the ambitions of the political classes in British India, but they openly disagree with many of the measures designed by British statesmen for their satisfaction and they are firmly resolved that they would not remain in any kind of subordination to a Governor-General in Council responsible to a British Indian electorate. Some years ago there was a proposal that the Indian Political Department should be made a branch of the Diplomatic Service. It came to nothing, but was generally regarded as an attempt to provide against any such contingency. This summer the Princes as a body sent Mr. Rushbrooke Williams and Colonel Haskar as a deputation to this country. The ostensible object of the mission was to obtain the highest legal opinion on their position in law in relation to the present administration. Its ultimate purpose, of course, was to secure for the Princes the best possible advice on which to negotiate their place in the India of the future.

Perhaps the most authentic expression of the Indian Princes' desire in this respect is to be found in the speech in which his Highness the Maharajah of Mysore proposed the health of the Viceroy at the State banquet at Mysore in August. "I and my brother Princes," said his Highness, "have long felt that one of the most urgent, if not the most urgent, problem in India to-day is the place Indian States are to fill in the constitution of the future . . . Your Excellency has attacked it with characteristic energy and a willingness to place all the cards on the table that makes all the difficulties far less formidable than they at first sight appeared. And we sincerely hope that, as a result of the conversations which your Excellency is inaugurating in this matter, and with the aid of your wise statesmanship, a way may be found in which it will be open to us to play an honourable part as partners with the British provinces in whatever form of federal Government may hereafter be decided upon." The answer to this appeal, and the constructive proposal put forward at the Simla Conference, came last week when at a State banquet at Rajkot, Lord Irwin made the momentous announcement that it had been decided by the Secretary of State to appoint a small expert Committee to report upon the relationship

between the Paramount Power and the States, with particular reference to the rights and obligations arising from treaties, engagements and "sanads" and usage; and, secondly, to inquire into the financial and economic relations between British India and the States, and to make any recommendations that the Committee might consider desirable or necessary for a more satisfactory adjustment. The rights, dignities and privileges under the treaties and "sanads" of the Indian States, Lord Irwin explained, had been frequently reaffirmed, and they might be certain that no British Government would fail to maintain them. Nor even apart from them, would any change affecting the Princes' position be likely to be proposed without the fullest possible consideration being given to their views and sentiments. In conversations, however, which he had had on the general question with many of their number, Lord Irwin said he had become aware that there was a strong body of opinion in favour of an early examination of some of its more technical aspects. Whatever might be found to be the ultimate solution of the wider problem of the States as viewed in relation to the developments in British India, there was, he thought, force in the contention that there were meanwhile certain practical issues which might profitably be examined without delay. The evident satisfaction with which the announcement has been received by the Maharaja of Patiala, the Chancellor of the Chamber of Princes, augurs well for the success of an inquiry in which mutual trust and confidence must play a leading part.

CURRENT TOPICS.

The Indian Sea Customs Act.

It is not to be expected that import duties will ever be popular with importers, but it seems to us that they are sometimes made needlessly unpopular by the irritating way in which they are charged. Section 30 of the Indian Sea Customs Act is a good example of this. It has been an annoyance to importers in India for a very long time; and cases that have been reported lately show that it is still as troublesome as ever. It defines the real value, that is the value upon which the import tax is to be charged on imported goods that have to be appraised by the Customs officers. The real value is deemed by the section to be: "(a) the wholesale cash price, less trade discount, for which goods of the like kind and quality are sold, or are capable of being sold at the time and place of importation without any abatement or deduction except of the amount of the duty payable; or (b) where such price is not ascertainable the cost at which goods of the like kind and quality could be delivered at such place without any abatement or deduction except as aforesaid." It needs to be added that the value adopted under clause (b) of the section is usually the invoice price plus the charge for freight. It follows that the duty is charged on the higher value—that which includes the wholesale dealer's profit—when the market price can be ascertained; but that it is charged on the lower value when the market price cannot be ascertained. For many years past this practice has created dissatisfaction among importers in India. It is true that the application of the principle laid down in clause (a) has not always been against the interests of the importer. There have been times, when the market has been falling, when it has been to his advantage. But the principle is not a good one, and it leads to disputes with the Customs. What is wanted is that the duty should be assessed on the invoice value, measures being taken to ensure that a genuine invoice is produced.

The Indian Taxation Inquiry Committee of 1924-25 had the subject before them, and they pointed out that the practice of charging duty on the wholesale dealer's profit gives rise to a sense of injustice. For it is really equivalent to levying the duty at a higher rate. They recommended that the order of the application of the two clauses (a)

and (b) inverts the right order of things. For the tendency of the section as it stands is to put a premium on making the wholesale cash price unascertainable. The Committee considered that, on the contrary, the law should be so framed as to put a premium on the production of an honest invoice; and that the importer who fails to produce such an invoice should be penalised by being made to pay duty on the wholesale value. They accordingly recommended that the order of the two clauses should be inverted; and that the charge should normally be on the price at which goods of like kind and quality can be delivered. In other words, that duty should be charged on the invoice price plus the cost of freight subject to the applications of the wholesale value should be reason to question the invoice. This change would be welcomed by importers; but so far as is known the Government of India have not yet decided to adopt it. Moreover, the Sea Customs Act was framed at a time when the duties were on a very low scale. There has been a great change since those far-off days, the current rates being so high that importers have to regard them very seriously. A more than sufficiently heavy burden is thus laid upon the importer; and it is altogether wrong that in addition he is irritated by provisions such as those of section 30. To revise the Act, which is of necessity a complicated statute, will take some years. But there is surely no good reason why section 30 should not be recast on the lines proposed by the Taxation Committee. This would not be a big undertaking and it could be, therefore, speedily completed.

India's New Finance Member.

Sir George Schuster has been appointed a member of the Executive Council of the Governor-General of India from September next. The new member, who will take over the Finance portfolio, will retain his present appointment as Financial and Economic Adviser to the Colonial Office until his departure for India. It is contemplated that before then the task of the East Africa Commission, on which Sir George is at present serving, will be completed. The temporary vacancy in the Governor-General's Executive Council, which will exist on the expiry of the term of office of Sir Basil Blackett in April next until the arrival of Sir George Schuster will, under Section 92 of the Government of India Act, be filled by the Governor-General in Council, who has decided to appoint Mr. A. C. McWatters. It is intended that Sir Bhupendra Nath Mitra should temporarily take charge of the Finance Department and Mr. McWatters of the Department of Industries and Labour.

Sir Basil Blackett, who has been on a short visit to this country in connexion with the Reserve Bank of India Bill, left London last Thursday on his return to India. Naturally the Finance Member was not able to add anything to the statement made upon his arrival, but it is understood that he has been greatly impressed by the good will towards the principle of the scheme exhibited in all quarters in this country. So far as his own mission is concerned he informed a Press representative that his conversations with the Secretary of State had proceeded satisfactorily, and that he had every reason to hope that the revised plan for the proposed Reserve Bank on the basis of share capital would meet with general approval when published in India in due course. As previously mentioned in these notes there is reason to believe that when the Bill is reintroduced at the ensuing Delhi Session it will be found to embody the main features of the original shareholders' scheme in the amended form outlined by the Finance Member on the occasion of the presentation of the Joint Committee's report. At the same time it is understood that opportunity has been taken of Sir Basil Blackett's visit to introduce such further modifications in points of detail as later experience, both in India and elsewhere, has shown to be desirable and practicable. The latter include the introduction of the system of allotment upon a territorial, but not necessarily a provincial, basis, owing to the difficulty of maintaining a free market for the shares if the number of registers is too large.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 17.

The Statutory Commission.

It is too early yet to judge what may be the effect of Mr. Baldwin's defence of the British Government's action in restricting the membership of the Statutory Commission appointed under the Government of India Act to members of the Houses of Parliament. What effect, I mean, it may have on public opinion among Indians. There is much talk of a boycott of the Commission, but, if some think that we may see that, others think that other counsels will finally prevail. There is nothing to be gained by filling too many columns with the *ipsissima verba* of protestors, but I may allow myself one other quotation. It is from a Press interview given by Mr. T. C. Goswami, a member of the Swarajist party, at Delhi last mail day. He said:—

"The manner in which the Parliamentary commission has been appointed is so cynical that it must be taken as a challenge. If I do not say very much about the Viceroy's statement on it, it is because I want to avoid, as far as possible, unpleasant language; for the sophistry of which it is full is far more irritating than the downright govern-by-the-sword manner.

"We are all talking about the necessity of concerted action—even those who, while making their usual emphatic protests, are sitting on the fence. It is, however, gratifying to find that public opinion is overwhelmingly in favour of a complete withdrawal of co-operation from the Commission."

Those words remind me, not so much any particular words, as the ring of the whole, of what I for one was most glad to find in the cabled summary of the Prime Minister's speech to the House of Commons. What that was is: "Cannot we have done with the spinning of phrases which will not square with the hard facts of life because they ignore them." That phrases are spun, and nowhere in the world perhaps spun faster than in India, is a thing never for a moment to be lost sight of. And at this time, with a question before us of such far-reaching moment, it is least of all to be lost sight of. That may be said by the way.

If there was no action open to the leaders in India alternative to co-operating with the Simon Commission, to give it the name by which already it has begun to be called, one might be sure that the majority at least would co-operate; but there is an alternative, and it is very possible that we shall see it adopted. What it was outlined by Mr. Goswami in the same interview from which I have quoted. He said, to quote him again:—

"There are already several draft constitutions which could be utilized for the purpose of preparing a final draft to be ratified by a convention of all the elected members of all the Legislatures, together with representatives from all the important existing political organizations, so as to include all representative men. Such a convention would be as representative and therefore as authoritative as any that could be secured by any other method under the present conditions.

"There is plenty of material for the purpose of the draft constitution, and there has been sufficient public discussion on the subject to warrant my belief that certain general ideas have become fixed. It would be impossible for the British Parliament to ignore such a constitution, especially if it was backed by public opinion expressed in such a practical and effective manner as a successful boycott of the Commission."

The Indian plan, then, would be to leave the Commission to its unaided labours, while an independent body composed wholly of Indians, and of a very large number of them, drew up its own scheme of a constitution. Indian action, when the day came for the question to be considered by the proposed Joint Committee of the Houses of Parliament, would be confined to presenting the Indian-drawn constitution as the only one acceptable to Indian

opinion. Mr. Goswami thinks the Joint Committee would not dare to ignore it. Is there no phrase-spinning in that?

The European view of the whole matter has been well expressed in a leading article in the *Statesman*, the words most to be emphasised in that article being the following: "The dispute between those who say that, because Parliament is the sovereign body, you can only give deliberative and advisory powers to a committee or conference in India, and those who hold that the decision should lie in this country, is really an idle one. Parliament and the British Government of the day are, of course, the sovereign bodies, but they already possess an Act under which India is and can continue to be governed." The *Statesman* goes on to argue that, before there can be any modification of the existing constitution, an agreement must be reached in India, and to that agreement the European community must be a consenting party. "No agreement, no Act," is the only possible motto, by which the writer means, of course, no new Act.

It is good that that point should have been made thus early in the day, for the Indian leaders have been too ready to assume that the existing constitution must and will be torn up. Now there is no must about it. On the contrary, should India boycott the Commission, the British Government would probably conclude that the existing constitution must be maintained.

Provincial Civil Service.

A conference of provincial representatives, whose task is to hammer out the lines on which the Provincial Civil Services of the future should be organized, has been opened at New Delhi under the auspices of the Home Department. No less than fifty-six persons have been gathered together, of whom thirteen are Ministers, and three are Executive Councillors, while the rest are departmental heads or technical advisers. The problem now to be thrashed out has been hanging fire since the Lee Commission reported in favour of the organisation of provincial services to function in the provincial and transferred fields. All-India services were to be reduced to a bare minimum, and development on local lines was decided upon. The Lee Commission, however, made it clear that every effort must be made, in organising the provincial services, to guard against the absence of uniformity in the standards required of civil servants. There must be this uniformity, if the efficiency of the Central Government is to be preserved and improved, for that Government will depend in many spheres upon the provincial agencies. The question has been found in practice to be not easy of solution, as the fixing up of standards of qualification and the class of candidates required for the more important administrative posts, and the sources to be tapped for the right class of recruits, all make a complex problem.

Grand Trunk Canal.

While in the Punjab they have been opening new canals, Bengal has made up her mind to abandon hers, the so-called Grand Trunk Canal, and that, too, after a good deal of money had been spent on the preliminary survey. The proposal was the no less ambitious one of connecting Calcutta with the districts of Eastern Bengal. Engineers of the Irrigation Department, and especially Mr. Addams-Williams, Lord Lytton's "deltaic expert," had for some years been expressing the opinion that the present Sundarbuns route, by which steamers from Calcutta still go to Chittagong and Dacca, and on to many parts of Assam, is so rapidly silting up that in the very near future the maintenance of a river connexion between Calcutta and those parts will be impossible. So the Grand Trunk Canal project was conceived. It has now been given up; so it is not worth talking about. But it will be a changed Calcutta when it is no longer possible to go hence by steamer "up the Sundarbuns;" or if that is no longer possible; so it will be with great interest that we shall wait and see. Engineer-prophets, when their subject is a river, do not always prove right.

Calcutta's Oil War.

The following somewhat enigmatic words were to be read in one of our Tuesday's newspapers, if not in several of them:—"Following on what has become known in Calcutta as the "oil war" is a talked-of alliance between the Burma Oil Company and the Asiatic Petroleum Company with the object of combating the alleged activities of the Standard Oil Company. It is also rumoured that an important agency for an oil company in the city may be dissociated from the firm with which it has hitherto been identified. In some quarters, however, it is suggested that the outward keenness of competition may conceal a significance not apparent to those unprepared for an important business move between principal companies. No authoritative pronouncement has yet been made in Calcutta." The column, in which there is a great deal more on the same subject, is headed, "Campaign Against Soviet Oil." Only one thing seems perfectly clear, and that is that this is no time for men of small means to speculate in the Calcutta Oil market.

Bengal Land Development Bill.

The Bengal National Chamber of Commerce has addressed a communication to the Government in which they say that, while appreciating the salutary principle underlying the bill, they cannot lend their whole-hearted support to it. The reasons given are of a technical nature. The Chamber thinks that, if the industrial development of Howrah should necessitate the creation of special machinery, there should be a Trust for Howrah on the lines of the Calcutta Improvement Trust, while for other towns requiring development of adjacent areas a Land Development Bill similar to the present one, but with some modifications, would serve the purpose.

The Statesman.

What "The Ditcher" in "Capital" has published to the world can no longer be regarded as a secret. "Advices," he wrote last Thursday, "have been received from London that Sir David Yule and Sir Thomas Catto have purchased the controlling interest in the *Statesman* from the brothers Knight, and this gives them a hold on the *Englishman*. The fact that the magnates of Clive Row are in the Liberal combine which acquired the *Daily Chronicle* of London has led some people to think that a political object underlies the new enterprise, but I am slow to believe that. The *Statesman* is a gilt-edged proposition, and as such made an appeal to financiers with plenty of money to invest in sure things. I hear that the net profit of the company last year was in the neighbourhood of £75,000.

"The passing of the Knights will be regretted by many old friends who hoped that the family would for ever be identified with the paper founded by so picturesque an ancestor as Robert Knight, the greatest journalist in India in the nineteenth century. He was born in 1825 in England and his parents destined him for the Church, but he preferred to go into business, and arrived at Bombay in 1847 to open an agency for Messrs. Cutler, Palmer and Co., the well-known wine merchants. He was, however, a born journalist, and soon left the counting-house for the editorial sanctum of the *Poona Observer*."

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, November 18.

The Boycott.

After what seemed to some to be a lull in the storm of protests which followed the official statement, the opposition to the personnel and programme of the Statutory Commission has gathered renewed force. And as fore-

shadowed in last week's letter, the protests are no longer confined to mere expressions of opinion, however vehement, but are beginning to assume the more definite form of an organised boycott—both political and economic—of the Commission. "For this *happy* change in the situation (the italics are mine) credit," the *Bombay Chronicle* thinks "should specially be given to the leaders of our own Presidency." The history of the public meeting of protest to be held in the Cowasji Jehangir all to-morrow (Saturday) may appropriately be related by the same organ, which is naturally jubilant over what it describes as a "triumph of nationalism." "Mr. Jinnah, who had been from the beginning planning concerted action among various eminent leaders a draft manifesto suggesting organised boycott. He has good reason to say now that he has already received most powerful and influential support from all parts of India, from the foremost leaders of the Indian National Congress, the All-India Muslim League, the All-India Liberal Federation, the Federation of Indian Chambers and the local Millowners' Association."

The manifesto, which is signed by Sir Dinshaw Petit, which is to preside at to-morrow's meeting, Sir Ali Iman, Sir Chimanlal Setalvad, Sir Abdur Rahim, Sir Sivaswamy Aiyar, Sir Tej Bahadur Sapru, Dr. Kitchlew, Sir Phiroze Sethna, Mr. Jinnah and other prominent men, declares that unless a Commission on which British and Indian Statesmen are invited to sit on equal terms is set up, they could not conscientiously take any part or share in the work of the Commission as at present constituted. The declaration, like that issued separately by the Responsive Co-operation party of Maharashtra, which is signed by Mr. Jayakar, Mr. Kelkar, Dr. Moonje, Mr. Aney and Mr. Bhopatkar, it will be noticed, carefully avoids anything in the nature of a specific request for the appointment of Indians on the present Commission. Apparently the idea underlying the constructive proposals—if either of the manifestoes can rightly be so termed—is the creation of a second Commission, composed entirely of Indians, enjoying the same status as the Parliamentary body.

A Rift in the Lute.

Dr. Kitchlew's assent to the Jinnah manifesto is significant as he is a member of the Punjab Muslim League, which has disapproved of the boycott, but not perhaps in exactly the same sense as the *Bombay Chronicle* suggests. The same remark applies to the other Muslim signatories. Anybody who is in touch with the realities of the situation would unquestionably regard the Punjab Muhammadan leaders as reflecting more truly the sentiments of the community than Sir Abdur Rahim and Mr. Jinnah, whose claims to leadership, as recent events have shown, rest upon the flimsiest foundations. Under the guidance of Sir Mahomed Shafi, an ex-member of the Viceroy's Council, who holds in the Punjab a position certainly not inferior to that occupied in the United Provinces by Sir Tej Bahadur Sapru, a former colleague, the Council of the Punjab Muslim League has decided, by 24 votes to 4, that a boycott of the Commission is detrimental to the best interests of the country in general, and of Muslims in particular. And that view is undoubtedly widely shared by Muhammadans in Bengal and other parts of India.

The dictates of reason, says Sir Mahomed Shafi, should not be sacrificed on the ground of sentiment and he appeals very strongly to reason when he argues that a boycott would only disclose the weakness of India. "In view of this lead to the Muhammadan community" the *Times of India* pertinently remarks, "it can no longer be suggested that nobody of any importance will lend his support to the proposed scheme, and we anticipate that the majority of Muhammadans throughout the country will shortly declare their intention of refusing to be stamped into an attempt to retard the political advance of India." And already signs are not wanting that not a few of those who at to-morrow's meeting will urge most insistently the need for a united front are already conscious that the appeal is vain.

THE TRADE OF INDIA.

The recently published "Review of the Trade of India in 1926-27" gives an exceedingly useful survey of the external commerce of India for the year ended March 31, 1927. It has been compiled by the Director-General of Commercial Intelligence and Statistics—Dr. D. B. Meek—and it contains a mass of statistical information concisely and clearly presented. The total value of the imports and exports of merchandise for the year aggregated Rs.540 crores—imports Rs.231 crores, and exports Rs.309 crores. To this total have to be added the imports and exports of treasure and Government stores, making a grand total of Rs.595 crores. For the preceding year, 1925-26, the corresponding totals were Rs.611 crores and Rs.682 crores respectively. India's biggest customer is the British Empire, as, of the Rs.540 crores of imports and exports referred to, the share of the Empire was Rs.246, or 45.5 per cent. Of the total, Rs.611 crores, for the year 1925-26 the Empire's share was Rs.269 crores, or 44 per cent. It is noticeable that in the last pre-War year, 1913-14, the Empire shared more largely than this in India's trade. The total value of the merchandise imported and exported by India in that year was Rs.432 crores, of which Rs.222 crores, or 51.3 per cent., was the share of the Empire.

The shrinkage has occurred in the trade between India and the United Kingdom. Imports from Great Britain 1913-14 no less than 64.1 per cent. of the merchandise imported into India came from this country. By 1924-25 the percentage had fallen to 54.1 per cent.; by 1925-26 it had declined still further to 51.4; and for the year under review, 1926-27, it stood at 47.8 per cent. The reduction is traceable in most of the principal imports. By far the largest of India's imports are cotton manufactures. Their value in 1913-14 was Rs.66½ crores, of which large total 90.1 per cent. came from Great Britain. For 1926-27 the total was Rs.65 crores, and this country's percentage was 75.3 per cent. Japan is the encroaching competitor, her share having developed from 1.8 per cent. in 1913-14 to 17.2 per cent. in 1926-27. In 1925-26 Japan did even better than this with a percentage of 19, against Great Britain's 74.6 per cent.; and it is satisfactory to see that there has been some recovery, however small, by the United Kingdom.

Other commodities, imports of which from this country have diminished since 1913-14—when stated in percentages—are iron and steel, machinery, hardware, motor-cars, railway plant and paper. But as regards some of these the effect of the coal strike has to be taken into consideration when the figures for 1926-27 are discussed. The progress of the motor-car trade since the War is of special interest. The value of the motor-cars of all kinds, light and heavy, imported into India in 1913-14 was Rs.153 lakhs. The United Kingdom shared in this total to the extent of 71.3 per cent. In 1926-27 the value of the motor-cars imported was Rs.509 lakhs, of which considerable total Great Britain's percentage was only 26.7. In passing, it may be mentioned that to March 31, 1927, the motor vehicles registered in British India were: motor-car, 88,767; motor-cycles, 21,665; motor lorries,

buses, etc., 13,796. In comparison with the enormous population these are, of course, small figures; but nevertheless they indicate that India is a valuable market. The number of cars (exclusive of cycles and heavy cars) imported in 1926-27 was 13,197; and of these 2,546 only came from Great Britain. The United States sent 4,030 cars, Canada 4,476, Italy 1,416, France 607, and other countries 122. In 1913-14 the total number of cars imported was 2,880, and of these 1,669 came from Great Britain. Of the remainder, 868 were imported from the United States, 118 from France and Italy, and 225 from various other countries.

At the present time there is a considerable import of motor omnibuses, van and lorries. But this business also has been secured by the United States and Canada. A cheap vehicle is what is mostly wanted in India, and the high price of the British motor bus hampers its sale. Its average chassis value in 1926-27 was Rs.4,968, against the American chassis at Rs.2,020 and the Canadian at Rs.1,335. From Canada 3,528 motor omnibuses, vans and lorries, valued at Rs.48 lakhs, were imported during the year, and from the United States 2,322, valued at Rs.49 lakhs. Only 341, valued at Rs.19 lakhs, came from Great Britain. On the other hand, it is satisfactory to be able to record that 92 per cent. of the motor-cycles used in India are imported from this country. The number in 1924-25 was 1,201, or 82 per cent. of the total imports. In 1925-26 it rose to 1,458, or 89 per cent. of the total; and in 1926-27 to 1,64, or 92 per cent. Not more than 75 American motor-cycles were imported in the year under review, while 19 came from France and 8 from Germany.

As regards India's exports, the share taken by the United Kingdom has not varied greatly since 1913-14. At that time it was 23.4 per cent.; in 1924-25 it was 25.5 per cent.; in 1925-26 it was 21 per cent.; and in 1926-27 it was 21.5 per cent. The chief commodities exported to the United Kingdom are raw and manufactured jute, tea, raw and tanned hides and skins, food-grains, raw wool, oilseeds, raw cotton and lac. During the year 1926-27 these articles represented about 83 per cent. of the total value of the exports from India to the United Kingdom.

Of the British possessions other than the United Kingdom, Ceylon does the largest volume of business with India, its value during 1926-27 being about Rs.16½ crores. Exports from India accounted for more than Rs.14½ crores of this. Rice and coal are the principal exports, imports being betelnut, tea, copra, and coconut oil. The Straits Settlements come next after Ceylon, their total trade with India for 1926-27 aggregating Rs.15½ crores. Australia is third with a total trade of Rs.9½ crores; and Kenya Colony is fourth with Rs.4½ crores. Hong Kong and Canada follow with Rs.3 crores 93 lakhs and Rs.3½ respectively. All of these dominions do a larger business with India now than they did in 1913-14, when the value of the imports from British possessions apart from the United Kingdom was Rs.10½ crores. In 1926-27 it was Rs.16½ crores. The value of the exports from India to these countries in 1913-14 was Rs.36 crores against Rs.52½ crores in 1926-27.

Tours.

TOURS that consider your comfort and are economical or liberal—just as you wish. Itineraries are arranged to suit your requirements. Travel is independent and private but everything is provided before you leave England.

India's foreign customers (excluding the British Empire) may be divided into European and non-European countries. With the European countries her trade in 1926-27 aggregated upwards of Rs.113½ crores, made up of imports Rs.4,748 lakhs and exports Rs. 6,640 lakhs. It is noticeable that the trade of India with Europe has changed greatly since the War. Imports from Europe have increased by as much as 61 per cent. over the figure for 1913-14, namely, Rs.2,951 lakhs. On the other hand, exports to Europe have diminished by 21 per cent., their value in 1913-14 being Rs.8,457 lakhs. As Dr. Meek justly observes, the reduced purchasing power of European countries is clearly indicated in these figures, even when allowance is made for the greater increase in the price index number of imports into India, as compared with that of exports from India. With the non-European countries the total was upwards of Rs.180½ crores—imports Rs.5,682 lakhs and exports Rs.12,383 lakhs. In 1926-27, as in each of the five preceding years, Japan stood first among India's foreign customers, excluding, of course, the British Empire. The importers amounted to Rs. 1,647 lakhs and the exports to Rs.4,127 lakhs, making a total of Rs.5,774 lakhs, say, Rs.57¾ crores. This total was smaller by Rs.19 crores than the total of the preceding year 1925-26, imports having declined by Rs.2 crores and exports by Rs.17 crores. The United States came next to Japan in order of importance with a total trade of nearly Rs.53 crores, which was less by Rs.2 crores than the total of the preceding year. Imports increased from Rs.15 crores to Rs.18¼ crores, but exports declined from Rs.40 crores to Rs.34½ crores. The principal articles interchanged between India and the United States were, as regards imports, mineral oils, raw cotton, iron and steel, hardware, machinery and motor vehicles. The chief exports were raw and manufactured jute, shellac, raw hides and skins, castor-seed, tea and mica.

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

One of the first thoughts following from the announcement of the personnel of the Statutory Commission was the query as to who would be entrusted with the scarcely less responsible task of carrying out the heavy secretarial duties involved in an inquiry of that nature. The selection of Mr. J. W. Bhore, from the Indian Civil Service, and Mr. S. F. Stewart, of the India Office, as Joint Secretaries is a happy one, for both officers have the reputation of possessing in a marked degree precisely the qualities which such work demands. The choice of Mr. R. H. A. Carter, the Secretary of State's principal private secretary, and of Mr. E. W. Perry, the popular Bombay civilian, as Assistant Secretaries is also a good one, and the members of the Commission will have the satisfaction of knowing that in so far as it lies within the power of an able and industrious secretariat to lighten their labours they will be well served in that all-important respect.

A good deal of the ground has, of course, already been prepared in advance of their arrival in India. Following the appointment of Mr. James Crerar, the brilliant Bombay civilian, to succeed Sir Alexander Muddiman as Home Member of the Viceroy's Executive Council, this duty has now devolved upon Mr. Dunnett, who, as Joint Secretary in the Home Department, has been engaged on the work for some time past. Mr. Dunnett hails from the Punjab where, as Deputy Commissioner of Amritsar, he won distinction at the time of the Akali trouble. Before his transfer to the Government of India he officiated on several occasions, I believe, as Chief Secretary to the Punjab Government and is regarded, both at Delhi and in his native province, as an officer of more than usual ability.

Meanwhile there is an eleventh hour change in the com-

position of the Commission itself. At a meeting of the Parliamentary Labour Party last Tuesday Mr. MacDonald announced that Mr. Stephen Walsh had been strictly forbidden, on medical grounds, to undertake the voyage to India, and that he would accordingly resign from the Commission. The fact that Mr. Walsh would be unable to serve was, I understand, communicated to the Prime Minister during last Friday's debate, but it was agreed that, as matters had gone so far, the resolution should be passed in its original form.

The Labour executive, it was stated, had arranged for Mr. Vernon Hartshorn to take Mr. Walsh's place, and the recommendation has been accepted. The news has been received with regret in all parts of the House, for Mr. Walsh's nomination was a very popular appointment; but Mr. Hartshorn, who has acquired a considerable reputation as a statistician of some skill, should prove a very capable substitute.

As the personnel of the Commission has already been announced in the *London Gazette*, it will be necessary for both Houses of Parliament to submit an amendment to the Resolutions passed last week in order to substitute the name of Mr. Hartshorn for that of Mr. Walsh. The necessary steps to this end were taken on Monday.

I have often referred to the number of questions relating to Indian affairs which are submitted on Mondays instead of being spread over the whole of the five days. Last week proved to be no exception. In fact, they were so numerous and in the majority of instances so obviously copied from the proceedings of the Indian Legislative Assembly (and by the same typewriter) as to cause the Speaker to take the unusual step of intimating his desire that members should be "a little more careful in putting their names to questions which are offered to them by some outside body." The fact is, there seems little or no doubt that the Socialist members are regularly "briefed"—as regards the majority of their questions on India.

I could wish that the Standing Orders of the House of Commons laid down rather more definitely the responsibility of members for the inferences and statements such questions contain. Not only in questions referring to India, but generally—I notice on occasions a tendency to attack individuals, Governments, institutions, etc., and although this kind of thing is usually quite adequately dealt with by Government, it does not always quite heal the wound left by the poisoned dart, and even in the cases of "personal explanation," where a member frankly confesses he has been misled, I sometimes doubt if the "explanation" entirely removes the wrong impression originally created.

The Strangers' Gallery during the Commission debate contained many faces familiar to me in India and it was very pleasant to be able to greet Sir Basil Blackett and to notice how his health and energy appear quite unimpaired by his arduous term of office; his successor, who it now appears is to be Sir George Schuster, after all, will have a more than usually difficult time in following after a personality of such conspicuous vigour and ability.

From a parliamentary point of view, India will probably fade temporarily into the background: to any Indians pledged to boycott the Commission who may chance to read these lines I would, however, say that the breadth of political vision displayed by the speech of Mr. Ramsay MacDonald in last week's debate is one shared by about 99 per cent. of the Socialist Party in the House of Commons; both in the spirit and the letter they are willing and anxious to give the Commission every chance and are convinced as to the justice of the decisions which have given rise to so much indignation in certain quarters in India.

I do not underrate the opposition, nor do I altogether impugn its sincerity, but I trust that on mature consideration the boycott parties will realise the danger that all such movements bring in their train, namely, of exchanging the substance for the shadow.

Tuesday Morning.

Tenders for Persia.

I wish to draw special attention to the list of tenders invited for Persia which will be found elsewhere in these columns. The list which includes locomotives, rails, pumps, steel bridges, wagons, and small tools does not cover the whole of the country's requirements, but sufficient details are given to show British firms that here they have a unique opportunity of obtaining substantial orders. It may be hoped that when the contracts come to be allocated a number of them will come to this country. I am asked to say that further details that may be required by firms desiring to tender may be obtained from the Persian Legation.

The Palestine Loan.

The surprising feature about the Palestine Loan which made its belated appearance last week was the relative generosity of the terms offered, and in view of the financial situation with which Great Britain is faced which calls for the placing of loans on a constantly lower basis in order to reduce the interest on the national debt it is not surprising that this aspect should have aroused some criticism. The amount of the loan was £4,474,000 in 5 per cent. stock, guaranteed as to principal and interest by the British Government, and issued at 100½, at which price it could be obtained at a point and a fraction below the price of War Loan Fives. The loan is redeemable at par in 1967, but the Palestine Government have the right to repay the loan on or after 1942, and it is on that account that it has come to be referred to as a fifteen years' issue. At the present time the surplus of the Palestine revenues is roughly sufficient to provide for the service of the loan, and while the amount involved is not large, the assumption that repayment will take place in 1942 is obviously based on the view that developments in Palestine in the next few years will be of a much more promising nature than has been the case since 1925.

Purposes of Loan.

As was to be anticipated in view of the terms of the loan there was a heavy oversubscription—it is said that the amount was covered ten times—in which development, of course, the "stags" played a prominent part. It is at any rate a flattering testimony to the value of the British guarantee. When the market opened a premium was immediately established, and ultimately the price reached 113-16 premium. I merely emphasise these points because they make it quite clear that the money could have been obtained on a less attractive basis, and it is difficult to understand why at the present time it should have been deemed necessary to issue the loan on what was practically a 5 per cent. basis. As regards the purposes for which the loan is required part is to be spent on the construction of a harbour at Haifa, on the improvement of the port of Jaffa, and on railway and public works improvements, while £1,000,000 is to be paid to the British Government for railway and other assets taken over by the Palestine Government. The loan may, and it may profoundly be hoped it will, form the turning point in the history of Palestine under the Mandate. For the past two years or so the country has been under a cloud of depression, and the economic situation which has in consequence developed has led to large numbers of the Jewish immi-

grants leaving the country from which they hoped so much. The considerable schemes now under weigh should restore the economic equilibrium, but the first essential for that is an adequate port, and this as a result of the loan it will now be possible to provide.

Kassala Cotton Company.

At the meeting of the Kassala Cotton Company, convened for the purpose of authorising the acceptance of the new concession for cotton growing in the Gezira, the Hon. A. M. Asquith explained that it has been proved that conditions, partly physical and partly political, would make it impossible to bring under cotton in the Gash Delta the large areas which had been anticipated. For one thing the soil of the Gash Delta requires as much water for its single flooding as the soil of the Gezira takes in 13 to 15 fortnightly waterings. Then there is the question of cotton growing by the Italians in Eritrea, where this year it is estimated that some 6,500 acres have been put under this crop. In the Gezira the company will have 15,000 acres under cotton, and the company will have a river of comparatively certain flow to draw on, and Mr. Asquith stated that there is some prospect of the company being in a position to pay moderate dividends in or after 1931. It is, of course, a disappointment for the ordinary shareholders to have to wait so long, and it is not surprising that the shares should have fallen from 10s. 6d. which they reached recently to 4s. 7½d., and in view of the fact that this is only 1927 I should not be surprised if they went much nearer parity than that.

Bulgarian Loan Negotiations.

A hitch has unfortunately arisen over the Bulgarian Loan negotiations. One of the conditions laid down for the reconstruction loan by the Financial Delegation of the League of Nations is that the National Bank of Bulgaria must become a private concern, that it must be, in short, an independent institution. This condition the Bulgarian Government is apparently unable to accept, basing its refusal on the ground that the alteration would be unacceptable to the country. At the same time the loan is a vital matter for Bulgaria, a fact which the Government impressed upon the delegates, and in view of the fact that somewhat serious consequences might be anticipated in the event of its not being forthcoming it may be hoped that a compromise may be found possible. The League might decide, for instance, that in this particular case insistence on an independent central bank is unnecessary.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

TENDERS INVITED.

PERSIA.

The following are among tenders invited by the Persian Ministry of Public Works:—

Rails and Fittings, Etc.—Tenders are invited for 10,000 metric tons of steel rails, open hearth preferred (Martin or Siemen-Martin or similar process), for fittings to equip the above rails, for metal ties to equip 80 kilometres of standard gauge track, and for 100,000 wood ties.

Small Tools.—Tenders are invited for small tools such as shovels, picks, wheelbarrows, track tools, etc.

Trolleys.—Tenders are invited for 60 trolleys, wheels, axles, and bearings only for a track of 1.435 m.

Bridge Steel.—Tenders are invited for bridge steel erected in place.

Locomotives, Wagons, Etc.—Tenders are invited for eight locomotives for 76 c.m. track, internal combustion preferred, also for 200 wagons, half for 60 c.m. track, half for 76 c.m. track.

Miscellaneous.—Tenders are also invited for 500 tons Portland cement, four concrete mixers, steel reinforcing bars, culvert pipes, powders, dynamite, etc., power shovels, portable sawmills, corrugated iron sheets, railway dump carts, centrifugal pumps, hand pumps, and force hand pumps.

Further particulars of the above and other tenders can be obtained from the Persian Legation.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, December 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Media for Calcutta (Birkenhead, December 13); s.s. Mathura for Calcutta (Birkenhead, December 22).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 14).

British India Line.—S.s. Hatarana for Bombay and Karachi (London, December 14); s.s. Mulbera for Colombo, Madras, and Calcutta (London, December 17).

Cunard Line.—S.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool December 10, and Swansea December 13); s.s. Brescia for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea December 10).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 17); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 21).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, December 9); s.s. Trevean for Colombo, Madras, and Calcutta (London, December 10).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, December 10).

Ellerman and Papayanni Lines.—S.s. Gerano for Genoa, Leghorn, Naples, Palermo, Mersina, Catania, Bari, Gruz, Ancona, Venice, Trieste, and Fiume (Liverpool December 24, Swansea December 30); s.s. Lesbian for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 24); s.s. City of Oxford for Malta, Alexandria, Jaffa, and Haifa (Liverpool December 22, Glasgow December 30). Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 6.

The course of events in the Stock Markets this week has not provided any outstanding features. The tone has for the most part been cheerful, and a tonic effect was produced by the heavy oversubscription of the Palestine Loan for £4½ millions. High class investment stocks have been firm and are expected to benefit from the release last Thursday of £50 millions in the form of interest on Five per cent. War Loan, though so far there has been little evidence of reinvestment of this money. In spite of the approach of the dividend season the home railway market fails to attract the attention of the investor and prices remain heavy. The rubber share market enjoyed a spurt at the beginning of the week on the sharp rise in the price of the raw material, but the whole of the advance was not held and prices have since slipped back. The interesting announcement of an amalgamation between the Bank of Liverpool and Martins and the Lancashire and Yorkshire Bank was responsible for a slight rise in the shares of the former.

Ordinary Shares v. Bonds.

What should the investor buy? Should he purchase ordinary shares of fixed interest bearing stocks, or a judicious mixture of both? This question, which has been widely discussed in financial circles this week, has been prompted by a paper read before the Institute of Actuaries by a leading actuary. This authority had a very good word to say for the ordinary share. There is, of course, nothing new in this, but it is useful to have a restatement of the problem. He showed that, over a period of years, it would have paid the investor better to invest a given sum of money in ordinary shares than in fixed interest bearing stocks. His presentation of the case for the ordinary share was subjected to some criticism, but apart from this it is important to observe that he went so far as to say that even in the case of an insurance company, "ordinary shares certainly could not take the place altogether of fixed interest and redeemable stocks." This caution applies with vastly greater force to the ordinary investor. He should on no account invest the whole of his savings in ordinary shares. In the first place, his savings are rarely large enough to ensure the necessary degree of diversification; and in the second place, he is generally unable to exercise that measure of skill in selecting the shares which is essential to the most successful working of the theory. In short, safety lies in a judicious mixture of ordinary shares and fixed interest bearing stocks.

Electric Supply Companies.

In recent months the ordinary shares of a number of the London electricity supply companies have received steady support from investors, with the result that their prices have shown a gradually rising tendency. It is not incontestable, however, that the London companies offer the most promising field for investment in this branch of industry. After 1931 the dividends of the London companies are stabilised by Act of Parliament and an increase is not permitted until somewhat exacting conditions have been observed. The provincial supply companies, on the other hand, are not similarly restricted and possibly, in certain circumstances, have greater scope for expansion than the majority of the London companies. In the opinion of well-informed observers the Electricity Supply Act of 1926 will greatly stimulate the consumption of electricity. Obviously this will benefit the supply companies. It is true that the ordinary shares of some of the provincial companies stand at rather high levels, but in many instances this is due to the expectation of an issue of new capital on bonus terms. In any case, higher dividends are regarded as certain sooner or later. Among the moderately valued ordinary shares deserving attention are those of the Lancashire Electric, returning £5 11s.

per cent., together with the "A" ordinary shares of the Shropshire, Worcestershire and Staffordshire Electric Power, yielding £5 11s. per cent. The Newcastle-upon-Tyne Electric Supply Company's 7 per cent. cumulative preference shares, returning £5 12s. per cent., are an attractive investment of their class.

"Kaffirs" and Native Labour.

For several months past the department of the Stock Exchange which is concerned with the shares of Transvaal Gold mining shares has suffered from adverse incidents affecting individual undertakings. And now a general factor of adverse character, lately overhanging the market, has assumed concrete shape. It consists in the action of the Mozambique Government in giving notice to end the long-standing convention under which native workers are recruited from Portuguese East Africa. For many years the Transvaal mines have secured about one-third of their "boys"—a large proportion of them the best workers—from the territory in question. It is obvious that curtailment of this supply would very seriously restrict the operations of the gold mines, which are responsible for something like one half of the world's output of precious metal. Actually the notification is less alarming than might be inferred at first sight. It does not take effect for six months—a period giving ample time for a *modus vivendi* to be arrived at. Indeed the move is thought in some quarters to have some connexion with the desire of the Mozambique Government to obtain a substantial loan.

NOTES FROM YUGOSLAVIA.

(From Our Own Correspondent.)

Belgrade, November 25.

The Budget.

The Budget proposals put forward by Dr. Bogdan Markovitch for the financial year 1927-28 are extraordinary in that they show a deficit of over 200,000,000 dinars. It would be so easy to cover so small a deficit by a slight readjustment of estimates that this open confession of inability to meet estimated expenditure from estimated income is believed to be of great political significance. It is known that Dr. Markovitch made great efforts to

secure from every Minister great reductions in expenditure and that in many cases he succeeded. But it is suggested that he has published a statement showing that the demands of the various ministries on the national exchequer are greater than the country can bear in order to get public support in trying to force still further reductions. If he fails he will almost certainly resign. It is obvious that this Budget must undergo considerable modifications on its way through Parliament and therefore it may be wiser to leave the discussion of its details until these are examined in the Skupshtina. It should be noticed, however, that the total of 11,592,794,000 dinars expenditure includes several items not hitherto included in the budget, and does not therefore mark an increase in expenditure over that for last year and that very considerable sums which are to be expended on productive investment, building of railways, roads, etc., which are usually paid for by loans and not from income, are also included in this total.

Commercial Treaty with Great Britain.

Yesterday the Skupshtina unanimously supported the ratification of the new Commercial Treaty with Great Britain. Hopes are expressed that this may lead to increased commercial connections between the two countries and eventually to the investment of British capital in this country which has many valuable mineral deposits, forests, and other sources of natural wealth awaiting capital for their exploitation.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date November 30:—

Currants.—The market is practically devoid of any fresh feature, and beyond the underlying steadiness accounted for mainly by the continued strength of the Greek market, operations have been of insignificant proportions, though quite sufficient to absorb any parcels pressed for sale at slight concessions, owing to the desire of some holders to avoid warehousing. It must also not be overlooked that the existing quietness is but the natural reaction from the activity experienced during the months of September and October. The strength of Pyrgos and Amalias grades is not surprising, as these qualities are in relatively short supply, and although s.s. Polo, Amarna, Brescia, and Baron Renfrew arrived during the month, they brought only insignificant quantities of this class of fruit, and to import these even higher prices are demanded than those obtainable on spot sales. Medium class moves slowly at unchanged rates, while on the other hand Vostizza are slow of sale with prices slightly in buyers' favour. This is especially noticeable in the finest Shade Dried. Sales were transacted in Pyrgos at 43s. 3d. c.i.f., and Cleaned Amalias 45s. c.i.f. afloat. Spot sales: Pyrgos, 48s.; Amalias and Patras, 49s. to 50s.; Zante, 49s. to 50s.; Gulf, 53s. to 56s.; Vostizza, 58s. to 68s.; Vostizza smalls, 54s. to 60s. S.s. Algerian and s.s. Phrygia are now discharging. Quotations:—Pyrgos, 48s.; Amalias and Patras, 48s. 6d. to 51s.; Zante, 49s. to 50s.; Gulf, 52s. to 56s.; Vostizza, 58s. to 68s.; Vostizza Smalls, 54s. to 60s.

Sultanas.—The situation presents no material change, and prices have receded further, following the poor demand. Arrivals per Amarna, Manchurian, and Baron Renfrew contained a large proportion of rain-damaged and lower grade qualities. In purchases of good average on a c.i.f. basis, the out-turn is not giving satisfaction, and recourse was had to arbitration in many instances. Business was most disappointing and total sales are out of all proportion to what we expect at this time of the season. Buyers are also commencing to receive their c.i.f. purchases of Natural Soda Bleached Californian Sultanas, in which a large business was done, and this also is a factor of considerable importance to be reckoned with.

Smyrna quotations:—Rain-damaged, 41s. to 43s.; ordinary to fair, 50s. to 53s.; good, 50s. to 60s.; fine up to 75s.

Cretans.—Some fine coloury fruit was sold on overland samples at 71s. to 80s.

Greeks.—Slow of sale, 56s. to 60s. up to 80s. for fine.

Figs.—Demand has quite fallen away, and it is difficult now to make progress except at tempting concessions. Latest sales:—Large Boxes, Layers, 60s. to 65s., with a few choices at 75s.; Small Boxes, 60s. to 70s.; Locoums, 85s. to 90s. Bags of Genuines are neglected, buyers having been well supplied with c.i.f. purchases. Quality of late arrivals is most disappointing. Spot sales:—Genuines, 35s. to 37s.; rain-damaged, 33s.

Purchases of the Roumanian Four per Cent. Consolidation bonds have been made by the Roumanian Government for the sinking fund. Under the terms of the bond, these were not due to begin until April 1, 1928.

THE CYPRUS FOREST INQUIRY COMMITTEE.

(From a Correspondent.)

A brief account of the activities of the Cyprus Forest Inquiry Committee may be of interest. The Committee was appointed by Mr. Nicholson just before Sir Ronald Storrs came to the Island, and the present Governor, by drawing attention over and over again to the need for protecting the forests thoroughly, has done much to stimulate its work.

The Committee first of all consisted of nine members, whilst three months ago another Commissioner was appointed, Mr. Surridge, so that the Committee is now ten in number.

The Committee has visited a very large number of the forests in the Island, including the Paphos, Troodos, Adelphi, and Mochera, Limassol, Raudi, Episcopi, Paramali, and Akrotiri forests; the Orites and Akamas forests in the Paphos District, Kartal Dag and Ayia Irini in the Kyrenia District, Dennarga, Kantara, Peristeria, Halasta, Karpass, and Apostol Andrea forests and other smaller areas, including Salamis Plantation in the Famagusta District.

The main questions coming before the Committee have comprised :—

1. **Grazing.** The Committee has heard requests from the villagers for unlimited numbers of animals to be allowed to graze in the forests, one of the more modest villages asking for 10,000 goats. For the whole Island this would mean 12,000,000 goats.
2. **Fuel.** Although 250 villages out of 647 are privileged to gather dry fuel, yet the allegation was made that they were not allowed to collect it. Usually it was admitted that they want to cut fresh green trees or shrubs.
3. **Timber cutting.** Every individual wishes to cut any tree he likes, regardless of the state of the forest.
4. **The cutting of privately owned trees and woods without hindrance.** This is allowed now, but if a man is found with fresh wood, he has to prove to the satisfaction of the F.D. and if necessary the Court that he has obtained it legitimately. The peasant does not wish to have the onus of proof, but it is impossible to concede this without undue damage to the State Forests. To the law-abiding citizen the present procedure is no handicap. He notifies the nearest forest guard of what he is doing and takes out a permit either to cut his trees or transport the material, when cut. In Norway, Sweden, Finland, Switzerland and Germany, no privately owned woodlands may be cut without permission. Here that is not demanded, simply subsequent proof that the timber has been obtained in a *bona-fide* manner.
5. **Land in the forests.** Many villagers claim land in the forest despite the fact that their relatives did not claim it 40 or 50 years ago when the forests were delimited. Even now old cultivation or trees are granted although such land or trees have been taken without any right or title. Lack of staff has hindered the detection of these thefts for several years.
6. **Claims to springs and water supplies in the forests.**
7. **Free issue of tree-seedlings to individuals** (about 200,000 were given away in 1927).
8. **The establishment of more nurseries** (30 in 1914, now 52).
9. **The acquisition of Halilands.** It has been the practice to take over poor uncultivable land and plant it. It is owned already by the Government.
10. **The compounding of forest offences:** less to be paid. The amount is usually very low now and does not reach half the value of the trees cut down.
11. **Supply of stones from the forest gratis.** These are being issued to villagers on payment of 10 paras per load fixed by law: a negligible sum for the individual purchaser, which the Department cannot reduce to any lower extent.
12. **Building as well as repairs to old mandras.** A Government circular issued in 1885 governing all cases relating to mandras has been the guiding principle of the Department. It was distinctly laid down that no repairs or construction of new mandras should be permitted within delimited forests.

The Forest Department has been asked for many statements covering all its activities, and has supplied over 140 statements covering, for instance, all the grazing permits issued to villagers for goats, sheep, pigs, camels, oxen, asses, and cattle from the year 1894 up to date. It has also supplied statements as to cases taken up, and land grants since 1884, when the forests were first delimited, and in addition about 160 letters and reports have been sent in dealing with the forests or questions specifically asked.

Undoubtedly the most knotty question is that of grazing. Although in many villages which have had no permits for years arrangements have been made to keep goats or other animals tethered, yet these as well as other villages to which permits are given ask for more and the rest for some to be granted.

Again, although under the Rural Constable Law no owner need tolerate other people's animals grazing on his land, yet the people do not feel strong enough to resist the unreasonable demands of the goatherds or farmers, who are trying to get the best of both worlds. In fact it is this desire to grow arable crops and keep animals loose without feeding, except what they can pick up for themselves, which is keeping the country back. Little or no attempt is made to keep animals under a proper system of animal husbandry, but every effort is made that they may be kept at the public expense, grazing in the forests or on other people's land.

In reality, if the people would only realise it, this is the major problem in the whole country, and on which its very future depends. It hinders the formation of orchards and gardens, as well as planting of mulberry and other trees at the edges of fields or properties. As the ordinary peasant says, he has no security for his planting, for a goatherd may come along and pull up his tree or shake it, so that it dries out, or it may be nibbled by grazing animals.

It is not yet known what the Committee will recommend in view of the apparent divergent views amongst the members whilst touring round the forests. Most members are now convinced that grazing is harmful to the trees and forests. The difficulty is to know how to stop it. Grazing areas are already set aside, but the goatherds in most cases do not respect the boundaries laid down. Until they are willing to abide by fixed areas there will be little progress. The goatherds think that permits should be inheritable, but a permit is not a material consideration. It is granted subject to good behaviour and certain other conditions year by year. There is no obligation agreed or implied that the son of a goatherd will have a permit. In fact, during the last ten years it has been stressed over and over again by the forest staff, that other means of occupation are open to goatherds and they should seek them rather than depend on grazing for a livelihood. Land is offered to goatherds who give up keeping goats in the forests. It is fully prepared as a small holding, equipped, and planted up with fruit trees and a water supply is found. As yet there has been very little response to this offer, which speaks for itself. A fully prepared small holding is worth about £60 and represents the selling off of ten to thirty goats and no further permit. The goatherd thus not only gets the money for the goats sold, but also is paid for working on his holding until it is ready for occupation, if he desires to do so. The ratio is 1 acre for thirty goats given up.

A better breed of goat is to be imported instead of the poor small, semi-wild kind kept now. Cows have been kept for many years by the Government, and some individuals have them also, but many more could be kept.

The cutting of all material in the forest by the Forest Department is strongly urged, but presents some difficulty owing to lack of sufficient funds and the existence of acknowledged privileges which have been exercised for many years.

It is acknowledged that every effort has been made by the Department to settle land and other claims for years, but here again, excepting a few demarcations, which were not very clear, it is the people themselves who have trespassed, both as to land and grafting wild olive and carob trees.

For the sake of avoiding the payment of a shilling or two in land registration fees, a man will sooner keep his property in uncertain tenure, and then complains if there is a doubt about it, when he himself ought to have taken steps long before to have had it registered in his name.

Motors and Motoring

By C. B. B.

The New Ford.

I was at the Press view of the Ford exhibition at the Holland Park Hall, and I was impressed with the extraordinary nature of the personality of a man who could make fourteen million models of a certain type of car, convinced that it was what the world wanted, and then, seeing that the public taste was changing, could boldly scrap all his designs, plans, patterns, moulds, dies and every scrap of plant used in its production and set to work to make an entirely new model.

Of the new design there are six models, but they all have the same size and design of engine, which is rated at 15 h.p. Consequently, the tax on any of the new Ford models will be £15. The saloon model should be the most popular, next to the open tourer, of the new designs and the cars should run for 35 miles on a gallon of petrol, and should be capable of a speed up to 55 m.p.h. The engine is of the four cylinder type, coil ignition is used, there are three speeds and a disc type clutch. A semi-automatic lubricating system is used and all cars have four-wheel brakes. In no respect do the new models resemble that with which we have been familiar in the past. In fact the saloon models follow the conventional lines of the heavier and most expensive American designs. The new engine, by the way, will develop 50 p.c. more power than did the best of the old model of engines, whilst multiplate dry disc clutch is claimed as being far in advance of current automobile practice. For the first time also in the history of the automobile has non-splinterable glass been fitted as standard on a low-priced car.

Trackless Trolleys.

A good deal has been said lately regarding the inefficiency of the ordinary electric tram, and whilst not expressing any opinion on the subject I have been impressed by the number of tramway systems on which flexible vehicles have been substituted for trams of the ordinary type. There is no doubt, trackless trams offer a ready solution to most of the problems associated with the tramcar, and at the recent Commercial Motor Show there were many of this class of vehicle exhibited. There were shown no fewer than three types of electrically operated trolley cars, including ordinary omnibuses which took their motive power from the overhead conductor in the same way as a tramcar, but which could be steered in any direction. There were also those which carry powerful electric storage batteries, and there was shown the other type which embodies in its construction a complete generating station, having a petrol engine as the original source of power, a dynamo driven by that engine which provides current, and two or more electric motors which use that current to propel the vehicle. Each and all of these systems is suitable for use in the

Near and Middle East, although of them all the third, or petrol-electric type, should find the most ready market. In the Far East the first type should, at any rate at first, sell most readily.

Tractors.

Those who are interested in the development of tractors, and who know of the big demand for these that is practically certain to arise before long, regretted that there was not, on exhibition at the Show, a home-produced model for trailer hauling or for agricultural work. At one time we had strong hopes that the British tractor would take as high a place in its sphere as other British products have done in theirs. At the Show there were a number of good imported models and it seems from that that U.S. makers have realised the size of the market awaiting them in this country. It seems utterly inexplicable that the British manufacturer should have neglected this vast and potentially profitable field. I have no hesitation in saying that any British manufacturer who would produce a light powerful tractor of equal merit with those of Transatlantic or Continental origin, would do a ready trade not only at home but in the Near and Middle East.

A New Lorry.

I hear a good account of the new overtyping 4-tonner of the Albion Motor Car Co., Ltd., which is proving extremely satisfactory in congested area work. Compared with the average vehicle of a similar load capacity, this model shows a clear saving of approximately 4 feet in overall length and 12 feet in turning circle. It can carry a 13ft. 6ins. platform and yet can negotiate with ease narrow entrances or exits and can turn difficult corners without trouble.

COMPANY NOTES AND REPORTS.

P. AND O.

The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30 last, states that after providing for depreciation there is a credit balance on the year's accounts, including £133,156 12s. 9d. brought forward from last year, of £918,001 os. 11d. against £919,096 6s. 3d. in the previous year. The directors propose to deal with the amount as follows: (1) 5 per cent. dividend on the preferred stock (of which 2½ per cent. was paid as an interim dividend) £152,000. (2) 10 per cent. dividend on the deferred stock free of income tax (of which 5 per cent. was paid as an interim dividend) £359,251 16s. (3) reserve for redemption of debenture stock, £288,422 5s. 4d. (4) To carry forward to next year £118,326 19s. 7d.—£918,001 os. 11d.

The state of trade generally, for the past 12 months, has not been favourable, although there are in some directions indications of an improvement.

The sinking fund for the debenture stock of £7,000,000 repayable at the company's option between 1930 and 1940 now stands at £1,256,867 12s. 10d., and this, together with interest earned, is invested in Government securities.

The Nyanza has been sold at a price in excess of her book value, and the difference will be passed to credit of the depreciation account for the rest of the fleet. The Narkunda has been converted from coal to oil burning; as foreshadowed in last year's report, and this ship is now on her first voyage after refitting. The results of the change from coal to oil have proved to be entirely satisfactory. The opportunity has been taken to make improvements in this vessel to render her more comfortable for the work of the Australian Mail Service. The Naldera will be altered from coal to oil burning as soon as possible. The Ranchi during the summer made eight cruising voyages to the Mediterranean and North Sea Ports.

The directors have recently contracted with Messrs. Alexander Stephen and Sons of Glasgow for an up-to-date passenger steamer of 19,000 tons, and they have decided to fit this ship with turbo-electric driven engines, which it is considered show greater economy than other types of machinery of similar power. The ship will carry a large number of first and second saloon passengers, and will have space for about 5,000 tons of measurement cargo. Small insulated chambers will be fitted in the same way as in vessels of the Ranchi class. It is necessary to look forward in regard to the mail and passenger services, and the Board has given much time and thought to ensure that this ship will be on the most up-to-date lines both as regards speed and the general comfort of passengers.

The directors contracted at the beginning of the year for a new powerful tug to work in connection with the mail service at Aden. This vessel, the Lahej, has a gross registered tonnage of 283 tons and has 1,000 indicated horse power, and is now at work in Aden. The Assaye was again chartered for trooping and continues in service, latterly in connection with the Shanghai Defence Force. The Karmala has been similarly employed.

Lord Inchcape has been Chairman and Managing Director of the Board of the P. and O. and British India Companies since their amalgamation in 1914. His services during this period and previously as Chairman of the British India Company and in various public and Government work here and in the East are well known to the stockholders, and it will hardly be a matter of surprise that, while still retaining the active control of the company's affairs, he is desirous that arrangements should be made with a view to the future. After considering the matter fully, the directors recently decided to appoint the Hon. Alexander Shaw, who has been a director of the company since 1920, to be Deputy Chairman of the Company, under the authority conferred upon them by Clause 79 of the Charter. Acting in entire accord with the Chairman, the directors have appointed three members of the Board, namely, the Hon. Alexander Shaw, the Hon. Kenneth Mackay and Mr. F. C. Allen, to be Managing Directors to act with the Chairman. Mr. F. Ritchie, a Managing Director, in this way will be free to undertake a tour of inspection of some of the company's Eastern and Australian Agencies. The appointments will not involve any additional charge on the revenues of the Company.

Mr. W. C. Symes, who has been an Assistant Manager for some years past, will, at his own request, retire from his office at the end of the year after a service with the company, at home and abroad, of 42 years. Mr. A. O. Lang, who has had a long experience of shipping and general business in the Far East and has represented the company for some years at Hong Kong and was Chairman of the Hong Kong and Shanghai Bank there, has been appointed an Assistant Manager to succeed Mr. Symes.

Only DUNLOP Experience covers the whole history of the pneumatic tyre.

Tyre Makers in Victoria's Reign

DUNLOP experience of tyre making and tyre performance under every conceivable condition is longer and more varied than that of any other maker—even than the *collective* experience of all other makers. This is a plain statement of fact, and incontrovertible. Dunlop experience commenced thirty-nine years ago when they made pneumatic tyres for the old high bicycles. Since then it has embraced tyre performance on every variety of vehicle on every possible (and impossible) road surface, in every part of the world. Dunlop have had more experience of road and track racing than any other maker. Dunlop can claim the supreme achievement in tyre history—the building of tyres for Major Segrave's 200 mile per hour Sunbeam.

THE PERSIAN MARKET FOR AGRICULTURAL MACHINERY.

The use of modern farm equipment in Persia is limited, but is increasing (says the American Consul at Teheran, Mr. Orsen N. Nielsen, in a recent report). The comparative isolation of the country, indifference towards Occidental methods of progress, lack of financial resources, need for irrigation, and inadequate transport facilities have been responsible for the small imports of implements into Persia. Persian statistics show that imports of this class were negligible up to about three years ago, amounting in 1922-23 to only 10 metric tons. In 1924-25, however, imports reached 190 tons, and in 1925-26 they increased to 665 tons, but they receded to 353 tons in 1926-27. The value of implement imports increased from £1,663 in 1922-23 to £46,842 in 1925-26, declining to £29,663 in 1926-27.

At first Great Britain, Germany, and the United States, in the order named, were the chief sources of supply, but in the year 1925-26 Russia was the leading country of origin, followed by the United States and Great Britain, Germany occupying fourth place. In the next year, 1926-27, further changes took place in the implement trade, and Great Britain came first, with the United States and Russia the next leading sources of supply.

The United States and Great Britain were the only countries to increase their shipments in 1926-27. Imports from Russia in 1924-25 were about 27 per cent., by value, of Persia's total imports of agricultural machinery, and although Russia increased its shipments to 53 per cent. of the total in 1925-26, it dropped to 9 per cent. in 1926-27. Imports from Germany have declined steadily, decreasing from 53 per cent., by value, of total imports in 1924-25 to about 11 per cent. in 1925-26 and to approximately 6 per cent. in 1926-27.

Great Britain and the United States, however, have steadily increased their trade since 1924-25. In that year imports from Great Britain constituted, by value, 5 per cent. of the total. This figure rose to 12 per cent. in 1925-26 and to 44 per cent. in 1926-27. The United States in 1924-25 furnished less than 1 per cent. of the agricultural machinery entering Persia, but in 1925-26 its percentage rose to slightly less than 16 per cent., and in the following year more than doubled.

The great increase in imports from Russia in 1925-26 and the pronounced reduction in 1926-27 developed under the influence of two factors quite apart from actual sales. In the first place, the Russian Cotton Co. some three years ago undertook to grow cotton in the Province of Mazanderan. In 1925 it decided to extend its operations and shipped to Persia a large quantity of agricultural machinery, which it supplied to its growers in lieu of cash advances against their crops. The price paid for cotton that year was unsatisfactory to the farmers and the acreage in 1926 was not increased, nor was there a demand for machinery in lieu of cash advances to newly enlisted growers.

Secondly, the Soviet-controlled trading company, Chark, operating in Persia, appears to have erred in 1924 in estimating the future Persian market. Anticipating a considerably larger demand in 1925, it was led to increase heavily its imports of implements and machinery. When the expected volume of business did not materialise, it was caught with large stocks and was compelled in 1926 greatly to reduce its imports. It is said on credible authority that about six months ago the display rooms and warehouse of the Chark company were stocked with fully 500 ploughs. The sudden rise of Russia in the trade and its subsequent fall were thus the result of the sudden influx from Russia in 1925-26 of machines and tools which either did not leave the warehouse of the consignee or were thrust on cotton growers in place of cash advances.

The demand in 1926 was encouraging, but freight rates were forced to such a high point by the extensive requisitioning of transport for the Alimentation Service and

the difficulty of securing delivery in Persia was so great that actual sales were light. The transport situation now is normal and freight rates have fallen, as a result of which dealers in 1927 are selling machines and implements which under ordinary conditions would have been sold a year earlier. The market gives promise of further moderate but satisfactory expansion. What direction this expansion will take in the next decade will depend on several factors, of which the most important are water supply, transport facilities, and possible diversion of farm labour from the villages to new industrial enterprises.

Irrigation and Transport Problems.

The greater part of Persia is a more or less arid plateau, with an annual rainfall between 9 and 13 inches, and varying in altitude from 3,000 to more than 5,000 feet. Most of the arable land lies on the arid plateau and conservation of the scanty water supply is of the utmost importance. Practically no steps have been taken to conserve water and in a wet year when the fields have been irrigated the surplus is permitted to flow into the desert. The irrigation system of carrying water across country in unlined underground channels known as "kanats," and in surface ditches termed "jubas," is wasteful, and various irrigation projects have been studied, but as yet they are only paper projects and there is no indication that any of them will be undertaken in the immediate future, as funds are lacking.

Lack of transport facilities, with attendant difficulties of getting crops to market, is another serious problem awaiting solution in Persia. Transport at present is practically limited to caravan routes, although there is a railway line from Russia as far south as Tabriz and another has been authorised to connect Bandar-i-Gaz on the Caspian Sea with Khour-i-Moussa on the Persian Gulf. This line, however, is not expected to be completed for a considerable period. Road construction and maintenance is being carried out in a small way under the direction of an American engineer with the limited funds available. The Trans-Persian Railway, when completed, and the improvements being made to the principal highways may be expected to stimulate agriculture by making possible a free flow of Persian farm products to local markets, as well as by opening up new markets for an exportable surplus.

Persia is a country of large proprietors and, speaking in general terms, of a landless peasantry. Most of the men are employed on the land, under an ancient system of payment in kind, under which they gain a meagre existence, the landlord retaining on the average three-fifths of the crop. Any large public project or any important industrial enterprise demanding large forces of unskilled labour would, doubtless, draw the farm labourers from the land. If the highway and railway construction programme is

energetically carried out, it is probable that within the next few years the Persian landlord will, by a shortage of labour, be forced to adopt modern implements and machinery.

Cotton as a Substitute Crop.

The reduction of poppy cultivation, which is being considered in Persia, presents the problem of how to meet satisfactorily the readjustments in agriculture which must accompany any considerable decrease in this product. The poppy is an important crop in Persia, yielding a large revenue, and the selection of crops to replace it will involve far-reaching changes in the agricultural life of the country. Should such a reduction occur it will probably have considerable influence on the future demand for agricultural implements.

Cotton appears to possess a number of the qualities necessary for an effective substitute crop for the poppy. Past experience has shown that it thrives over a large part of Persia and the unit value of the better grades permits them to be exported. Many varieties are being grown, including some American types which have been acclimatised in Russian Turkestan, and production is estimated to range from 38,000,000 to 47,000,000 lb. per year. Lack of water is the chief impediment to a more extensive cultivation of this crop. Present indications are that experimental effort to replace the poppy will be concentrated upon cotton, sugar cane, sugar beets, tobacco, and tea, as well as forage crops.

Primitive Methods.

The peasant labourers strongly adhere to the primitive methods of their ancestors, and the ox or the small Persian horse pulls through the surface soil a bent stick. Seeding and harvesting are done by hand.

Apart from the conservatism of the peasant farmer pro-

bably the most important obstacle to the sale of tractors in Persia is the cost of petroleum fuels, which, although produced in the country, are high in price because transportation facilities are so inadequate. Lack of roads also makes it difficult to get the tractors into the interior of the country, and Persia appears to offer only a limited market for tractors for use outside the field of agriculture, although there are possibilities for their use in railway and highway construction.

Although tractors have made slow progress in Persia, the market for other machines and for some implements has in the last two years shown an encouraging development. Ploughs and plough-shares, both in the average American and in smaller sizes, have been sold in considerable numbers. Oxen can pull a standard plough, but for the undersized Persian horse a lighter model is necessary. For those peasants who adhere to their own form of beam, but who are not averse to using a modern share, this part alone is supplied. Harrows and planters also have met with some success, and not infrequently the buyer purchases at one time the harrow and planter as well as the plough. Sales of reapers have been retarded in some provinces by the types of irrigation ditches in those areas. There is no market yet for binders, low wages and the cost of twine, as well as the small size of the fields, operating against their sale. Few threshers have been sold, but dealers are not discouraged, as it is considered inevitable that eventually proprietors will come to realise that these machines are a profitable investment.

As stated, the only rail connexion is through Russia, and transit privilege through Russia is granted only to Russian, Italian, and Polish nationals. The American exporter, therefore, unless he is represented in Persia by a Russian, Italian, or Polish agent, must ship to a Persian Gulf port or to a Turkish Black Sea port. This route, however, involves a long and difficult overland haul from Trebizond. For south Persia, shipments normally are consigned to Bushire, while goods sent to west, north, and north central Persia are landed at Basrah, Iraq; from thence they are sent by rail to Baghdad and from there over the narrow-gauge line to Khaniqin, near the Persian frontier. From Khaniqin, motor trucks and caravans are available. Under these conditions strong packing is essential.

Few firms in Persia have shown eagerness to participate in the difficult and not especially remunerative task of pioneering in the field of agricultural implements. Yet experience has shown that tedious preliminary work has produced results, and implement sales, which a few years ago were negligible, have now increased to some proportions, considering the undeveloped state of the country. Realising that the peasant must be taught better agricultural methods, the Government has established at Teheran an agricultural school, at which there are trained young men who later find employment supervising operations on large estates. The use of modern farm machinery, such as tractors, ploughs, reapers, threshers, and other machines, is demonstrated on a model farm; and this educational work will probably have considerable influence in awakening the interest of proprietor and peasant to modern methods and to foreign machinery and implements. For some years the market for implements is not expected to be large, but in the absence of political disturbance it should steadily expand.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lombury, London, E.C.2

Roumania's foreign trade figures for the first nine months of 1927 were as follows:—Exports, 28,783,629,936 lei; imports, 25,208,028,589 lei; or an adverse trade balance of 3,575,601,347 lei as against a favourable balance of 1,689,000,000 lei for the corresponding period of 1926.

Dr. MacInnes, Bishop of Jerusalem, broadcasted a talk on "Palestine: A Record of Ten years" on December 6. This was specially arranged in connexion with the tenth anniversary of the liberation of Jerusalem.

Company Meeting.

KASSALA COTTON COMPANY.

New Agreement with Sudan Government.

An extraordinary general meeting of the Kassala Cotton Company, Ltd., was held on November 29 at Winchester House, E.C., for the purpose of authorising the acceptance of the new concession for cotton growing in the Gezira in substitution for the existing concession in the Gash Delta.

The Hon. A. M. Asquith (the chairman), in explaining the position, said:—Briefly, our company has been successful in establishing a system of irrigation in the Gash Delta, and in popularising there the growing of cotton on the share system. On the other hand, it has proved, in practice, that conditions, partly physical and partly political, will make it impossible to bring under cotton in the Gash Delta very large areas such as we and the Sudan Government anticipated. In practice the expectations of irrigable acreage upon which the concession negotiations proceeded have not been fulfilled.

As an instance of one of the important physical limiting factors, I might mention that in order to carry a cotton crop to maturity it has proved, in practice, that the soil of the Gash Delta requires as much water for its single flooding as the soil of the Gezira takes in 13 to 15 fortnightly waterings.

As instances of the political limiting factors, I have mentioned to you on previous occasions the offtake of water upstream of us in Eritrea, and the Government requirements in connexion with the growing of grain.

In moving from the Gash Delta to the Blue Nile our company will be moving to an area familiar to our management and will be drawing upon a river of comparatively certain flow.

The alternative scales for fixing the company's share of the proceeds of the cotton crop are clearly set out in the circular. The effect of the arrangement is that in poor years the company's proportion of the proceeds of the crop will be rather larger, and in good years it will be rather smaller.

I shall not be so foolish as to attempt to predict what cotton yields and prices will be, on the average, between the years 1931 and 1950. With 15,000 acres under cotton in the Gezira, under the terms of the new proposals, assuming yields averaging slightly lower than the average of the yields actually experienced to date in the Gezira, and assuming a continuance of to-day's cotton prices, there should be a surplus, after deducting all charges and the Preference dividend, of some £10,000 to £15,000. On the actual average yields and prices of the last six years in the Gezira the surplus would be considerably better. These six years include two of low, and two of exceptionally high, yield. Throughout the period prices have been good, and I doubt whether we ought to count upon prices continuing at such levels.

As things are, under our existing Kassala Concession we should never feel justified in making any distribution to shareholders for fear of our good flood being followed by a succession of bad floods, which might embarrass us in meeting our liabilities for working expenses and Debenture service.

Acceptance of the present proposals frees us from all preoccupations about any possible railway deficits, improves greatly the security for our Debenture service, and gives us some prospect of being in a position to pay some moderate dividends on our shares in or after 1921.

In all the circumstances I am expressing the unanimous opinion of the board when I strongly recommend you to ratify the proposed new agreement. I am glad to say that we hope to be able to retain, for the development of these new areas in the Gezira, the services of our manager, Mr. Fleming, and of our chief engineer, Mr. Thetford, who have done such fine work in the Gash Delta and have produced such good results in difficult circumstances.

Finally, I should like to pay a tribute to the attitude of the Sudan Government in our recent negotiations. Governments of countries such as the Sudan are wise to enlist the help of private enterprise if they want to develop their resources, but private enterprise will hesitate to expend its efforts and to risk its money in such countries unless it can feel confident that in any difficulties which may arise it will find in the local Government a true spirit of co-operation. In the present case the High Commissioner for Egypt and the Sudan Government have realised our difficulties and have made a generous attempt to enable us to overcome them.

The resolution submitted was unanimously approved.

At a subsequent meeting of Debenture holders resolutions were unanimously passed approving of the new arrangement with the Sudan Government, and of certain modifications of the conditions of the Debentures designed to bring them into line with the shorter period of the new concession.

CHESS.

By "CARO-KANN."

The result of the world championship match has been to upset expectations, for it was generally anticipated before the contest began that Capablanca would be successful. As the contest proceeded, however, it gradually became clear that in all probability Alechin would win, but the final score of 6—3 does not bring out the severity of the struggle. It was necessary for thirty-four games to be played before a decision was reached, and that fact shows very plainly that there is very little between the two players, who stand, it may be emphasised, in a different class from their rivals. In such a prolonged contest, as I suggested last week, there is something of the inconclusive, and it may be hoped therefore that the proposal for a further match between the two masters will materialise. There were two outstanding features about the match—the

insistence by both players on the Queen's Pawn opening, and the way in which Alechin, the outstanding exponent of the modern school, adapted himself to the severely classical methods of his opponent.

I give this week an example of a trap which did not materialise. Black is defending against a potentially violent attack on the King's side, and has just played Kt—B4, hoping that White in pursuance of what was obviously his previous intention will play P—Kt4. If so, there would follow Kt(B4)xP; 2, PxKt, KtxP; 3, Q—Q (forced), KtxB; 4, QxB, B—Kt3 (ch); 5, K—R2, P—Q5 (dis ch); 6, K—Kt3, P—Q6; 7, Q—Q, Q—Q4, with a fine game. White saw this, however, and played BxKt, and ultimately the game ended in a draw with bishops of opposite colours.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for the month of November was 45,370 tons.

Roumania's wheat crop amounted to 2,630,000 tons, 400,000 tons lower than last year's yield. The maize yield was 3,700,000 tons, which also represents a considerable decrease.

The area under beet cultivation this year in Yugoslavia was 11,120 acres, as compared with 10,480 acres last year. It is expected that the yield of sugar will be 85,000 tons, as against 78,000 tons, leaving a surplus of about 25,000 tons available for export.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended November 30:—

Egyptian Futures.—Sakel Contract. For the greater part of the week values in this contract have shown a declining tendency, increasing pressure being experienced, owing to the heavy statistical position, poor trade support and some further easing in American prices. At one period under the weight of heavy liquidation of old "Bull" accounts and the uncovering of "stop-loss" orders on the decline the level fell away to the lowest of the season, 17.15d. for the January position. At this point some active short covering held the movement and at the same time with Alexandria beginning to display more resistance values started to react, a tendency which continues in evidence up to the time of writing, with the result that the decline on the week at to-night's close has been modified to 23. to 37 points, October and November new crop exceptionally 4 points since our last report. The very moderate character of the trade offtake now being experienced from Lancashire, Continental and American sources is evidently beginning to cause considerable apprehension amongst holders in Egypt, and the probability is that a good deal more unhedged cotton than usual has accumulated there since the commencement of the season.

Upper Contract.—For the greater part of the week this option has shown a poor undertone and with continual liquidation in evidence prices have eased persistently. Some slight improvement, however, has been noticeable during the past two seasons and at the present reduced differences with other varieties we expect an expansion in the offtake as soon as trade conditions permit. As we have recently indicated, the contract has been suffering from a rather congested technical position; however, recent operations have resulted in a big reduction of the "long" account, and, at the time of writing, the outlook seems a good deal healthier. We now hold a very favourable opinion of the market and consider that conservative purchases are to be recommended.

Egyptian spot.—No improvement in spot business has yet to be recorded, but a steady, if somewhat meagre, trade has again resulted. The weakness in the Alexandria market, signs of which were apparent when our last report was written, culminated in a substantial break over the last week-end, and as a result prices show a further decline, in spite of a steadier tone which has been in evidence during the past two days. The total decline, in spite of a steadier tone reached this season in September last is a now very important one and past experience has shown that, under similar conditions, very little is required to cause a turn. In this connexion, one looks naturally to the American Bureau report due for publication on the 8th prox. Failing any renewed impetus to be derived from this source, we cannot at the moment foresee any factor likely to induce trade buying on an extensive scale prior to the Christmas holidays. It is true that, during the last two days, a fair amount of buying on the reaction theory has been taking place in Alexandria, but the trade generally has had too much experience of these unwarranted spurts in the past to be easily drawn on this account, and, in our opinion, we shall have to be content to wait for a while until the shelves of the World become so empty that replenishment becomes an economic necessity.

Estimated sales 1,500 bales Egyptian and 710 bales Sudan. Quotations of Sakel show a decline on the week of 40 points. (Extra Fine exceptionally 15 points lower). Uppers and Pillion are 35 points lower on the week. F.G.F. Sakel to-day 17.90d. F.G.F. Upper to-day 14.10d. F.G.F. Pillion to-day 14.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended November 24, state:—

Since our last report the market has been fairly active but the tone has been rather heavy. The week's summary of price movements is as follows: Sakellaridis, January, 35.72 dollars, 1.57 dollars down; March 36.08 dollars, 1.55 dollars down; May, 36.35 dollars, 1.53 dollars down; November, 36.20 dollars, 0.98 dollars down. Ashmouni, December, 27.05 dollars, 1.17 dollars down; February, 27.46 dollars, 1.12 dollars down; April, 27.75 dollars, 1.04 dollars down; October, 27.20 dollars, 0.80 dollars down.

Sakel.—The market during the early part of the week was firm following the publication, on the 21st instant, of the American Ginners' Report showing 10,899,000 bales ginner to the 13th instant, a figure somewhat below expectations. The firmness of the market proved, however, to be very short-lived, for the slight reaction in New York quickly sent prices down here; the market during the last two or three days, has been distinctly heavy and prices are now appreciably lower than a week ago. The trade demand is still very small and quite insufficient to absorb the hedges offered by the financing banks and by some of the big growers. Local speculators, for the most part, still incline towards the bull side, and, with actual trade so poor, this constitutes a weak point in the technical position of the market.

There has been a good deal of straddle reversing during the week, selling out Sakel and re-purchasing Ashmouni; the straddle between the near positions of these two varieties is now 8.67 dollars against 9.07 dollars a week ago and we look for a further narrowing.

Figures published by the Government place the stock of Sakel in Alexandria on the 16th instant at noon at

Notes of the Week.

Headway in Greece.

At a time when further delay in the floating of the Second Refugee, or Triple, Loan for Greece would have strained to a serious point the rather precarious financial and economic situation in the country the Greek Government has placed two striking successes to its credit. At the beginning of last week it was announced that an agreement had been reached between the respective Governments for the settlement of the Greek War Debt to America. As a corollary to this agreement the American Government undertakes to lend Greece two-and-a-half million pounds of the nine million fixed for the Second Refugee Loan, at the moderate rate of four per cent. interest, the money to be used exclusively for the purpose of refugee settlement. An immediate effect of the American negotiations was to relieve the strained relations that had existed for some time between France and Greece owing to the non-settlement of the Greek War Debt to France. Within a few days M. Briand and the Greek Minister of Finance contrived to sign an agreement at Geneva providing for the settlement by arbitration of the only point outstanding between the two countries, the question of France's claims in respect of armaments supplied to Greece in 1917 and 1918. Great Britain had waived her claims on this score, but the French Government proved less accommodating, and its attitude threatened to postpone indefinitely the issue of the new Greek loan. With the removal of this last obstacle, the negotiations for the Triple Loan, so called because the money is to be divided equally for three purposes—refugee settlement, stabilisation of currency and payment of Budget arrears—have been opened in London, where M. Kaphandaris, Greek Minister of Finance, has arrived for this purpose.

The Government's Position.

The conclusion of the new Loan should considerably enhance the prestige of the Coalition Government in Greece. Whether it will have the effect of giving the Cabinet a fresh lease of life, or of weakening its cohesion on the ground that Greece has now taken her last fence

and has entered the straight, remains to be seen. M. Kaphandaris has secured a personal triumph, as his financial policy, with its rigid enforcement of economy, has not been popular, and, it will be recalled, was the ostensible reason for the withdrawal of M. Tsalderis, the Royalist leader, from the previous "Œcumenical" Government. The position of M. Zaimis's Ministry, however, depends on other things than the successful conclusion of loans. It will take time for the effects of the new Loan to be reflected in the general condition of the country. In the meantime the financial burdens which the Greeks have to bear are heavy, and the people will need to be convinced that their sacrifices in this direction are being put to profitable use. To a large extent the standard by which they will determine this point will be the concrete achievements of the Government in domestic legislation and freedom from political alarms. In regard to the latter it is noticeable that the trial of General Pangalos has not yet taken place. There have been no fresh scares since a number of the General's friends and supporters were arrested and subsequently liberated; but every day that sees the hearing postponed and the ex-Dictator's imprisonment without trial prolonged must increase popular sympathy with him and tend to weaken the Government's position. It is noticeable too that recriminations between Republicans and Royalists are becoming more outspoken again, an inevitable sequel, perhaps, to the return of M. Venizelos to Athens. With the conclusion of the new Loan the Government has at least one answer to the accusation of its critics that, although the Coalition was sound in principle and essential in practice, it had no definite achievement to its credit.

Hungary and Roumania.

The Council of the League of Nations has decided to postpone consideration of the dispute between Roumania and Hungary on the subject of "Optants" in Transylvania, partly in order to spare the Roumanian Foreign Minister, M. Titulescu, who has been ill, the necessity of personal attendance in Geneva, but mainly, it may be supposed, to give the two countries an opportunity to

settle their difference without further intervention on the part of the League. The controversy turns on the grievances of some three hundred Magyar landowners in Transylvania who opted for Hungarian nationality, while remaining domiciled in Roumania, and whose estates were expropriated under the Roumanian Law of Agrarian Reform. Their case was first submitted to the Romano-Hungarian Arbitral Tribunal in Paris on the ground that expropriation was a violation of the terms of the Treaty of Trianon, which provided against the retention or liquidation of their property. When the Tribunal decided that it must deal with each case on its merits the Roumanian Government withdrew its representative, and the Tribunal ceased to be legally constituted. This action has exposed the Roumanian Government to the charge of attempting to evade the terms of the Peace Treaties. Both parties appealed to the League Council, Hungary for the reconstitution of the Tribunal under the terms governing the case in question, Roumania for support in its attitude on a matter of internal administration. After hearing the disputants, the Council appointed a sub-committee of three, presided over by Sir Austen Chamberlain, which submitted a report embodying three principles governing the matter in dispute; that Hungarian nationals were subject to the application of agrarian reform in Roumania, that no distinction was to be made between Roumanians and Hungarians in that application; and that action lay under the Treaty of Trianon only when discrimination had been introduced against a Hungarian in virtue of his nationality. The Hungarian Government, which had contested the right of the Council to act as a Court of Appeal, rejected these recommendations of the sub-committee and urged the submission of the controversy to The Hague Court; Roumania was prepared to accept them, but would not agree to the reference to The Hague. In these circumstances the League had decided in September to postpone further consideration of the subject until December, and now has again put it off. It is clearly a case for compromise, for while it would be intolerable that Magyar peasants in Transylvania should benefit in a matter of agrarian reform only from State lands or Roumanian private property, while Hungarian estates should be exempted from expropriation, it has to be inferred from what is known of conditions in the province that the application of the Agrarian Law has been such that the local authorities are reluctant to have an impartial investigation into each case.

Turkish Problems.

One of the first acts of the new Minister of the Interior in Turkey has been to investigate the situation in the Eastern Vilayets, where he has been able to report an improvement in local conditions that will justify the gradual supersession of martial law by civil administration. A prominent official of the Popular Party, Ibrahim Tali Bey, has been appointed Inspector-General of the Eastern Vilayets, with headquarters at Diarbekir, and he is to rely for the maintenance of order on the gendarmerie, which is to be strengthened, rather than on military forces. The change is worthy of notice abroad, as it shows the Turkish Government to be awake to one of the most pressing problems with which it has to cope at this stage, that of finance. For the next financial year expenditure on national defence will account for nearly forty per cent. of the total Budget. For a Government that is minded to bring the material development of the country up to Western standards, this must, or ought to, be regarded as an intolerable burden on the national finances. It may not be without significance that the new Minister of National Defence is the former Minister of Finance, and an earnest of what is expected of him has been given by the abolition of the Ministry of Marine, which is to become a Department in the Ministry of National Defence. A big programme of railway construction is to be completed in large part by 1931 and wholly by the end of 1932. Turkey will thus be confronted with a considerable interest on the railway loans. One result of the Census returns has been to draw attention to the inadequacy of

the note circulation, (the old notes are now in process of being replaced by a new issue), which, whether it be reckoned at the original figure of issue, 160,000,000 Turkish pounds, or at 130,000,000, the total amount now supposed to be available, is clearly insufficient for the requirements of a population of fourteen millions. Yet the country is not in a position to increase its note circulation without affecting, perhaps seriously, the exchange. The whole question of Turkish finances interests other countries as well as Turkey. For this reason we should like to see a much more sympathetic attitude on the part of Turkey's creditors, particularly in the case of Great Britain, in order that the Angora Government may be encouraged to take this country into its confidence in a matter which almost certainly admits of no final settlement without recourse to the London money market.

Egypt and Al Azhar.

Sarwat Pasha has taken an interesting, and courageous, step in appointing a Commission to study the question of reforms in the great Muslim University of Al Azhar. The subject is a delicate one. Time was when teachers in Islam were the repository of the learning of the age, its scientists as well as its theologians. Al Azhar—the largest Muslim university in the world and one of its oldest—has not contrived to keep pace with modern progress. As a religious seminary its hold on Islam is proved by the large number of its students; but it is obvious, in face of growing competition, that in many branches of learning it has lost its pride of place. At the same time the religious prestige of the Ulema has allowed them to occupy a position in public affairs for which the essentially restricted outlook of Al Azhar has hardly been a suitable qualification. Jealousy of interference from outside is not unnatural in the circumstances; but the Egyptian Government appears to have won over the authorities of the University to a scheme of consultation and co-operation with officials and educationists. The Commission will consist of the leading Ulema, officials of the Ministry of Education and members of the Egyptian Parliament. If it should succeed in reaching an agreed scheme of reform that will remove some of the anomalies that have clung to Al Azhar, the present Ministry will have a further notable achievement to its credit.

Aziz Izzet Pasha.

Owing mainly to the state of Madame Izzet's health, which has not been equal to the English climate, Aziz Izzet Pasha has been anxious for some time to resign his post as Egyptian Minister in London. It is now reported from Cairo that his resignation has been accepted, and that a new appointment will shortly be made. The four years during which the Royal Egyptian Legation has been established in London have been notable in the history of Anglo-Egyptian relations. During this period those relations have experienced many ups and downs; but the Legation under the personal incentive of Aziz Izzet Pasha, supported wholeheartedly by a loyal and capable Staff, has throughout been a steady factor of good will, always working in the cause of an honourable and lasting understanding. The first Egyptian Minister to London has the satisfaction of knowing that his efforts have not been in vain. Anglo-Egyptian relations are better to-day than at any time in the last decade; the prospect of the conclusion of a satisfactory treaty of alliance between Egypt and Great Britain is bright, and there is no reason why the plant of which Aziz Izzet Pasha successfully sowed the seeds should not continue to grow equally rapidly under his successors, until it becomes a well-favoured tree. With his tact as a diplomatist Aziz Izzet Pasha combined a striking charm of manner; both he and Madame Izzet will be missed by official and unofficial circles in London.

The Liberation of Jerusalem.

It is not inappropriate, in view of the celebration last Friday in Palestine, in Great Britain, and elsewhere, of the tenth anniversary of the liberation of Jerusalem from

the Turks, to estimate the work done in the Holy Land since the supervising hand was changed. Quite obviously the material progress has been remarkable; such things as railways, roads, telephones and telegraphs, water supply, the war on the mosquito, are patent blessings which the inhabitants owe mainly to the British. Never before, probably, certainly not since Roman times, has Palestine had such impartial justice and such internal security. Great Britain has a right to be proud of these things. And yet—are they enough? Are there being sufficiently stamped upon the Holy Land the deeper aspects of civilisation which the British race has to contribute to mankind? What, for instance, of education? Is it enough for the inhabitants of Palestine to be obliged to complete their education, in the sense of taking a University degree, by leaving the country for one which bears no trace of English thought? We do not wish to grow unduly sentimental over the point, and, indeed, deprecate the tendency, sometimes displayed, to assert that British soldiers died in Palestine in order that this or that scheme, whether political or otherwise, should be foisted upon the Holy Land; but it is surely a duty of the present generation, which was saved by the efforts of the men whose services were commemorated on December 9, to see that if to Great Britain has been allotted the high privilege of supervising the Holy Land she should seek to inform in some measure not only the material but also the mental process of the life of the country. Too often in considerations of the problems of Palestine it is the Zionist factor which is considered paramount; it is well at times like these to remember that there still exists a problem as between the Mandatory Power and the majority of the Holy Land's inhabitants.

The Palestine "Crisis."

It is a tribute alike to the sense of order which the British Administration has inculcated into the whole life of Palestine and to the restraint of the unemployed, that the "crisis" which has overtaken so many thousands of Zionists should fail to create any serious incidents. Alarmist stories arrive from Palestine from time to time to the effect that the Jews are profoundly discontented, the authorities are anxious over the possibility of complications, and so on, but it is well to examine very carefully their source. That the position is still extremely unhappy, however, is a fact not to be gainsaid. In part, of course, the unemployment is the outcome of the mistaken policy pursued, but it is also in part due to a fundamental difference as between Arab and Jew upon the question of wages. As is known, the Arab and the Jew have different standards, the Arab being content with about half that which the Jew considers himself entitled to receive. Now the Government, in procuring labour for its own work, can be expected by no reasonable person to be indifferent to this fact, although it is false to assert that all municipal contracts are being fulfilled with Arab labour. (In this connexion we are speaking, of course, of unskilled labour: skilled labourers of either race obtain about the same wage.) In view of this fact and of its inevitable complications, the High Commissioner has set up a Commission to inquire into and to make recommendations on the wages of unskilled labour in Palestine, consisting of the British District Commissioner for the South, a Jewish Labour leader, and an Arab engineering contractor. Such a Commission was, in view of the very important (relatively to Palestine) building contracts which are soon to be given out, highly desirable. Hitherto, of course, the Zionist Organisation has tried to make good the difference between the low Arab standard and the high Jewish standard, and if, as is stated in some quarters, it is no longer able to do so, no gift of foresight is necessary to see that complications of a most delicate kind might ensue. The question, stated generally, is whether Palestine shall approach to the Western standard of living at the rate which the Jews demand or at the rate which the Government has tacitly suggested; and exposition of it is much easier than solution.

Italy and Syria.

There is generally something of pre-War cynicism in the agitation, which is raised from time to time alike in France and Italy and England (but never, we believe, in Syria) and France should relinquish the Mandate for Syria in favour of Italy. The French Mandate has, of course, been extremely expensive for France, but it is by no means in the real French tradition to abandon it on that account alone. It is very improbable, in fact, that the best informed and the most patriotic Frenchmen counsel the abandonment of the task of leading Syria to self-government. Italy's arguments for obtaining control of Syria are patent and, indeed, not disguised; she desires it solely and openly as a means of settling her surplus population—solely, that is, if one excludes the certain coveting of the rich lands of Anatolia. And the arguments that are put out in Great Britain mostly derive from contemplation of the present Franco-Italian tension; something, it is argued, must be done to placate the irresistible resolve of Signor Mussolini. Never in all these swift and shallow solutions is the desire of the Syrians themselves considered: they, poor people, are apparently to be banded about according to the transient whims of Europe's masters. This is not only abominably cynical, it is statesmanship of the lowest kind. There is little prospect, however, of its being pursued; the campaign in favour of Italy is indeed being revived at a most curious moment, seeing that France's position in Syria is probably stronger than it has been since her assumption of the Mandate.

Wahhabi Raids.

It would appear that the agitation caused by the recent Wahhabi raid upon Busiyah, in Iraq, has to some extent been diverted by the later raid on Zaqlah Jahrah, in the Sultanate of Kuwait. But there must be uneasiness so long as the motives of these two raids, and of the reported Wahhabi concentrations, remain obscure. The central point is, of course, whether or not King Ibn Saoud is cognisant of them. With the Sultan of Kuwait he has been in negotiation for some time past, and the raid of Shaikh Turahib Ibn Shuqair on Jahrah may have been a not wholly original mode of pointing a moral. Similarly it is suggested that the raid on Busiyah, coming at a time when King Faisal of Iraq was in London attempting to demonstrate his hold upon the tribes of Iraq, was not entirely fortuitous, and was possibly designed to prompt the British Government yet to withhold the grant of

METHODS AND MINORITIES IN ROUMANIA.

It would be a disservice to Roumania to pretend that the rioting of large bands of students in Transylvanian towns is not damaging to the prestige and interests of the country. The sequence of events is obvious, but it in no way justifies the excesses. An effort has been made in a British paper, conspicuous for a limited outlook on foreign affairs and for devotion to journalistic "stunts," to start a campaign for the revision, in favour of Hungary, of the frontiers fixed by the Treaty of Trianon. On the Continent the influence of the paper in question on British policy is taken at its own estimation, and, while in Hungary itself the articles led to a recrudescence of unreflecting chauvinism embarrassing to the Government, in neighbouring countries they caused genuine alarm, because their appearance was held to foreshadow an official attempt on Great Britain's part to secure a revision of the Treaty of Trianon. Too late in the day these countries have recognised the unwisdom of attaching importance to the lucubrations of a journal which has already passed to the beating of other drums. Of the three countries affected Czechoslovakia showed the most concern officially by organising innumerable demonstrations against a proposal which otherwise would have passed unnoticed in responsible quarters; Yugoslavia followed suit, but with less conviction and not under official stimulus. In Roumania the reaction has taken on the more objectionable form of rioting and excesses against the Magyar population of Transylvania. There has been no evidence of provocation on the part of the Magyars, but the outrages may be taken to reflect Roumanian exasperation at the proposal for a revision of the frontiers and over the deadlock that is postponing a settlement of the question of the Hungarian "optants." The students of Roumanian universities have a reputation for discipline and aggressive intolerance, which have nothing in common with youthful exuberance of spirits; these weaknesses represent rather an unsavoury factor in Roumanian life that finds vent in later life in such features as "made" elections, which are the despair of Transylvanians and other Roumanians more in touch with the modern standards of the West. In view of the scale on which these latest disorders have been indulged in the Roumanian Government has done well to deal drastically with them. It would have been better if they could have been prevented, as both the central and the local authorities will have to explain how they allowed the situation to get out of hand, when it was known that large numbers of students from Old Roumania were assembling at Oradea Mare, a town close to the Hungarian frontier. Systematic outrages in Dobruja, which are admittedly the work of uneducated peasants in remote villages, become more difficult to explain away, when those who are qualifying to be the intelligentsia of the country are conveyed in special trains across the Kingdom to work their hooligan will on peaceful citizens in a large town under the eyes of the local authorities.

The incidents in Oradea Mare may help to explain the political situation in Roumania at the present time. On the death of M. Ion Bratianu, the new Prime Minister, M. Vintila Bratianu, at once established touch with the leaders of the Opposition and endeavoured to form with them a Coalition Government. The overtures were far from being perfunctory. All parties appear to have worked hard for an understanding, but the negotiations broke down on a point which in most countries would be regarded as a fundamental point of constitutional government. M. Vintila Bratianu was prepared to share the Ministerial portfolios equally between his own party, the Liberals, and the National-Peasant Party of M. Maniu, under a neutral Prime Minister, and agreed that the Coalition Cabinet should proceed to hold new elections. M. Maniu, however, who has successively challenged the last four general elections on the ground that the electorate was subjected to undue pressure by the Government of the day, could not stultify himself by being a party to a system which perpetuated the "making" of elections. He held out for free elections, and for the principle that all parties should abide by the result, the reins of government being entrusted to the party or group commanding a majority in the Chamber of Deputies. It is significant of the Roumanian conception of parliamentary government that the Liberals could not concede this point. They hold—quite conscientiously, it must be allowed—that the country is not sufficiently advanced for the degree of constitutionalism entailed by M. Maniu's programme; and they are not prepared to grant that Roumania could face any radical departure from the financial and economic policies with which the Liberal Party is identified, without serious risk to her interests. In other words, elections, in the view of the Liberals, must continue to be "made" for the good of the nation, as the Liberals alone are capable of deciding upon and carrying out the best policy for the country.

The issue between the two parties is thus clearly defined, and it is not for the foreign observer to determine whether the Transylvanian leader is wise to hold out at this stage for his whole policy and nothing but his policy, or whether he would be better advised to co-operate with M. Vintila Bratianu, as M. Titulescu, the Foreign Minister, has done, in order to work for a gradual, rather than a sudden, adoption of complete constitutionalism. The Roumanians are in urgent need of a closing up of their political ranks for the more effective government of the country; it is equally certain that the country cannot forge ahead materially until terrorism and corruption, on which successive Governments have placed the hall-mark of their approval at each general election, have been eliminated. The situation is, therefore, one for a Coalition Government to cope with. One immediate effect of the student disorders at Oradea Mare will be to strengthen the Hungarian case in the dispute between Hungary and Roumania over the Magyar "optants." The League of Nations cannot be blamed for arguing that a country whose students are so permanently undisciplined, that at any moment they are liable to take the law into their own hands in matters, not of personal concern, but of State and international importance, is not likely to possess an official class that can be relied upon to act fairly in questions where national rivalries are apt to clash. There is a growing consensus of opinion in the West that the League has not taken in the past adequate steps to see that definite undertakings given for the well-being of minorities have been honoured. This feeling may become reflected in Geneva with uncomfortable results for some countries. The subject is admittedly a difficult one, and the League's instinct to leave the matter to the good sense of the countries and Governments concerned was sound in principle. There must be limits, however, to the extent to which it can turn a blind eye on what is actually happening. If the Roumanian students were anxious to establish the fact that minorities may possibly be worse off in Roumania than anywhere else, they could hardly have adopted a more effective way of proving their thesis.

The Near and Middle East*

From Our Own Correspondents.

Belgrade, December 8.

The King and Dr. Davidovitch.

Interest in the internal political life of Yugoslavia centres now on the development of the action of the 'Opposition and especially on the activities of Dr. Davidovitch. Yesterday Dr. Davidovitch was received in audience by King Alexander, who, since the death of Pashitch has been by far the most powerful political factor in this country, and despite Dr. Davidovitch's statement that the object of his visit was to discuss purely private matters, this meeting has been very widely commented in the Press and the cafés, which are the centres of political life in Belgrade. M. Raditch made a characteristically rash statement on the matter to a group of journalists, to whom he pointed out that as Dr. Davidovitch is the leader of a group which forms part of the Government 'Coalition, even his private conversations with the King were matters of great significance for the general public. He suggested that Dr. Davidovitch had informed the King that he, with the Croatian Peasant Party and M. Pribitchevitch, command a majority in the Parliament and asked leave to form a Government. He went on to prophesy that the present Government would not live long after Christmas, and that the next Government would be a 'Concentration Government probably led by M. Marinkovitch or Dr. Davidovitch.

To-day M. Yovanovitch, the Peasant Party leader, who has been in close contact with M. Raditch and M. Pribitchevitch during the last few days, spent a long time with Dr. Davidovitch, and it is believed that negotiations are proceeding for the widening of the Peasant-Democrat agreement to include the Serbian Peasant Party and eventually the Davidovitch Democrats. At present it is composed of the Croatian Peasants and the Pribitchevitch Independent Democrats. The position of the Democrats in the Government Coalition has been greatly strengthened by the appointment of Dr. Spaho to replace the Minister of Finance, Dr. Bogdan Markovitch, who, having presented his very controversial budgetary estimates to Parliament, has left for a foreign watering-place on account of his health. It is commonly suggested that Dr. Markovitch, who was made Finance Minister as a financial expert rather than as a politician, will not return to his Ministry, and this rather tends to confirm the rumours that he met with considerable difficulty in getting his colleagues' consent to his policy of strict economy.

The Skoplye Trials.

The trial of a number of students and other young men from Yugoslav Macedonia on a charge of having been members of a secret organisation engaged in plotting revolutionary activities endangering the well-being and very existence of the S.H.S. Kingdom as at present constituted—high treason in fact—is being watched with the closest interest in Yugoslavia and abroad. As the case is still *sub judice* comment is impossible. One thing which has, however, been proved is that the reports in the foreign Press that these students were being mercilessly ill-treated in prison, starved, beaten, half-killed, were absolutely

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

devoid of foundation, as is shown by the reports of all the foreign journalists and others who have visited the prisoners and attended the trial. The prisoners are being defended by their own lawyers, including M. Pavelitch, a Zagreb lawyer of great reputation and a member of Parliament of M. Raditch's party. Up to the present the prisoners have completely denied the police statements that they were members of any such organisation and that they were in any way concerned with the Macedonian Internal Revolutionary Organisation of Bulgaria which is responsible for organising the recent series of outrages in Southern Yugoslavia.

In connexion with the trial a series of fresh outrages have broken out, but owing to the close watch kept by police and military they have met with little success. A fortnight ago a goods train on the main line from Skoplye to Ghevgheli was derailed by the explosion of an infernal machine. Fortunately no great damage was done as the assailants were preparing for the express train which was to pass an hour or so later and had placed only one of the three packets of explosive which they had brought for the purpose when the goods train surprised them. A day or so later an attack was made on the sentry guarding a tunnel on the Veles-Shtip line, but this failed. On Sunday last three *komitajis*, who had apparently been hiding in Strumnitza for three or four days making vain attempts to place an infernal machine in one of the cafés where senior officers and civil servants usually sit in the evenings, set the machine in a dark corner near the old post office and exploded it. The explosion broke the windows of all the houses in the neighbourhood and injured some people slightly owing to the falling of broken glass. The escaping *komitajis* met police Lieutenant Jeffitch whom they shot down with revolvers and left dangerously wounded. Twice later they were observed by police patrols who tried to catch them, but each time they escaped after wounding one of the gendarmes in an exchange of revolver fire. It is believed that one of the culprits has been caught. Such outrages will do little to further the cause of the Macedonians, and cannot have a good effect on the fate of their claimed friends at present on trial.

Valona, November 30.

The National Fete.

The National Fête always seems to bring surprises in its train. Last year, on November 27, the eve of the Fête, news was received of the signing of the Tirana Treaty. This time the gift has taken the form of a military alliance between Italy and Albania. It is fifteen years since the Albanians declared their independence, and it was wished to celebrate the occasion in a more resounding and patriotic manner. But the news of the military alliance spoiled everything. It was received gloomily, and the question was heard whether, after the Treaty of last year, a new alliance, even more intimate and lasting, for twenty years, was really necessary, binding the fate of Albania to that of Italy—a fate directed by Signor Mussolini who appears to have taken upon himself the task of making so many enemies.

Here, at Valona, where the national flag was hoisted in

1912, and the battles of 1920 against the Italian troops confirmed that independence, the population is even more sceptical, the more so in that the Island of Sasseno—opposite the roadstead—is still occupied by Italians.

Local Opinion on the Alliance.

I was anxious to learn the opinion of several notable Albanians; some replied that this Alliance is opposed to the principle "The Balkans for the Balkan peoples," and also futile, since Albanian and the neighbouring countries (Yugoslavia, Greece and Italy) are members of the League of Nations. There are a small number of people who believe, however, that Albania was obliged to make this alliance with Italy because Greece and Serbia have not responded to the good intentions shown them by Albania. Others still hold that this alliance has been imposed by Italy's threatening to overthrow Ahmed Zogu's present Government and to create a new one with Hasan Prishtina at its head.

The Treaty of Alliance.

In addition to the Treaty two letters, dated November 2, were signed respectively by Ilias Vrioni, Albanian Minister for Foreign Affairs, and Ugo Solo, Italian Minister, in which they declare that, in the event of war the troops in Albania are to be placed under the command of the Commander of the Albanian forces, while those in Italy will be under the command of the Commander of the Italian forces.

The National Fete.

As I have stated above, the National Fête was of a rather gloomy character. There was, however, an innovation: the *képi* (soldier's cap) was worn by all the officers of Tirana, and the hat by the majority of Government employees. Nevertheless the latter is not of striking significance, as the hat has already been worn two years in Albania by Moslems as well as by Christians; without, however, entirely displacing the *calotte* (skull cap).

Cairo, December 3.

The Residency.

The High Commissioner paid a flying visit to Port Said on November 30 to meet Sir Laming Worthington-Evans and Sir Robert Horne on their way to India. General Sir Peter Strickland was also at Port Said to confer with the Secretary for War. In the evening Lord and Lady Lloyd gave their first official dinner party since their return, their guests including Sarwat Pasha, Prime Minister; Said Zulfikar Pasha, the Grand Chamberlain; Mme. Gaillard, wife of the Doyen of the Diplomatic Corps; and Sir John and Lady Percival.

The Financial Adviser.

At last the question of the Financial Adviser has been settled. The choice of the British and Egyptian Governments has fallen on Mr. Frank Pears Watson, until recently Financial Secretary to the Ministry of Public Works. The appointment came to a great extent as a surprise, as his name has not been included among the many candidates mentioned since it became known that Sir Reginald Patterson had resigned.

Egyptian Limited Liability Companies.

For the first time on record the more important Chambers of Commerce in Alexandria met in conference this week. The object of the meeting was to consider the decision of the Council of Ministers to add certain conditions to those already applying to the formation of Egyptian Limited Liability Companies, and it was attended not only by delegates from the British, French, Italian and Greek Chambers but also, in rôle of observers, by the French Commercial Attaché and the American Assistant Trade Commissioner. The Italian Commercial Attaché was prevented at the last moment from being present. After a somewhat protracted discussion it was unanimously decided that the new conditions were impracticable, and that the meeting should adjourn for a consideration of the terms of the protest which should be made and the manner in which it should be presented.

The new conditions which the Council of Ministers has decided to apply to Egyptian Limited Liability Companies are the following: the board must include at least two directors of Egyptian nationality; apart from workers the staff must consist as to one quarter of employees of Egyptian nationality; every issue of shares must be reserved as to one-fourth for public subscription in Egypt and of that fourth four-fifths must be reserved to Egyptians. If the fourth of the issue is not taken up in Egypt within the period fixed by the call for tenders the Council of Ministers can either prolong the period for not more than three months or can dispense the promoters from compliance with this condition; every share offered for public subscription in Egypt must within a year of issue obtain a quotation on the Egyptian Stock Exchanges and all balance sheets must be published in Arabic and one European language in two local papers at least fifteen days before the general meetings.

Opinions differ in regard to the legality of this action and on whether the conditions themselves are really unfavourable to foreign commerce. But there seems a general feeling of dissatisfaction and uneasiness in all the commercial communities. A striking instance of this was given by the head of a prominent firm in Alexandria. His business, a family partnership, had been in existence for over half a century and as the number of the family participating had grown somewhat considerably and this caused certain inconveniences he decided that the time had come to take the normal course of converting the business into a Limited Liability Company. He accordingly went into the question with his lawyers, but in the end came to the conclusion that in view of the new policy of the Egyptian Government, as indicated by these conditions, it would be far preferable to continue to put up with the inconveniences of a private family concern.

There is indeed a widespread feeling that these conditions reveal an unpromising attitude towards foreign commerce on the part of those in the Ministry of Finance who are responsible for policy. None of those whom I saw in Alexandria on the subject talked with any hostile feeling towards Egypt or the Egyptian Government. On the contrary, they one and all evinced the greatest sympathy with the Egyptian desire to develop on independent lines and gain greater freedom in the matter of commerce and finance and so on. But they at the same time could not fail to see in this latest action a potential menace to their own interests, and on behalf of the future genera-

tions they had to take a stand against a step which otherwise might serve as a dangerous precedent for even worse encroachment on their rights. What would satisfy the foreign communities and would be the most satisfactory for all parties would be some legislative regulation of the formation of public companies instead of the present régime, where it is entirely at the mercy of any conditions the Egyptian Government cares to introduce.

The Late Mr. Roberts.

The British community suffered a sad loss last week in the sudden death of Mr. Richard Henry Roberts, the senior partner in the firm of Roberts Hughes. He had been for over a quarter of a century in this country having started as an employee of the firm of Davies Bryan, and about 1903 set up on his own with Mr. G. J. Hughes as a sporting outfitter. He met with conspicuous success and quickly extended branches to Alexandria and Mansura, becoming one of the leading British commercial representatives in the Country. His success was due as much to his genial personality and his integrity as to his business acumen. His customers came in time to regard him in the light of a friend and both as an example of what sound straightforward business should be, and as a man he will be sorely missed in all circles.

The Tram Strike.

For over a week Alexandria has been without a tram service, and although this produced a silence in the streets to which its inhabitants have hitherto been totally unaccustomed, it nevertheless seriously inconvenienced all classes of the community. There were various causes of the strike, amongst the most important being the refusal of the Companies, Ramleh as well as Alexandria, to agree to the demand of the men that the high cost of living allowance should become a permanent addition to wages and that a more generous scale of indemnities should be introduced. The main reason that the company objected to this addition to its obligations was that the Ramleh Railway has hanging over it a notice of cancellation of its concession, and although it is to receive compensation when the lines are taken over, it is likely that it would have to bear itself the charge of indemnity in the case of employees not re-engaged by the new monopolists. It held that, as the Government was responsible for the uncertainty of its position, it should give a guarantee that whatever new arrangements were made include provision for meeting the obligations undertaken towards employees

of indemnifying those who were not taken over. After considerable discussion a compromise was arrived at. The Government gave the necessary guarantee with regard to indemnities and the Company agreed to consider half the high cost of living bonus as a permanent addition to the wages, the other grievances to be considered by the Conciliation Commission as soon as the men had resumed work. The service has now been resumed, and the Companies and the Conciliation Commission are now conferring with regard to the outstanding questions.

CYPRUS.

Nicosia, November 29-

Emigration from Cyprus.

The Greek Archbishop has issued a long circular, pointing out the serious harm that is being caused by the continued outflow of young Cypriots, who seek their fortunes in other countries. Considerable numbers still leave the island every year. In order to raise funds for the purpose, family properties are often sold, causing not infrequently hardship and injustice to others of its members. The Press has for some time past uttered warnings. His Eminence states that he has abundant proof of the dire distress and want to which only too many late emigrants have been reduced. Cyprus, which now suffers from under-population, once carried a million and more inhabitants, and he sees no reason why it should not regain its ancient prosperity, if those who contemplate departure were to devote their energies to work in the island. What is needed at present is a systematic exploitation of the island's undeveloped resources. Moreover, expatriation tends to weaken all links with their native land: to the gradual abandonment of their mother tongue, and, in coming generations, through inter-marriage and other causes, to loss of the Greek spirit and customs. He exhorts those who are perhaps discontented with the present poverty of agricultural life and prospects, to give themselves, with patriotic courage, to the work of which the island stands in need.

A Greek as Crown Counsel.

Mr. S. Pavlides, a member of the Legislative Council, has been appointed to the office of Crown Counsel. His qualifications are admitted by all; but in some quarters disapproval is expressed by Greeks and in the Press that a member of Council should accept office, at any rate before he has completed the term for which he was elected to serve in that Assembly. They hope that such appointments will not be offered in the future to members who are acting as such. Mr. Pavlides takes up his duties on December 7.

Sir Ronald Storrs and Egypt.

The Governor will visit Egypt in the early part of December. He has already expressed his desire to meet the leaders of the large "Cypriot Fraternity," and amongst other activities he will devote time to a study of the commercial relations of Egypt with Cyprus, with a view to betterment of mutual interests.

A Tourist Trade.

There is again some awakening to the fact that the island is losing much by inaction in failing to make its great attractions more widely known. There can be little doubt that many more tourists would be attracted to the island if an energetic propaganda were set on foot, similar to that adopted in Egypt, Switzerland, and many other countries. The large bodies of American and other excursionists who have recently visited Cyprus have been very favourably impressed by their experiences, and will have carried away excellent reports.

Fifty Years of British Occupation.

The Greek community is considering what attitude should be taken with reference to the celebrations which

are to take place next year, when (in July) the 50 years of British rule will have been completed. The influence of the Church in all such matters is, of course, great, and the matter has already come before the Holy Synod. It will be further considered shortly, with a view to their decision.

General News.

Dr. Horn, who has been studying the conditions of the Medical Department, has left the island, and will, it is said, submit his views in respect of any reorganisation, to the Government in due course.

The Editor of the Greek paper *Asmodæus* in Egypt has published a poem in praise of Sir Ronald Storrs' work for Cyprus, and has sent copies of his works to the Governor for the Library. Amongst them is a translation into modern Greek of parts of the Iliad of Homer.

Mr. Lee, who is to succeed Canon Newham as Chief Inspector of Schools, is making himself acquainted with the districts, and visiting many schools with the Greek inspector, M. Arabi.

The departure of the Hellenic Consul, M. Sakellaviades, is much regretted by the Greek community. His successor, M. Inglezis, has arrived in the island with his family.

buildings, but although the work has gone down to a great depth the rock foundation of the original fortress has not yet been reached. The present excavations are more or less experimental, but should the discoveries prove of sufficient interest, they will be carried out on a larger scale.

Tourists to Egypt this season will have the opportunity of making a four-days' tour by aeroplane, landing at Amman, where cars can be obtained, and from where it is about two hours' run to Jerash, and at Maan, whence Petra can be visited.

Mr. A. P. Mitchell, late of the Egyptian Survey Department, is shortly to join the Government service in Trans-Jordan, and is expected to arrive before Christmas.

M. H. Ayres, Divisional Superintendent of the Hijaz Railway, Trans-Jordan, is being transferred to Kantara at the end of November, and will be replaced by Mr. Graham, who comes from Ludd.

The new Palestine coinage is now in circulation in Trans-Jordan and will gradually replace the present mixed Egyptian and Turkish currency, though this will not be withdrawn for some time, as the amount of the new coinage is insufficient for the needs of the two countries.

TRANS-JORDAN.

Amman, December 2.

A Tobacco Factory.

The first Trans-Jordan tobacco factory will be opened early in December, and a second is nearing completion. The first consignment of tobacco, about 26 tons, has come from the Bonded Stores in Suez by a somewhat complicated route. It was brought from Suez to Aqaba by sea, from Aqaba to Maan by camel, and thence to Amman by rail. This has been a rather costly proceeding, but is cheaper than bringing it via Palestine, in which case the Palestine duties would have been collected in addition to those in Trans-Jordan.

Housing at Amman.

The housing problem in Amman is one of great difficulty for Europeans. Although many new houses have been built since the earthquake last July, they are as a rule only suitable for Orientals, and the older houses are even more primitive. The British community is too small to be much incentive to landlords to alter the style of their building, so that conditions are not likely to improve greatly in this direction. It is, however, a satisfaction to know that a suitable residence for the British Representative is in course of construction on a hill close to the Palace of the Amir Abdullah, a healthy site, where there is also sufficient water power to drive a dynamo for electric light.

General News.

The excavations which are being carried on at the Citadel in Amman have unearthed various layers of

THE LIBERATION OF JERUSALEM.

To commemorate the tenth anniversary of the liberation of Jerusalem by the armies under General Allenby, two meetings were held on December 9 in London, under the auspices of the Jerusalem and the East Mission.

At the first, which was the Annual Meeting of the Mission and was held in the Church House, Westminster, Sir Frederick Holiday presided, and supporting him on the platform were the Archbishop of Canterbury, the Bishop in Jerusalem, and the Archbishop of Thyatira. The Archbishop's address was devoted to the history of the Anglican bishopric in Jerusalem. Nearly a hundred years ago, he said, this scheme had been started with very different ideals from those which governed the institution to-day. Three bishops had held the office before the interregnum, in the 'eighties, which preceded the assumption by Bishop Blyth of the task in Jerusalem. It was owing largely to the unceasing efforts of this Bishop, who had raised funds for the construction of ecclesiastical and scholastic buildings in Jerusalem, that the name of St. George's stood in the Holy City where it did stand. He himself had vivid personal memories of the state of affairs in Jerusalem fifty years ago, a state of affairs which, in the aspect of its ecclesiastical jealousies was, if the word were not irreverent, comic. But now, the whole position of the Anglican attitude towards the Church of the East was a different thing from what it was. He was happy to see on the platform the Archbishop of Thyatira, who represented in England the Patriarchate of Constantinople, and kept them in constant touch with the ecclesiastical

life of the Churches in the East. They had now a fellowship, where in the old days they had a kind of suspicious acquaintance between ecclesiastics of the East and West. That had been transformed into something of a fraternal kind which grew in meaning, in character, and in usefulness every year.

They were commemorating that day the entry, ten years ago, of Lord Allenby into Jerusalem. The mandate which England now had over Palestine and its life, had given a totally different character to not a few of their activities and their hopes. He thought he was right in saying that the contrast was almost illimitable between what happened under the British mandate and what happened under Turkish rule. He was thankful for the work which the Bishop of Jerusalem had done and was doing, and they wished him God speed.

He liked to think that support for that work was not confined to this side of the Atlantic. He was always struck by the way in which America was ready to show a kind of loyal fraternity with us in admitting that we in England must have the controlling voice in the country now under our mandate and in the ecclesiastical agencies and work for which our own Church made itself responsible. They co-operated with us without seeking to rival us except in zeal. That was a matter for great thankfulness. In America they knew how we appreciated the kindly and fraternal attitude which they took towards what we were trying to do. They were present at that meeting in furtherance of financial aid for carrying on the work. We were proud to do our utmost to see that the activities did not languish for the lack of the necessary supplies that ought to be forthcoming from England and America towards the carrying on of the work.

Sir Gilbert Clayton then moved, and Sir Thomas Haycraft seconded, this resolution:—

On the tenth anniversary of the liberation of Jerusalem by Lord Allenby's Army and the assumption of the administration of Palestine by Great Britain, when the Holy Land once again came under the guardianship of a Christian Power, this Meeting desires to press upon the Christian people of the Empire their responsibility for the completion and maintenance of St. George's Cathedral Church, and the adequate development of the Christian work of which it is the centre.

In the course of his speech, Sir Gilbert referred to the agitation after the War that, in the interests of economy, Great Britain should relinquish her hold on Palestine, but the British people would not leave "so splendid a task for so sordid a motive."

The second meeting, which was held at the Central Hall, Westminster, and was met to re-emphasise the needs of the Mission—£50,000 for buildings and £5,000 a year increased income to meet growing needs—was presided over by the Bishop of London.

The Chairman spoke of his early interest in the work of the Anglican community in Jerusalem, for he was one of the "canons" which the Turks heard of and attempted to excavate in the Holy City. For month after month during the War he waited for the fall of Jerusalem, which for him was the greatest event of the War. That triumphant day had come, but still the representation of the Church of England in Palestine was quite inadequate.

Sir Samuel Hoare, Secretary of State for Air, who spoke next, spoke of his interest both in the religious and material aspects of Palestine. He dealt first with the material aspect. There was a time, he said, when hardly a citizen would have accepted the suggestion of our taking up a definite responsibility of this kind under

the Mandate, with the country's Exchequer depleted, and with every legitimate objection against spending the taxpayers' money. But now we could claim that Palestine had reached a standard of material prosperity that would have been impossible under Turkish domination. Instead of the £3,000,000 a year expended as recently as 1921 upon units of cavalry, artillery, and infantry, one flying squadron of the Royal Air Force now sufficed, and the £3,000,000 had been reduced to £300,000. Again, our expenditure in Iraq in 1921 was £20,000,000, and this had been brought down to an annual sum of £3,000,000. What better test could there be of the increased security and efficiency we had brought about?

Sir Samuel said he had recently found excellent roads that would compare well with those around London. To-day there were 2,550 telephones in Palestine, and whereas in 1914 there was a single motor-car, they might now see as many as 300 cars passing regularly every day along all the principal roads. Palestine was also becoming one of the most important junctions along the flying route between England and the Far East, and the Gaza of Bible history and Lord Allenby's campaign was destined at no distant date to be one of the busiest scenes along this same route.

He then turned to the hold of the Anglican faith in Palestine and to its possibilities. He told a story of Anglican Syrian priest who, when the Turks were in Jerusalem, insisted to the German Governor that British officers and men who were brought in wounded and died in the Holy City should be given full military honours at their funeral. This old Syrian won his claim; and one of Lord Allenby's first acts after entering Jerusalem was to thank this old Syrian. Sir Samuel, in conclusion, said that it seemed to him that at Jerusalem, through being brought into close daily connexion with representatives of other Christian Churches, we had a great opportunity of improving our relations with them so that we might gradually be able to build up a common mode of thought, and at some time in the future might bring about Christian reunion.

A lantern lecture was then given by the Rev. H. S. Frank Williams, late Senior Chaplain, 53rd (Welsh) Division, on the war in Palestine and its significance to Christendom.

Finally, Dr. MacInnes, Bishop in Jerusalem, described vividly the improvements which had been wrought by the British Mandate in Palestine and Transjordan. Roads and bridges were constructed without fuss and ostentation; public security was absolute, despite the much advertised attack on himself recently by amateur bandits; the work of the soldiers who were formerly in Palestine and of the police still there was indeed beyond all praise. Some time was then devoted to the excellent work of the St. George's School in Jerusalem, where Christian, Arab and Jew met on equal footing and learned that religious differences were no bar to harmonious living. In conclusion he read a letter from Field-Marshal Lord Plumer, High Commissioner and Commander-in-Chief of Palestine, who wrote:—

You tell me that at your annual meeting on December 9 you are hoping to issue an appeal for the completion of St. George's Cathedral, the boys' school, and the hostel, and other smaller matters such as improvements to the playground. All these objects are, I can testify, well worthy of support, and I trust your appeal will meet with a generous response. I feel sure it will.

He also read a letter from Field-Marshal Lord Allenby, who stated:—

I am very sorry that I am leaving England on December 9, the great anniversary. I offer, nevertheless, to you the expression of my hearty good wishes for the success of the appeal which you are launching on behalf of objects of the first importance—the completion of St. George's Cathedral, the boys' school and playground, and St. George's Hostel for travellers in Jerusalem.

A Cairo message states that the Cabinet has fixed the quantity of eggs which may be exported from Egypt in January, February, and March, at 15,000,000 a month.

RAILWAYS IN TURKEY.

Under the auspices of the Central Asian Society a lecture on "Railways in Turkey" was given at the Royal Society's Rooms, Burlington House, on December 7, by Colonel W. H. Gribbon, C.B., C.M.G. Viscount Allenby, Chairman of the Society, presided.

Before dealing in detail, with the help of a large wall map, with the railway system of the Turkish Republic, Colonel Gribbon drew attention to the published results of the recent census. With a population of 14,000,000 Turkey, he pointed out, would have a density of 28 to the square mile; but for this purpose the lecturer selected 500,000 square miles as the area of Turkey, instead of the 270,000 square miles claimed by Turkish official statistics. Turkey, he continued, occupies an important position as a bridge both as between north and south and between east and west. Whereas in the past the railway system had to be regarded as radiating from Constantinople, with the establishment of the Republic the focus had been shifted to Angora. The programme of new construction clearly had a strategical basis and in this respect the western sector was the most important. There were the Anatolian Railways from Haidar Pasha to Eski Shehir and Angora, with a branch north-westwards from Kutahia to Tavshanli, now in process of extension to connect with the Smyrna-Kassaba Railway at Balikissir. The construction of this new line was in German hands (Julius Berger) and was to be completed by August 1930. In pursuance of strategical considerations the Turkish Government was anxious that the British Company owning the Smyrna-Aidin Railway should build a north-south connexion linking the Anatolian Railways through Egerdir with Adalia.

In the northern sector before the War railway construction was reserved for Russia, and no work was undertaken. To-day the Turks had entrusted harbour works at Samsoun to a Belgian group, which was also building the southern portion of the Samsoun-Sivas line, the first section from the sea to Amasia having just been completed by the Turks themselves. The Belgian section is to be finished in March, 1930. A metre-gauge railway from Eregli—the main source of Turkey's indigenous coal supply—to Angora was under Swedish construction and was to be completed by June 1932. This line was intended to facilitate the distribution of coal in Anatolia. From Angora there had been talk of a line running due east to Sivas, but its construction would have encountered serious difficulties, and the railway now ran south-east to Kaisarieh—this section having been built entirely by Turkish engineers with State funds. At Kaisarieh it would ultimately be connected with Sivas—the line is due to be completed in March 1930, under Belgian construction—and south-eastwards with the Baghdad Railway at Ulu Kishlar, this section being built by the German firm, J. Berger, to be opened to traffic in February 1931.

The last item in the present programme of construction was a line from a point on the Baghdad Railway, thirty miles from the Syrian frontier, to Melatia and on, south-eastwards to Diarbekir, which was in the hands of the Swedish firm building the Eregli line. It was due to be completed in December 1932.

As far as was known these lines now under construction by foreign firms were to be handed over to Turkish management on completion, and payment was to be made out of railway revenue. The old system of a kilometric guarantee had been abolished. In regard to the eastern sector Colonel Gribbon did not think that there would be any new construction at an early date, nor did he suppose that a line between Trebizond and Erzeroum would be built. [The Grand National Assembly in the Budget for 1925-6 passed a credit of £T429,500 for preliminary work on a line from Trebizond via Erzincan to Erzeroum, but there is no evidence to show that the money was devoted to the purpose.—ED. THE NEAR EAST AND INDIA]. In conclusion the lecturer stated that the personnel of the Turkish railways was good.

In the discussion that followed Mr. H. C. Woods, Mr. F. H. Skrine, Mr. E. H. Keeling and others took part. Lord Allenby in thanking Colonel Gribbon for his interest-

ing and informative lecture expressed satisfaction that the Taurus and Amanus tunnels on the Baghdad Railway had not been completed before the last days of the War. He had travelled shortly after the Armistice through the Amanus tunnel, and he hoped that it was now in a better condition than it was in those days.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

"THE FOUNDER OF ISLAM."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I be allowed, through the medium of your columns, to thank you, on behalf of many of your Muslim readers and admirers, for your outspoken comment, on November 17, on "Mohammed," by R. F. Dibble?

I really fail to see what purpose can possibly be served by publications such as his, unless they are intended to render understanding between Christendom and Islam difficult, if not impossible.

Reiterating my thanks, I am, etc.,

November 27. HASSAN ABDO,
Bahr-el-Seghir, Mansura, Egypt.

NEWS IN BRIEF.

The settlement of the Greek War Debt to America was announced in the Greek Chamber on December 6.

Signor Mussolini presented the Treaty of Tirana and the Italo-Albanian Treaty of Defensive Alliance for ratification at the Italian Senate on December 6. The treaties were to come up for debate after examination by committees.

Mr. Lloyd George has, on the invitation of the Executive of the Jewish National Fund, become a patron of the Balfour Forest project. The Jewish National Fund has decided to plant a forest in Palestine which will be named the Balfour Forest.

An attempt was made at Tirana on December 6 to assassinate Shesfet Beg Verlaci, who was Prime Minister of Albania from March to May, 1924, and is the future father-in-law of the President, Ahmed Beg Zogu. One of the Beg's servants was killed, and one was wounded, but the assailant escaped.

Some Roumanian university students returning on December 7 to Cluj from the recent congress at Oradea Mare, where there were anti-Hungarian excesses, broke the windows of several shops. The police arrested 24 of the youths, and the Government decided the following day to take strong measures against them.

Through the intervention of the Greek Orthodox Patriarch, says a Beyrouth message, a case of interdiction, which was to have come before the Sharia Court, was amicably settled on December 6. M. Millerand, former President of the French Republic, who had been briefed in the case, reached Beyrouth a few hours after the settlement had been reached.

The public session of the Roumanian Chamber on December 7 was preceded by a meeting of the Majority Parties, at which the declarations of the Government were unanimously approved. M. Vintila Bratianu was afterwards received at the public session with loud and prolonged applause. A resolution of confidence in the Government was voted by a large majority.

M. Georges Juritch, Yugoslav Minister in London, speaking at the annual dinner last week of the British Serbian Units branch of the British Legion at Victoria Mansions Restaurant, paid a tribute to the magnificent work of the British nurses in Serbia during the War. "They have," he said, "left a deep impression on not only the soldiers, but also the civilian population whom they nursed in the time of sickness."

Bulgaria has issued new air post stamps in connexion with the service recently put in operation between Sofia, Rustchuk, and Varna. For this purpose the current 6 leva postage stamp has been converted into a provisional air post stamp of 1 leva merely by overprinting it with an aeroplane device and the new value in red, while the 4 leva has been distinguished by the addition of an aeroplane in blue. These air mail stamps are not on sale to the public in the ordinary way, but are affixed by the postal officials themselves to letters handed in for transmission by air.

Book Review

TALES OF THE MARSH ARABS.

"HAJI RIKKAN: MARSH ARAB." By *Fulanain*. (London: Chatto and Windus. 10s. 6d. net.)

The author of this rare book is not unknown to readers of THE NEAR EAST AND INDIA, in the columns of which, indeed, some of the material in his pages first appeared. But our praise of the book will appear less ungracious when it is pointed out that a good portion of it has been published before, and that that which has been printed in two other periodicals, *Blackwood's* and the *Cornhill*, is very worthy of reproduction.

Quite certainly "Haji Rikkan" is a book with a flavour. These stories of the Arabs living in the vast, seldom penetrated marshes of Southern Iraq are in themselves tales such as the world for ever loves to hear; nor are the art with which they are told and the scene of their unfolding on an unequal plane with their intrinsic merits. "Fulanain," who knows, as few Englishmen have been privileged to know it, the country lying between Qurnah and Kut-al-Amara, has considerable sympathy with the lives of the marsh Arabs, who live so near and yet cling so passionately to the borders of existence. That they can be cruel plunderers is admitted; it is a natural effect of their unfruitful environment. Yet time spent amongst them revealed to "Fulanain" qualities which could not have been suspected by those whose experience of them was gained, so to speak, in passing. These Arabs have their ideals, and they have their sympathies, human, political, and religious; of all of which delightful and instructive hints are to be found in the pages of this book. It was, incidentally, an excellent plan to include photographs of this primitive folk, of the *mashhuf*, the *birkash*, the types of the different tribesmen, their homes, and so on; although it is no less than the truth to say that the text alone is sufficiently vivid and compelling for the discerning reader.

The people whom "Fulanain" is concerned to describe are the tribes of the desert—the shepherd and camel trading tribes, the tillers of the soil in the fields, and the marsh-dwellers of the swamp, but it is to the last group that probably his best passages are devoted. Not that he does not thrill the reader with, for instance, his narrative of a dash on horses with the Bani Lam to the Persian frontier and Pusht-i-Kuh; but his finest prose is never far distant from the reflection of the water, the flap of the reeds, the musing on the *ishan*.

Haji Rikkan himself was an old fellow who hawked his wares about the marshes. Like all "characters" in the East, he had had his ups and downs, one of more notable "ups" being during the War, when money was not so tight as it afterwards became. Of many things, of love and of action, of tribe and of State, this old pedlar was wont to tell, what time his two nephews paddled his *birkash* through the waterways by the lower Tigris. His very name was a deception indicative of a life so commonly led in these parts, for

in jest, because I had been to distant Karbala, one of my uncles called me Haji, which nickname clung to me although, long absent as I had been, never had I set foot in distant Mecca.

There are, as the book abundantly shows, a beauty as well as an ugliness in the lives of the folk among whom Haji Rikkan plied his meagre trade, a beauty and a devotion which made "Fulanain" wonder whether "the people of this land might yet become a great nation," or whether his glimmerings of their ideals but showed "a noble past in a decadent race."

Across the marsh "Fulanain" is paddled, observing and noting not only the unchanged things but the changing ways of men. Nor is he less observant when in the saddle. He sees, for instance, and with a certain lamenting, that of late years the Bani Lam had been less inclined to roam, and he says:—

It is still the official policy to settle the nomad Arab on the land, and the invariable result is immorality and degeneration. It seems that the nomad cannot lose his wildness without losing his virtues also. The Bedouin, when they walk through the little towns at the desert's edge, to which they come each year to trade, stop their nostrils in scornful disgust at the stuffy, malodorous streets. May not their instinct show a greater wisdom than the wisdom of those who would tempt them from the desert?

From which it can be gleaned that "Fulanain" is a romanticist who shows the Englishman's common partiality for the unsoiled, unspoiled Oriental. But the combination of a romantic with an efficient governing spirit is one seldom manifested in the world's history.

The attempt to summarise the various sketches would be both futile and unfair; but for ourselves, the greatest heights of passion and human feeling seem to have been reached in the chapters entitled "Ghalib the Exile" and "In Favour of Discretion." We cannot forbear from quoting the climax of the former story, which tells how, because a girl, Sadiqa, of a shaikhly house, had desired to marry one Haddam, a man of lesser birth, she was murdered by her father, Ghalib. On the *ishan* of Umm Furukh the dreadful scene is enacted. "Nay, spare me, spare me, sheathe the cruel blade!" one Hantush heard Sadiqa wail. Then

With a great voice she cried aloud, 'Ah, to me, to me, Haddam, O Haddam!'

"My blood turned to water within me when I heard that shameful avowal, yet none the less with held breath did I strain by ears for a succouring shout. None came. Only the taunting echo, 'Haddam, O Haddam,' came faintly back to me on the still air. Then came a sobbing cry, and I knew that that which had been decreed from the beginning had come to pass.

"Long I waited in the boat as my lord (Ghalib) had bidden me, long I sat weeping alone, until the sun went to its westering, the shadows grew long, the air chill and dark. And when a cold breeze from the north blew suddenly, I thought that all the *Jinns* and *tantrals* of the marsh were falling upon me, and in the grip of a great fear I seized my paddle, and fled back to the tribe.

"Next morning, when the sun was up, I came with companions to the *ishan*. As we drew near the shore a man rose up, but it was not the figure of my lord. Haddam towered above us, his body naked and covered with mud, and with blood where he had gashed himself. His hair was matted, and his eyes were full of fire, and we knew not the voice which cried, 'Begone! I, I alone will bury my dead.'"

The plangent voice of the story-teller ceased abruptly. No more distant torches gleamed from the marsh, and the young moon, setting in a bank of cloud, left only the dying embers of the camp fire for light. The rattle of a horse's chain, the grumble of a restless camel, alone broke the stillness, until a deep voice from the circle of listeners, low-toned, set the seal of desert approval on Hantush's tale of violence.

"Aye, 'twas well done," it said. And the rest, bred in the same stern creed, gave guttural assent.

That passage gives a fair indication of the quality of a book which takes a place among the distinguished company of studies on Arabia.

It may be mentioned that Gertrude Bell encouraged the writing of this book, and was to have written a Foreword to it.

NOTE.

The review, contained in our issue of December 8, of the volume of plates prepared by Mr. C. T. Seltman to accompany the first four volume of the Cambridge Ancient History wrongly suggested that there were four such volumes of plates. There is only one volume.

PERSONAL AND GENERAL

TO-DAY

December 15, 1927 (New Style).
 December 2, 1927 (Old Style).
 Jumada II, 20, 1346 A.H. of the Muslim Calendar.
 Kislev 21, 5688, of the Jewish Calendar.

Mr. T. Millard, Assistant Treasurer, Cyprus, has been appointed Colonial Treasurer, British Guiana.

Lord and Lady Airedale will return on December 24 to 3, Cadogan Square from India.

Sir Abbas and Lady Ali Baig left London on December 6 for India, and will not return until the end of April.

The Countess of Seafeld and Nina Countess of Seafeld have arranged to spend the winter months in Egypt.

Sir Valentine Chirol sailed from Southampton on December 9 in the Edinburgh Castle for South Africa, where he will stay for two or three months.

It is announced from Cairo that the resignation of Aziz Izzet Pasha, Egyptian Minister in London, which was tendered some time ago, has now been accepted.

Field-Marshal Viscount Allenby and Viscountess Allenby left 24, Wetherby Gardens on December 9 for South Africa. They will be away until the middle of March.

Sir Elly Kadoorie and Mr. Lawrence Kadoorie left London on December 8 for Paris and Marseilles on their way to Shanghai. They will not return to 6, Princes Gate before next June.

Dr. H. R. Hall, Keeper of Egyptian and Assyrian Antiquities in the British Museum, has been appointed an Elector to the Disney Professorship of Archaeology, in the place of the late Dr. Hogarth.

Abdul Wahab Azem Effendi, formerly of the Egyptian Legation, London, has been appointed, after a course of study at the school of Oriental Studies, Assistant Professor of Persian at the Egyptian State University, Cairo.

In convocation on December 6, Oxford University conferred the honorary degree of D.Sc. upon Edward Ball Knobel, F.R.A.S. Dr. Knobel, besides being a distinguished astronomer, is a celebrated Oriental scholar. His published works include various papers on Oriental and ancient astronomy, Ptolemy's "Catalogue of the Stars," and Ulugh Bey's "Catalogue."

The following have been elected hon. members of the Society for the Promotion of Hellenic Studies:—Professor Ch. Blinkenberg (Denmark), Professor E. Breccia (Italy), Professor C. Diehl (France), Dr. B. H. Hill (America), the Freiherr Hiller von Gaetringen (Germany), Professor M. Holleaux (France), Professor P. Kretschmer (Austria), Mubarek Ghalib Bey (Turkey), Professor M. Nilsson (Sweden), Commendatore B. Nogara (Italy), Professor R. Paribeni (Italy), Professor E. Pfuhl (Switzerland), Professor J. Strzygowski (Austria), Dr. W. Wilcken (Germany), and the Ephor S. Xanthoudides (Greece). Mr. W. R. Le Fanu, of King's College, Cambridge, has been appointed Second Librarian of the Society.

The new postage stamps of Afghanistan, whose Post Office has been reorganised with a view to membership of the Universal Postal Union, bear for the first time the designation "Afghan Post" in addition to the purely native inscription. The first of the new series is of the face value 15 pools carmine, 50 pools being equivalent to 33 paisa.

Lieutenant Yestovitch, who was wounded by the explosion of the bomb thrown by the Macedonian *komitajis* at Strumnitza on December 4, died on December 9. Eighteen persons suspected of complicity in this outrage have been arrested.

NOTES OF THE WEEK

(Continued from page 739.)

complete independence to the son of King Ibn Saoud's hated rival, ex-King Husain. Such explanations, however, are speculation. It may equally be that King Ibn Saoud, who is bound by Treaty to respect the integrity of Iraq and of Kuwait, wholly disapproves of these actions of Faisal ad Dawish and of his subordinates. A point to recall is that Faisal ad Dawish is rather a Najdi zealot than a genuine Wahhabi. As in the earliest days of Islam, many Arabs, probably, have adopted the tenets of a great leader for purposes far other than the propagation of morality and the truth.

THE KING OF AFGHANISTAN.

King Amanullah of Afghanistan has started upon his tour to the West. On December 10 he arrived at Chaman (Baluchistan) from Spin Baldak Fort, and was received by Colonel St. John, Agent of the Governor-General for Baluchistan, and Sir Charles Harington, G.O.C. Western area, and their staffs. At Karachi, where the King and his Queen arrived on the following day, there were scenes of pageantry to greet the Royal visitor, the Afghan flag being flown at various points on the cantonment station building. His Majesty, who was saluted with the firing of 31 guns, was greeted by Mr. Hudson, Commissioner in Sind, and by Major-General M. R. W. Nightingale. The Queen was greeted by Mrs. Hudson. All the Afghan ladies wore European clothes, but, in accordance with Muslim custom, were veiled. Entertainments were given, at which speeches were made, including one, in Persian, by King Amanullah. This speech, which showed the "Westernised" spirit of the Afghan King, enjoined toleration upon the various religious communities in India, and was received with keen appreciation.

On December 12 King Amanullah and his Queen embarked for Bombay.

The following is the result, according to *The Times*, of the trial of the 15 Macedonian students at Skopyle (Uskub):—Juzelovitch and Shopovitch were convicted of military espionage and were each sentenced to 20 years' imprisonment with hard labour. Netzevitch was sentenced to ten years' imprisonment with hard labour, and five others to five years' simple imprisonment. There will be an appeal. The other six students were found "Not Guilty" and have been released.

Sir Ronald Storrs, Governor of Cyprus, arrived in Cairo last week as the guest of the British High Commissioner and Lady Lloyd at the Residency. He was welcomed by the Cypriot community at Zazazig Station and on reaching Cairo.

The tenth anniversary of the liberation of Jerusalem in 1917 was observed in Jerusalem on December 9. There was, says *The Times*, the customary State service in the Anglican Cathedral of Saint George, attended by Field-Marshal Lord Plumer, High Commissioner for Palestine, his principal officials, religious chiefs, and representatives of all communities. The Orthodox and Armenian Patriarchs took part in the service, which was conducted in English, Arabic, Hebrew, Greek, and Armenian. A commemorative letter from Field-Marshal Lord Allenby to the Anglican Bishop was read. After the service the High Commissioner held an Investiture, during which the insignia of British honours recently gazetted were bestowed upon a number of officials and local notables. Subsequently the High Commissioner, on behalf of the people of Palestine, sent messages to the King and to Lord Allenby.

PROVINCIAL AUTONOMY.

"Our conception of the eventual future of India is a sisterhood of States self-governing in all matters of purely local or provincial interest, in some cases corresponding to existing provinces, in others perhaps modified in area according to the character and economic interests of the people." This is the ideal which the authors of the Reforms scheme had in mind when they framed their report nine years ago; and by their scheme they endeavoured to set India on the path leading to it. They did not attempt to create the self-governing States the future existence of which they visualised. They contented themselves with a transitional scheme of reform whereby the principle of responsibility, in the democratic sense, was introduced into the existing Provincial Governments. They recognised that change in the provinces must imply change in the Government of India. But they held that the change need not be simultaneous or in equal proportion: it should be merely enough to make the Central Government a suitable instrument for controlling the provinces at the stage that they are at for the time being. And they judged it to be sufficient for the first stage to provide for better representation and more criticism in the Government of India without introducing the principle of responsibility. As we all know, this scheme has been condemned by Indian opinion as unsatisfactory and unworkable. And, furthermore, many leading Indians have expressed their unwillingness to accept any alternative transitional scheme. Their demand is for the immediate establishment of what is defined in India as provincial autonomy. This expression implies the existence of a Central Government as well as provincial governments. On the other hand it does not, strictly speaking, suggest that the constitution of these should be autocratic, or bureaucratic or democratic. We may take it, however, that the phrase is generally used in India to mean the replacement, in the provinces, of the existing dyarchical system by a unitary and responsible provincial government.

It will be for the Statutory Commission to consider whether the time has come for the establishment of such a government in any province, or provinces, and also whether any approximation to it can be established in other provinces. And this inquiry will, as it seems to us, open up questions of considerable magnitude affecting the whole fabric of Indian administration. One of these will surely be the exercise of control over the provinces. Before the revision of the Government of India Act in 1919 complete control was exercised by the Central Government. But a division of functions as between that Government and the provinces was brought about by the amended Act. So far as regards provincial "reserved" subjects—that is, subjects reserved for administration by the Provincial Governor and his Executive Council—the Central Government still exercises control. But such is not the case in respect of the "transferred" subjects. It would seem, therefore, that if all the provincial "reserved" subjects are transferred

to ministers in any province central control will disappear, or at any rate it will be insufficient. It follows that provincial autonomy implies much more than the mere transfer to ministers of all provincial "reserved" subjects. For it clearly raises a question which has always been a difficult one in federalised States, namely, the question of the division of functions between the central government and the provincial governments. Then we must also remember that leading Indian politicians agree with the authors of the Reforms scheme that change in the constitution of the provincial governments implies change in the Government of India. The existing constitution of that Government is, they contend, incompatible with autonomous provincial governments; and they demand that the grant of provincial autonomy must be accompanied by the introduction in the central government of the principle of responsibility. And this demand does not end here, because if the central executive is to be made responsible to the central legislature the control of the Secretary of State must be relaxed. For as the authors of the Reforms scheme pointed out "all movement towards responsible government in India implies a corresponding change in the constitution of the controlling agency in England."

It follows, therefore, that if provincial autonomy is to be established important changes will be necessary in the Provincial Governments, the Central Government, and at the India Office. That the question of the division of functions between the Government of India and the provinces will have to be examined is obvious. And it is, we believe, generally agreed that there will have to be a complete separation of finances; and that the fields of taxation and other sources of revenue to be assigned respectively to the Central Government and the provinces will have to be defined. Then there will be the question whether the legislative control which is now exercised should not be circumscribed. And as regards administrative control it will certainly be proposed that the Provincial Governments should be made responsible for the maintenance of law and order and for the actual administration of the criminal law. Then as regards the Central Government the important question will be whether responsibility is or is not to be introduced. As we have indicated it was not the intention of the authors of the Reforms scheme that changes made in the Provinces should be necessarily also made in the Government of India. But at the same time their report expresses the opinion that States which are on the way to responsible government and which have a large element of responsibility in their constitutions cannot be controlled by a purely autocratic power. Indian opinion is, as we have already suggested, strongly in favour of making that part of the Central Executive which deals with civil administration responsible to the Legislature instead of to the Secretary of State as it is now. And if any large step in the direction of provincial autonomy is recommended by the Statutory Commission this demand will naturally develop in intensity.

Our object in drawing attention so prominently to

these problems is to emphasise the signal importance of the inquiry which is now being undertaken by the Statutory Commission. For it is clear that they will have no alternative but to examine the Indian constitution as a whole before they can be in a position to make recommendations. In our last issue we expressed the opinion that they will find it impossible adequately to deal with the wider issues which will come before them without taking into consideration the problems presented by the Indian States. What we have now said concerning these wider issues supports that view, for the Indian Princes cannot fail to be keenly interested in any proposals which may transform British India into a democracy. And we would like to add that a consideration of these issues makes it more than ever necessary that the All-India representation of commercial interests which was suggested at the London Chamber of Commerce meeting in July last should be framed. For it is easy to see that most of the principal questions to which we have referred vitally affect, directly or indirectly, the commercial and industrial interests of India.

CURRENT TOPICS.

"Britain's Record in India."

Nearly fifty years ago the late Sir William Hunter delivered at Edinburgh two lectures on the subject of the British administration of India. These lectures he subsequently enlarged and published under the title of "England's Work in India." We are reminded of them now by the timely appearance the other day of Mr. J. E. Woolacott's interesting little book, "England's Record in India." For the first of Hunter's two lectures was designed—as we are told by his biographer—to be "a counterblast to those mischievous and unpatriotic doctrines which proclaim to the world that England's hold on India is rooted in fraud and bloodshed and upheld by spoliation." A counterblast to these doctrines is, we think, much more urgently needed now than it was in 1879; and we are glad to see that Mr. Woolacott has attempted, not unsuccessfully, to supply it. He does not, it is true, treat the subject so fully and with such a wealth of detail as Hunter treated it in his lectures in their published form. But his pamphlet is quite detailed enough for the purpose in view. He combats by reasoned argument, supported by facts and figures, the persistent efforts which are "being made in England to create the belief that British rule in India means cruel repression of the people; that a reign of terror has been maintained by successive Viceroys, and that almost every evil that afflicts the country may be traced to British malevolence or wrongdoing."

The subjects with which Mr. Woolacott deals are Indian poverty, famine and irrigation, "the untouchables," industrial labour, popular education, child marriage and finance. And he concludes with a brief account of the agitation which was followed by the horrors of Chauri Chaura and the Moplah Rebellion. We do not propose to remark on all these various subjects or on his treatment of them. It will suffice to say that he sets forth in plain language what the real facts are; and shows that there is no warrant for the sweeping charges of mal-administration and spoliation which are being constantly brought against British rule.

When Hunter wrote his Edinburgh lectures he had to admit that "the problem of Indian famine is still unsolved; but it has been accepted by all earnest administrators that it is one for which we must find a solution." Mr. Woolacott is able to say that the solution has been found. Security against famine has been, as he rightly points out, now established. And he shows that the famine resulting from the failure of the monsoon in 1918-19 was successfully fought. "What emerged from the experience of that trying period was," he says, "that even in the areas where the rise in prices was most acutely felt the agricultural population showed powers of resist-

ance never before experienced. Distress even in backward areas never became critical, and the maximum number of people on famine relief at any one stage of the shortage was under 600,000, or one-tenth of the number similarly placed through the crop failure of 1900." As we have said, the solution for which Indian administrators were seeking fifty years ago has been found; and it can be defined in two words—irrigation and railways. For this great achievement the British Administration is justly entitled to take credit whatever its detractors may say. And, as Mr. Woolacott convincingly shows, it is not in respect of famine administration only that British rule emerges successfully from the strictest scrutiny. On the contrary, it is true, as Sir William Hunter said, that "British rule in India means order in place of anarchy, protection by the law instead of oppression by the sword, and a vast free people dwelling in safety where of old each man was beaten down beneath whosoever was stronger than himself."

A Banking Anomaly.

In these days when a multiplicity of banking facilities has become part of the established order of things, it is odd to see that the practice of remitting large sums of money by means of divided currency notes still persists in India. But such is the case and, what is more, the principal Indian Chambers of Commerce have most strongly protested against an attempt which the Government of India are making to discourage the practice. It is urged by the Chambers that facilities for transferring money from the great commercial centres to mines, plantations, agricultural estates, etc., in the mofussil areas are insufficient. They admit that these facilities are being developed by the Government of India, and by the Imperial Bank of India and other banks. But their contention is that this development has not yet reached so advanced a stage as to enable remittance by divided notes to be even discouraged, much less stopped altogether. Obviously it is useless to send a cheque, or a bank transfer, or a currency transfer to, for instance, the manager of a distant mine if he has no bank or Government treasury in his neighbourhood. He wants cash to pay his labour force and to meet his other current liabilities; and he wants it at periodical intervals. It is not, of course, suggested that every mine or every plantation is off the track of the ordinary remittance facilities. But that very many of them are is clear from the attitude taken up by the Indian Chambers. Some of the larger agency firms in the principal trade centres are said to remit up-country lakhs of rupees yearly by means of half notes. These firms naturally avail themselves of such facilities as are offered by the Government and the banks. But these facilities do not cover all their needs by any means; and they consequently have no alternative but to resort to the practice of sending half notes.

The Government of India are not making the practice illegal. They have merely so amended their rules, under which refunds for lost notes can be claimed, as to discourage it. There is no need to set out here the details of these amendments. It will suffice to say that they increase the risk of remitting by divided notes; and that it is left to the public either to take this risk or to insure against it. For years past great efforts have been required to popularise the Government currency notes, particularly in outlying districts, and nowadays these efforts are being rewarded. It would be a pity to take any step that might tend to detract from this growing popularity of the note issue; and it may be assumed that the Government of India have satisfied themselves that their amended rules will have no such unfortunate effect. But the Chambers of Commerce do not apparently share this view, as the Bengal Chamber has recorded strong protests both before and after the decision to make the amendments was arrived at.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 24.

The Statutory Commission.

Political attention in this country has undoubtedly centred throughout this week in the cabled utterances and writings of Pandit Motilal Nehru, as, to take a piece of writing first, his appeal to the British Labour Party to withdraw the names of Mr. Stephen Walsh and Major Attlee from the Royal Commission. He has been cabled as having expressed the fear that the agitation in India had taken a wrong step, and that nothing could be more harmful to Indian interests than to insist on the inclusion of Indians and stop there; for such a demand could easily be satisfied by the appointment of undesirable Indians, which would only make matters worse. He wished all parties in India would concentrate on framing a constitution to meet the country's needs, and demand that constitution firmly, without caring about a Royal Commission, or other agencies employed by the Government.

That would be, in effect, to have a Royal Commission composed solely of Indian politicians; for, when such as Pandit Motilal Nehru speaks of "all parties in India," one may be allowed to think that he extends no recognition to the European party, or even the Anglo-Indian party. What would be likely to be said in European circles of any proposal to have a Commission composed solely of Indians is very much what "Capital" said last Thursday: "With the proposition that the Commission should have consisted of Indians only one can have no patience, considering the communal crisis through which the country is passing. The example of Australia is held up to the imitation of India, but such imitation presupposes unity of sentiment, which is non-existent here."

That Indian interests have been adequately safeguarded, if that point has not been made clear enough already, will surely be acknowledged, if it is considered how many checks have been placed on Sir John Simon and his colleagues. First, before making its recommendations, it is to consult a Joint Committee of the Council of State and the Legislative Assembly, and also Select Committees of the Provincial Councils. The Report will have to be considered by the Government of India, and the British Government's proposals, in a draft bill, are to be examined by a Joint Committee of both Houses of Parliament, with the assistance of another Joint Committee, this one composed of members of the Indian Central Legislature. One may be confident that the more sober-minded Indian politicians, when they have thought over the whole matter longer, will see that a plan of procedure so hedged about with precaution would not have been in any essential different, had the decision been to have two or three Indians as members of the Royal Commission. Had there been that Indian membership, we might have looked to have to deal with, say, two minority reports. Well, what then? Would that have made so much difference? It would have made none; for those two minority reports, and several others, that is, the substance of them, will have, as things are, to be dealt with by the Joint Parliamentary Committee, not merely with the words in print before them, but face to face with the reporters.

Pandit Motilal Nehru's utterances make one think again of Mr. Baldwin's cry that we might have done with the spinning of phrases. Never shall we, one fears, this side of Doomsday.

The Provincial Finances.

The subject of the allocation of the proceeds of taxes between the Central Government in India and the Provincial Governments must be rather a dry bone to readers in England, unless they realise how vital a matter it is that the Provinces should be given a fair share. Many unflinching upholders of the authority of the Central

Government, and Europeans as much as Indians, are firmly of opinion that under the Meston Award some of the Provinces, and Bengal one of them, did not get a fair share. In consequence of that, important schemes of public education and sanitation, and bridge-building have had to be held up indefinitely. So the annual conference between the financial authorities in New Delhi and the financial representatives of the Provinces—this year's conference is at the moment in progress—is of great local interest. The absence in England of the Finance Member, Sir Basil Blackett, may have robbed this year's conference of a little actuality, but not necessarily; for the length of Sir B. N. Mitra's connexion with the Finance Department of the Government of India may have provided a compensation. Sir B. N. Mitra is guiding the conference in Sir Basil Blackett's absence.

One of the main proposals down for consideration this year is that the revenue from commercial stamps should go in future to the Central Government, the provinces receiving a share of the income tax collections as a compensation. Several of the Finance Ministers have expressed the view that the offered compensation was inadequate. "The conflict of interests being acute," the *Statesman's* New Delhi correspondent telegraphs, "it was agreed that the decision had better be postponed pending the Statutory Commission's inquiry." Many, one may assume, will be the decisions postponed pending that inquiry. Perhaps, however, it is right.

Another proposal—it arose on a recommendation of the Taxation Inquiry Committee—is to impose taxation on tobacco through an excise duty on local manufactures, or by an increase of the import duty on imported tobacco, with a system of licensing of sales of country tobacco. The matter has been referred to a special committee. Its recommendations are awaited with interest.

New Territorial Force Scheme.

One imagines that nowadays not much publicity is given by the English Press to answers given in the House of Commons to questions put about Indian matters; so that it may be reasonable enough that I should sometimes repeat in my letter what Reuter has cabled to us from your side. To those who follow Indian questions most closely the tale will be a three weeks' old one, when it is read here, but to most people, I imagine, it will be as new a tale as any. Reuter wired this week:—"The functions of the Auxiliary and Territorial forces in India were the subject of a question by Mr. Blackett, who suggested that Indians should be allowed to hold commissions in both forces. Earl Winterton said that the Auxiliary force had hitherto been regarded, and would henceforth be maintained, as a second line of defence for internal security, and the Territorial force similarly for the field army. He stated the Government had approved of the recommendation that an attempt should eventually be made to raise cavalry and artillery units of the Territorial force, which would be confined to Indians if the existing infantry units showed sufficient progress." There need be no exception taken to that.

Minor Calcutta Bridges.

On Tuesday, Mr. Stewart-Smith gave the local Rotary Club an interesting account of the dispute regarding what I may call the minor bridges of Calcutta, those, namely, over Tolley's Nullah and the Circular Canal. The trouble is to decide who is to pay for the new bridges that are needed, and nine new ones are, for of the eleven only two, the Kidderpore and the Zeerut, the latter the bridge that carries the main traffic to Alipore, are good enough to leave alone. Nine new bridges all at the same time mean a great deal of money. The Local Government paid for the existing bridges, and it took the line at the beginning of the discussion of to-day that it should not be asked to replace the old bridges with any better bridges, though that attitude has since been modified. It is still held, at least by the other two bodies

concerned, the Corporation and the Improvement Trust, to be throwing too large a share of the cost on to them. One does not see, at least at first sight, an excess of logic in the Government's view. When it paid for the existing bridges, it presumably thought it was right it should. It did not then construct bridges narrower than were needed. Why should it now, when wider bridges are needed? Why should it not now construct the width of bridge now required? It did that formerly. Why should it now not pay the whole bill? It did that formerly. It is no argument that there now is an Improvement Trust, which there formerly was not; for new bridges will not "improve" Calcutta in the sense in which the word is used in that body's title. Its improvement was to be to make Calcutta a healthier place to live in. No one catches disease from a bridge being too narrow for the traffic it has now to carry.

Bengal Provincial Congress Committee.

No one has ever long to wait before Fate turns the tables on Indian politicians. We were listening the other day to Mr. Bipin Chandra Pal protesting against a certain insult, as he saw it, to India's political intelligence, or if it was not he, it was another. The insult was the British Government's appointment of the Royal Commission, of course. Apparently, insults to political intelligence can come from the very opposite quarter. An old Congressman has thus delivered himself to an "Englishman's" representative, on the subject of the new Bengal Provincial Congress Committee: "that a body thus constituted can have any influence on the political life of the country (change a few words, and that might be Mr. Bipin Chandra Pal speaking of the Statutory Commission) is impossible. No doubt Mr. Subhas Chandra Bose has a reputation, and for some time to come will be able to trade on that reputation. But he is being pitchforked into the responsible and dignified position of President. He appears to be a young man in too much of a hurry, and, in any case, whatever the public attitude towards him may be, Bengal will be in no mood to tolerate the political dominance of such comparatively inexperienced politicians as Mr. Satyendra Chandra Mitra and Mr. Kiran Shankar Ray. It is only their accidental connexion with the non-co-operation movement which brought these new Congress office-bearers into the limelight; but to think that they are fit to act as leaders in public life is an insult to the political intelligence of Bengal." Change a few words, and there again it might be Mr. Bipin Chandra Pal expressing his views of the Simon Commission. The truth is that phrases like "insult to the political intelligence" get into those men's tongues, to put it so. Once the tongues have got the phrases into them, they use them on the slightest provocation. They are soon not phrases that have meanings, to which sensible men may be asked to listen. They are sounds that people have got the habit of liking to hear. India is phrase-ridden.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, November 25.

The Town Hall Meeting.

One of the most interesting, though scarcely the most important, events in a very busy week was the much-heralded meeting of protest at the Town Hall on Saturday. "The immediate effect of appointing a Parliamentary Commission recruited exclusively from the British Parliament, to determine the 'next step' in Indian constitutional reform," writes the veteran author of "A Ditcher's Diary," who is a caustic but not unfriendly critic of present-day Indian politics, "has been to drive nearly every important political organisation and personality in India into one camp. Moderates, Liberals, Responsivists, and Swarajists—with negligible exceptions—are now enrolled under one flag, and, at the moment of writing, there is no sign of a break in the ranks." But as sug-

gested last week the unanimity at least so far as Bombay, and, more particularly the Punjab, are concerned, is more apparent than real. There were in the columns of Bombay newspapers on the morning of the Town Hall gathering reports of a Bombay meeting which on the preceding night expressly declared against boycott. The *Indian Daily Mail* admits that "there are certainly a few—very few—men who have acquiesced in the proposed Commission," and while the paper contends that "their acquiescence cannot be set against the tremendous volume of active disapproval which has been expressed by leading men in all parts of the country" it reiterates the advisability of postponing the taking of irrevocable decisions until full particulars of the Government plan are known. Incidentally the same paper shows itself at complete variance with the views of the signatories to the manifestoes to which I referred last week when it proceeds:—"The reasons for which the Commission is to be boycotted also should be made unmistakably clear. For ourselves, we have again and again stated that the exclusion of Indians from the Commission is a fundamental defect which can be cured only by the inclusion of Indians in it."

The Voice of Reason.

Although the majority of the Muhammadans in Western India are obviously awaiting a lead from the Aga Khan, who is expected back in India in a fortnight's time, Muslim sentiment in other parts of the country has been more vocal. Nor can the testimony of a man like Sir Sankaran Nair be dismissed as that of "a mere sycophantic nonentity." In a reasoned statement on the proposals he has paid a remarkable tribute to the weight given by the Parliamentary Joint Committee to his own advice as a Member of the Viceroy's Executive Council during the shaping of the existing constitution and declared his conviction that whatever room for present criticism there might be, "any defect in the machinery of the Commission can be remedied in view of the fact that a Parliamentary Committee is to be appointed subsequently to examine the reports of the Commission and of the Government of India." Against their unsolicited testimony, based upon personal experience, extending over a long period of public service, may be set the object and purpose of the Town Hall meeting, as defined by Sir Dinshaw Petit, who presided, and echoed by practically every subsequent speaker. "We consider it to be derogatory to our sense of respect," said the well-known Parsee millowner, "that we should not have any people of our country on the Commission that is going to decide our own and our country's destiny." Or take Sir Chimanlal Setalvad's contention that "the implication of the action of Government is that there are no Indians available of sufficient ability and impartiality to sit upon the Commission."

A Vain Appeal.

Meanwhile the significance of the *Indian Daily Mail's* suggestion that the reasons for the boycott "should be made unmistakeably clear," is daily becoming more apparent. I have referred before to the entire absence of constructive criticism from the welter of abuse and outpourings with which the Government proposals have been assailed. The reason is not far to seek. The Liberals are dissatisfied with the Commission because Indians are not included in its personnel. The Responsive Co-operationists are not satisfied with the opportunities provided for the co-operation of Indians in the several stages of the work, and would like to see them increased. The Swarajists want not a Royal Commission at all, but a Round Table Conference dominated by that exclusively Hindu preserve, the All-India Congress. And now Pandit Motilal Nehru, if correctly reported in a cable message from London, wishes the Government of India Act to be treated as null and void, and a declaration from the British Parliament conceding the demand for full self-government and instructing the Statutory Commission to prepare a workable scheme for that purpose. "If it was the object of the Pandit to embarrass all parties in India," the *Indian Daily Mail* pertinently remarks, "he has most effectively carried it out by his eleventh hour intervention."

THE VICEROY IN KATHIAWAR.

(From a Correspondent.)

The Viceroy must have found much novelty of interest in his recent visit to Cutch and Kathiawar. The former State, at least, must have presented a vivid contrast to the pullulant aspirations of Karachi, and to the methods of modern science employed in the execution of the irrigation works of the Lower Punjab and Upper Sind. Cutch in past days was the fortunate possessor of sea ports which produced a hardy race of mariners who traversed all the Eastern seas, and was the home of an enterprising mercantile class and of workmen famous throughout the East for their skill in the silversmith's art.

The speech of His Highness the Maharao in welcoming the Viceroy drew a melancholy picture of decay and deterioration. The harbours have silted, land has gone out of cultivation, the merchants have sought more profitable and more secure homes in Bombay and Karachi, the trade in silverwork has languished, shipping has gone to more modern ports. While, however, we may admit that Nature has not been of recent years kind to the State, since the few freshwater streams have been, like the harbours, choked up, and years of scanty rainfall have been painfully frequent, it is obvious that we must look elsewhere for the real reason for the lamentable decline of prosperity.

His Highness the Maharao is one of the most charming and polished of the Indian Chiefs of the older sort: but his long administration has been rigidly conservative, if not retrogressive. It may be a blessing that no newspapers are allowed to be published in Cutch: but any form of school, at least established by the State, is, we believe, equally non-existent, and His Highness has steadfastly set his face against the construction of railways in his State. He even carried his objection to the extent of successful protest against the Bombay-Karachi Railway traversing a portion of his State, though this would afford the most direct line for the railway. His Highness prefers that trade and travellers should reach his State by water only. But the Customs duties are vexatious, and there is little inducement to the Cutchi merchants, who form so important a part of the commercial life of Bombay and Karachi, to return even for an occasional visit to their homeland. Finally, alone of the States of India, Cutch has insisted on maintaining its own currency of the silver kori. This is subject to the most violent fluctuations and is at the mercy of the speculator, which alone must be a serious drawback to external commerce. While, moreover, the ports of Kathiawar, immediately to the south of Cutch, have recently been developed with an energy and success that has proved embarrassing to the Government of India, nothing has been done to keep the port of Cutch Mandvi, with a far greater tradition behind it, up to modern requirements. It may be hoped that the visit of Lord Irwin, the only Viceroy, with the notable exception of Lord Curzon, to see local conditions, may inaugurate those measures of progress and reform which are necessary if Cutch is not to fall yet further behind.

When he reached Kathiawar, the Viceroy entered a

land not merely of historical interest, but of striking modern developments. The peninsula is in the Hindu mind indissolubly connected with the youth, manhood, and early death of Shri Krishna. The hoary antiquity of the shrines of Dwarka and of Prabhas or Somnath is only equalled by their undiminished sanctity. No less famous are the Jain temples at Palitana and Girnar. The most western portion of the Indian sub-continent, every wave of invasion, Aryan, Scythian, Afghan or Moghul, seems to have aimed its final effort at Kathiawar. It has been the last refuge of many of the Rajput clans, driven down to it by the pressure of Muhammadan invaders. It has always been a warring welter of small States, too disunited to withstand any powerful outside foe. Although far the greater part both of chiefs and subjects are Hindus, they found their cruellest master in the Marathas from the Deccan. The intervention of the British Government little more than a century ago was only just in time to save the remaining Chiefs from entire ruin under the purely destructive Marathas' régime. Since the British Government assumed the paramountcy there has been, on the whole, steady progress and prosperity. Further improvement of communications is only necessary to accelerate this progress. At present the railway system is split up between the jurisdiction and management of a number of small states, with results that are inevitably chaotic.

There are two questions of especial importance to Kathiawar at the present time. The first is the position to be allotted to Indian States in the ever-changing framework of the Indian Constitution. The whole peninsula, with the exception of one or two minute British Civil Stations, is composed of Indian States. None of these, if Baroda, whose holding in Kathiawar only constitutes an outlying province of that State, be excepted, are very large. Many are very small, comprising in some cases only a part share in a few poor villages. All, again the exception of Baroda, are subject to the paramount control of the British Government to an extent not generally found elsewhere. The powers of the chiefs vary from practically complete local independence to the entire control in judicial and fiscal matters of the Political Agent. For just a century the States remained very happily under the care of the Bombay Government. Then the feeling that some inferiority was involved in subordination to a Provincial Government instead of the Supreme Government itself led to a movement for transfer to the latter. This was doubtless strengthened by a better-grounded apprehension as to the extent to which the Provincial Government would pass under the control of local politicians, whose methods and aims were in many cases extremely distasteful to the Chiefs. The transfer, doubtless inevitable though in some respects to be regretted, has taken place. It remains to be seen how this conglomeration of small, in some cases tiny, States can be incorporated or enmeshed in the new system to be devised for the Indian States in general.

The second, and perhaps most pressing, question is that of the ports. Formerly, there was a Customs line strictly dividing Kathiawar from British territory proper. It is true that it was intended mainly to prevent the

smuggling of illicit salt and liquor : but it served also for the collection of Customs duties. The line was a serious embarrassment to the population of Kathiawar, and the Government of India generously abolished it, with, however, a clear intimation of the power of reimposition, should this prove necessary. At that time there was little question of the importation of foreign goods through Kathiawar. The difficulties of access and the lowness of the rates of duty levied in British India rendered such importation unlikely on any large scale. When, however, the Customs duties in British India were raised to their present high figure, it was obviously worth while to improve the ports and to lay fresh railways to them. It is true that the States had agreed to levy the same duties as were collected at British ports, but collection and appraisalment were alike slack and indulgent : and in any case the States admittedly made large concessions in the way of remission of charges. The result was that trade was so largely diverted from Bombay and Karachi to certain Kathiawar ports that the Government of India have had to reimpose the Customs line.

This is naturally the subject of complaint by the Kathiawar States concerned. But it is not apparent why these States should enjoy the whole market of India, when they have not to bear the burden of the protection of that market by sea or land. The surplus revenue thus remaining with the States can be used to give preference to the Port Administrations, which the Port Trusts of Bombay and Karachi, who have to bear all their own charges, are unable to obtain. It may be hoped that the Government of India will remember that their first duty is firstly to the taxpayers of India, and secondly to the great ports in British territory, which have unaided provided enormously expensive facilities for the overseas trade.

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

As usual questions on Indian affairs figured prominently in the order paper on Monday, though there were indications in several directions that the Speaker's recent warning, to which I referred last week, had been taken to heart. In reply to Mr. Pethick-Lawrence, Lord Winterton said that the Government of India hoped to be in a position to announce its decision on the Sandhurst Committee's report at the ensuing (Delhi) session of the Legislative Assembly. It will be recalled that the Government of India, in a foreword to the Report, emphasised the fact "that neither they nor His Majesty's Government have yet formed their conclusions on it and that those conclusions must necessarily take account of certain factors of which it was not within the province of the Committee to undertake a complete survey." Some Indian politicians and publicists, whose views have even found an echo in the House of Commons, seem to have made up their minds to regard the Committee's recommendations respecting the recruitment and training of officers holding the King's Commission as tantamount to judicial decisions binding the Government of India, and the India Office and the War Office as well. But, as was pointed out in THE NEAR EAST AND INDIA at the time, many of the problems involved are "essentially an Imperial concern and cannot be considered from a purely Indian standpoint, if only because so long as India remains a member of the British Commonwealth of Nations any local failure to solve them will react adversely on the general interest." During the debate on Dr. Moonji's resolution at the last session of the Assembly the Commander-in-Chief explained that the Government of India's provisional views had been communicated to the Cabinet, but as they had not been reached until shortly before Parliament rose, His Majesty's Government had not been able to formulate a considered judgment on them.

Pressed by another Labour member for information

respecting the ill-fated "Unity Conferences," the Under-Secretary of State confessed that he had no news other than that available to readers of the Indian Press, "from which I gather," Lord Winterton observed, "that it is unfortunately somewhat premature to suppose that any generally accepted accommodation has been arrived at." Those to whom such statistics appeal will no doubt learn with interest that the approximate number of members of the Anglican Church in India, according to the 1921 census, is 533,180, of whom 108,759 belong to European and Allied races. The total, incidentally, represents a percentage of decimal 17 on the total population of India, including the Indian States and should not, of course, be confused with the number of Christians in the country, which is variously estimated at between 3,000,000 and 4,000,000.

On the motion for adjournment on Tuesday Mr. Saklatvala raised the question of the cancellation of his passport to India in a lengthy speech of nearly half an hour's duration, which only left Lord Winterton twelve minutes in which to reply. But as the Communist member for Battersea's remarks were merely in the nature of a rejoinder—and be it said an exceedingly ineffective one—to the Under-Secretary of State's earlier explanation, Lord Winterton had no difficulty in disposing adequately and effectually with the hon. member's complaint, both from the personal aspect and as regards the alleged question of principle involved. The Under-Secretary reiterated that the Secretary of State had accepted the recommendation of the Government of India that in view of the speeches made by the hon. member, and the action which he subsequently took, it was undesirable that he should be given a *visa* for his passport to India. Lord Winterton added that Lord Birkenhead had asked him to explain to the House that he accepted full responsibility for passing the recommendation on to the Secretary of State for Foreign Affairs, and the incident really calls for no further comment.

NEWS IN BRIEF.

The Secretary of State for India has appointed Mr. D. T. Monteath to be his principal private secretary, vice Mr. R. H. A. Carter, who has been appointed to the staff of the Indian Statutory Commission.

The Parliamentary Under-Secretary of State for India has appointed Mr. E. P. Donaldson to be his private secretary, vice Mr. W. D. Tomkins, promoted.

It is announced from the India Office that the King has approved the appointment of Mr. Arthur Edward Nelson, C.I.E., O.B.E., I.C.S., to be a member of the Executive Council of the Governor of the Central Provinces in succession to Mr. John Thomas Marten, C.S.I., I.C.S., who is about to resign.

The statement by the Viceroy of India on the Indian Statutory Commission, published in THE NEAR EAST AND INDIA of November 17, has been issued as a White Paper by H.M. Stationery Office (Cmd. 2986, price 2d.).

Lieutenant-General Sir W. C. G. Heneker, K.C.B., K.C.M.G., D.S.O., has been appointed General Officer Commanding-in-Chief, Southern Command, India, in succession to Lieutenant-General Sir H. B. Walker, K.C.B., K.C.M.G., D.S.O., with effect from March 1, 1928.

WILLS.

The Right Hon. Lord George Francis Hamilton, P.C., G.C.S.I., D.C.L., LL.D., of Montagu Street, W., Captain of Deal Castle, 1899-1923, First Lord of the Admiralty, 1885-1886 and 1886-1892, and Secretary of State for India, 1895-1903, late deputy-chairman of the Phoenix Assurance Company, Limited, and of the Central London Railway Company, Limited, a director of the Metropolitan District Railway Company, and other companies, who died on September 22, aged 81, third son of the first Duke of Abercorn, left unsettled property of the gross value of £53,568, with net personalty £52,670. Among other bequests he left to his sons, Ronald and Anthony, as executors, his correspondence with Lord Elgin and Lord Curzon when they were Viceroys of India, and while he was Secretary of State for India, asking that none of it should be published without written consent of the other correspondent or his executors if deceased.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

The Trade Revival.

In view of the trade figures for November it is impossible any longer to question the revival of trade. The exports for that month are well in advance of those for the previous month and also of those for November, 1925, and the fact that the increase is particularly marked in the heavy manufactures is a specially encouraging feature. In recent months the volume of orders placed in this country for rails, wagons, and other manufactures has been of a most encouraging nature, and the fact that orders are continuing to come to this country on a substantial scale suggests that the outlook for the iron and steel industries, at any rate, is most promising. One would like to think that the trade revival was general in its incidence, but unfortunately so far it is not, and some of the basic industries of this country are still experiencing a marked depression. It is not a small thing, however, that the wheels of trade have begun to revolve again in a number of directions, and it may be hoped that, if conditions remain favourable, the expansion of trade will spread and benefit industries which so far have not felt the revival.

Next Year's Fair.

That the trade revival now in evidence is expected to be something more than a mere flash in the pan is very clear from the demand for space which has been forthcoming for next year's British Industries Fair both at the White City and at Birmingham. The Fair this time will be easily the largest on record, a fact which speaks volumes as to the confidence felt in the immediate trade outlook, while it also shows plainly that our business men realise to the full that the Fair presents a unique opportunity for the development of trade. For the first time the Fair will be held in conditions which are really promising, and it is not too much to expect that it will result in a most timely fillip to our export trade.

The Greek Loan.

Following a settlement with France over the question of war material which had stood in the way of the loan which is to be issued under the auspices of the League of Nations, negotiations are now in progress in the City, and as there is no reason to anticipate any difficulty arising in connexion with the terms, the issue may be expected very shortly. It will not, it appears, be a question now, however, of an issue of £9,000,000, for the news is forthcoming that in connexion with the settlement of the Greek debt to America the United States is to grant Greece a loan of about £2,500,000 at a rate of 4 per cent. The terms of this loan, it need scarcely be emphasised, are much lower than those on which Greece will be able to raise the Reconstruction Loan, but then America is so overburdened with the money of the rest of the world that she is in a position to be generous to borrowers; indeed, there would be much truth in the cynical view that Greece by accepting this loan is doing America a real service.

The National Bank of Bulgaria.

The other important Balkan loan on the tapis is that for Bulgaria, and that, as I pointed out recently, is held up for the time being for the reason that the Bulgarian Government is unwilling to make the National Bank of Bulgaria an independent concern. The question of the position of the National Bank first came up some eighteen months ago when the Financial Committee of the League of Nations suggested a number of reforms in the statutes of the institution, but it was not then suggested that it should become an independent institution. Insistence now on this departure is only capable of the interpretation that the reforms in question have, in the Committee's view, failed to attain the end desired. It is a very significant fact that the advances that the bank has made directly or indirectly to the Government constitute an important part of the total assets of the institution. An independent bank would mean the existence of a check on Governmental finance, which does not at present exist in Bulgaria. It cannot but be realised that so long as the bank occupies its present relation to the State a Government has less reason to resist the calls for further expenditure that are inevitable in a modern State than if the bank is a private concern.

Bulgaria's Need for a Loan.

It may be hoped that the matter in dispute will be capable of speedy adjustment, for there is no doubt that Bulgaria's need for a loan is urgent, and that a delay in its issue may have adverse consequences. The weakness of Bulgaria's position lies in the fact that at present she is practically entirely dependent on agriculture, though, as pointed out in the Monthly Review of the International Bank, extracts from which will be found elsewhere in this issue, she is not devoid of other resources, but she has not yet been able to utilise them because of her lack of capital. In normal conditions Bulgaria would be able to rely on her agriculture, but as a result of the War she is faced with heavy Reparations payments, and the fact that her export commodities are so limited in character, being mainly tobacco and cereals, which together total some

86 per cent. of the total trade, makes her position difficult in the extreme.

The Cotton Position.

The position with regard to cotton continues to be uncertain. The latest American report shows a crop yield of 12,789,000, which was larger than was expected, and though this total is far below the 1926 yield it is anticipated that it will provide ample supplies for all requirements and leave an adequate carry-over. If the demand for cotton goods were on a normal scale it would certainly not be sufficient, but the cotton trade is one which has yet to benefit from the trade revival, and with cotton prices at a relatively high level there is little immediate prospect of the development of the desired demand in many markets. The difficulty, of course, is that so many markets are still suffering from the effects of the War, and the inhabitants are not yet in a position to absorb anything like the normal quantities of goods. This is especially the case in some of the Near Eastern outlets which provided Lancashire with such important markets in pre-War days.

The Rubber Outlook.

Those who expected a steadily increasing reduction of the London stocks of rubber have been doomed to disappointment, for this week, instead of a substantial decrease as in the two previous weeks, there was a slight increase of 142 tons. This result was not anticipated by the market, which had looked for a decrease of anything up to 500 tons, and the consequence was to be seen yesterday in a dull market. This setback is, however, obviously only a temporary phase, and if the London stocks still loom large it may be taken for granted that, partly because of the increased demand both for America and the Continent and partly because of the tightening up of the restriction regulations, the commodity market has definitely entered upon the period of declining stocks. It is anticipated that the reduction in the London stocks in a period of six months from the middle of November will total 30,000 tons, and it may well be considerably more if buyers come forward as they have done in two out of the last three weeks. Assuming that 30,000 tons is approximately the reduction, that would leave a balance of about 40,000 tons at a time when buying is not at its maximum, and on the face of it those figures would hardly suggest high prices for the commodity in the immediate future. But things do not always work out like that, and a steady reduction in

the stocks is likely to have an effect on prices quite out of proportion to the actual decline, and it has to be remembered that it is very possible that the demand will increase to an extent that is at present unexpected.

COMMENTATOR.

NOTES FROM YUGOSLAVIA.

(From Our Own Correspondent.)

Belgrade, December 8.

The Commercialisation of the Railways.

All this week a conference of transport experts and economists, with the present and two ex-Ministers of Transport, have been discussing in Belgrade the way in which the State Railways can be worked on a purely commercial basis and their net yield increased. Despite the fact that since the War the whole railway system of the country has been renewed and greatly extended almost entirely out of income, with the very minimum of foreign loans, the railways have shown a fair rate of profit, yet many of the experts profess themselves dissatisfied and advocate the handing over of the financial administration of the railways to private commercial companies. The Parliamentary Opposition is watching the results of this conference with considerable misgiving, and is trying to influence the new Minister of Finance to intervene so as to ensure that no definite step in this direction shall be made until Parliament has been consulted and the whole question of the theory and practice of railway administration discussed.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, December 22). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Birkenhead, December 22).

Bibby Line.—S.s. Shropshire for Port Said, Colombo, and Rangoon (Birkenhead, December 28).

British India Line.—S.s. Manora for Bombay and Karachi (London, December 31); s.s. Warfield for Colombo, Madras, and Calcutta (London, December 31).

Cunard Line.—S.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool January 7, Swansea January 10); s.s. Cypria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, January 14).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 17); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 21).

P. and O. Line.—S.s. Ranchi for Bombay (London, December 23); s.s. Nankin for Colombo, Madras, and Calcutta (London, January 7).

Ellerman and Papayanni Lines.—S.s. City of Oxford for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, December 22); s.s. Lesbian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, December 24); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool December 24, Swansea December 30); A steamer for Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, December 30); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 2); s.s. Mardinian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 7). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

Carrying First and Third Class passengers.					

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 13.

Fairly cheerful conditions have again characterised the stock markets this week, but activity has been mainly confined to one or two sections. Gilt-edged stocks have secured a considerable amount of attention and the view is being put forward that the future trend of yields on this class of security must be in a downward direction if the problem of the conversion of the Five per cent. War Loan, of which over £2,000 millions is outstanding, is to be successfully tackled. In certain circles it is contended that the method most likely to be adopted is by a reduction of income tax which would raise the net yield obtainable and cause a further rise in prices; this would open the door for conversion on a 4½ per cent. basis. Predictions of this kind should of course, be taken with all due caution, but while the problem of the conversion of Five per cent. War Loan is not one of pressing urgency it is one which the Treasury has to take into account when considering the question of maturing debt. Incidentally the Chancellor of the Exchequer will have to exercise his well-known ingenuity to the full if he is to succeed in reducing income tax and at the same time is to balance his budget for 1928-29.

Among the outstanding features of the industrial section has been the sharp rise in Triplex Glass shares, on the further contracts with motor car manufacturers. Other industrials have been fairly steady though less active.

Bucket Shop Activity.

A spell of liveliness in the stock markets is inevitably followed by an outburst of bucket-shop activity. History is once more repeating itself, for the recent buoyancy of Stock Exchange prices is being followed by the broad-casting of bucket-shop circulars. These circulars specially aim at interesting the capitalist of limited purse who has no large experience of financial matters; and they are admirably designed to serve this end. There is nothing that the bucket-shop does not know concerning the psychology of those of modest means. It is, therefore, very necessary to warn all who receive these circulars that there is only one thing to be done with them; they should be

thrown into the waste paper basket immediately they are received. At first sight the bucket-shop's offer may appear reasonable enough. But in actual practice it is otherwise. The primary object of the bucket-ship is to obtain money from the investor; and having succeeded it exercises all its ingenuity to retain the money. The dice is, in fact, very heavily loaded against the investor. It is true that there are some honest brokers who are not members of a recognised Stock Exchange, but the investor cannot separate the sheep from the goats. In short, he should leave all bucket-shops severely alone, and deal only through members of recognised Stock Exchanges—who, be it remembered, are not allowed to advertise by circular or any other method.

The Nitrate Outlook.

A few weeks ago there was considerable interest in the shares of Chilean nitrate producing companies; but recently the market in these securities has been largely neglected. Indeed, the great majority of the shares are standing below the highest levels touched this year. Nor is the speech of Mr. H. W. Morrison, at the meeting of the Santa Catalina Nitrate Company, held this week, likely to encourage a revival of interest. He contends that the recent buying of Chilean nitrate, on which the activity in the nitrate companies' shares was based, is to some extent of an artificial character and is not likely to be maintained. He refers particularly to the American buying. This, in his opinion, was due to the desire for quick results which could be satisfied owing to the high prices recently ruling for cotton. With the absence of the need for quick results combined with lower quotations for cotton he expects a curtailment of American demand. Like many other producers, Mr. Morrison believes that, to use his own words, "the sovereign remedy" to restore the industry's fortunes is a reduction in the export tax. There has undoubtedly been an improvement in the position of a number of the stronger companies as compared with a year ago, but the investor who wishes to taken an interest in this market should proceed most warily. The ultimate fate of the weaker companies remains to be seen, but it is possible that the announcement made this week regarding the Santa Catalina Company—namely, that it will be taken over by the Angela Company, one of the stronger undertakings—may not be without significance.

A Mixed List of Industrials.

From time to time we have dealt with companies engaged in the leading industries, such as iron and steel, shipbuilding and so forth. There are a number of companies, however, which do not readily fall into a broad classification of this kind, but which none the less deserve the investor's attention. To-day we proposed to discuss several of these companies. The Birmingham Railway Carriage and Wagon Company, whose title is sufficiently descriptive of the character of its business, has had a very prosperous career. At present the ordinary shares give a return of £6 3s. per cent. and are a fair industrial investment. Burt, Boulton and Haywood are interested in the timber trade and in recent years have distributed an ordinary dividend of 10 per cent. At the current price the ordinary shares, yielding £7 5s. per cent. offer attractions in view of the company's strong financial position. The building trade is looking forward to a period of considerable activity for some years to come. In particular many business houses are modernising and rebuilding. This activity should benefit the manufacturers of lifts, so that the ordinary shares of Waygood-Otis, returning £6 13s. per cent., are not without interest for those seeking an investment with a speculative seasoning.

The production of the Anglo-Egyptian Oilfields for the week ended December 9 was 4,202 tons.

Mr. H. T. Hines, who has been marine underwriter to the Royal Exchange Assurance since 1907, has asked to be relieved of his duties at the end of the year. The directors have accepted his resignation with regret, and have appointed him a local director of the Southampton branch of the corporation.

THE TURKISH MARKET FOR LEATHER.

Forty per cent. of the sole leather and about 95 per cent. of the upper leather consumed in Turkey is imported, it is estimated (says an article in the United States "Commerce Reports"). However, efforts are being made to increase and improve the local production, in order to reduce imports to a minimum, and receipts of sole leather, especially, have been declining during recent years. Competition is very keen, and France, the United States, and Germany supply the largest part of the leather imported into Turkey.

The production of leather in Turkey is comparatively small and it is necessary to import considerable quantities. European producers supply the larger portion of this trade, but American tanners have been making larger sales during the past few years. Germany and France offer the greatest competition to American leathers, and can usually make prompter deliveries and quote lower prices. Moreover, they have been operating in the Turkish market for a longer period than have the American producers. Most of the American upper leather sales to Turkey are of calf uppers and this leather has met with great favour on the Turkish market, sales having increased steadily during the past three years.

The entire amount of patent leather consumed in Turkey is imported, the annual consumption being estimated at slightly less than 1,000,000 sq. ft. of which American tanners supply about 90 per cent. European tanners have found it very difficult to compete with American patents, owing to the reasonable price for which quality patents are offered. Only small importations come from France and Germany. American patent side upper leather in the medium weights is especially popular in Turkey. German producers, it is reported, are again attempting to increase their sales of patents to Turkey by offering lower prices and long-time credits.

Production of sole leather in Turkey during recent years, has increased decidedly, from an estimated quantity of 7,500,000 lb. in 1925 to a probable amount of 9,500,000 lb. during 1927. Imports in the past have averaged slightly less than 2,500,000 lb. annually, but are expected to amount to less than 1,500,000 lb. in 1927. France is said to furnish more than 50 per cent. of the sole leather imported, and 30 per cent. comes from Belgium. Italian tanners, who formerly supplied considerable quantities, lost ground steadily in the early part of 1927. The only type of American sole leather sold on the Turkish market in any large quantities is offal.

An order has been received by Ransomes and Rapier, Ipswich, for four roller-type sluice gates for India.

Contracts have been placed with Light Railways, Ltd., London, for five broad-gauge tank waggons for the Bombay, Baroda, and Central India Railway and five metre-gauge petrol tank waggons for the Madras and Southern Mahratta Railway.

CHESS.

By "CARO-KANN."

With the annual match between the past members of Oxford and Cambridge Universities, which takes place on December 17 at the City of London Chess Club, the London season will practically come to an end until the first week in January. This match has come to be regarded as one of the most delightful encounters of the chess year. The excitement, combined with the lack of experience, which marks the University match and leads to the usual crop of blunders, is lacking, but the keenness is there, and ever since its establishment just after the War the match has been strenuously contested, and in view of the names of those who have taken part in it it is superfluous to add that it has been productive of much excellent chess. With the exception of the first year,

White to play. What result?

when Oxford won, Cambridge has been successful on every occasion. This time the issue is doubtful, but I am not so certain, after looking at the Cambridge team, as to give a decided opinion that Oxford will gain their second victory. I think, however, that it will be a very close thing, with not more than a point dividing the teams at the call of time.

By way of a change this week I give another end game.

An Excise duty has been imposed on matches manufactured and sold in Cyprus.

The production of the Attock Oil Company for November was 36,607 barrels.

The production of the Dacia Romano Petroleum Syndicate for November was 4,161 tons.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Company for November amounted to 45,338 barrels.

For the first eight months of this year the trade of the Sudan amounted to £8,631,903 as compared with £8,416,542 for the corresponding period of 1926. The value of the imports was £3,857,273 as against £3,695,944, while that of the exports was £4,513,641 as compared with £4,394,915.

The production of Hamilton's Concessions (Roumania) for the week ended December 2 was 900 tons (6,300 barrels). Decrease in production due to sand plug in well No. 12, which is now being cleaned. New well No. 14 continuing preparations for bringing into production. Now well No. 13 cased to 867 metres.

The Board of Directors of the Burma Railways Company has received notice from the Secretary of State for India that the contract with the Burma Railways Company will be terminated on December 31, 1928. The management of the Burma Railways will be taken over by the State with effect from January 1, 1929.

Motors and Motoring.

By G. B. B.

Magneto Ignition.

A position has now arisen, which has long been foretold—in fact, I prophesied its advent in these columns over four years ago—which is likely to have an important effect on a certain branch of British industry: that is, on magneto manufacture. We have progressed considerably since those days when the coming of the magneto caused us, unthinkingly, to throw all our coil ignition sets on the scrapheap. But battery ignition is now being recognised as a coming thing and many makers are now taking it up who a few years ago would have laughed it to scorn.

Something must also be said about automatic ignition timing, and although this refinement has been slow in developing, it is noteworthy that on a number of the higher-grade cars it has been adopted, and it may be safely assumed that it has only been fitted because it does help, definitely, in obtaining better efficiency under all running conditions than can be obtained by the ordinary manual control. Naturally, it adds to the cost of the magneto, and, as the *Motor* says, it involves some mechanical complication, but these are factors which, nevertheless, are not of serious moment when it is desirable to obtain the most efficient results in the matters of power and fuel consumption.

Owing to the greatly extended speed range of the modern engine and the much improved results from standard types of carburetter in conforming to the greater range of engine speed, the precise timing of the spark for any point in the speed range has assumed a greater importance than hitherto. During engine tests the automatic timing device can be adjusted with precision so as to contribute materially to the maximum power output. In driving it obviates an all-too-common cause of loss of efficiency, viz., keeping the spark advanced too far when hill climbing.

Many owners do not use the ordinary hand spark control at all beyond retarding at starting and then advancing, but much more use than that should be made of the device. Others retard a little on hills or immediately any tendency to knock becomes apparent. For practical purposes this plan works well enough on mass-produced engines. It is, however, often remarked that ignition timing variation produces no noticeable result with that class of engine, but the effect is there, nevertheless, although it is nothing like so marked as it is in the highest grade engines. With automatic timing the driver need not concern himself as to whether he has got the timing point correct for any given conditions. These automatic timing devices are now quite reliable pieces of mechanism and they are totally enclosed and self-lubricating. The controlling principle by which they are governed is, of course, centrifugal force, a force which has been used for generations to control the speed of steam-engines and for actuating speedometers.

There is a rapid and, to the juvenile mind, a regrettably rapid depreciation in the value of some motor cycles, and one which has only been a few miles will, in the second-hand market, fetch merely a fraction of its original price. One of the contributing causes, according to *Motor Cycling*, is that they so quickly become shabby, but I

fancy there is a less obvious but more real reason than that. However, it is perfectly true that many a new machine, after it has been on the road only a month or two, shows traces of rust not only on minor fittings and accessories, but upon the handlebars, gear gate, and so on. If those parts could be plated with a material such as chromium, which is immune from corrosion and which maintains its lustre with a bare minimum of polishing, machines would keep very much smarter, their value would probably fall at a reduced rate, and the rider's initial pride of ownership would be continued for an almost indefinite period. It is impossible to retain the same measure of enthusiasm concerning a drab machine as one which still retains the spick and span finish and polish of the manufacturer.

The traffic receipts of the South Indian Railway Company for the week ended November 12 amounted to Rs.11,10,046, making the total from April 1 Rs.3,79,32,786.

The report of the Ionian Bank for the year ended August 31, 1927, shows profits of £61,079, plus £15,252 brought forward. An interim dividend at 3s. per share has been paid and a final dividend is proposed at 3s. per share, also a bonus at 2s. per share, all free of tax, £15,000 being placed to reserve and £13,331 carried forward.

The Yugoslav *Official Gazette* states that only 10,977 million dinars, out of an estimated revenue for 1926-27 of 12,504 million dinars, were realised. The falling off of revenues continued through 1926-27, and the downward movement has not yet stopped, and therefore the present revenues of the Serb-Croat-Slovene Government should not be estimated at more than 10,000 million dinars; while it is not impossible that they will eventually fall below that figure. The expenditure of the Government during 1926-27 was 10,645 million dinars, or 332 millions less than the revenue.

The Bicycle for the hardest wear

Near East Markets

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains the following quarterly reports:—

Egypt.

In spite of a lack of demand and a certain weakening in America, the cotton market has been well sustained. Spot Sakel cotton has been neglected, except for the completion of old orders, and new business has been completely lacking. Notwithstanding the increase in stocks Sakel futures were maintained until the middle of the month, when some hedge selling caused a certain amount of weakness, but there was no serious break in quotations and, at the moment of writing, there is a slight recovery. Uppers cotton, which up to the present has been in great favour, shows signs of neglect, but as the crop does not seem to be as large as at first estimated, it is thought that the weakness is not likely to go far. Low cottons of all kinds have been in favour.

The cottonseed market has shown great activity, both in Spot and Futures, and prices have benefited accordingly. The rise in Futures amounts to 14 piastres per Ardeb and the premium for Spot has improved by two piastres per Ardeb. There are signs of a shortage of good seed and the tendency of prices is upwards.

The market for cotton goods has continued brisk throughout the month, but prices show a weakening tendency in sympathy with the raw material. Gunnies, under the influence of Calcutta, have been rather weak and hesitant, and prices have declined slightly, but there has been no great selling pressure. Flour has been weak, partly in sympathy with world markets and partly on account of large local stocks, which are temporarily providing for domestic requirements. Sugar has shown some improvement, owing to a good export demand, but prices are little changed. The markets for rice and coffee have been steady, with a slightly advancing tendency.

The Sudan.

The salient feature during the month has been the confirmation of an abundant durra crop, and if any further proof were needed, the fact that the Government have already sold out 200 tons of Jowari seed, which it was holding for its employees, native troops, etc., would be sufficient. Cotton cultivation is making good progress and it is expected that the ginning of rain-grown cotton will begin at Atbara towards the beginning of December. In spite of the estimated disbursement of about £1,000,000 to the tenants of the Sudan Plantations Syndicate as their share of the profits in last season's cotton crop, the money has not gone into circulation, and it is assumed that most of it is being hoarded.

Palestine.

During the past month, commercial activity has been satisfactory, owing to the winter selling season; wholesalers report the existence of adequate stocks. The

market in building materials has shown improvement and it is anticipated that the impending harbour works may revive the demand to a large extent. Owing to normal crops of cereals this year, large exports have been made and in consequence, prices have shown an upward tendency. Orange shipments have commenced, and, so far, 73,000 cases have been despatched to the United Kingdom, prices being reported to range between 9s. and 16s. per case.

CYPRUS TRADE IMPROVEMENT.

The Trade Commissioner for Cyprus reports a further increase in the trade of the colony during the three months ending September 30, for which detailed figures have now been received. There has been a steady improvement since the beginning of the year.

The principal increases in imports were: unmanufactured tobacco (£9,850); cotton piece-goods (£7,300); and fertilisers £20,400; and in exports: barley (£25,500); fruit (£7,800); wines (£6,000); asbestos (£36,000); and sponges (£8,000). The principal decreases were in the imports of timber (£13,600) and machinery (£13,300) and the export of oxen (£5,000).

There is an all round increase in shipping.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended November 25:—

Arrivals in Kordofan stations, including Tendelti, from October 21 to November 24 showed a decrease of about 85 per cent. as against the same period last year. The total arrivals amounted to 92 tons, including 5 tons rain-damaged. The new crop arrivals were only 16 tons, whilst during the same period last year they were 76 tons.

The shortage from October 21 to November 24 was 535 tons as compared with the same period last year, which brings the total shortage of Kordofan Hashab gum from the beginning of the year to date to 3,663 tons, and the total shortage on all varieties of Hashab to not less than 5,663 tons.

Taking El Obeid as the standard, prices fluctuated practically from day to day, but in any case these prices cannot be taken as a basis for c.i.f. quotations owing to the insignificant quantities coming upon the markets.

The shortage of this year's crop has had the effect of clearing up so far as it can be ascertained all last year's stocks and leaving practically nothing of 1927 arrivals.

New Crop.—The arrivals are so insignificant that they cannot be used as a basis of quotation and any prices quoted have been purely speculative.

There was a slight fall in Yugoslavia's coal output last year as compared with 1925. The production was 4,140,753 tons as compared with 4,152,126 tons in 1925 and 3,095,000 tons in 1913. The output in the various provinces last year was as follows (in thousands of tons):—Slovenia, 1,678; Bosnia and Herzegovina, 981; Serbia, 868; Croatia, 447; and Dalmatia, 166.

LIVERPOOL

MANCHESTER

GLASGOW

HAMBURG

COLOGNE

JAFFA ORANGES.

A report from the Empire Marketing Board's correspondent at Jaffa states that fine weather still prevails. There has been no rain since the last report, when it was stated that rain was much needed for the colouring of oranges.

Shipments of Jaffa oranges in the week ended November 26 totalled 63,000 cases, all for Manchester and Hull. In the corresponding week last year shipments totalled 65,000, but owing to the earlier state of the season this year total shipments to date are well above those for last year at the same date. Total shipments up to November 25 this year amounted to 161,683 cases, an increase of 52,371 cases over shipments at the corresponding date last year.

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows under date December 3:—

The arrivals of sultanias on the Smyrna market since the opening of the season are estimated at 37,900 tons, and the sales to date are put at 36,100 tons. Closing prices Smyrna, per cwt., c.i.f.:—Type 12, 39s.; type 13, 41s. 6d.; type 14, 45s. 6d.; type 15, 50s. 6d.; type 16, 56s. 6d.; type 19, 38s. 6d.; type 20, 35s. 6d.; type 6, 36s. 6d.

The market is steady with a firm undertone. Since our last report of November 12 there has been a gradual advance in prices which, in spite of the better rate of exchange obtaining, represents an improvement in foreign equivalents of from 1s. to 3s. per cwt. (fl. 1 to fls. 3 per 100 kos.) over the early November level of prices. No marked change in the situation is expected over this month, but an improvement in the demand is anticipated after the holidays. Be this as it may, native dealers are not pressing their goods for sale, but are busy computing the stocks remaining in this country. So far as we can figure on the information at our disposal, the crop should yield about 48 to 50,000 tons, of which some 36,000 have already been disposed of. Present estimates of remaining stocks as put forward by leading dealers amount to about 85,000 bags, or 11,500 tons.

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 21,547 tons, and the sales to date are put at 21,547 tons.

The market is without supplies. Shipments represent the balance of engagements held in stock by shippers.

It is understood that the Soviet cotton delegates, apart from their 110,000 kantar deal with the Government, have purchased hitherto 180,000 kantars of cotton on the spot market in Alexandria (says a Reuter message).

According to a report received in the Department of Overseas Trade on the Smyrna Fair, which was held from September 4 to 25, there were 338 exhibitors, 195 of whom were of Turkish nationality, 71 foreign, and 72 private and official corporations. Among the foreign exhibitors there were 21 Polish firms, 17 German, 16 Russian, 5 American, 4 British, 3 French, 3 Italian, 2 Swiss, and 1 Hungarian. There were 80,000 visitors to the Fair, which will be held again in the early autumn of next year, when it is proposed to extend its scope and to grant further facilities to foreign exhibitors. The exhibits included motor cars, turbine motors and dynamos from the United Kingdom.

TENDERS INVITED.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

Tenders are invited for the following contracts, and must be made by the dates mentioned.

EGYPT.

Bridge.—The Inspector of Irrigation, Third Circle, Alexandria, invites tenders for the supply and construction of an opening bridge including foundations, abutments, piers, superstructure, and fender piling at Abu Hommos, K 26.930 on Mahmudia Canal, Behera Province. February 15.

Machinery, Etc.—The Controller of Technical Education, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of machinery and machine tools for Fayum, Beni Suef, and Qena Trades Schools. January 21.

School Books, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of school and copying books to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. December 28.

Electric Light Installations, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for electric light installation in the new Post Office and Waklis accommodation at East Kantara—December 20; electric light installation in the new class rooms, dining hall, etc., at Zagazig Secondary School—December 20; and for the supply of steel mild bar flat and steel plates ordinary required for the Government Workshop, Bulaq, Cairo—December 24.

Jetty at Tor.—With reference to the notice of adjudication for the construction of a jetty at Tor for which offers were to be received up to November 30 last, the Director-General, Ports and Light-houses Administration, announces that the date is extended up to December 26.

Surgical and Medical Instruments.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of surgical and medical instruments. December 20.

Tyres.—The Superintendent of Stores, Egyptian State Railways, Telegraphs and Telephones, Saptieh, Cairo, invites tenders for the supply of 300 carriage and wagon tyres. January 4.

Motor Lorries, Etc.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of motor lorries and cars, tractors and trailers for Cleansing and Transport Service. January 15.

INDIA.

Machine Tools.—The India Stores Department (Engineering Branch) invite tenders for the supply of machine tools for Saidpur Workshop, Eastern Bengal Railway. January 9. (D.O.T.)

PERSIA.

The following are among tenders invited by the Persian Ministry of Public Works:—

Rails and Fittings, Etc.—Tenders are invited for 10,000 metric tons of steel rails, open hearth preferred (Martin or Siemen-Martin or similar process), for fittings to equip the above rails, for metal ties to equip 80 kilometres of standard gauge track, and for 100,000 wood ties.

Small Tools.—Tenders are invited for small tools such as shovels, picks, wheelbarrows, track tools, etc.

Trolleys.—Tenders are invited for 60 trolleys, wheels, axles, and bearings only for a track of 1.435 m.

Bridge Steel.—Tenders are invited for bridge steel erected in place.

Locomotives, Wagons, Etc.—Tenders are invited for eight locomotives for 76 c.m. track, internal combustion preferred, also for 200 wagons, half for 60 c.m. track, half for 76 c.m. track.

Miscellaneous.—Tenders are also invited for 500 tons Portland cement, four concrete mixers, steel reinforcing bars, culvert pipes, powders, dynamite, etc., power shovels, portable sawmills, corrugated iron sheets, railway dump carts, centrifugal pumps, hand pumps, and force hand pumps.

Further particulars of the above and other tenders can be obtained from the Persian Legation.

A company has been established in Roumania to work the gold, silver, lead and zinc deposits near Almasel Porcusca in Transylvania.

Statistics of the production of the Yugoslav iron-ore mines, most of which are located in Bosnia, show an increased output of from 130,000 metric tons in 1925 to 360,000 tons in 1926. The number of men employed in taking this ore also increased—the 850 employed in 1925 increasing to 1,182 in 1926 (says an American Consular report).

The directors of Barclays Bank (Dominion, Colonial and Overseas) recommend a final dividend for the year ended September 30, 1927, at the rate of 8 per cent. per annum on the cumulative preference shares, less income tax, and a final dividend on the "A" and "B" shares at the rate of 4 per cent. per annum, less income tax, making, with the interim dividend paid in July last, 3 1/2 per cent. for the year.

THE SITUATION IN BULGARIA.

The current issue of the Monthly Review of the Anglo-International Bank Ltd., contains an interesting survey of the situation in Bulgaria from which we take the following:—

Post-War Bulgaria has an area of just over 100,000 square kilometres and a population of approximately five millions. The population is composed almost entirely of small peasant-proprietors. There are no large estates, and the average size of the Bulgarian farms does not exceed fifteen acres. Seventy-five per cent. of the Bulgarian people live by agriculture; ten per cent. are engaged in industry, while the remaining fifteen per cent. are composed of merchants and State employees. The average density of population is forty-nine per square kilometre.

The main-spring of the economic life of Bulgaria is, therefore, agriculture. In addition to cereals and tobacco, which are the staple products of the country, Bulgaria also grows sufficient sugar for her own needs, and, in the last year or two, even for export. Live-stock has gone back, but is rapidly recovering from the evil effects of the war. A feature of the economic development of post-War Bulgaria is the intensive breeding of pigs, and with the erection of proper cold-storage plant considerable developments are to be expected in the export of bacon and other animal foodstuffs. About a quarter of the country is under forest, but, although the timber is valuable, little headway has been made in its exploitation owing to lack of capital. Twenty-nine per cent. of the forests belong to the State; fifty-three per cent. to the communes, and eighteen per cent. to private individuals. Bulgaria also possesses considerable mineral wealth including coal and copper. Here, again, lack of capital has prevented exploitation on any large scale. Since the beginning of the present century, Bulgaria, too, has been steadily developing home industries. Most of those industries are directly ancillary to the agricultural and pastoral production of the country. Of the definitely non-agricultural industries the textile industry, which is the most important, owes its origin to the old house industry promoted by the Turks. The cultivation of cereals and tobacco, however, is likely to remain the chief source of the national wealth for many years to come. To-day tobacco represents about two-fifths of the total value of Bulgaria's exports, while cereals account for approximately twenty-three per cent.

Financial Position.

Perhaps the most satisfactory feature of Bulgarian finances has been the determined effort to check inflation. Thanks to these efforts the currency has been practically stable since the beginning of 1925. Unfortunately, this stabilisation is not based on a sufficient reserve of gold or of foreign currency holdings and has only been maintained by the very strict control which is exercised by the Finance Minister over all credit facilities and over all foreign exchange operations. These restrictions, while necessary until a definite currency stabilisation can be achieved, have naturally a very hampering effect on the trade and on the economic development of the country. In spite of all these difficulties, however, Bulgaria has succeeded in carrying out her foreign obligations in a manner which should go far towards restoring foreign confidence in her credit and in her economic future. A tangible proof of that confidence was the Refugee Loan of 1926, which was floated under the auspices of the League of Nations and which has helped Bulgaria to settle one of her most pressing problems, namely, the provision for the thousands of Bulgarian refugees who have flocked into the country since the War from the lost provinces of Thrace and Macedonia.

The difficulties of Bulgaria's financial situation have been reflected in the trade and commerce of the country. High rates of interest, lack of capital, and the almost complete restriction of credit have prevented that improvement and modernisation of agricultural production which

alone can raise the national wealth of the country, and without the advent of foreign capital in liberal measure it is difficult to see how any immediate improvement in the situation can be affected. With the exception of 1922, when very favourable prices were obtained for the tobacco crop, the country has had annually an unfavourable trade balance. Indeed, during the past two years, owing to the slump in tobacco prices and the inability to export the crop, the country has been in the throes of an economic crisis. During the past four months, however, there has been a remarkable and very welcome improvement in the general situation. Owing to the smallness of the crop, prices for Bulgarian tobacco have risen sharply, and, in addition to obtaining high prices for the new crop, the Bulgarians have succeeded in disposing of large quantities of the 1926 stocks. Fortunately, this improvement applies not only to the tobacco crop but also to the cereal harvest, and the whole trade position of the country has acquired a new appearance. At the end of September, 1927, for the first time for five years, the trade balance shows a surplus of 217 million levas as compared with an unfavourable balance of 419 million levas at the same date in the preceding year. As this improvement is likely to be sustained during the remaining months of the year, there is every probability of the year 1927 closing with a favourable trade balance.

The Outlook.

Bulgaria to-day presents the picture of a country which has made an honourable attempt to carry out a supremely difficult task. Not only has the country had to adapt itself to the entirely new set of economic circumstances created by the loss of rich and fertile provinces, but it has also had to find the funds for a very onerous series of reparation payments. The standard of living has been reduced to the lowest possible level. The peasant, who is the backbone of the country's economic life, exists to-day solely on what he produces himself. Such articles of everyday life as in other countries are regarded as necessities are to him unattainable luxuries. Worst of all, owing to the restriction of all credit, he is unable to effect in his implements those improvements which will enable

him to increase his agricultural production. The bulk of the country's available capital is required for Bulgaria's foreign obligations, and, in consequence, the yield of the soil, in spite of its richness, is extremely low.

The reparations payments which Bulgaria has to make are on a sliding scale and in a few years will attain proportions which are likely to exceed the present fiscal capacity of the country. If the economic development of Bulgaria is not to be seriously retarded, one of two alleviatory measures seems necessary. Either the reparations payments must be modified or else the national wealth of the country must be raised in order to enable Bulgaria to meet her obligations. The raising of the national wealth can only be achieved by the introduction of foreign capital. The reparations problem is not one which can usefully be discussed here, although it may be pointed out that the uncertainty which prevails everywhere regarding the whole question is perhaps the most serious obstacle to the economic recovery of all the Central European States. The question of a foreign loan for Bulgaria, however, has already become acute. In September of this year the Bulgarian Government formally applied to the League of Nations for assistance in raising a foreign loan, and the League has already sent a special commission to Sofia to study this question on the spot. The results of the Commission's findings have not yet

been made public, but, provided that all the financial difficulties can be overcome and that care is taken that Bulgaria shall not accept a responsibility which she is unable to bear, there can be no doubt that, both politically and commercially, a foreign loan for Bulgaria has much to recommend it. The Bulgarians are a hard-working and honest people, who, not entirely through their own fault, have suffered more from the results of the War than perhaps any other nation in Europe. Provided that they are given the possibility of developing the rich resources of their State without too heavy a burden being placed on their shoulders, they are likely to progress, both socially and economically, with considerable rapidity. The Balkans to-day require, above all things, peace and economic stability in order to enable them to recover from the disruptions of the last fifteen years. Bulgaria, in particular, requires a more generous treatment at the hands of her former enemies and a hope of a better existence for her people. A foreign loan seems the first and most essential step towards the attainment of these ends.

It is announced that Greece signed a war debt agreement with France on December 7, thus removing the last obstacle to the flotation of the Greek Reconstruction Loan under the auspices of the League of Nations.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 7 :—

Egyptian Futures.—Sakel Contract.—There has been no radical change in the conditions latterly governing the outlook in this market; thus, throughout the week, the undertone has been heavy and further declines have taken place. The technical position of the contract appears to be coming steadily weaker, and the continual absence of a normal trade demand is beginning to assert a more and more decided influence on the situation. The present limited offtake in the Sakel qualities apparently is not only confined to Lancashire, as poor reports continue to come to hand both from the Continent and America. In the country we are informed that recently Arizona Pimas have been in good request owing to the fact that they have been offered down to a very attractive basis compared to either the finer qualities of Egyptians or Sudans. In surveying the consumption figures we find that the Egyptian takings of all qualities are 4,000 bales more than last year. This increase we consider is attributed chiefly to the more widespread use of Uppers. The Sudan figures show a gain of 30,000 bales, and there is still approximately 20,000 bales of this cotton held in Liverpool on spinners' account, most of which is for delivery up to next March when new crop arrivals are to be expected. Generally speaking, spinners on this side are booked in yarns up to the middle or end of January and have covered their commitments in actual to that date. In our opinion the effects of the competition of the Sudan crops and also the prevailing use by manufacturers of artificial silks, which we understand are being mixed with fine yarns to the extent of 10 per cent. in the production of fancy goods, have not yet been fully discounted as price determining factors in our markets. Another point that has cropped up lately which perhaps only indirectly concerns our own contract is the fact that American staple cotton has started to weaken in basis. As we anticipated a further narrowing-in of the Egyptian-American straddle has taken place since we last wrote and we remain of the opinion that the premium of our cotton with other varieties will have to fall in further before we begin to attract the necessary weight of spinners' business to relieve the present weight of cotton overhanging the contract.

Alexandria reports throughout the week continue to show an underlying weakness, and the fact that holders there are more easy to trade with is reflected in the more attractive offers that shippers are now able to make. A certain amount of undesirable docket cotton continues to depress the near positions, and as re-tenders of this will probably be made early in January, we look for this month later to widen out with March and May.

On the whole, we still remain "bearish" on the situation and should the market advance through any other cause than that of improving trade support, we think that conservative short sales are to be recommended.

Upper Contract.—This option continues to show a rather disappointing undertone and further liquidation of old "long" cotton, coupled with a rather restricted trade demand, have combined to force values to a lower level, to-night's close being 12 to 15 points down for near and 4 to 6 points down for distant positions since our last report. It will probably take some little time for the accumulated stocks to pass into trade channels, but ultimately we consider that the statistical position will show strength, and on this account, should the present difference at which we stand with the American contract narrow further, we consider that straddle possibilities between the two markets should be carefully considered. In the meantime, it does not appear probable that any material change in values will be witnessed, but should values, through weakness in the American markets or any other cause, decline materially, moderate purchases on

the down scale will probably later on be able to be liquidated at a profitable basis.

Egyptian Spot.—Conditions have remained almost identically the same as those ruling during the preceding week. Listlessness has been the prevailing note and prices have again declined, the most important differences having taken place in Sakellaridis. The slackening of trade up country, the feeling of insecurity engendered by the precarious financial state of so many of the mills, the imminence of another Bureau Report (which is closely followed by the Christmas holidays) have all combined to create an atmosphere of depression, and, under the circumstances, it is not perhaps surprising that no improvement has resulted. Granted even a mildly "bullish" report to-morrow, there are still hopes of better things, but, if the figures published should create an opposite impression, there is no saying to what level prices will sag. During the last few days, certainly, a feeling has been gaining ground that even a "bearish" report has been fully discounted and a little trade buying has taken place on this theory. Unfortunately, the volume of it has not been great enough to start a "movement."

The local inquiry has been largely composed of Fair to Strict Good Fair Uppers, spot and forward. Most of the business has taken place in cotton valued at from 13½d. to 14½d., but inquiries have covered a much wider range. There has been a considerable inquiry for "off" Sakel cotton at from 12½d. to 14½d., but the other qualities of this growth have been rather neglected. Pilon has been practically ignored in the daily inquiry, but some small lots of White cotton (Casulli, etc.) have changed hands at round about 18d. to 18½d.

Sudan cotton has been in moderate, to fair, request at prices ranging from 9d. to 22d. C.i.f. business, on the whole, has shown some slight improvement. Forwardings to spinners for the week ending the 2nd inst. were returned at 5,191 bales Egyptian and 2,281 bales Sudan. Estimated sales, 1,600 bales Egyptian and 870 bales Sudan. Quotations of Sakel have been reduced 20 to 40 points. Upper and Pilon are both 5 points lower on the week. F.G.F. Sakel to-day, 17.60d. F.G.F. Upper to-day, 14.05d. F.G.F. Pilon to-day, 14.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended December 1, state :—

Since our last report the futures market has been very active and prices have fluctuated somewhat wildly; at the close to-day the market showed some nervousness. The week's summary of price movements is as follows :—Sakellaridis : January, 35.27 dollars, 0.45 dollars down; March, 35.58 dollars, 0.50 dollars down; May, 35.93 dollars, 0.42 dollars down; November, 1928, 35.88 dollars, 0.32 dollars down. Ashmouni : December, 26.58 dollars, 0.47 dollars down; February, 26.98 dollars, 0.48 dollars down; April, 27.22 dollars, 0.53 dollars down; October, 1928, 26.75 dollars, 0.45 dollars down.

Sakel.—The week has been a series of active markets and fluctuations have been wide. The decline in the early part of the week was started by speculative selling in a market devoid of all commercial support, and was rapidly accentuated by the hedge selling of the banks and financing houses against financed cotton on which margins were disappearing proportionately as the market declined. Under the weight of this speculative and hedge selling January declined as low as 33.80 dollars, at which level, however, spinners came forward with buying orders, as a result of which a good part of the ground lost has been regained. We think, however, that the recovery has been pushed too far; spinners are apparently not disposed to follow the advance, for the demand has been checked by

the rise and, in our opinion, it is quite possible that prices will again slip back.

The statistical position is very heavy, and unless and until this improves it is but natural to expect prices to show a sagging tendency. Reports from the industrial centres are about the same as last week and, in general, do not indicate any improvement in the outlook.

Uppers.—Our remarks on Sakel may equally be applied to Uppers. The straddle difference between the two varieties narrowed at one moment to about 8 dollars, but at the close to-day it is out to 8.69 dollars, about the same as last week. As we have previously remarked, we consider this difference too big and not justified by the actual supply of, and the prospective demand for, the two varieties.

At the December 1 tender, 14,250 kantars dockets were issued.

The week's receipts amount to 214,098 kantars, against exports 244,061 kantars; the stock in Alexandria stands at 3,198,204 kantars.

The official figures of arrivals and exports for the period September 1, 1927, to November 23, 1927, are as follows:—Arrivals: Sakellaridis, 1,042,048 kantars; Ashmouni and Zagora, 1,577,763 kantars; Pilon, 148,861 kantars; Various, 101,045 kantars; Scarto, 50,166 kantars; total, 2,919,883 kantars. Exports: Sakel, 614,274 kantars; Ashmouni, 780,870 kantars; Pilon, 57,707 kantars; Various, 39,116 kantars; total, 1,491,967 kantars.

Spot: There has been slightly more activity at Minet el Bassal this week and a little better demand from abroad. Sales amount to about 19,200 bales, of which we estimate 6,500 bales Sakellaridis, 11,400 bales Ashmouni and Zagora, 1,000 bales Pilon, and 300 bales other varieties. The spot situation is technically as last week for Sakel, but Ashmouni is rather better held in view of the premium on February contracts over December.

Sakellaridis: Has met with a moderate demand covering all styles except the best. Spot differences are generally without much change but inclined to ease.

Ashmouni and Zagora: Have been in very fair favour with buyers and a good business has been done. It is to be doubted whether this improvement reflects an improved spinners' demand entirely, as the premium into February is attractive to merchants. Medium qualities have been most in demand. Spot differences are unchanged for Fully Good Fair and the grades above, but steady and inclined to harden for Good Fair and below.

Pilon: Has been in good demand and a very fair business has been done in all styles at about last week's differences.

Other Varieties: A small business has been done in White at about last week's differences. In Nahda the demand continues and, where sellers are not too difficult, a good business has been done at improved spot differences.

Up-country: The decline has brought about some forced selling of cotton in the hands of financially weak merchants. The accumulation of stocks in Alexandria and the consequent shortage of warehouse space prevent many of the ginning factories from working more than three or four days a week, and the reduction in the arrivals figures this week is explained by this intermittent working. The Ministry of Agriculture continues to be severe on seed submitted for approval as planting seed and only really good lots have, for the time being, been passed.

A motor engine works has been established near Belgrade.

Work has begun on the construction of a new subway for the prolongation of the Piræus Railway which will be connected with the Kefissia line (says an American Consular report). Excavation for the underground central station which will be built under Concord Square has also started. It is estimated that this work will cost over 160,000,000 drachmæ, and should be finished in 20 months. The length of the new subway will be 2,400 metres, the height 4.20 metres, and the breadth 7.40 metres.

THE TABRIZ TEXTILE TRADE.

Shipments of foreign textiles into Persian Azerbaijan during the year ended March 21, 1927, were valued at £1,035,000, or 51 per cent. of the value of all imports. The most striking feature of this trade (says the American Consul at Tabriz, Mr. A. W. Ferrin) is the long lead of Italy and the poor position of Great Britain, which formerly competed with Russia for first place. Italy now stands first with a total of about £400,000 and Russia second with about £200,000. France also has made remarkable gains and is in the third place with £140,000, while Great Britain and Turkey are competing for fourth place with about £80,000 each. Germany is fifth with £58,000 and Belgium a close sixth with £50,000. Austria, Switzerland, and Czechoslovakia appear in some classes, but not for large amounts. The United States, at £520, would be last but for Poland's single shipment of woollens valued at £140.

This situation is partly the result of transportation conditions, Great Britain and the United States being compelled to rely wholly on slow and costly caravan loads from Trebizond and Baghdad, while their rivals can use the Russian rail route, connecting at Julfa with the branch line to Tabriz which was built during the Russian occupation of 1909-1918 and turned over to the Persian Government by the Soviets in 1921. That the English showing is so much better than that of the United States is probably due to the long establishment of British firms in Tabriz where no American importing house exists. British firms state that their trade is declining steadily.

Italy's lead is largely confined to coloured cotton cloth, dyed and printed, of which its exports to Persia were valued at £260,000. Great Britain's exports of this material, in which it once dominated the market, were valued at only £21,800, less than 10 per cent. of the Italian. Russia was second in this class, which constituted over half of the total textile imports.

Italy leads also in fabrics of cotton mixed with rayon, a commodity comparatively new to Tabriz, and now used to replace natural silk cloth in the voluminous "chuddar" or black mantle in which a Muslim woman must envelop herself whenever she appears in public. The cotton and rayon mixture is also increasing in popularity for garments worn under the black "chuddar" and which may be of any colour. Pinks and purples are popular. The "chuddar" of the poor continue to be of black cotton cloth and their other clothing of calico. Imports of Italian mixed cotton and rayon fabric were valued at about £60,000, and of Belgian at £20,000. The total imports of this fabric were valued at about £100,000.

Imports of pure wool goods amounted to £224,600 in value, with French goods leading at £118,000, British second at £35,000, and Italian third at £27,800. For men's wear, grey and brown worsteds are preferred, with black for formal dress. Some blue serge is sold, but not in great quantities. Italy was first in supplying mixed cotton and wool fabrics, of which the total was valued at £57,600. Russia is first in bleached and unbleached cotton sheetings with £39,000, and Great Britain second with £2,500, out of a total of £46,600.

The continued popularity of velvets, for women's wear as well as for curtains and upholstery, is shown by imports valued at £227,600. These consisted of cotton, wool, and mixed cotton and wool velvets. Linen is little in demand.

Made-up clothing, including lingerie, is not listed in the textile class but is reported separately. The total import was valued at £14,050, of which £6,000 worth came from Italy, £4,000 from Turkey, £2,000 from Germany, and the remainder from eight countries, including the United States and Japan.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended November 10 amounted to £12,505, making the total from April 1 £182,000. The totals for the corresponding periods of the previous twelve months were £12,639 and £197,151.

COMMERCIAL BANK OF GREECE

(A Limited Liability Company Registered in Athens.)

CAPITAL PAID UP - Drs. 47,107,000
RESERVE FUNDS - Drs. 57,091,594.50

The Assets include securities worth £1,000,000, which are valued at Drs. 25,000,000; that is at the rate of Drs. 25 per £1 only.

Notes of the Week.

Balkan Tom Tiddlers.

Nothing that has happened during the past week is, perhaps, of more importance, potentially, to the Balkans than the *détente* between France and Italy. Certain conversations at Geneva and a matter-of-fact speech by Signor Mussolini on the subject of Italy's foreign relations have engendered a feeling of hopefulness, if not of actual confidence, in both countries that an adjustment of their present differences on a permanent basis is by no means unattainable. Any agreement that will eliminate the active rivalry of France and Italy from the Balkan Peninsula will be of considerable advantage to the Balkan States themselves. As things are, the latter have had their attention distracted from their own major interests by the necessity, as they conceived it to be, of taking sides in the rivalries of the two Great Powers. While France made use of the Little Entente for her own ends, she did nothing to heal the breach between Yugoslavia and Italy; the existence of the ties between France and Yugoslavia encouraged Italy to make counter-plans in the Balkans, with the result that Albania for the time being is detached from any possible scheme of Balkan co-operation, and the general attitude of the other States towards one another has had to take into consideration the relations of each to the Franco-Italian dispute. If the two Powers could abate their pretensions in the Balkans and content themselves with merely the legitimate advancement of their economic interests, the Balkan States would have respite from international politics and more freedom to get on with the work that concerns them most.

The Situation in Roumania.

The earnestness with which the Roumanian Government immediately grappled with the situation arising from the outrages at Oradea Mare and Cluj made a good impression not only in Roumania itself, but also abroad. With the liberation of many of the students arrested, however, it is seen that the Cabinet will be handicapped in its good intentions by the remissness of the local authorities, who allowed the situation to get out of hand to such an extent that, when they could no longer delay

intervention, they had to be content with promiscuous arrests without reference to the actual guilt of those who were seized. The incidents have served still further to embarrass the Ministry of M. Vintila Bratianu, which seems clearly to regard itself as on the defensive since the refusal of the National-Peasant Party to co-operate in the Government. Next to the question of the conduct of elections, one of the strongest counts in the indictment brought by M. Maniu against the Liberal Party is its connivance at official corruption and incompetence. The Liberal leaders are aware of the position, but it is alleged that they prefer to use their knowledge of individual delinquencies to serve the ends of party discipline rather than to purge the Civil Service of worthless employees. The student excesses have drawn attention to a crucial point in Roumanian administration of the newly-acquired provinces, the employment of imported officials rather than of local men whose political allegiance cannot be guaranteed. So long as elections have to be "made" in the interests of the party in power this system is inevitable, and a long chain of vicious consequences is forged. M. Maniu has, accordingly, taken a strong stand on the need for free and honest elections, and his refusal to co-operate with the Government, unless this point is conceded, appears to be making a considerable impression in Roumania.

Turkey's Eastern Provinces.

In addition to abolishing martial law in the Eastern Provinces, the Turkish Government has announced its intention not only to discontinue the deportations that have been taking place, but also to restore to their former homes those who have already been deported to other parts of Anatolia. Action of this nature must be so novel in Turkish history that its adoption by the Republican Government is worthy of notice. If Turkey really stood in fear of aggression from without, as it is the habit of some of her spokesmen to pretend, there could have been no more foolish policy than to denude frontier provinces of their population. The experience of Iraq and the employment of refugees from the Turkish Eastern Pro-

vinces in the French scheme of defence in Syria have suggested to the Turkish authorities that there are other ways of making a Kurd loyal than by killing or deporting him. New methods of government are now to be introduced. The region is to be placed under an Inspector-General, who will be responsible for a more personal form of administration than has prevailed hitherto. It is recognised that the trouble experienced in the past has been at least in part due to the faults of the local administration. The appointment of the Secretary-General of the Popular Party as Inspector-General of the Eastern Provinces must have been made with a view to ensuring that the new spirit actuating the Government shall not become attenuated before it is applied to these distant provinces. The Inspector-General is intended to centralise power in his own hands in order to obtain uniformity in the administration, and he is specially charged with the task of eradicating the old abuses, which, it is now realised, were largely responsible for an unsatisfactory state of affairs in these frontier territories.

The Anglo-Egyptian Conversations.

It is unfortunate, although not altogether unnatural, that the extremist sections of the Wafd should find their patience so sorely tried by the delay in following up the conversations in London between Sarwat Pasha and Sir Austen Chamberlain with formal negotiations for a treaty of alliance. Yet it is obvious that the Egyptian Prime Minister is following the right course in refusing to be hurried in a matter of such vital importance to the country's future. The London discussions cleared away the misunderstandings that had arisen over a period of years owing to the absence of any attempt to analyse the policies of Great Britain and Egypt as a whole in their relation to one another, and as a result of dealing with each point as it arose, without special reference to its bearing on or connexion with a clearly defined policy. Those discussions further revealed the fact that it was quite possible to bring the two policies, when considered in their entirety, into line, and they even covered much of, if not all, the ground necessary to harmonise them. It was evident, however, that both Sarwat Pasha and Nahas Pasha, the new leader of the Zaghloulists, were ahead of the great majority of their countrymen in their studies of an intricate question, which concerned not only Egypt's position among the nations, but also the peculiar constitution of the British Empire. In these circumstances it would be idle to suppose, as the Wafd extremists contend, that Sarwat Pasha has merely to summarise his conversations with Sir Austen Chamberlain—in themselves very lengthy matters—in a speech to the Legislative Assembly to enable it to register its opinion at once on the possibility or desirability of a Treaty and even to formulate the actual terms. It will be far better for the Prime Minister and Nahas Pasha to take their time in leading their people gradually to a fuller understanding of all the issues involved. The interval, it may be supposed, is being put to good use in another direction, in preparing the ground for a conference on the question of the Capitulations, for the Egyptian people will require to have some idea as to what is to happen to the Capitulatory régime if they want to form a correct opinion on a treaty between Egypt and Great Britain.

A Sudan Tragedy.

The murder by natives of Captain V. H. Fergusson, District Commissioner of Bahr-el-Ghazal Province, in the Sudan, calls attention in a tragic way to the splendid work performed by officials of the Sudan Civil Service in the administration of that vast country. Bahr-el-Ghazal is in the extreme south-west of the Sudan, bounded on the east by the White Nile, and on the west by French Equatorial Africa and Belgian Congo. The province is approximately as large as Italy, and it is well known for the bellicose nature of its tribes, prominent among which are the Dinkas and Nuers. Captain Fergusson had been

among the latter for six years, had established friendly relations with the Nuong Nuer division of the tribe and had been responsible for bringing them more or less under Government control. When he met his death, he was carrying out his ordinary administrative duties in attending a gathering of chiefs at a short distance from the steamer on which he was travelling. With him was a Greek merchant. Apparently without warning a Nuer youth threw a spear at Captain Fergusson, and the whole party was at once set upon; only a few servants and carriers succeeded in escaping to the steamer. Another victim has thus fallen in the cause of the white man's burden; for there is no reason to suppose that his murderers bore any particular grudge against Captain Fergusson personally, but that they were actuated by a spontaneous antagonism to the authority that stood for law and ordered development in the place of the unbridled rule of the stronger which makes still an irresistible appeal to the wilder tribes of the Sudan.

The Ikhwan Raids and Iraq.

In writing upon the recent Ikhwan raids into Iraq and Kuwait, we have already suggested that they have been conducted in spite of, rather than because of, King Ibn Saoud's known attitude towards the State of King Faisal. It was difficult to believe that a man of the proved statesmanship and integrity of the leader of the Wahhabis could recklessly break his word both to the Iraqis and to the British. And the more honourable explanation of this violent conduct by the Ikhwan is now shown to be the correct one. For, as Mr. Ormsby-Gore told the House of Commons last week, serious trouble has broken out in Najd, and the forces arrayed against the Iraq frontier have so established themselves against the wishes of King Ibn Saoud, who, indeed, went so far as to warn the Iraq authorities of this movement of the Ikhwan. For the moment, however, Shaikh Faisal ad Dawish appears to have got out of hand, and has indulged, according to information from Basra, in hostile ebullitions which bear more than a merely political character. His followers are reported to have attacked, on December 13, the Badur and Az Zayad tribes in the Nasiriyah district, thirty miles above Busiyah, the scene of their previous outrage. But the Royal Air Force is busy patrolling the frontier, and the Mutair, or whoever it is who is responsible for these absolutely unjustifiable raids, are not likely to have a very enviable time. If there is one place in the world where aeroplanes are certain to achieve their object over fighters on camels, it is in such flat desert as divides Iraq from Najd. From an international point of view, however, the importance of these raids can be exaggerated; a more interesting aspect from which they may be viewed concerns the internal structure of the tribal organisation of Najd. Will King Ibn Saoud be able resolutely and finally to stamp out such intransigence as has been displayed; or will he be forced to decide that it is impossible simultaneously to govern the Hijaz and Najd? Quite certainly Faisal ad Dawish would not dare to indulge in this sort of conduct if his King were very close at hand; but while the cat is thousands of miles away there are possibly scores of mice who would choose to play their immemorial games.

The French and Syria.

Even French domestic opinion, which has been notoriously ill-informed upon affairs in Syria, appears now to be convinced that something must be done, and done quickly, for the appeasement and prosperity of the mandated territory. That section of French opinion—and it is a large one—which has not troubled to study the Syrian problem, wavers too often between a mere "bag and baggage policy," the futile echoes of which are not unknown in this country, and an unreasoning, comprehensive denunciation of Great Britain as the source of all France's trouble in the East. On December 14, however, the Foreign Affairs Committee of the Senate passed

a resolution on Syria, which expressed confidence in the French High Commissioner, but urged that the scheme of the Government in Syria should shortly be laid before Parliament. If the French people are growing as impatient as the Syrian peoples have long been at the uncertainty of the whole situation, we should at last be in sight of some sort of concrete declaration by M. Ponsot upon the lines of governance in Syria. We have already pointed out that the whole population has awaited a lead, now that the rebellion has been crushed—it is wise, incidentally, to discount any threats which Sultan Pasha al Atrash is said to have made—and of such a lead there has been as yet no sign. M. de Jouvenel, whose theoretical solution of Syria's woes was possibly better worked out than his actual handling of affairs in Syria, made several suggestions, some of which appear to us as very sound, at this Foreign Affairs Committee. The question of the frontier between the various Syrian States, he said, should be settled (though it would be better, in our view, if these frontiers were abolished); the scheme of Government should be finally elaborated and a Treaty be concluded with Syria (as was done with Iraq some time ago); the Syrian-Palestine railway system should be linked up by the construction of a Tripoli-Acre railway (a favourite conception of General Weygand, this, and one that has much to commend it); and an understanding should be reached with the neighbours of Syria, among whom M. de Jouvenel apparently included King Ibn Saoud. Some of these suggestions of the former High Commissioner in Syria are admirable, but how is it that they have not been acted upon before?

The Syro-Palestinian Committee.

If there ever were a psychological moment for laying firm the foundations of Syria's future it is now, when order has been established, and, as M. de Jouvenel pertinently pointed out, a scission has overtaken the Syro-Palestinian Committee, that extraneous body which attempted to play so important a part in the direction of Syrian affairs. This split may have a profound effect upon the whole Syrian Nationalist movement, and it may be well, therefore, to recall the history of the Committee. For about five years it worked incessantly, from Cairo, against the French Mandate in Syria. About last March, however, there were signs of division of counsels in the heart of the Committee. The Syro-Palestinian delegates to Geneva, who use to abuse France in season and out of season, then drew up a moderately worded Memorandum, which contained a statement of their willingness, on certain conditions, to co-operate with the Mandatory Power. This was an evolution not at all to the liking of the extremists. A conflict broke out between the irreconcilables and the reconcilables. The former, led by Shaikh Rashid Rida and Assad Effendi Dagher published a manifesto accusing their President, the Amir Michel Lotfallah, of having made approaches to the French Government and of having renounced the idea of Syrian unity by accepting the existing frontiers of the Lebanon. The Committee was at this divided into about equal camps. Later, however, Dr. Shahbandar, who is known in Iraq and Egypt as well as in Syria, gave his adherence to the proposals of the Amir Lotfallah, who would now appear to have the stronger following. But the struggle between the two groups still continues, despite the reported endeavours of the Mufti of Jerusalem to reconcile them. It is one, in a word, between the extremists who desire to see Syria as a united country incorporated into an Arab Empire, and their moderate opponents who limit their efforts to the establishment of an independent Syria bound up with France in a way similar to that in which Iraq is bound up with Great Britain. The split has, of course, stopped the subscription of money in America in support of the Syrian "rebels," and its effects are being watched with great eagerness, alike in Syria and in Egypt. Suppose, therefore, that France were now generously but firmly to tilt the scales in favour

of the Moderates, is it not almost certain that the effect would be very considerable? This policy of secrecy or inaction on the part of the French Administration can surely bring good neither to themselves nor to the country for which they have a mandate.

Jewish Settlement in Palestine.

While the House of Commons busies itself with questions on the Palestine Loan and on the Dead Sea Salts Concession—the latter obviously inspired by disgruntled unsuccessful applicants—the Jewish community awaits with considerable eagerness the reports both of the Mixed Commission, representing both Zionist and non-Zionist, which was given the test of thoroughly exploring the possibilities of Palestine, and the verdict of which may be expected to be published in a few months, and of Sir John Campbell, Vice-Chairman of the Greek Refugee Settlement Commission, who, on the invitation of the Jewish Agency, studied settlement problems in Palestine for six weeks and left the Holy Land on December 14. There is, naturally, no use in speculating upon the contents of these two reports, but it has already been hinted that emphasis will be laid by Sir John Campbell upon the extremely limited possibilities, in existing economic conditions, for settlement development. It is only too probable, therefore, that many Zionist hopes will have to be modified during the coming year, and that more ample justification will be given to those possibly unpopular Zionist leaders who foresaw that slow development in the Jewish settlement of Palestine is the only feasible policy. The old proverb concerning the pint pot will hardly be disposed of by the experts who have been investigating Palestine.

Progress in Palestine.

That Palestine is making remarkable progress, however, cannot be denied, and universally it is admitted that it is extremely well administered. In this connexion it is pleasing to note that both Bishop MacInnes, Anglican Bishop in Jerusalem, and Bishop Godric Kean, Bishop-Auxiliary and Vicar-General of the Latin Patriarchate in Jerusalem, have lately been paying fresh testimony to the security and justice now reigning in Palestine. Some of the Anglican Bishop's remarks, made on the occasion of the commemoration of the Liberation of Jerusalem, we printed in our last issue; they were reinforced last week by the Catholic Bishop during a visit to Manchester. It is, perhaps, fitting, in view of the erroneous ideas

THE ANGLO-IRAQI TREATY.

The first requirement that the third treaty concluded between two countries in five years has to fulfil is that it should justify its existence. From the text of the Treaty between His Britannic Majesty and His Majesty the King of Iraq, which is published on another page, it will be recognised that this requirement has been amply met. The Treaty is comprehensive; it supersedes the Treaties of October 10, 1922, and January 13, 1926, except in so far as two questions are left for subsequent negotiation, and it advances Anglo-Iraqi relations a definite stage. To gauge the significance of the new agreement, it is necessary to understand the points at issue between the two countries. Five years ago, in our issue of November 30, 1922, we wrote as follows:—

Briefly put, the articulate demand of Iraq to Great Britain to-day would be:—

1. Let us run our own show, but stand by to tell us what to do and where we are going wrong.
2. As we admit Great Britain's special interests in Iraq, let there be a clear understanding at the outset as to what these entail; but let us try to give satisfactory effect to them of our own accord, and until we have failed, do not take the matter into your own hands so as to detract overtly from our sovereign rights.
3. As we cannot stand up against foreign aggression without British assistance, let us adopt a common-sense plan of action for all eventualities which will safeguard Iraq and will enable Great Britain to reduce her military expenditure in the country.

The suggestion then put forward in these columns was that in conceding the Iraqi demands—which included, in the place of the two Governments, British and Iraq, then existing side by side, as it were, the appointment of British Advisers, to advise and supervise, without assuming executive authority; and the formation of an Arab army not exceeding 15,000 men to be recruited by a form of conscription, as the voluntary system would probably not suffice to raise a force of this strength—it would be found that such measures would not militate seriously against British interests in Iraq nor would they prevent the country from finding ultimate salvation on its own halting and uneven lines. It was not, however, until the negotiations in London had broken down on November 25, to be resumed a few days later as the result of informal conversations between King Faisal and British Ministers at a farewell luncheon given to the former, that the British Government could bring itself to concede in the main the Iraqi point of view. The system of Advisers attached to the different Iraqi Ministers was early adopted and has worked uniformly well; but while the British Government continued to urge upon the Iraqi authorities the necessity of terminating British financial and military responsibility, even to the extent of fixing the year 1928 as the date for this termination, it showed little readiness in the details of administration to relax its hold on the leading strings so as to enable Iraq to gain the practical experience required for the assumption of an independent status. The boggy of distrust on one side or the other, or on both sides, had arisen, and it has necessitated personal touch between King Faisal and his Prime Minister on the one part and British Ministers on the other to exorcise the spectre.

The new Treaty may be said to embody the official relinquishment by both Governments of distrust of either in the intentions of the other; Great Britain no longer fears anti-British designs on the part of the Iraqi régime,

and the Iraq Government has satisfied itself that British caution in regard to the fulfilment of Iraqi aspirations is prompted not by self-interested motives, but by a sincere desire that the régime for which Great Britain has made herself responsible should achieve lasting success and not bring about its own downfall. With the ground thus cleared, it has been possible to evolve a Treaty that can be regarded as satisfactory by both parties. The frigid phraseology of the former Treaties has been abandoned in favour of the more customary wording of agreements between independent States. The contracting parties desire "to consolidate the friendship and to maintain and perpetuate the relations of good understanding between their respective countries"; "considering that the revision of the terms of the said Treaties of Alliance can best be effected by the conclusion of a new Treaty of Alliance and Amity," they "have agreed to conclude a new Treaty on terms of equality." Iraq is recognised as an independent sovereign State; there shall be peace and friendship between His Britannic Majesty and the King of Iraq; each of the High Contracting Parties undertakes to observe friendly relations towards the other; there shall be full and frank consultation between the High Contracting Parties in all matters of Foreign Policy which may affect their common interests. Article V provides that the King of Iraq agrees to place the British High Commissioner in a position to give information to His Britannic Majesty regarding the progress of events in Iraq and the projects and proposals of the Iraq Government, and the High Commissioner will bring to the notice of His Majesty the King of Iraq any matter which His Britannic Majesty considers might prejudicially affect the well-being of Iraq or the obligations entered into under this Treaty. Finally, "provided that the present rate of progress in Iraq is maintained and all goes well in the interval, His Britannic Majesty will support the candidature of Iraq for admission to the League of Nations in 1932," and the Treaty shall be subject to review with the object of making all modifications required by the circumstances when Iraq enters the League.

King Faisal and his Prime Minister, Jaafar Pasha, thus have a concrete achievement to submit to the Majlis and country as the result of their visit to London. Iraq will not be proposed as a member of the League of Nations in 1928, but she has the definite assurance that "provided that the present rate of progress in Iraq is maintained and all goes well in the interval" Great Britain will support her candidature for admission in 1932. The qualification was necessary, as Great Britain could not stultify herself by urging the League of Nations to accept as one of its members a country that had deliberately given itself up to extremist doctrines and measures. It is, perhaps, unfortunate that a final decision on the military and financial agreements could not have been embodied in the Treaty. The negotiations, however, will now be carried on in Baghdad, and it may be expected that they will be renewed under happier auspices than marked their progress in the last few years. The British Cabinet has given a lead to the High Commissioner in respect of the spirit in which it looks to have these negotiations conducted; for it is evident that Ministers were able to discover over a luncheon table the reciprocal good will that had not characterised the previous discussions. Yet another point in Iraq's favour is that Article 5 paves the way for the self-reliance that only administrative experience and responsibility can give. The Iraq Government undertakes to keep the British Government informed of its intentions and of its policy, and the High Commissioner has the right to point out where there is a possibility of the well-being of Iraq or the obligations entered into under the Treaty being affected. Anything in the nature of a veto or direct interference in Iraq affairs would be contrary to the spirit of this Article, and it is to be hoped that its terms will be scrupulously carried out to the letter. The friendly relations to which each of the High Contracting Parties are now pledged require that in every detail full credit must be given by each side to the good intentions of the other, until a definite case to the contrary can be adduced.

The Near and Middle East*

From Our Own Correspondents.

Sofia, December 6.

Foreign Policy.

The Sobranie has just concluded the debate in reply to the Speech from the Throne. In accordance with Parliamentary tradition, advantage is taken on such an occasion to review the Government's general policy. This year the debate took place immediately after the ratification of the Cabinet's proclamation of martial law in the two frontier provinces of Petritsch and Kustendil. The proclamation was deemed advisable on account of the revolutionary activities in Macedonia and also as a precautionary measure to avert any possible complications with Yugoslavia. In the circumstances all the speakers dwelt more fully than usual with the external situation—more especially in regard to the relations at present existing between Bulgaria and her neighbours. Naturally the Opposition was severely critical, accusing the Government of lack of firmness and of following a weak and sterile policy. These accusations were all the more pointed in view of the cold and reserved, if not almost threatening, statement respecting Bulgaria recently made in the Belgrade Skupshtina by M. Marinkovitch, Yugoslav Minister for Foreign Affairs.

The President of the Council brought the debate to a close with a full statement replying to these criticisms and accusations. M. Liaptcheff emphasised the fact that there was no contradiction between the actual state of affairs and the assurances contained in the reply to the Speech from the Throne regarding Bulgaria's good relations with all foreign countries. "No one can deny that the relations of the Bulgarian Government with the Governments of all foreign States, including her neighbours, are good and correct. But it is equally true that there is a general uneasiness in the Balkans; and this uneasiness is very serious and demands our whole attention." The speaker referred to the revolutionary activities in Macedonia which caused the closing of the Serbo-Bulgarian frontier and to the anti-Bulgarian assaults in the Dobruja which led to a formal protest from Bulgaria to Bucharest. He emphasised the necessity of grappling with the problem in co-operation, and urged that all the Balkan Governments should unite in their efforts to pursue steadily to a finish a definitive policy of pacification and consolidation.

M. Liaptcheff continued:—"I earnestly remind everyone in Bulgaria and elsewhere how serious the situation may become, if we do not succeed in keeping our *sang froid*, and what would be the responsibility of the Bulgarian Government if it did not take in time the necessary measures to avoid any undesirable actions. On the other hand I would express the hope that the Governments of the Balkan Peninsula will consider with the same care the danger involved and that they will do all that is necessary to stamp out this state of uneasiness.

"Not only is the Bulgarian Government doing this, but I am happy to state that all the States, near and far, are convinced that the Bulgarian Government, although in an extremely difficult position, is striving and risking

everything, as far as is in its power, to remove these *malaises* and assure the improvement of the situation.

"That hope is, above all, based on the declarations made by the Yugoslav Minister for Foreign Affairs in the Skupshtina. He says in these declarations: 'The policy of prestige' is a very bad thing. Particularly as far as we are concerned. I have thought, and I still think, that in our relations with our neighbours, especially with Albania, Bulgaria and Greece, we must avoid following a 'policy of prestige and of adopting a certain attitude of supremacy, not only because that in general is not *élégant*, as M. Raditch says, but more particularly because I realise that we must one day arrive at a general collaboration on the basis of the equality of rights.'" M. Marinkovitch further pleads for this collaboration for which the hand is extended on the part of Bulgaria.

"That is why," added M. Liaptcheff, "regarding the closing of the Yugoslav frontier as quite provisional, the Bulgarian Government is every moment expecting this measure to be withdrawn and normal relations to be re-established between the two countries, relations for the re-establishment of which the Bulgarian Government has proved its patience in not taking analogous measures."

In a similar strain, M. Liaptcheff turning to relations with Roumania, spoke in praise of the alacrity with which the Roumanian Government ordered a rigorous inquiry into the regrettable excesses committed by the *Tzintzars* against the Bulgarians in the Dobruja, as soon as the complaints of the Bulgarian Government were made known to it. He also appreciated the decision of the Cabinet at Bucharest to take the required measures to prevent a repetition of these cruelties.

Lastly, passing to the relations with Greece, which he described as very good, the President of the Council spoke of the Greco-Bulgarian exchange of populations and especially of the liquidation of the property of the emigrants on either side, liquidation which, as is known, had recently raised certain difficulties. According to the terms of the special convention in force the emigrants must receive, on the basis of the official estimate of their property left in Macedonia, 10 per cent. of the value in ready money and 90 per cent. in bonds payable by redemption after 12 years. The National Bank of Bulgaria delivers these bonds in the name of the Greek Government, which does the same with regard to the Greeks who have left Bulgaria to find refuge in Greece. But the interested parties complain that these bonds are now quoted so much below their market value that they are only worth 30 per cent. instead of 90 per cent. of the value of their property according to the official estimate. It follows that if the total of the sums which must be recovered in this way by the Greek and the Bulgarian refugees is calculated, the latter must receive indemnities exceeding by about 1½ milliard leva the value of what is owing to the Greek emigrants. Now the eminent persons at the head of this liquidation have decided to ask the League of Nations (or its Financial Committee) to extend beyond the 12 years arranged for in the Convention the date of payment of these bonds and in addition that the neutral Powers (or other intermediaries) should guarantee the whole payment of the bonds. "Let us hope," the President of the Council concluded, "that that just proposition be adopted: for it would powerfully contribute to calm the present uneasiness of the unfortunate Bulgarian refugees."

Cairo, December 10.

Reply to the Speech from the Throne.

The salient feature of this week's Parliamentary meeting has been the voting of the reply to the Speech from the Throne. The reply was noteworthy for its cordial references to the King's visit to Europe and to the friendly relations with Great Britain, and, generally speaking, the only opposition came, as was to be expected, from Nationalist quarters. A proposal was put forward that the debate should be postponed until Sarwat Pasha had given the Chamber information on what had happened in London. It was rejected with only seven votes in its favour, and the Chamber passed the proposed text, accepting willingly the Premier's explanation why no reference was made in the King's speech to the memorials to Saad Pasha. This sitting was a re-affirmation of the strong position which Sarwat Pasha appears to have acquired and the desire of the majority of the members at present at any rate not to force the issue on any vital points.

The Soviet Cotton Deal.

At last the deal with the Soviet Government for the sale of the cotton held by the Egyptian Government has been put through, though it turns out that the Russians are not taking the whole quantity as was at first intended. There has been considerable delay, owing mainly to the dilatory methods of the purchasers, which not unnaturally gave rise to the suspicion that there was never any intention on the part of Moscow to buy the cotton but that the proposal was merely a clever ruse to get into the country and set up contact with agents who would carry on propaganda. The Egyptian Government appear to have effected a good deal. The total taken by the Soviet is 100,000 kantars out of a total of 500,000 kantars. It is all the "good" the Egyptian Government had which is the lowest quality Moscow can take. Of this 82,000 kantars is Sakellaridis and 22,000 Upper Egypt, and the average price is three to four dollars above the spot price in Alexandria. For the Egyptian Government the result is good. Most of the cotton was purchased in the neighbourhood of 33 dollars for Sakellaridis and 20 dollars for Upper Egypt. To this have to be added expenses and losses due to storage for over a year, but the spot prices are respectively 34 and 26 dollars; it can be seen, therefore, that from the Egyptian standpoint the deal has been advantageous. On the other hand, leaving out of account any political considerations favouring a deal in Egypt itself, the Soviet has done well, since it would have had to pay a good deal more if it had purchased as usual in Liverpool and shipped thence to Moscow. The only thing that is troubling everyone is that for taking delivery of this cotton the Soviet has to be allowed to keep one or two experts in Egypt. This opens the door to the propagation of their propaganda, which has so far been so successfully kept out of the country. But, frankly speaking, no one likes the position.

The Afghan King.

All arrangements have been made to receive the visit of the King of Afghanistan, who is due to arrive in Cairo

at Christmas. He will be accompanied by the Queen, the Minister for Foreign Affairs, the President of the Chamber and a numerous suite as well as his sister and sister-in-law. The Royal party will make a stay of a week in Egypt during which they will be the guests of King Fuad. As the alterations to Abdin Palace are not yet ready they will be accommodated in the Abusbaa Villa at Giza, which has been specially rented for them, while the members of their suite will find quarters in the Semiramis Hotel.

The Nile.

The Ministry of Public Works has issued a *communiqué* warning the public as well as the Navigation Companies, that, owing to the unusual drop in the levels on the upper reaches, the river will be more than normally low during the winter months, particularly from the 15th inst onwards. Inquiry at the Navigation Companies, however, shows that there is no anxiety with regard to the possibility of their steamers not keeping to their programmes. It is pointed out that navigation does not altogether depend on the level of the river, but on channels. Often the river has been phenomenally low for irrigation purposes but has in no way impeded navigation, since the channels have proved to be sufficiently deep for the steamers. Contrariwise, it has not been usual for the steamers to find navigation difficult in years where there has been an abundance of water according to irrigation ideas. The reason is that navigation does not depend on the actual level of the river, but on the manner in which the flood has cut the channels, and the latter have retained their contour. There is, therefore, at present no reason to fear any interruption in the usual Nile services.

Egyptian Army Tournament.

The Egyptian Army held their Tournament this week on the racecourse of Heliopolis. King Fuad was present and with him in the Royal Box were Lord Lloyd and the Diplomatic Corps. The Tournament from beginning to end was a great success, the drilling and cavalry and gymnastic displays being particularly good, while the battle scene at the close in which the Army and Frontier Districts Administration collaborated was one of the most realistic performances we have seen out here. The organisers of the Tournament are certainly to be congratulated on the success of their efforts, particularly in regard to the accommodation allotted to the guests—which this year left nothing to be desired.

The Medico-Legal Department.

Egyptian, especially legal, circles have been much shaken by the discovery of a serious scandal in the medico-legal branch of the Parquet of the Native Court of Appeal. For some time there had been whispers of corrupt practices in the chemical laboratory to which are sent for analysis all the suspicious specimens seized in connexion with crimes. Particularly was it mooted that all was far from well in the matter of the investigations carried out in connexion with the drug traffic. The heads of the Department conferred and decided to effect close supervision over the chemical laboratory. They succeeded in assuring themselves that the rumours were well-founded, and in order to obtain final conclusive evidence they decided to lay a trap for the Director in connexion with a case, in which the guilty party had confessed to having tried to bribe him. They accordingly caused to be substituted for samples of heroin submitted to him other samples of the purity of which they themselves were absolutely certain. In due course the Director produced a report certifying that these samples were not what they purported to be but were quite innocuous and so the last link was forged. Perquisitions were made at his house and compromising documents were discovered showing that this falsification of reports on heroin, cocaine and so forth, in return for pecuniary compensation had been going on for some time, and that quite a number of persons were implicated. Several of the latter have since confessed, and the Director has been arrested and will in due course come before the Assizes.

THE ANGLO-IRAQI TREATY.

Treaty Between His Britannic Majesty and His Majesty the King of Iraq.

His Majesty the King of Great Britain, Ireland, and the British Dominions beyond the Sea, Emperor of India,

And His Majesty the King of Iraq,

Desiring to consolidate the friendship and to maintain and perpetuate the relations of good understanding between their respective countries; and

Recognising that the terms of the Treaties of Alliance signed at Baghdad on the 10th day of October, 1922, corresponding with the 19th day of Sa'far, 1341, Hijrah, and on the 13th day of January, 1926, corresponding with the 28th day of Jamadi-al-Ukhra, 1344, Hijrah, are no longer appropriate in view of the altered circumstances and of the progress made by the Kingdom of Iraq and stand in need of revision; and

Considering that the revision of the terms of the said Treaties of Alliance can best be effected by the conclusion of a new Treaty of Alliance and Amity:

Have agreed to conclude a new Treaty for this purpose on terms of equality and have appointed as their plenipotentiaries:

His Majesty the King of Great Britain, Ireland, and the British Dominions beyond the Sea, Emperor of India,

For Great Britain and Northern Ireland: The Rt. Hon. William George Arthur Ormsby-Gore, M.P., Parliamentary Under-Secretary of State for the Colonies; and

His Majesty the King of Iraq:

Ja'far Pasha al Askari, C.M.G., Prime Minister and Minister for Foreign Affairs. Who having communicated their full powers, found in due form, have agreed as follows:—

ARTICLE 1.

His Britannic Majesty recognises Iraq as an independent sovereign State.

ARTICLE 2.

There shall be peace and friendship between His Britannic Majesty and His Majesty the King of Iraq. Each of the High Contracting Parties undertakes to observe friendly relations towards the other and to do his best to prevent in his own country any unlawful activities affecting peace or order within the other's territory.

ARTICLE 3.

His Majesty the King of Iraq undertakes to secure the execution of all international obligations which His Britannic Majesty has undertaken to see carried out in respect of Iraq.

His Majesty the King of Iraq undertakes not to modify the existing provisions of the Iraq Organic Law in such a manner as adversely to affect the rights and interests of foreigners or as to constitute any difference in rights before the law among Iraqis on the ground of difference of race, religion, or language.

ARTICLE 4.

There shall be full and frank consultation between the High Contracting Parties in all matters of Foreign Policy which may affect their common interests.

ARTICLE 5.

His Majesty the King of Iraq agrees to place His Britannic Majesty's High Commissioner in a position to give information to His Britannic Majesty regarding the progress of events in Iraq and the projects and proposals of the Iraq Government, and the High Commissioner will bring to the notice of His Majesty the King of Iraq any matter which His Britannic Majesty considers might prejudicially affect the well-being of Iraq or the obligations entered into under this Treaty.

ARTICLE 6.

His Majesty the King of Iraq undertakes, so soon as local conditions in Iraq permit, to accede to all general international Agreements already existing or which may be concluded hereafter with the approval of the League of Nations in respect of the following:—

The Slave Trade.

The Traffic in Drugs.

The Traffic in Arms and Munitions.

The Traffic in Women and Children.

Commercial Equality.

Freedom of Transit and Navigation.

Aerial Navigation.

Postal, Telegraphic or Wireless Communication, and measures for the Protection of Literature, Art or Industries.

His Majesty the King of Iraq further undertakes to execute the provisions of the following instruments in so far as they apply to Iraq:—

The Covenant of the League of Nations.

The Treaty of Lausanne.

The Anglo-French Boundary Convention.

The San Remo Oil Agreement.

ARTICLE 7.

His Majesty the King of Iraq undertakes to co-operate, in so far as social, religious and other conditions may permit, in the execution of any common policy adopted by the League of Nations for preventing and combating disease, including diseases of plants and animals.

ARTICLE 8.

Provided that the present rate of progress in Iraq is maintained and all goes well in the interval, His Britannic Majesty will support the candidature of Iraq for admission to the League of Nations in 1932.

ARTICLE 9.

There shall be no discrimination in Iraq against the nationals of any State, member of the League of Nations, or of any State to which His Majesty the King of Iraq has agreed by Treaty that the same rights should be ensured as it would enjoy if it were a member of the said League (including companies incorporated under the laws of such State), as compared with those of any other foreign State in matters concerning taxation, commerce, or navigation, the exercise of industries or professions, or in the treatment of merchant vessels or civil aircraft.

Nor shall there be any discrimination in Iraq against goods originating in or destined for any of the said States.

ARTICLE 10.

His Britannic Majesty undertakes, at the request of His Majesty the King of Iraq, and on his behalf, to continue the protection of Iraqi nationals in foreign countries in which His Majesty the King of Iraq is not represented.

ARTICLE 11.

Nothing in this Treaty shall affect the validity of the contracts concluded and in existence between the Iraq Government and British Officials; in every respect those contracts shall be interpreted as if the British Officials Agreement of the 25th March, 1924, were in existence.

ARTICLE 12.

A separate Agreement shall regulate the financial relations between the High Contracting Parties. This Agreement shall supersede the Financial Agreement of the 25th day of March, 1924, corresponding with the 19th day of Sha'ban, 1342, Hijrah, which shall thereupon cease to have effect.

ARTICLE 13.

A separate Agreement shall regulate the military relations between the High Contracting Parties. This Agreement shall supersede the Military Agreement of the 25th day of March, 1924, corresponding with the 19th day of Sha'ban, 1342, Hijrah, which shall thereupon cease to have effect.

ARTICLE 14.

His Majesty the King of Iraq undertakes to maintain in force the Judicial Agreement signed on the 25th day of March, 1924, corresponding to the 19th day of Sha'ban, 1342.

ARTICLE 15.

Any difference that may arise between the High Contracting Parties as to the interpretation of the provision of this Treaty shall be referred to the Permanent Court of International Justice provided for by Article 14 of the Covenant of the League of Nations. In such case, should there be any discrepancy between the English and the Arabic texts of this Treaty, the English shall be taken as the authoritative version.

ARTICLE 16.

This Treaty shall come into force as it has been ratified and ratifications have been exchanged in accordance with the constitutional methods of the two countries, and shall be subject to review with the object of making all modifications required by the circumstances, when Iraq enters the League of Nations in accordance with the provisions of Article 8 of this Treaty. This Treaty shall replace the Treaties of Alliance signed at Baghdad on the 10th day of October, 1922, corresponding with the 19th day of Sa'far, 1341, Hijrah, and on the 13th day of January, 1926, corresponding with the 28th day of Jamadi-al-Ukhra, 1344, Hijrah, which shall cease to have effect upon the entry into force of this treaty.

In faith whereof the respective Plenipotentiaries have signed the present Treaty and have affixed thereto their seals.

Done at London, in duplicate in the English and Arabic languages, this fourteenth day of December, One thousand nine hundred and twenty-seven of the Christian Era, corresponding with the eighteenth day of Jumada al-Thani, One thousand three hundred and forty-six, Hijrah.

JA'FAR AL ASKARI.
(L.S.)

W. ORMSBY-GORE.
(L.S.)

Owing to the conditions of distress prevailing in Northern Albania caused by poor crops and raiding parties, Signor Mussolini has decided to send supplies of food and clothing for distribution among the sufferers, "by way of emphasising the solidarity of human nature and the ties uniting Italy and Albania." Three hundred tons of food and clothing up to last week had already been landed at San Giovanni di Medua and further consignments are to follow. The Albanian Government has telegraphed to Signor Mussolini expressing its gratitude.

A VISIT TO MACEDONIA AND OLD SERBIA.—I.

(From a Correspondent.)

The writer has just returned from a visit of six weeks' duration to Macedonia (Southern Serbia) and Kosovo Plain (Old Serbia). He also visited Sofia and Belgrade, where he had an opportunity to speak with many persons, from M. Buroff, the Bulgarian Foreign Minister, to the leaders of the Macedonian Revolutionary Organisation; from members of the Radical Party in Yugoslavia to M. Stepan Raditch.

One week was spent in Kosovo Plain and the surrounding districts, and as the problems to be met with there are to some extent dissimilar from those associated with Macedonia, it is proposed to deal with this part of the journey separately.

Prishtina, Mitrovitza, Ipek, Djakova and Prizren were visited. Although this area is regarded by all Serbians with especial veneration as the cradle of the independence of their race and the centre of the empire of Tsar Dushan, the overwhelming majority of the population consists to-day of Mussalman Albanians, who settled in the Plain during the Turkish rule (chiefly during the 17th and 18th Century) and dispossessed the Slavs. In Ipek, Djakova and Prizren, there are a few thousand Catholic Albanians. Nowhere apart from officials of all kinds, and soldiers, is there more than a small handful of Serbians and Montenegrins.

It is the case that none but Serbian schools exist. Ordinarily, however, religious instruction is given to the Mussalmans for one hour a day in their native tongue. An attempt was made several years ago to form an Albanian party in association with the Dzemijet "Turkish" party. This party was, however, in effect suppressed by the authorities some two years ago. An Albanian named Ferad Bey Draga has been imprisoned for three years, charged with a murder supposed to have been committed in Belgrade during the Austrian occupation. This man, in spite of several acquittals, has recently been re-arrested. It is stated that his real offence lay in his connexion with this Albanian party.

Throughout Kosovo there are only three Albanian deputies; for the rest, the district is represented in the Skupshtina by Radical and Democrat Serbs, including several Ministers. The writer gives for what it is worth a story told him by a minor Serbian official who had supervised the elections in a village close to the Albanian frontier. To his great surprise the village voted solidly for a Radical Serb as against an Albanian Democrat. He asked the Mayor for an explanation. "Last time we voted Democrat and half our village was imprisoned. No one could get a pass to leave the village to go to market. It is for my people's sake that I have become a Radical. My father stays a Democrat." And there was the father presiding over the Democrat voting-urn. Such incidents, whether this one was real or imaginary, are, of course, unfortunately commonplace in all Balkan countries.

The writer's impression was that the amount of active dissatisfaction in Kosovo is not very great. This is attributable to a number of causes. In the first place material conditions are on the whole fairly satisfactory. The country is fertile, taxation heavy, but not insupportable, and relative peace is enjoyed by towns and villages which have never known much peace in the past. The Agrarian laws were carried out with some thoroughness, and the properties of dangerously powerful Beys, distributed among the peasantry. Finally, Albanians of Kosovo realise through personal experience of life across the frontier in independent Albania that in some ways they are better off.

At the same time it is possible that Yugoslavia has thrown away a great chance of having really contented subjects in Kosovo. Minority schools for the Albanian-speaking children, the employment of a much larger

proportion of local officials, and permission for genuine local political life would be wise concessions.

In Yugoslav Macedonia the writer stayed for some time in each of the following towns: Uskub, Monastir, Kochane, Shtip, Strumnitza and Ghevgheli. In addition he paid shorter visits to numerous other towns and villages.

It is probable that Macedonian Slavs constitute to-day, owing to the emigration of other elements, some 70 per cent. of the population. Scholars will always disagree as to the exact ethnological affiliation of these Slavs; will weigh against one another the use of Serbian customs such as the "slava" and the employment of the definite article as in Bulgarian. It may be sufficient for us to recognise that after the Balkan War, the Yugoslav Government had to deal not with a population composed of undifferentiated Slavs ready to become Serbian or Bulgarian as influence was brought to bear upon them; but with a population relatively highly educated by reason of propaganda, and of strong Bulgarian sympathies owing to Bulgarian schools and the Bulgarian Exarchate. It cannot be denied that the Yugoslav Government has not always acted wisely in dealing with the difficult problem presented by her Southern province. There are no minority schools for the Macedonian Slavs, who are officially regarded as Serbians, nor for the Albanians, Turks, Kutzo-Vlachs, Jews, etc., who form the rest of the population. The only exception to this rule is that some provision has been made for Turkish-speaking children in the lowest classes of the primary schools; but this provision seemed confined in the first place to religious instruction, and in the second to teaching Serbian to those pupils quite numerous in Ghevgheli, Kumanovo and elsewhere, who know nothing but Turkish. It must be stated that almost without exception Serbian teachers are employed in all schools, and that unhappily a proportion of them are exceedingly fanatical. Teachers of Macedonian origin are sent to other parts of the kingdom. There are French schools at Uskub and at Monastir; but during the afternoon, these schools are visited by local Serbian masters who give instruction in the Serbian language, literature and history.

The writer was informed that about 50 per cent. of the officials were of local origin, but he thinks that among the higher officials the proportion must be very much lower. As a result of the attempt made to staff the whole of Yugoslavia largely with Serbian officials, and to the losses suffered during the War, it is admitted that many of the civilian officials, and the police especially, are not of the best quality. Service in Macedonia is regarded as an exile, and is too often reserved for officials without special influence, or ability, and for those who are not on good terms with the Government. It is claimed that during the past few years there has been some improvement in this respect owing to the influx of young men.

Some reference has already been made to the elections in Kosovo. It will be convenient here, if the accusations made by M. Stepan Raditch are summarised. M. Raditch states that as a tactical move he put forward in Macedonia lists at the head of which stood the name of a Croat, while the body of the list was composed of local men. M. Raditch usually chose not pro-Bulgarians, but local Serbs, those whom the Bulgarians had prosecuted, but individuals whom he describes as true democrats who were in favour of local self-government for Macedonia. Not one list was allowed to be presented. Often the police visited signatories, and persuaded them by means of threats, to withdraw their names. The lists themselves were seized and destroyed. Formal objections were lodged, not twenty-four hours after the list had been received as the law enjoins, but at the last moment, so that no new list could be presented. In Monastir, the names were collected, printed and exposed in a tobacconist's. All the world knew that there were

one hundred names supporting M. Paul Raditch's list; yet, on some formal grounds which could not be explained, the tribunals refused to accept this list. The Croats sent three "expeditions" to Macedonia. M. Stepan Raditch states that the members of these "expeditions" were all attacked by police "en civil." M. Paul Raditch and Dr. Schwegel were both quite seriously wounded.

When all allowance has been made for M. Stepan Raditch's peculiar temperament and for the fact that at present he is particularly bitterly opposed to the Government, independent investigations go to prove the general truth of his charges. It is a matter of general comment that out of thirty-eight Jupans (Governors) only ten are Democrats. Apart from any direct interference by the authorities, any village naturally tends to vote for the list of the party of which the Jupan is a member, in the hope of receiving favours and averting disfavour.

As in every Balkan State, there exists in Yugoslavia a special law for the preservation of public security. Repressive use is made of this law in Macedonia. In addition, justice marches very slowly; legally, any prisoner must be brought before the Tribunal within three months, but the Court of Cassation has the power indefinitely to extend this period and commonly does so in political cases.

Apart from grievances arising out of the state of affairs which the writer has described, he received certain specific complaints. The Government has a complete monopoly of the purchase of tobacco, and is accustomed to give very much less than the world price, especially in the frontier districts. As little as 5 or 6 dinars per kilo is paid. The people themselves are convinced that the reason for this is fear lest the villagers shall be enriched, and enabled to give money to the *komitajis*.

The Jupan Matkovitch, who was formerly Jupan of Shtip, claims credit for the policy of giving a certain number of rifles to the inhabitants of the towns and villages near the frontier. He asked the writer if this did not show great confidence in the population. The answer given was that while the *komitajis* only came from time to time, the police were always there. Actually, it is a grievance that apparently without any legal authorisation, the able-bodied men are driven out to keep watch upon the mountains, and made responsible for the passage of *komitajis*.

Material conditions in Macedonia are not unnaturally far from satisfactory. There has been a marked fall in population, of which the most striking example is that of Monastir. The population of this town, in 1912, was 80,000 and in 1914 some 45,000, and to-day it cannot be more than 26,000. This heavy fall is partly attributable to the voluntary emigration of Mussalmans to Asia Minor, an emigration which continues to-day. But it is also due to the general conditions of uncertainty and instability in which people live. It was commonly said that Macedonia was still living in a state of war. Every adult male who wishes to leave his native town or village must take with him a pass provided or withheld according to the good pleasure of the authorities. The necessity for the production of this pass is a very frequent one. The fear of terroristic acts by the Revolutionary Organisations is a very real one. Naturally, after actual incidents the condition of life for the population becomes still more difficult; for instance, the local authorities have it in their power to institute a curfew, and I found such a curfew in force at 8 p.m. at Shtip, and at 7 p.m. at Ghevgheli.

Some considerable difficulty was experienced in gaining the confidence of members of the population and inducing them to speak freely. Nevertheless, this was in fact achieved with a considerable number of individuals. What do the inhabitants themselves want, and do they approve of the terroristic activities of the *komitajis*? The writer is convinced that near the Bulgarian frontier there is substantial general sympathy with the objects of the Revolutionary Organization, and that this sym-

pathy, although to not such a marked degree, exists throughout Serbian Macedonia. But the bulk of the population would probably be content with some sort of local self-government, such as the Raditchists and a section of the Democrats are willing to concede. The bomb-throwing exploits of the Committee are almost universally condemned. It is probable that during the past five years, the Committee has lost somewhat in influence. The passage of time and Serbian propaganda cannot fail to have some effect. In addition the villagers have given to the Committee their hoarded stock of Turkish gold, and must now pay out of their current earnings. The consequences of terroristic acts are very unpleasant for the population and it is natural that only the most fanatical should fail to feel some resentment against the Committee.

(To be continued.)

THE TATAR INVASIONS.

Sir Denison Ross lectured to the Central Asian Society on December 14 upon "The Invasions and Immigrations of the Tatars." General Sir George MacMunn presided over the lecture, which was given in the Room of the Royal Society, Burlington House.

Sir Denison spoke of the difficulty of distinguishing between Tatar, Mongol, and Turk. First he described the great China Wall, which he said led to the downfall of the Roman Empire. For the inhabitants of Mongolia, who on their ponies found the Great Wall, built during the reign of successive Emperors, quite impassable, turned their attention to the south-west. Wave after wave left the region of Karakorum, south of Lake Baikal, for the south-west. It was necessary, however, to distinguish between mere raids, such as those of Mahmoud of Ghazna or of Tamerlane, and the vast immigrating movements of Ghingiz Khan or of the Seljuk Turks. When the Mongols were out to destroy they destroyed thoroughly; in the region of Khurassan, for instance (which was much bigger than the present Khurassan, and contained Merv, Nishapur and Herat) there was hardly any old architecture left. The fear which the Mongol invaders put into Asiatics, particularly the Persians, was incredible, but it should be remembered how nearly Europe itself was overrun by these fierce Tatars. Only in 1481 was the danger definitely quelled on the Danube. Another period when Europe was in danger of being overrun by the East ceased only with Charles Martel's victory over Arabs and Berbers in France itself.

The lecturer called attention to the fact that all the big rulers in the East were of Turkish descent, whether the Seljuks or the Ottomans or the Moghul dynasty in India, or the Qajars in Persia: even the Safavi were really not pure Persians. Another suggestive hint which he threw out was, in a attempt to distinguish between Tatar and Turk, in the statement that the Tatar naturally turned towards Buddhism, the Turk towards Islam. What the Seljuks had done for Islam was enormous, for they revived it at a time when the Caliphs at Baghdad were weak and the Franks had obtained a strong hold in Western Asia.

In conclusion, Sir Denison, before showing some photographs of the Great Wall and of Bukhara and Samarkand, spoke of the present condition of the "Khanates," of Enver Pasha's attempt after the Great War to found a Pan-Turanian State, and of the Soviet's subsequent creation of Turkomenistan, Usbegistan and Khirgizistan.

In the discussion, Miss Gable spoke of a recent visit to Mongolia. She described the vivid interest of the in-

habitants, now under Russian influence, in the affairs of the West.

Mr. Gibb suggested that the destruction so commonly imputed to the Mongols was possibly exaggerated. The "Black Deaths" of Asia probably were a far more potent cause of the decay of Western Asia than were the ways of the Mongols. He further emphasised the lecturer's point that distinction must be made between invasion by an army and immigration by a people. The Turks, for instance, had been in Anatolia for only about 800 years; yet everybody regarded the place as Turkish without another thought.

The Chairman illustrated the lecturer's remarks about the fear which the Mongols inspired by recalling how, in 1919, some Mongolian troops had been sent to Southern Kurdistan to quell Shaikh Mahmoud of Sulaimania. The Kurds had been utterly discouraged by this element in the British force. Indian troops, again, spoke to this day of "Khurassan" as a much bigger entity than the present Persian province. Quetta, even, was regarded as being in Khurassan.

ST. NICHOLAS DAY IN SLOVENIA.

Santa Claus is well known to English-speaking children of all ages and climes. His real name is Saint Nicholas, the friend of children, something of a pedagogue, perhaps, but a kindly one. In Britain and America his arrival is delayed until Christmas, doubtless because on his own day, December 6, he is too busy keeping old-standing engagements on the Continent of Europe. Even there, as a rule, St. Nicholas Day is observed mainly for the benefit of the young folks; little gifts and greeting cards are exchanged; it is a kind of prelude to the larger bounty of Christmas. In the Slovene lands, however, St. Nicholas, or Sveti Miklavzh, as he is locally called, is still held in high honour by everyone alike. Year after year he returns, for preference on the evening of December 5, with pomp and jollity, with rewards and penalties for old and young, and suitable retinue to carry out his behests. He is a hardy old saint, too, not afraid of the severities of our Alpine winter. Some years ago we had record frost and snow at the beginning of December. The first ski-runners were out, getting excellent fun out of the powdery snow under a brilliant sun. Of a sudden we were bidden to stand at attention. Sv. Miklavzh was coming in person—and on skis! Hard upon the announcement followed the arrival of the sainted bishop, immensely tall and imposing, in flowing ecclesiastical robes, with mitre and crozier all complete. He swept down the gleaming slope on long skis, closely followed by a white-robed angel (looking rather frozen, poor dear!) with a bag of gifts, and a black and crimson fiend to whom the prevailing arctic conditions ought to have caused more inconvenience than to his celestial *confrère*. Then and there upon the snow Sv. Miklavzh dispensed rewards to the good from the angel's store; evil-doers were set upon by the other party.

But as a rule, Bishop Miklavzh prefers to receive more conventionally indoors. Then every hall where he is expected to put in appearance is closely packed—even our big hall which holds three thousand and would surely be accounted a sizeable hall anywhere; and the saint's retinue is befittingly large and splendid. A galaxy of angels attends him, sometimes an archangel or two confer special distinction. Two shining ones hold the great book of names and records. Others are loaded with gifts. Behind the angels, but constantly butting their way to the front, sprawling all over the platform and even invading the public of mortals, lurks the troop of devilkins, black, red and green—an athletic, mischievous company. Sometimes they are chained together, but I have never noticed any sobering effect of this restraint. Only a degree less popular than Miklavzh himself is St. Anthony in the guise of a jovial friar (more like Friar Tuck than my idea of St. Anthony), who practically always accompanies the saint on his earthly rounds. It is St. Anthony who pro-

fects little boys and girls from the boisterous fiends when these come rampaging down the hall; it is he who scatters largesse of nuts and biscuits and offers a pinch of snuff out of an old-fashioned snuff-box to the grown-up. He also carries a bag and is not above collecting alms for some worthy purpose (such as e.g. the training of Yugoslav competitors for the winter Olympiad).

No company is too simple or too humble to be honoured by a visit from Sveti Miklavzh, and that he is broadminded and up-to-date he showed by accepting a special invitation from the mountaineering club *Skala* this year. Many a time have I seen the good saint; but never before had he appeared quite so burly and powerful. The attendant fiends were marvels of speed and liteness. St. Anthony, though more like the forest friar than ever, was several times hard put to it to keep them at bay. His angels, too—they looked rather like a conventional illustration of the *non Angli sed angeli* episode in English history—seemed to have heard something about muscular Christianity; I noticed that when one of the devils was too persistently teasing (ragging the angels is naturally excellent sport for devils and a recognised part of the game) one of them landed the said devil a well-calculated hack on the shin—surely a most un-angelic thing to do!

Sveti Miklavzh addressed the company as he always does. He commends and criticises, deplores frivolous innovations and the evil of our days; then he turns to the book and reads out the name of someone present. If the person called hesitates to obey the summons, the devils at once rush off to hail him before the bishop by force. Next follows a brief examination. Candidates who reply satisfactorily to the saint's questions receive their gift at once and are allowed to depart in peace. As for those who fail in the test, a hint from Miklavzh calls up the powers of darkness. Stalwart imps fall upon the unfortunate wight and drag him, struggling with all his might, to some place of torment, whence he presently emerges to be dismissed to his seat, a good deal ruffled as to hair and clothes, but otherwise none the worse—never have I seen this part of the pageant spoiled by real roughness—and the richer for his gift; for none of Sveti Miklavzh's guests is allowed to go empty away.

Neither Miklavzh nor his attendants despise modern resources. They parade the town in motor-cars, with Lucifer at the wheel and electric lamps glowing in the angels' halos, while St. Antony scatters nuts and biscuits as he did in the old unmechanical days. The mountaineers' Lucifer was mightily up-to-date. He forced his victims to sit in a broken-down armchair through which was passed an electric current, and sinners were suitably "shocked." But even the united efforts of three devils failed to overcome the determined resistance of more than one sturdy cragsman. Which is as it should be and as all good mountaineers fervently believe.

The dominant colour of St. Nicholas' festival is the flame red of terror, and no gift is complete without a rod bound up with it. The rod may be as tall as yourself or as small as your little finger. But the tall rod is garlanded with bright-coloured paper strips; the little rod is prettily gilt, and the parcel itself tied with gold. For the terrors and penalties of Sveti Miklavzh are all symbolical. The charity, good will and gaiety are actual and from the heart, bringing a golden gleam into these gloomiest and shortest days of winter, and putting us into the right frame of mind for the rebirth of Light and Love.

F. S. C.

An American industrial and scientific mission, which is on its way to Abyssinia and is headed by Mr. H. C. Peters, arrived at Cherbourg on December 16 on board the Olympic.

The Budgetary Commission of the Roumanian Parliament has allocated a sum of 10,000,000 lei (£12,000) for instruction in the Jewish faith.

Jewish unemployed at Petach Tikvah had a serious brush with the British police on December 16, 15 Jews being wounded and 17 arrested. The unemployed Jews in the colony, numbering 600, have been agitating against the action of the Jewish orange grove owners in employing Arabs to pick fruit. Armed British police were sent to occupy the colony.

GREECE IN THE WAR AND SINCE.

A meeting of the Near and Middle East Association, held by kind permission of Sir John and Lady Brunner at 43, Harrington Gardens, S.W.7, on December 16, was addressed by Sir John Stavridi and Sir Edward Boyle. The subject of discussion was Greece; Sir John Stavridi dealt with the part played by Greece in the Great War, and Sir Edward Boyle confined his address mainly to the present situation in the country.

Sir John Stavridi stated that he had been wondering why the Near and Middle East Association had gained a reputation for being anti-Greek, and he thought that he had found the reason in the clauses of their Articles of Association which laid special stress on the cultivation of friendly relations with Muslim countries. As Turkey had been the leading Muslim State, it was inevitable that she should be the subject of the particular attention of the Association, and the antagonism between Greece and Turkey inevitably threw it into the opposite camp. Now, however peace between Turkey and Greece had been established, and there remained not more than one or two points that tended to keep them apart—the question of the Patriarchate being one. It was, therefore, appropriate that the Association should devote an evening to the subject of Greece, and in order to clear up any misunderstandings that might remain in the minds of his audience, he proposed to deal with certain aspects of the Great War in so far as they concerned Greece. Sir John Stavridi then gave an interesting account of the inner history of Greek action in regard to Asia Minor. He maintained that it was not the Greeks, but the Allied Governments, who had first directed Greek attention to Smyrna, by suggesting that Greece should receive territory there in compensation for what she was to surrender in Macedonia; that the actual landing at Smyrna was not made at Greek prompting but on the direct instructions of the Supreme Council; and that the Allies were equally responsible for the advance of the Greek forces into Asia Minor. In each instance the speaker gave chapter and verse for his contention. He had been closely associated with M. Venizelos during the period in question, had accompanied him to Paris, Lympne and elsewhere, for consultations with the Supreme Council, the Allied military commanders and individual heads of the Governments. Sir John Stavridi laid special stress on the part played by the Greek troops in saving the British forces threatened by the Turkish advance towards the Ismid-Brussa sector, and gave a graphic account of the differences of opinion of the military authorities as to how quickly the relief could be accorded from Smyrna. Sir Henry Wilson told M. Venizelos that the British could hold out for four weeks. Marshal Foch was positive that the Greeks could not reach Brussa in less than three months. The Greek Commander-in-Chief in Smyrna promised relief in a fortnight and actually reached Brussa in eleven days from the date of leaving Smyrna.

Sir Edward Boyle pointed out that the Zaimis Government had scored a big success in the field of finance. It contained on the one hand representatives of most of the Venizelist groups (with the important exception of the refugees, who were all politically-minded and keen republicans) and on the other hand, representatives of one monarchist group out of four. Two questions called for early settlement, the question of the Free Zone at Salonika in regard to which the Government had rejected the arrangement provisionally made by General Pangalos and Yugoslavia, and the question of an economic outlet on the Aegean for Bulgaria. Sir Edward expressed some doubt as to whether the present régime in Greece would last, and drew comparisons between the condition of Greece since the departure of King George II, and the events which took place before the arrival and after the expulsion of King Otho. Events since 1914 had inevitably left much latent bitterness, and it was too soon to be able to judge impartially of the parts played respectively by King Constantine and by Venizelos. The Royalists had had to bear the entire blame for the disasters in Asia Minor, in

his opinion unfairly, and the execution of public men (some of them bearing names which had served Greece for generations) had left its mark. He voiced the question why there was imperfect sympathy between Greek public opinion and such a body as the Balkan Committee in this country, and he found the explanation in the fact that the intense pride felt by the Greeks in the achievements of their race and in the services rendered by them to civilisation makes them intolerant of those who take a Balkan view of Balkan problems. There were various matters in regard to which the Balkan Committee had always supported Greece, and the speaker instanced the rights of the Patriarchate of Constantinople, the need of assistance in order to enable the Greek Government to complete the work already begun by M. Kaphandar in putting the national finances on a more satisfactory footing and to further refugee settlement; the question of opening to Greeks some of the higher posts in the administration of Cyprus; and lastly the Aegean Islands, of which he traced the recent history, emphasising the hardship and the injustice that they should still remain under alien rule. In conclusion Sir Edward Boyle remarked that, although individual public men could properly be regarded as champions of one Balkan State or another, the most useful service which organisations such as the Near and Middle East Association or the Balkan Committee could render was to avoid partialities, and to endeavour to bring the various peoples into closer touch, while at the same time urging solutions on an equitable basis of those questions which stood in the way of Balkan unity. He expressed the goodwill of the Balkan Committee toward the Greek nation and toward the Hellenic race throughout the world.

Among those who took part in the discussion were Archbishop Germanos of Thyatira, Archdeacon Beresford Potter and Commander Williams. Captain E. N. Bennett was in the Chair, and among those present were:—Lord and Lady Strathspey, Lady Emott, Sir John and Lady Brunner, Lady Boyle, the Dowager Lady Boyle, the Hon. Lady White-Thomson, Lady Stavridi and the Misses Stavridi, Sir William Clark, Sir Henry Penson, Sir Frederick and Lady Graham, Lady Tighe, Lady Hewitt, the Hon. Katherine Thring, Dr. Tchitchowsky, Mrs. L. Cobham, Mrs. and Miss Eckstein, Mr. and Mrs. James Conchie, Mrs. William Paget, Miss Sylvester Samuel and M. Emil de Nagy.

King Fuad of Egypt on December 15 opened Lady Lloyd's bazaar held in Cairo in aid of child welfare.

NOTES OF THE WEEK

(Continued from page 771.)

which certain people, including some Englishmen, have in regard to the Roman Catholic attitude towards the British Mandate in Palestine, to quote a few striking and very pleasing remarks. "Lord Plumer," said this Catholic Bishop, "is one of the most valuable servants that the British Empire has to-day; and that is saying a great deal. He is a man of consummate tact . . . he has won the confidence of everybody." Bishop Kean, who is an Englishman, by the way, then praised the security and the justice of present Palestine. He affirmed that the irritability as between Arab and Jew was passing away, and he praised the energy of the Jewish immigrants. In the matters of education and health considerable progress had been made. In fact, the Bishop regarded Palestine "as one of the most peaceful places within the British Empire," and he considered "the outlook for the country very hopeful indeed." Now all these things are, of course, well known to the close student of Palestine, but we have thought it well to set out this estimate which has come, so to speak, from a quite impartial source, and even, if we may be allowed to say so, a potentially critical source. That Bishop Kean has thus spoken is a credit alike to the honesty of his observations and to the Faith which he represents in Jerusalem.

Zionists' Labour Troubles.

In referring last week to the economic "crisis" in Palestine, we mentioned that a contributory cause to it was the difference between the standard wage paid to Jewish workmen and the wage usually paid to Arab workmen. This matter has been sharply illustrated at Petach Tikvah, where, during the last week-end, some unemployed Jews came into contact with the British police. The incident, which was significant not so much for its actual content as for its potential portent, arose in this way. Certain Jewish employers in this agricultural colony, alleging that the wages demanded by Jewish labourers were "uneconomic," introduced the cheap Arab labour for picking and packing oranges. The six hundred unemployed Jews in Petach Tikvah were indignant at what they considered to be the introduction of "blacklegs," particularly at a time when Jewish unemployment was rife; and so, according to the unhappy example of more "capitalistic" countries, they posted pickets to distract the Arab labourers. The summoning of British police was followed by the wounding of fifteen Jewish labourers and the arresting of seventeen more. The remaining Jews, furious at what they regarded as undue violence and the betrayal of their interests, vented their spleen in smashing up the furniture and windows of the Council Hall of Petach Tikvah. The British police then took the matter firmly in hand, and now occupy the colony. The whole situation on which this particular incident throws a lurid light is, as we have already said, unhappy. There can be no doubt at all that the Jewish unemployed acted very unwisely

indeed, because, apart from their defiance of authority, nothing could be more prejudicial to Arab-Jewish co-operation than their hasty and purposeless action. Obviously the demands of the Jewish workmen cannot be satisfied *in toto*; profits in Palestine are not large as it is, and anything in the nature of the stereotyping of an "uneconomic" standard of wages would be fatal to the country. It would appear, then, that either these discontented Jews must leave the country, or they must bear themselves in patience until times are better, not only in Palestine, but in all countries the economic condition of which affects Palestine.

NEWS IN BRIEF.

It has been officially announced that Palestinian-owned vessels are to fly the British Red Ensign defaced on the fly by the word Palestine in a white circular field.

Amid acclamation the Albanian Senate in Tirana on December 13, voted the title of "Saviour of the Nation" to Ahmed Beg Zogu, the President of the Republic.

Dr. Breccia, Curator to the Alexandria Museum, was recently elected an honorary member of the Society for the Encouragement of Hellenic Studies in Egypt.

A Japanese mission, composed of six business men, arrived in Egypt at the beginning of December to organise a permanent exhibition of Japanese products in Cairo and Alexandria.

The death is announced from Alassio of Brigadier-General C. L. Smith, V.C., M.C., who won his Victoria Cross in 1904 in Somaliland. After that date he served with the Egyptian Army. In the Great War he was with the Camel Corps.

It is announced that in view of a certain event being expected at the Royal Palace of Belgrade at the end of January, the annual Court balls in connexion with the birthday (January 9, N.S.) of the Queen of Yugoslavia will not be given.

The Turkish police last week arrested in Galata a band of 15 Greeks and Armenians who are alleged to have printed false Turkish bank-notes in Greece. In their possession were found counterfeit notes for £T25 and £T50 (£2 10s. and £5).

M. Petit, a French financier, has been engaged by the Egyptian Government for three years, at a salary of £E2,000, says the *Sphinx*, to reorganise the Egyptian Customs service and to draft new Customs laws.

The Council of the Egyptian University, Cairo, has appointed Mansour Fahmy, Professor of Philosophy, as delegate of the University to the Congress of Orientalists to be held in August next at Oxford.

Following his conference with the Grand Zhupans of the Yugoslav counties along the Bulgarian frontier, concerning the prevention of *komitaji* activities, the Yugoslav Prime Minister last week decided to keep that frontier closed.

Concerning the reports of the low state of the Nile and the consequent stoppage of Nile steamer sailings, the Tourist Department Association of Egypt states that the sailings of these steamers up to date have been carried out according to time table, with no delays, and that there is no probability of any stoppage.

The trial arising out of the murder of a journalist, M. Hajipopovitch, in July, 1926, ended at Monastir on December 15. One man was sentenced to death, another to 20 years' imprisonment with hard labour, three others to 14 years', and each of the remaining two to five years' imprisonment.

 December 29, 1927 (Old Style).
 Jumada II, 27, 1346 A.H. of the Muslim Calendar.
 Kislev 28, 5688, of the Jewish Calendar.

Mr. and Mrs. William Talbot have left London for the Riviera and Egypt.

Lord Sinha left London last week for India, and will not return until next April.

Lord and Lady Farrar will leave Abinger House, Dorking, on December 29 for India.

M. Bojidar Pouritch, Counsellor of the Yugoslav Legation in Rome, is staying at Claridge's Hotel.

Sir Willoughby Carey arrived on December 16 at Marseilles in the P. and O. s.s. Rasmak from Bombay.

M. Caclamanos, Greek Minister in London, has returned from Geneva to 61, Upper Brook Street.

Mr. S. N. Mallik, who is on leave from the India Council, and Mrs. Mallik have left for India and will return to London in April.

The Hon. Violet Cust joined the s.s. Rawalpindi at Marseilles on December 17 for Port Said, and Lady Cable is a passenger to Bombay.

Viscount and Viscountess Dunedin are leaving London to-morrow (Friday) on a visit to India. They expect to be away for about two months.

Sir Willoughby and Lady Dickinson left Tilbury on December 15 in the s.s. Llandovery Castle for South Africa. They will be away until May.

Lady Robson, Sir Alexander and Lady Bicket, and Sir Francis Couchman last week left London to join the P. and O. s.s. Rawalpindi at Marseilles for Bombay.

King Alexander of Yugoslavia celebrated his 39th birthday on December 17. The day was marked by services in churches and places of worship of all denominations. In London a service was held at the Russian Church (St. Philip's), 188, Buckingham Palace Road.

The Turkish Ambassador has left London to join Madame Ferid Bey on the Riviera. During his absence Shevky Pasha, Counsellor of the Embassy, will act as Chargé d'Affaires.

Lieut.-General Sir William Heneker (upon his appointment as General Officer Commanding-in-Chief, Southern Command, India) had the honour of being received by the King at Buckingham Palace on December 17.

King Amanullah of Afghanistan, who received a most enthusiastic welcome in Bombay, where he took the opportunity to emphasise the desirability of mutual tolerance as between Muslim and Hindu in India, sailed for Europe on December 17 in the P. and O. liner Rajputana.

The engagement is announced between Comte Charles du Bourg, son of Comte and Comtesse du Bourg, of Montflours, La Mayenne, and Mlle. Nelly Sidarouss, daughter of Sesostris Sidarouss Bey, Counsellor of the Royal Egyptian Legation, acting Chargé d'Affaires.

M. Dimitri Stancioff, former Bulgarian Minister to the Court of St. James's, and Mme. and Mlle. Stancioff arrived last week in London from Varna, Bulgaria, and are staying at 62, Courtfield Gardens, S.W. They will spend Christmas in Northamptonshire with Sir Kay and Lady Muir.

Jaafar Pasha, Prime Minister of Iraq, left London on December 16 for Baghdad. He is travelling via Marseilles and Beyrout. Among those at the station to see him off were Muzahim Bey al Pachachi, Iraq Diplomatic Agent in London, Sir John Shuckburgh, Colonel de Satgé (representing the Secretary of State for the Colonies), Mr. Hall (Colonial Office), and Mr. Dojaily, Secretary of the Iraq Diplomatic Agency.

Mr. Claud Frederick William Russell, lately His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Addis Ababa from 1920 to 1925, whose appointment to be His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Berne has been approved by the King, has served, among other places, in Turkey, Egypt, Morocco, and Greece. He was British delegate to, and president of, the International Financial Commission in Athens, and the Treasury representative on the Inter-Allied Commission.

Mr. Willoughby Bullock, President of the District Court, Palestine, has been appointed Chief Justice of St. Vincent, and Mr. S. O. Rowan Hamilton, President, Land Court, Palestine, Chief Justice of Bermuda.

The British, French, Belgian, and United States Legations in Cairo have been asked by the Egyptian Government to submit the names of experts willing to accept an advisory appointment in the Department of Inland Navigation, Wells, and Roads.

During the income-tax debate in the Skupshtina at Belgrade on December 16 there was a serious altercation between the Yugoslav Democrats and the Agrarians. An Agrarian Deputy, who had been injured, drew a revolver with the apparent intention of shooting a Democrat opponent, but was pacified by Slovene Clericals. For reasons unconnected with this uproar the Skupshtina has been prorogued *sine die*.

At a meeting of the Court of Common Council held at Guildhall on December 15, at which the Lord Mayor presided, it was announced that the King and Queen of Afghanistan were to pay a visit to London early in March next. On the motion of Mr. C. A. Stanley Stone, the Chief Commoner, it was resolved to invite their Majesties to receive an address of welcome in a gold box from the Corporation, and to be present after the ceremony at a State *déjeuner*.

BENGAL WATERWAYS.

The reported abandonment by the Government of Bengal of the Grand Trunk Canal project is after all correct. At least there would seem to be no doubt on the point, according to the latest Indian newspapers. The scheme has been under discussion for about a quarter of a century, and though it is not now to be proceeded with nobody can suggest therefore that a decision has been hastily arrived at. Its object was the shortening of the river route from Calcutta to distant points in Eastern Bengal. In the Ganges delta the Bengal Presidency possesses one of the finest systems of natural waterways in the world. This great network of channels largely takes the place of roads in the eastern districts, the rivers being the principal highways of trade and traffic. Calcutta is situated on the Hughli, which is the most westerly of the many streams by which the Ganges pours into the sea. And the Grand Trunk Canal would be a navigable waterway of about 22½ miles long, extending from Calcutta to a place called Kulti on the Kuligong river. The scheme was designed to include an inland harbour in one of the suburban areas of Calcutta; and it was estimated to provide a water frontage, by means of this harbour and connected basins, of nearly fourteen miles. By the alternative route which it would afford it would reduce the distance by river from Calcutta to Narayanganj—the centre of the Eastern Bengal jute-growing districts—from 485 to 277 miles; and the distance from Calcutta to Goalundo—the most important junction for Assam—from 535 to 271 miles. It would also make correspondingly large reductions in the distances to other points in Eastern Bengal.

The scheme has been materially altered more than once since it was first framed. The particulars quoted in the preceding paragraph relate to it as it stood seven years ago, since when it has not been, we believe, appreciably amended. At that time the Government of Bengal officially intimated that it had been sanctioned by the Secretary of State, the estimated cost being Rs. 309 lakhs. It was not, however, proceeded with in 1920, the new system of government, which was introduced by the Reforms scheme, probably tending to keep it back. The objections which have been raised to it have been chiefly on the ground of its great cost; and it is admittedly an expensive project. On the other hand, for years past the opinion has been confidently expressed by the commercial and inland shipping interests of Calcutta that it would tend greatly to develop trade between that port and the Eastern Bengal districts. It has also been attacked for the reason that by interfering with the national drainage of the area traversed by it, and by the possible creation of swamps, it might have a bad effect on the public health. An objection analogous to this has for years been urged against the railway embankments in Eastern Bengal. These embankments are said to interfere with the free passage of the flood water over the deltaic areas and so to give rise to malarial and other fevers. A point in support of the canal scheme is that certain of the connecting links in the existing river routes from Calcutta to Eastern Bengal are deteriorating. There seems to be no question

that this is so. A very ancient river, the Bhagirathi—the original course of the Ganges to the Bay of Bengal—which is one of the deltaic spill-streams forming the Hughli, is involved; and what remains of the old central mouth of this river is said by drainage experts to be in a very advanced stage of decay. Certain of the other connecting links on the route to Eastern Bengal are also deteriorating. These various channels are now kept open for navigation by persistent dredging. But it is doubtful whether they can continue to be kept navigable by this means. If they cannot, then the case for a Grand Trunk Canal becomes a strong one.

In April last the Government of Bengal appointed a Special Committee to examine the scheme, and to report on the estimates of anticipated revenue. We do not yet know whether this Committee has or has not completed its investigation. But, as was mentioned recently by our Calcutta correspondent, the scheme was reported to have been abandoned. Later it was stated that the abandonment may have had reference to the proposed alignment of the canal only and not to the scheme as a whole. But we now have definite information of the abandonment of the whole project. It seemed unlikely that a project which has been under discussion for so many years, and which was actually sanctioned on one occasion, should be disposed of in this way. At the same time it is undeniable that public opinion in Bengal is not enthusiastic in its favour. The cost is, of course, the real difficulty. It is feared that the estimate of Rs. 3 crores, which was framed in 1920, must by now have gone up to something like Rs. 5 crores. And there is a disinclination to spend on this scale, or anything approaching to it, in respect of a project the necessity for which is challenged. The wisdom of this attitude may be questioned, although there is probably much to be said for it if the Special Committee has reported definitely against the scheme. But it has to be remembered that the waterways of Bengal are a most valuable asset to the province; and that every effort ought to be made to maintain and to improve these great national lines of communication. We do not suggest that nothing has been done in the past. But there has been no eagerness on the part of either the Government or the public to promote the welfare of the waterways. There is no special department charged with the duty of conserving them, although it is true that since 1906 there has been in existence a Waterways Advisory Committee comprising both officials and non-officials. Seven years ago the sphere of action of this Committee was enlarged by the nomination to it of representatives of the Government of Assam and the Government of Behar and Orissa. But it has no executive or administrative powers. It merely advises the three Provincial Governments on questions relating to the conservancy and development of the waterways of the three provinces. In 1912 proposals were formulated for the organisation of a Waterways Trust or Department to be vested with administrative powers of control over the waterways of Bengal and the neighbouring provinces. Six years later this proposal was succeeded by another with a more ambitious object, namely, the formation of a Waterways Board to look after the interests

of river transport throughout the whole of India. Both proposals were, however, rejected, by the Secretary of State in 1920, when the Advisory Committee was enlarged as mentioned above. We fully recognise, of course, that there is very little, if any, chance of these matters being reopened now, seeing that the Indian constitutional question is likely to monopolise attention for some considerable time. And we can only hope that as the Canal scheme has been abandoned the existing river routes from Calcutta to Eastern Bengal will be kept open to navigation at whatever cost.

CURRENT TOPICS.

Indian Road Finance.

Although the proposal itself was submitted to the Government of India as far back as May last, the inclusion in the questionnaire of the Roads Development Committee of the Bombay Government's suggestion that an additional duty should be imposed on petrol for the improvement and development of road communication directs attention anew to the road problem in India. The Committee in question, the appointment of which was announced last month in these columns, has been formed "to examine the desirability of developing the road system of India, and, in particular, the means by which such development can be financed." It is required "to consider, with due regard to the distribution of Central and Provincial functions, whether it is desirable that steps should be taken for co-ordination of road development and research in road construction by the formation of a Central Road Board, or otherwise."

Under the present constitution roads in India are a provincial transferred subject and if some form of central advisory body is deemed necessary the Committee will have to consider the financial resources available for its work, and how they can be utilised to the best advantage in co-ordinating and stimulating local effort. The main difficulty is, of course, finance. As the Bombay Government frankly admits in the letter embodying its proposals, owing to the condition of the provincial exchequer it has not been able "to keep pace with the growth of motor traffic, and the state of many of the main communications of the province is now such that the question will not brook further delay." And it may reasonably be assumed that conditions in the majority of the other provinces are certainly no better, and in many definitely worse. Meanwhile the urgency of the question is increased by the fact that motor omnibus services are rapidly developing in all parts of the country, and are being largely used by the poorer classes of the public as a means of linking up outlying areas with the trunk roads and the railways.

Briefly stated the suggestion upon which the views of the other provincial administrations are now being invited is that the simplest and best method of raising the additional funds required in each province for the improvement of road communications is a tax on petrol. In the nature of things such a duty must either be imposed simultaneously in all provinces by the provincial administrations, or be collected by central agency and distributed to the provinces in proportion to the provincial consumption. As Indian States must also be involved the Bombay Government are in favour of the latter alternative and it is understood that the oil companies are anxious to co-operate, and are willing to act as agents in the collection of the duty. That is to say they would raise the price of petrol by the agreed amount and hand over the proceeds for distribution in the proportion of territorial consumption. It is suggested that the Indian States should also share proportionately in the revenue, either on condition that the proceeds be earmarked for road communications or without conditions. It is estimated that a duty of 4 annas a gallon will bring in to the Bombay Presidency alone a revenue of 19 lakhs, and as the formation of a separate Road Fund is alien to the

present financial system the local Government proposes to overcome the difficulty by giving an undertaking to the Legislative Council that a sum equivalent to the proceeds of the tax shall be spent on road communications in addition to the average amount already allocated for that purpose. That the proposal is not free from objections, as regards both principle and practice, is obvious. It amounts, in fact, to the imposition of a customs or excise duty to be used for the benefit of the Provinces and it is probably without precedent. But we agree that such considerations should not deter the Roads Development Committee from considering on its merits a suggestion of such vital interest to the great and growing community of motorists in India.

Sir Evan Maconochie.

The Viceroy's visit to Kathiawar, with which a correspondent dealt in an interesting and instructive article in last week's issue, was completed only a few days before the death of Sir Evan Maconochie, the last Indian civilian to hold the post of Agent for the Province under the Government of Bombay. He was an officer singularly well suited for service in an Indian State. He combined great ability with an unfailing pleasantness of temper and manner which made his advice always welcome. Not, perhaps, wholly enamoured of the routine duties of ordinary administration, he was particularly well placed in the post which he held for seven years of Private Secretary to the Maharaja of Mysore. His service in Kathiawar was not of long duration, but was of great public usefulness. His recollections of his time in India, published last year, gave a singularly pleasant account of a civilian's duties and he will long be remembered by his friends as an exceptionally charming companion.

India and the Irish Free State.

The appointment of Mr. James McNeill to be Governor-General of the Irish Free State will be a matter of interest and satisfaction to the many friends he made in India, and especially to those who served with him in the Bombay Presidency. With the pleasant easy-going nature possessed by so many Irishmen, he combined much capacity and unfailing good humour. His independence of character was indicated when he was sent with an Indian colleague to report on the condition of Indian immigrants in certain British colonies. It was generally believed that a somewhat highly coloured report of the hardships of these emigrants would have been welcome to the Government of India as then constituted. The two commissioners, however, had the courage to submit a perfectly impartial report, indicating the advantages as well as the drawbacks of the régime under which the emigrants lived.

After filling with usefulness many posts, without rising to the highest, Mr. McNeill retired from India early in the War. The incidents of the Easter Rising of 1916, which included the condemnation to death of his brother, Professor John McNeill, somewhat estranged Mr. James McNeill for a time. After all, it is rather trying to have your brother sentenced to death (even though he is reprieved) by, in effect, the same Imperial Government whom one has served, and whose pension one draws. With the signing of the Treaty and the appointment of Mr. McNeill as High Commissioner of the Free State in London, however, the old disagreements faded, so far as Mr. McNeill was concerned, into forgetfulness. He picked up old threads of friendship and wove many new ones during his time as High Commissioner. He seems admirably fitted for his new post. His fellow service with so many Englishmen and Scotsmen, and it may be added Indians, has taught him the real meaning of the Imperial system, and of the value to Ireland of remaining within its orbit. Although a fervent Roman Catholic and of the old Irish stock, the fact of his birthplace being in the glens of Antrim should at least enable him to appreciate the view-point of the North of Ireland. A career from the Antrim farmhouse to Viceregal Lodge is a curious one for the most quiet and unassuming of men.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 1.

The Royal Commission.

Mr. Ramsay Macdonald had an advantage over both the Viceroy and Mr. Baldwin, the advantage of having served on an Indian Royal Commission. He was a member of the Islington Commission to inquire into the Public Services in India. As that Commission held its sittings before the Great War, and as even at the time the question of the Indian Public Services was one remote from English interests, Mr. Ramsay Macdonald's participation might well have been forgotten; but Mr. Macdonald would not have forgotten it himself, nor those of us who saw him in Calcutta at the time, though that last is not much, perhaps, to my present point. It is that Mr. Macdonald was in a better position than any of the other protagonists of to-day to say such a thing as, "I feel bound to confess that my experience on the Public Services Commission convinced me that a Royal Commission appointed, as that Commission was appointed, to inquire into the Indian Constitution, would not be an efficient body. If there was nothing else to be done, we would have to appoint one, but it was the duty of the Government to consider whether a better system of finding what Indian needs and Indian opinion were, could be instituted. One of the great difficulties of having a mixed Commission as a Royal Commission is, first of all, the difficulty of selection."

Those words, when enough attention has been given to them in India, may be expected to have their weight. The British Government has considered whether a better system could be instituted, and it has decided that one could; and the fact that its action has received the support of both Houses, should have its weight also. From now onwards we may expect to hear less and less of a boycott of the Commission. A lead has been given in Bengal by Mr. A. K. Ghuznavi, not long ago one of the Ministers in charge of transferred departments, in a statement to the Press. "It seems perfectly amazing," said Mr. Ghuznavi says in it, "that not one of the loud-mouthed boycotters seems to have thought it necessary to consider what the scope of this Commission is. It is quite evident that the main function of this Commission is to inquire into the working of the system of government since the introduction of the Reforms; in other words, to scrutinize and report as to how Indians, Anglo-Indians, as well as the British residents have worked the Reforms during the last eight years. This means an inquiry into the conduct of political India, which, when reduced to concrete dimensions, will mean an inquiry into the conduct of some two thousand or more persons who have been members of the various local Councils and the Central Legislatures during the last eight years."

Mr. Ghuznavi, with a logic that Sir Abdur Rahim and others must have felt as cold comfort, went on to say that he failed to see how any person whose conduct was under inquiry could take any umbrage, far less consider it an insult, if he was not put on the board of inquiry; or, in other words, how any Indian, Anglo-Indian, or British resident, who had taken part in the working of the Reforms, could claim to be on that body.

Pandit Motilal Nehru's not having wished any Indian to be appointed to the Commission, but his pressing his scheme for a Round Table Conference, it is believed in some quarters in India that it was no less a fact than that which convinced the British Labour Leaders that the Government's fear that a proper mixed Commission was an impossibility was not baseless. As we have only had cabled summaries of the Pandit's views, it may be that we do not very accurately know what they are.

Pandit Madan Mohan Malaviya leaves no one in doubt about his views. Writing again on the Royal Commission, he declares that, Lord Birkenhead having

declined to appoint Indians to the Commission, let Indians show equal determination not to go near it. He characterizes the Secretary of State's remarks regarding the depressed classes as unabashed hypocrisy. If Lord Birkenhead had really wanted to appoint a member of that class, he says, no Indians would have objected to it. If he had honestly selected six Indians, the whole Indian community would have been satisfied.

The Pandit suggests a meeting of twenty-five party leaders on December 15 at Allahabad, or any other central place, to reorganise the Congress, so as to make it fully representative, and to draw up a constitution for presentation to Parliament for enactment, failing which the Congress should advise the people on an extreme form of non-co-operation, namely, non-payment of taxes, and complete boycott of British goods. He suggests that these proposals should be finally drawn up at a special Congress session in February in Delhi, and that all the members of the Legislatures should be made members of the Congress.

The European Association.

The annual meeting of the Calcutta Branch of the European Association was held immediately after the mail closed last week. To pass to its deliberations is to change the name but not the letter; is to change one's heading but not one's subject; for the subject of the Royal Commission naturally filled the minds and the speeches of Sir Hubert Carr, who presided and spoke first, and of all who followed him. Speaker after speaker endorsed the Parliamentary constitution of the Commission. It was stated that by appointing such a Commission the Government had avoided the difficulties inseparable from the constitution of a mixed body. "As surely as night follows day," said one speaker, "grounds would have been found for communal disagreement." Sir Hubert Carr said: "An important matter engaging the attention, not only of the Committee, but also of all members who can assist, is the framing of evidence to be given before the Statutory Commission. The evidence given by the Association ten years ago, with its prophecies and warnings, has proved extraordinarily correct; and there is little doubt of the representations being made by the Committee at the present day proving equally valuable, for the Committee will have the advantage of framing its views with a more sympathetic understanding of Indian aspirations, thanks to the experience of the last ten years, than perhaps has always been entertained in the past." As to the last point, it should no be forgotten that Indian aspirations, or what the European Association knows of them, are their expression in words, and words are nowhere more misleading than in India. Many are ready to maintain, at least in private, that what Indians say they want they do not really want. While having due regard to Indian aspirations, one must never for a moment let one's eyes stray from Indian facts.

Associated Chambers of Commerce.

It is strictly with those facts that the Associated Chambers of Commerce of India, Burma, and Ceylon will be concerned, when the annual meeting is held, here in Calcutta, some time this month. His Excellency the Governor of Bengal will open the meetings, which the Chairman, Bengal Chamber of Commerce, Mr. B. E. G. Eddis, is to preside over. The Bengal Chamber has sent in a batch of resolutions for inclusion in the programme. They cover a field including the Reserve Bank, the regulation of banking in India, the Sea Customs Act, the Indian Merchant Shipping Act, Import Tariff Schedules, Railway Workshops, the Income Tax Amendment Bill, Provident Funds, and other matters. The Chamber, it will be seen, has not lost touch with actuality, whoever else may have done so.

Indian Industrial and Commercial Congress.

The same sense of touch with actuality is shown in the programme of the Indian Industrial and Commercial Congress, which is holding its sessions the same time, but in Madras. In some items the Congress programme

make one think of a threshing of what, Time having garnered the corn, is now only chaff. The programme includes the Reserve Bank Bill, Exchange, an Indian Banking Inquiry Committee, Imperial Preference, Indianisation of Services, State aid to industries, Protection to the Textile Industry, Indian Commercial Representation at International Conferences, Transport, the Indian Mercantile Marine, Indian Insurance, Export Duties on Silver and Hides and Skins, and other matters. As it may not be apparent from that programme why I should speak of threshing chaff, let it be added that report has it that at Madras "the exchange ratio will come up for discussion, when Government will be called upon to re-open the question of establishing the exchange ratio at 1s. 4d., or to leave it to take its own course."

Oil Companies' Merger.

One of our minor excitements during the last few weeks has been an "oil war" in Calcutta, with not a little cutting of rates. In view of the misleading and inaccurate rumours in circulation throughout India authority has now been given for the statement that negotiations are being conducted in London between the Burma Oil Company and the Royal Dutch Shell Group for a fusion of their marketing interests in the whole of India, excluding the Chittagong and Burma markets, in order that the close association in marketing which has existed between the companies since 1905 may be put on to such a permanent basis as would enable them to realise the economy in new capital construction and in expenditure obviously potential in a unified organisation, but hitherto not realised because of the impermanent nature of the arrangements. A new company will be formed to acquire the distributing assets of the parties to the fusion, the shares to be held equally by them. The new company will conduct the entire trade in the petroleum products of the parties, the indigenous products of the Burma Oil Company having the first call, as in the past.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, December 3.

A valuable lead in dealing with educational and health problems was given by the women of Bombay at the Women's Conference on Education held early this week. Among the various suggestions made were the need for relieving the regular school routine from monotony so as to attract rather than repel students, and physical culture for girls. The Conference also congratulated Rai Saheb Har Bilas Sarda on bringing a Bill for fixing in the Central Legislature the marriage age of girls, suggesting at the same time that it should be fixed at sixteen and not at twelve as proposed in the Bill. It is true that there is nothing new in suggestions made by the Conference, but it must not be forgotten that certain problems of social reform will be more easily solved if women take an active part in tackling them.

Army Contractors.

The proposal for a new Army Contractors' Association as a successor to the Army Canteens Board has met with a certain amount of opposition from the vested interests in the Southern Command area. In view of the fact that a sum of Rs.25 lakhs is involved the scheme has alarmed the petty contractor who fears that a central organisation such as the one proposed would result in his gradual elimination. The larger contractors, on the other hand, are reluctant to invest large sums of money without securing adequate security and desire that the Government of India should give some definite guarantee ensuring the life of the Association which Government have definitely refused to do. The power exercised by Government of nominating both the managing director and the chairman is also the subject of protest, as the

contractors maintain that Government should nominate only one of these officers whose powers again should be strictly defined. The discussion stage is rapidly reaching a conclusion and it is to be hoped that sufficient precautions will be taken to ensure that the mismanagement rampant during the Canteen Board days is not repeated.

Fresh Water for Aden.

The news that Aden will henceforward have a fresh supply of water from a bore 1,600 feet deep at Sheik Othman, has been welcomed here as solving a very important problem. Hitherto, Aden has obtained her water supply by the expensive process of condensing seawater. It is believed that a supply of 100,000 gallons a day can be obtained by means of pumps and the work is being continued in the hope that increased quantities of water at a lower depth will be obtainable. It may be mentioned in this connection that the site for the boring operations was selected by a special officer despatched by the Government of Bombay and the entire cost of the operations, amounting to Rs. 30,000, has been promised by the same authority. It is understood that an appeal has been made to the War Office, London, to contribute to the continuation of the work, if necessary, to a depth of 2,000 feet, and that Rs. 15,000 has been secured from that quarter.

Distinguished Visitors.

Towards the middle of this month Bombay will welcome two distinguished visitors, the Viceroy and the King of Afghanistan. The Viceroy arrives here on December 11, and on the following day will be entertained to dinner by the Bombay Millowners' Association. The Indian Broadcasting Company has obtained His Excellency's permission to broadcast his speech on that occasion. Their Majesties the King and Queen of Afghanistan will be accorded a public reception at the Gateway of India, when the Viceroy and the Governor of Bombay will be present. A state banquet will be held the same night at the Government House, Bombay, where His Majesty will be the guest of the Viceroy. The Bombay Municipality has decided to present the King of Afghanistan with an address and has requested the Government for permission to present the address on his arrival at Apollo Bunder. The proposition was carried with a unanimity that has been unusual of late, and all parties joined in expressing their desire to support the proposal.

Taxation in the City.

The Corporation considered two very important questions of public interest during this week. One was the proposed terminal tax which was strongly opposed by the Bombay Chamber of Commerce and the Bombay Trades Association on the grounds that the position of the city as a distributing centre would be greatly affected, inasmuch as it would tend to divert the trade to other ports and that the new system would not appreciably increase the Municipal revenue. A heated debate ensued when the commercial interests did their best to secure the rejection of the measure, but in vain. Finally, it was decided that a Standing Committee should prepare a schedule fixing the rates in such a way that the income derived would approximate to that at present accruing from the town duties, for submission to the Government of Bombay later on. Another source of revenue that the Corporation is endeavouring to tap is the Insurance companies in the city. A special tax was proposed on the grounds that, owing to the plentiful water-supply the number of fires had been considerably decreased. The Revenue Committee feared that the incidence of the tax would eventually fall on the clients, as the companies would raise the premia. Despite this warning, however, the resolution was passed favouring such a tax with a rider that Indian companies should be exempted from the duty. Should these measures be put into force the Municipal revenues will be greatly enhanced and enable the undertaking of several schemes which have been suspended owing to lack of funds.

LANDOWNERS AND THE REFORMS.

In its issue of March 17, THE NEAR EAST AND INDIA published an interesting and instructive address to the landowners and zaminders of Bihar and Orissa by the Hon. Maharajadhiraja of Dharbhanga, Sir Rameshwar Singh Bahadur, G.C.I.E., K.B.E., D.Litt., on the need for a more effective representation of the landed interests, "which are the backbone and most stable element in the country," in any reform of the Indian Constitution.

Last month, in his presidential address at the annual conference of the All-India Landholders' Association, held this year at Madras, the Maharajah made an eloquent appeal for co-operation and good will in the preparation of the community's case for presentation to the Statutory Commission. After outlining briefly the history of the Association, which he founded in 1917 in somewhat similar circumstances, the Maharajah proceeded:—

"The Statutory Commission has been announced. The occasion calls for a clear and explicit understanding of our position, for a thorough and efficient organisation of our forces and for an unified enunciation of our particular demands in relation to the national demands. On an occasion like this, I wish to speak quite frankly. For one thing I have earned the right to candour, because in all my public activities I have always placed the interests of our community first and foremost.

What is our exact position to-day? I am afraid I cannot indulge in any rosy picture when describing the present position. In these days when the formula of life is that aggressive slogan—"Survival of the fittest," we have been content with the lifeless principle of drift, in the facile hope that the Government of this country, who have always found in us an unfailing source of strength and help, would in their turn do nothing to weaken that strength and stultify that capacity for help; in that facile hope we have nearly forgotten the need and significance of self-help. Shall we allow this process of disintegration and demoralisation of our stamina and vitality to go on? Self-preservation, if nothing higher, compels us to abandon lethargy, to wake up from langour, and to look facts squarely in the face.

It does not seem to be at all clear that the large interests vested in land and agriculture in this country are going to get adequate representation on those consultative committees which are to be formed in connexion with proposed Royal Commission. One does not doubt that these committees, composed as they will be of members of the two Houses, will be composed of other than representatives of the two communities, Hindu and Mussalman. But how are we going to insure that the case for the agriculturist in the field is going to be represented properly, any more than the case for the owner of large lands or other interests?

Is it not time that we got together and prepared ourselves for presenting a united front? At present we may well be thought to have divergent views and perhaps different aims. If we do not press our claims and our case as one, do we not run the risk of being considered to be satisfied with what we have got in the matter of control of our own affairs? It seems to me that even the man who works on the fields, as well as the landlord, needs and should seek the guidance and help of those others in India who have large and small vested interests; by this I mean the owners of businesses, property or other material interests, who must themselves feel that the time has come to organise and uphold their claims.

We have in front of us some ten months to a year, during which we should endeavour to bring together all those interests that I have referred to above and there is no time to be lost if we are to formulate a programme and proposal of what we require. It is quite certain that without some definite statement of our claims, we should be set on one side in the future as we have been, to a large extent, in the past, because we have not been sufficiently vocal. One of our greatest difficulties is due to the fact that we are widely scattered over the land and if we are to represent united views we must be prepared, those of

us who cannot easily attend meetings or join Conferences, to support those who are working genuinely and honestly on our behalf. We must not only be prepared to give them our vote, but we must also be prepared to support these working organisations financially, remembering that those who are putting into shape a case which will support our interests, have everything in common with us.

We know that there are big and powerful interests, both British and Indian, who have complete sympathy with us, and they have the means of bringing to public notice, and to the notice of the Secretary of State and Parliament in England, the fact that a very large proportion of India has not apparent means at the present time of either expressing its views or standing up for its rights. Only recently we had evidence in the very largely-attended meeting which was held in the City of London, when both British and Indian business men were present, that active interest is being displayed in the coming deliberations. When, therefore, you are presently called upon to give your support and help; I hope you will show that you are ready to unite. For you must remember that if you let this opportunity pass now, you may well place yourself for years to come in the position of being unable to resist those who may desire to exploit you.

You know it has been announced that the Royal Commission, which is coming out to India, is composed of Englishmen only, none of whom are acquainted with this country or its affairs, to any great extent. But this should not disturb you, and although you may also hear that certain of our Indian politicians propose at this time to boycott the Commission and to avoid giving it any assistance or help, you may be quite sure that most of these people will presently change their attitude. For they know very well indeed, that they are neither going to help themselves nor their country by refusing to express the views of those whom they are said to represent. What shall be our attitude? It cannot be disputed that our relationship with the Government dates from centuries past and that there are certain rights and obligations on both sides. There ought to be a thorough understanding of them and we should keep up our time-honoured traditions by supporting the Government and expect in return that the privileges and interests of the landed aristocracy in India will be guarded and preserved. We should not fail to impress on the Government the shortcomings of any of its schemes by healthy criticism; but I must tell you plainly that we must always co-operate with the Government.

As regards the adequate representation of India's case before the Commission, we have to put up our cause strongly in unmistakable terms and make the best of the opportunity open to us to place our case before the Parliament through the Joint Select Committee of the Imperial Legislatures.

I wish to draw your attention to the significant part that we can play and that we have to play as due to our position, our tenantry and our country, and our endeavours will prove fruitful and our Conference will become the coping stone of communal amity. It is a fact recognised on all hands that the territories under the Indian princes are singularly free from the insane frenzy of communal bickerings. In British India we hold a somewhat analogous if less imposing position to the princes in their Native States. We, too, have a large tenantry who look to us for guidance and with whom our suggestions carry weight; we, too, have a moral obligation to do our best to promote harmony and mutual understanding among the ryots. It is my firm conviction that the solution of the communal troubles will be made considerably easier if the Zamindars and Landholders apply themselves seriously to the question and follow the noble advice in His Excellency's message.

The one important question to-day is this:—

How is peace to be restored amongst the several sections? That is a question which throws into shade every other and this all-important matter may be tackled at once and tackled successfully. We have to realise our duty and the need for offering the fullest co-operation to

all those engaged in peace propaganda, a co-operation which implies active work from each one of us, which will create mutual understanding amongst those among whom we have some influence and among whom we have a great responsibility. Mutual understanding between us and other sections of the country, as a result of the sincerity and earnestness with which we throw ourselves into this movement and mutual understanding between us and the Government are demanded by the present circumstances of the country. It is the prime concern of the Government to lead the variegated forces with tact and patience to a common goal and in this matter of conciliation and unification we, the Landholders, have a large part to play and to play with great credit to ourselves. So I call upon my friends to exert their utmost in the cause of peace, reform and national amelioration."

INDIA IN PARLIAMENT.

By SIR FRANK NELSON, M.P.

Those with any experience of the Central Legislature will have little difficulty in endorsing Lord Winterton's suggestion that the Railway Board, and the department responsible, probably have to answer more questions in the Legislative Assembly than any other branch of the Government of India. Mr. G. G. Sim, formerly Financial Commissioner, Railways, and the Board's principal spokesman in the lower House, who left the Indian Civil Service last year to join Vickers (of which undertaking I am glad to see he has since been appointed a director), I believe held the record for the largest number of answers at a single sitting. As his replies could hardly be described as verbose, and the tone of their delivery effectively checked any attempt to elicit further information by means of a supplementary question, I can think of few more signal tributes to his outstanding ability and personal popularity than the fact that his premature retirement was nowhere more regretted than in the ranks of his most inveterate inquisitors.

The occasion of the Under-Secretary's animadversion, from which I have somewhat digressed, was question time in the House of Commons on Monday. The subject of his remarks—the policy of Indianisation in relation to the Railway Board. In reply to Colonel Day Lord Winterton said, as usual, that vacancies upon the Board are no exception to the rule regulating other appointments of a similar nature, but expressed his inability to say whether in the latest case any applications had been received from Indians. The suggestion, in a supplementary question, that the absence of Indians from the Board as at present constituted could only mean that there was no Indian of the requisite standing or experience available was repudiated by the Under-Secretary, though it is of course the natural inference.

The Tata Iron and Steel Company's contract for the supply of the whole of its estimated output of steel rails, at a fixed rate, for a period of seven years also provoked some discussion, which provided Lord Winterton with yet another opportunity of emphasising that in such matters the Government of India's primary concern are the interests of manufacturers in India.

"In the discharge of my duties I shall, I assure you, observe strict impartiality in dealing with all sections of the House irrespective of Party considerations. From this moment, I cease to be a Party man. I belong to no Party. I belong to all Parties. I belong to all of you and I hope that my hon. friend, the Leader of the Swaraj Party will take immediate steps to absolve me from all the obligations of a Swarajist member of this House, if, indeed, it has not been done by implication in consequence of my election to this Chair." I am forcibly reminded of that dramatic declaration by Mr. V. J. Patel, when returning thanks for his election to the Chair of the Indian Legislative Assembly nearly three years ago, by the cabled report of his opinion on the present political situa-

tion. That, with the exception of possibly one or two minor lapses, he has worthily upheld the traditions of his office cannot be denied. I fear, however, he will find it intolerably difficult to maintain the same rigidly impartial attitude now that, in spite "of the reserve imposed by his position," he has so definitely joined sides by reiterating his belief that "the relations between Great Britain and India are only finally adjustable on the basis of the unreserved recognition of India's right to Dominion Status, to be effected by means of a joint equal conference of plenipotentiaries from both countries."

The Indian Church Bill, which as readers of THE NEAR EAST AND INDIA are aware, is complementary to the Measure providing for the dissolution of the legal union between the Church of England and the Anglican Church in India which received the Royal Assent last month, passed its second reading on Friday. Although when the change becomes effective the Church of England in India will become a voluntary association legally entitled to manage its own affairs (on the basis of "consensual compact") like other churches in the same communion in the self-governing Dominions, the United States, China and Japan there is no doctrinal point involved, the self-government being solely in the constitutional, as distinct from the spiritual sphere.

WILLS.

LORD CABLE'S ESTATE.

Lord Cable of Ideford, Calcutta, Bishops Teignton, Devon, and Grosvenor Square, W., merchant, senior partner in Bird and Co., and F. W. Heilgers and Co., a former High Sheriff of Devonshire and a former president of the Bengal Chamber of Commerce, at one time Sheriff of Calcutta, and a member of the Viceroy's Council, and a member of the Indian Finance and Currency Commission; lately a director of the Development Corporation of East Africa, Ltd., and on the London Board of the British-American Assurance Co., and of the Western Assurance Co., and a director of the Tanganyika Development Co., who died in London in March last, aged 67 years, left unsettled English property valued for probate at £214,715, with net personalty £29,837. He gave:

Rs.300,000 (about £22,450) to the Calcutta General Hospital, Rs.300,000 to St. Paul's School, Darjeeling, Rs.100,000 to St. Vincent's Home, Calcutta, in memory of his mother; Rs.100,000 to the Bengal Chamber of Commerce.

To his executor, William Withall, £1,500 for each journey to India to look after his affairs (and he requested that he should make at least one such journey annually), and he left to him also three lakhs of rupees.

He stated that he died domiciled in British India, "the country of my birth, my education, and my life's work and interests," and he recommended his trustees to seek advice from the retired partners of his firm, "which they will be glad to give for the sake of 'Auld Lang Syne.'"

After many personal bequests, he left:

The residue of his property to his wife for life, with remainder upon trust for his two daughters and their issue, whom failing with ultimate remainder for:

Such charitable institution or institutions or objects in the United Kingdom or in Bengal (preferably hospitals or educational institutions) as his trustees in their absolute discretion may think fit, and, without in any way fettering such discretion, he recommended that as regards any such institutions in Bengal they should consult the council for the time being of the Bengal Chamber of Commerce.

It is notified in Indian Army Orders that the appointment of British N.C.O.s as sergeants in the Indian Army Ordnance Corps will be by selection governed by merit marks set against the name of each applicant in the office of the Director of Equipment and Ordnance Stores at Delhi. On being selected, a N.C.O. will be transferred to the Indian Unattached List as a sergeant, and after three years will be promoted staff sergeant, with eligibility for warrant and commissioned rank.

A reduction of the 3rd Madras Regiment has been decided on, and at the close of the year it will lose a battalion. The reduction will consist of disbanding the 1st Battalion, which in January will consist of cadre strength only. This unit is one of the oldest in India and was in existence in irregular form during the first half of the 17th century. Its regular formation dates from 1776, when Captain H. R. Alcock brought together sections of three Carnatic battalions to form the 13th Battalion. It became the 73rd Carnatic Infantry during the Kitchener changes, and in the post-War alterations reverted to the 3rd Madras, a designation it had borne in 1726. It served in Mesopotamia, East Africa, and Waziristan.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Albania's Economic Position.

While Albania's Budgets from 1921-22 to that for the past year have invariably resulted in deficits, which have been as low as 100 Albanian francs for 1923-24 and as high as 11,973,326 for the previous year, a survey of the figures for the past year, combined with a knowledge of the progress which is being made by the country, suggests that before very long the series of deficits may be replaced by balances, and it is quite possible that the current year's Budget will inaugurate the change. The figures for 1926-27 showed receipts totalling 23,009,260 and expenditure amounting to 23,102,607, the deficit being 93,347 Albanian francs, the lowest recorded with the exception of the year 1923-24, to which reference has already been made, when the conditions were of an exceptional character. It is noteworthy that the trade position has shown a steady tendency to improve, and that Albania is at last within measurable distance of obtaining a favourable trade balance. The outstanding feature of the trade figures of the past few years has been the rapid expansion of the export trade; one might say, indeed, its development from practically nothing. In 1920 the value of the export trade was 1,500,000 gold francs, but by 1925 it had risen to 17,100,000 gold francs, while for the current year it is anticipated that the total will be slightly in excess of 20,000,000 gold francs, while it is expected that the value of the imports will not be much in excess of that total. These figures are very significant when it is borne in mind that Albania's resources are distinctly limited, that agriculture is conducted on primitive lines, and that the country by reason of its position is forced to depend to a very large extent for progress in development on the activities of foreign concerns.

Sudan Trade.

The figures for the trade of the Sudan for the first nine months of this year show a slight improvement as compared with the totals for the corresponding periods of the previous year. The volume of trade amounted to £9,153,165 as against £8,976,586, an increase of £176,579. For this increase the development of imports was mainly responsible. The value of the imports was £4,256,654 as against £4,081,334, and while public imports fell from £2,696,387 to £2,690,588, Government imports rose from £1,390,745 to £1,580,267, an increase of £189,521. The value of the exports showed only a slight advance, the figures being £4,596,124 as against £4,535,180. Viewed broadly, the figures as a whole are not unsatisfactory when the depression through which the Sudan has been passing is borne in mind. This year's dura crop has been good, and with the steady increase in cotton production it may be expected that next year's trade figures will show a considerable improvement, provided, of course, that the prices for cotton remain somewhere about their present level.

Suez Canal Traffic Developing.

It is only natural that considerable interest should attach in these times to the figures of the Suez Canal traffic, since the development of trade by that waterway is one of the most valuable indications of the commercial position generally. For October the shipping transiting the Canal totalled 2,452,000 tons, which was 102,000 tons in advance of the total for October, 1926, and incidentally established a record for that month. The tonnage from north to south totalled 1,165,000 tons, and that homeward amounted to 1,287,000 tons. The merchandise taken through the Canal totalled 2,402,000 tons, and there were substantial increases in both the outward and the homeward trade, though this feature was more pronounced in the case of the latter. The outward trade totalled 875,000 tons as against 779,000 tons for October, 1926, while the homeward traffic totalled 1,527,000 tons as against 1,374,000 tons, the respective increases being 96,000 tons and 153,000 tons. Increased exports of coal and railway material were the principal factors in the development of the outward traffic, 47,700 tons of coal being exported from this country as against 100 tons in October, 1926, while the exports of railway material at 91,000 tons showed an increase of 48,000 tons. The railway material was, of course, mainly for India and East Africa.

Steaua Romana (British).

At the meeting of the Steaua Romana (British) Sir Albert Stern was able to give an encouraging picture of developments during the year. For the twelve months ended June 30 last the production of the Steaua Romana Company was 483,580 tons as against 352,637 tons for the previous year, and the products exported totalled 335,478 tons, an increase of 124,784. Since the close of the company's year the increase in production has continued, and for the five months ended November 30 the output was 244,353 tons as against 199,008 for the corresponding months of last year. Dealing with the position of the Roumanian oil industry, Sir Albert Stern pointed out that the production for the first ten months of this year was 3,034,903 tons as against 2,689,438 tons for the corresponding months of last year, and that it is expected that the production for the year will be in excess of three and a half million tons. For the same period the exports of petroleum products totalled 1,576,001 tons as against

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

1,201,038 tons. The Roumanian industry has, however, been seriously affected by the fall in the prices of oil products, and Sir Albert Stern went on to point out that the Roumanian Government appreciated the position and has already done much to alleviate the difficulties. Thus it has reduced considerably the export taxes on petroleum products, and has reduced the transport tariffs by railway and pipeline by approximately 50 per cent. "It is hoped," Sir Albert Stern added, "that in due course the export tax will be entirely abolished, and there are also other directions in which I believe the Roumanian Government is considering reductions of the various heavy taxes which still weigh on the industry."

The P. and O. Meeting.

As usual Lord Inchcape's speech at the meeting of the Peninsular and Oriental Steam Navigation Company was of extreme interest. One of the matters on which he touched was that of the Suez Canal facilities, pointing out that the administration of the company consistently endeavoured to improve the transit facilities, and that the speed of the passage would shortly be increased by a knot per hour. He mentioned the pending reduction as from April 1 next of the transit fees by five gold centimes per ton, which will bring the rate down to seven francs as compared with the pre-War rate of 6.25 francs per ton, and pointed out that this reduction will relieve British shipowners alone to the extent of about £160,000 a year.

The Rubber Outlook.

Following a trifling increase in the London stocks last week there was a substantial reduction yesterday of over 1,200 tons, bringing the stocks down to 64,761 tons, and in view of the figures of the past few weeks there is no longer any room for doubt that the period has been entered upon when stocks will steadily and perhaps rapidly decrease. With the average price for the current quarter still below 1s. 7d. per lb., it seems almost impossible that the price should average 2s. by January 31, and if it does not do so it seems self-evident that really high prices will rule in the ensuing quarter. The key to developments in 1928 is the progress of consumption, and while Europe is gradually taking more rubber, it is what America does that really matters. A report I have just received adduces a number of reasons in favour of and against an increase in American consumption. The factors in favour include the marketing of the new Ford car and the fact that there are still people in America who do not own a car. On the other hand, it is pointed out that the Presidential election takes place next year and this always upsets business, and that as there is now one car to every six of the population saturation point must be very near, if it has not been attained. It is estimated in the report in question that next year there will be a reduction of stocks by 51,000 tons.

THE SUDAN'S GAMBEILA TRADE.

The value of of this trade to the Sudan cannot so far be regarded as substantial, the interchange seldom much exceeding a quarter of a million pounds but a consideration of its potential development is attractive (says an article in the Monthly Journal of the Sudan Chamber of Commerce). Although progress in the past has been admittedly slow, there are reasonable grounds for optimism regarding the future. It was observed during the past season that the natives of the district are now showing a more enlightened and keener interest in trade, the exchange of goods by barter appears practically relegated to the past, and, provided there are no adverse international developments, we feel confident that the commercial prospects of this outlet, together with the frontier posts round Gallabat, are decidedly favourable.

From reports received during the season, we anticipated a greater fall in the quantity of coffee imported than approximately 250 tons, but it is apparent from past returns that a total of 2,300 tons can be comfortably absorbed in our local markets under normal conditions. It remains to be seen what effect will develop on selling prices when the profits from our anticipated improved harvest of Sudan produce begin to circulate in the native market.

The trade in beeswax shows decided progress. From 1923 to 1925, imports averaged 58 tons and in 1926 they amounted to 89 tons, while for the past season an increase is reported over last year of 30 tons. This trade is capable of immense development as, in addition to large quantities of wild bees in the country, the native has of late years been increasing the number of hives. These are usually made from the stem of a hollow tree, measuring roughly two feet in diameter by about five feet long. They are fixed in trees in suitable localities, preferably where there is an abundance of flowers, and a correspondent informs us he counted over 100 hives this year in a distance of only half a mile.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, January 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Calcutta (Birkenhead, January 3).

Bibby Line.—S.s. Shropshire for Port Said, Colombo, and Rangoon (Birkenhead, December 28).

British India Line.—S.s. Manora for Bombay and Karachi (London, December 31); s.s. Warfield for Colombo, Madras, and Calcutta (London, December 31).

Cunard Line.—S.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool January 7, Swansea January 10); s.s. Cypris for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, January 14).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 21).

P. and O. Line.—S.s. Ranchi for Bombay (London, December 23); s.s. Nankin for Colombo, Madras, and Calcutta (London, January 7).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool December 24, Swansea* December 24); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool December 24, Swansea December 30); s.s. Andalusian for Gibraltar, Malta, Jaffa*, and Haifa* (Glasgow December 30, Liverpool, January 2); s.s. Mardinian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 7). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 20.

Evidence of some quietening down in activity in the stock markets is manifesting itself as Christmas approaches, although the general tone remains fairly cheerful. To what extent the calling in of loans by the banks for "window dressing" purposes for the balance-sheets, which will be drawn up at the end of the month, may be responsible for restricting activity on the Stock Exchange it is impossible to say. But it is known that much of the recent speculative activity in industrial shares has been conducted with the help of loans from the banks against the securities in question, rather than by means of the carry-over, and any action by the banks in the way of reducing advances against stocks is bound to produce an immediate effect. The gilt-edged market maintains its firmness and was unaffected by the £7 millions loan for New South Wales, which came as something of a surprise after the recent loan for a similar amount issued by the Commonwealth Government. Company promoters have again been busy and a large volume of prospectuses of all kinds has been issued, presumably in the hope of attracting subscriptions from the investor before the aftermath of Christmas in the shape of bills and demands of the tax collector empty the latter's pockets.

A Delusion Concerning Capital Appreciation.

One does not frequently meet an investor who has abandoned hope. He may pass through stages of disbelief, but ultimately he returns to the faith that his ship, generously laden, will enter port one day. The investor of this way of thinking will be encouraged by the recent price movements of the ordinary shares of the Triplex Safety Glass Co. A fortnight ago they could be bought of £6; at the time of writing they stand at £14. Doubtless some investors will ask stockbrokers and financial journalists to advise shares which will show equally substantial capital appreciation in an equally short period of time. They can as readily forecast six months ahead the weather on the day of the Boat Race as comply with this request. If it were possible to predict capital appreciation

as some suppose, stockbrokers and financial journalists would never grow grey in their callings; and this they do! The investor should never have great expectations so far as the investment world is concerned. He may count himself fortunate if he succeeds in keeping his capital intact and at the same time receives a fair rate of interest. This much will tax his ingenuity and that of his advisers. It is true, as the case of the Triplex Glass shares proves, that the spectacular rise does occur, but it should be remembered that this is the exception and not the rule. On no account should the ordinary investor deliberately go in search of substantial capital appreciation in a short period. The risks of the more prosaic paths of investment are more than enough for his capacity.

The Shipping Outlook.

The speech of Lord Inchcape, at the meeting of the P. and O. Company, was not calculated to stimulate conspicuous confidence in the shipping outlook. "Many of our voyages," he said, "have shown bad results. Very few have left a credit balance after debiting marine insurance and depreciation." He went on to refer to the high cost of victualling, equipment, and wages, and added that "we have found it extremely difficult to make ends meet." He apparently had hopes, however, of being able to maintain for the current financial year the distribution made to the deferred stockholders for the past financial year. There are possibly some shipowners who do not entirely share Lord Inchcape's views; they may hold that here and there he has painted the picture in too sombre colours. In the main, at any rate, the prices of the majority of the shipping companies' shares are not appreciably below the highest level touched this year; and it is noteworthy that in many cases these prices considerably discount the future. It would seem, therefore, that the holders of the shares of British shipping companies have not lost confidence in the future. And this reading of the situation seems eminently sound. The companies are not for the time being faced by boundless prosperity, but the more efficient shipowners should be able to maintain at least a moderate level of earnings.

Attractive Port Investments.

During the past week or so two of our leading ports—namely, London and Manchester—have been much in the public eye. This is due to the fact that both have taken steps to improve their position—the first by an issue of stock for development purposes, and the second is expected to benefit by any success attending the establishment of a spot cotton market at Manchester. Both undertakings, however, are already in an extremely favourable position and provide attractive investments for those seeking a fair return with a reasonable degree of security. Last year the Port of London was able to carry forward no less than £674,636. The Authority's 4 per cent. "B" stock, redeemable 1929-99, gives a return of £5 4s. A yield of £5 3s. per cent. is given by the 4 per cent. inscribed stock, redeemable 1940-1960. In recent years the Manchester Ship Canal Company has made steady progress and its future is assured. Those who are responsible for the establishment of the spot cotton market at Manchester are hopeful regarding the increase of traffic which this development will bring to the Canal, and though this may not be entirely justified, steady progress will doubtless continue. The Company's 5 per cent. preference shares give a return of £5 18s., while the ordinary shares, which have received a dividend of 5 per cent. for some years past, yield £6 8s.

Dates to the amount of 81 tons were exported from Dongola Province, Sudan, in a recent month.

During the first ten months of this year 9,090 cattle and 2,813 sheep were exported from Kordofan Province, Sudan, as against 11,403 cattle and 2,581 sheep in the same period of 1926.

BELGRADE TO-DAY.

By P. H. SITTERS.

Prompt to time the Simplon Orient Express ran into Belgrade station on a bright, sunny day in mid-November. The fifteen hundred miles from London had been covered in less than forty-nine hours, and the journey throughout had been most comfortable. The growing efficiency of the Yugoslav Railway Administration could be gauged by the fact that nowhere within their territory was the train behind time; and nothing but courtesy was shown by the officials either at the station or in the customs.

After several months of absence it was a great delight to be back amongst the warm-hearted Yugoslavs, and the pleasure was increased by the improvements which were to be seen on every side. The Mayor and other City Fathers are combining practical foresight with a sense of beauty. For years the condition of the streets has been a matter for jest, but the cobble-stones will not "harass the feet" much longer if the present rate of improvement continues.

Visitors driving from the station to the University pass along broad, smooth boulevards which are flanked first by the imposing buildings of the new Ministries, and then by the Royal Palace and the increasingly attractive shops of the Terazia. In front of the University there has been a considerable change. The unsightly space where the old market used to be has been transformed into a park, surrounded by an open stone fence and laid out with green lawns under the shelter of the acacias. Moreover, Belgrade has discovered that its most beautiful possession is its unhampered outlook upon the setting sun, and it has laid out a terrace close to the Hotel Moscow on the Terazia, where many a citizen pauses at eventide to gaze westward along the silver windings of the Sava. For the same reason the terrace of the favourite part, Kalemegdan, has been enlarged and improved; and here not only is there a glorious view at sunset, but at all hours of the day there is the interesting prospect over the confluence of the two rivers, the Danube and the Sava, and the plains rolling away towards the northern frontier.

It is certain that the same desire to improve existing conditions prevails throughout the whole country. The people who gain their information chiefly from press reports are apt to think that Yugoslavia is a country whose chief concern is war, or warlike preparation; but those who study her more closely know that this is not true. The greatest desire both of her statesmen and her people is for peace, for only peace will enable them to make the most of the resources which lie within her.

It seems a pity that the charm of Yugoslavia is not better known. Last month an exhibition of water-colour paintings was held in Belgrade, at which it was possible to count up within a few minutes some of the treasures which the country possesses in scenery and historic interest. Churches steeped in the atmosphere of the Middle Ages, monasteries clinging to the stony sides of the mountains, Lake Ochrid limpid as the Lake of Geneva, the ruined fortress of Serbia's national hero, Marko Kraljevitich—these pictures, to mention but a few, bring back delightful memories to those who have been fortunate enough to travel in those parts; and throw out a challenge to all others to come and see such beauty for themselves.

Equally strong are the claims of the lovely Dalmatian coast. The Government, desiring to attract tourists thither, are offering special facilities in the way of reduced fares. There could not be a happier hunting-ground for a holiday.

CHESS.

By "CARO-KANN."

The solution to last week's end-game is as follows:—1, Kt—K2 (best), Kt—K4; 2, Kt—Kt, KtxP (!); 3, Ktx Kt, P—Kt5; 4, K—Q2, PxKt; 5, K—K, K—Kt3; 6, K—B2, K—R4; 7, KxP, K—Kt5; 8, KxP, KxP and wins.

As I anticipated the annual match between the past members of Oxford and Cambridge Universities, which was played on Saturday at the City of London Chess Club, produced an excellent contest. Oxford were very unfortunate in having two absentees, and the final score of 7—5 in favour of Cambridge suggests that I was not very far out in estimating that not more than a point would separate the two teams. Admittedly the Cambridge team were somewhat below their usual strength, but I do not think I am going too far in saying that some seven of the team would find places in the strongest combination that Cambridge could place in the field, and in the circumstances Oxford's score can only be considered as distinctly meritorious. Notable players missing from the Cambridge team included Mr. H. E. Atkins, Mr. W. H. Gunston, Mr. B. Goulding Brown, Mr. J. E. West, and Mr. L. Illingworth, and probably many people would think that a team composed of those five and seven of this year's team would be beyond Oxford's capacity to beat.

The above was the closing position in one of the games in the University match. White (Cambridge) here played Q—B7 threatening RXP which would have won, but Black forced the exchange of Queens and then there was nothing for it but a draw.

JAFFA ORANGE SHIPMENTS.

A report from the Empire Marketing Board's correspondent at Jaffa states that the weather continues very fine and cold. Rain is badly needed. It is expected that shipments of oranges during the next two or three weeks will be fairly light.

Shipments of Palestine oranges have recently been light. Only 50,000 cases were shipped during the week ended December 2, as compared with 108,000 in the corresponding week last year, and total shipments up to that date, at 212,000 cases, were slightly below the figure at the corresponding date in 1926.

Over 1,800 British manufacturers have taken space at the British Industries Fair of 1928.

The traffic receipts of the South Indian Railway Company for the week ended November 19 amounted to Rs.11,27,478, making the total from April 1 Rs.3,90,60,264. For the corresponding periods of the previous year the totals were Rs.11,51,746, and Rs.3,74,59,868.

Motors and Motoring.

By G. B. B.

The parking problem is one which will have to be taken in hand in earnest before long, as otherwise the present rapid increase in the numbers of car buyers will fall away as rapidly as it arose. At present there is no possibility of thousands of London car owners using their cars for business purposes except at a heavy expense for garage charges. That means that the cars can only be used for week-ends, and there are few who are prepared to pay five or six hundred pounds for a car merely to use it thirty or forty times a year. It has been said that the parking problem is one which cannot be solved—a statement which is frankly ridiculous. But it is, at any rate, not one of the simplest, and I doubt whether the proposed underground garages, should a much-debated scheme be carried into effect, will do much to ease the situation. In the first place, the cost of constructing underground garages will be much higher than most people imagine and that means that the rents charged will be proportionately heavy. Another and a serious difficulty will be in finding sites for these subterranean car nests. Just where they are chiefly needed, in the City and immediate vicinity, ground is far too valuable. Further away, the situation would not be good. Few car owners would trouble to drive into town if they had to garage at, say, Hammersmith, Wimbledon, or Muswell Hill and continue their journey by train. They would probably prefer a first-class season to a car in that event.

The Ariel Motor Cycle.

For rough and hilly country, especially in districts such as are frequently met with in the Near East, where con-

ditions themselves over the road or trying to throw away their magnetos or carburetters as they went, but the Ariel has never given any trouble of that kind.

One of the best pieces of work ever done by a British motor cycle was the test of the Ariel sidecar engine to the tremendous strain of running under load continuously, non-stop, for 5,000 miles under official observation. The record at that time for continuous running stood to the credit of the American airmen, Chamberlin and Levine, by virtue of their flight of 3,905 miles from U.S.A. to Germany. The machine was a standard side-valve Model "B" Ariel with a sports sidecar. It was not selected from stock by the A.C.U. for the simple reason that it was the first 1928 model made and there was thus no stock from which to select it! The only way, however, in which it deviated from standard was that both acetylene and electric lighting sets were used, and a Boniksen speedometer was fitted. By the A.C.U. ruling the speed had to be kept down to 20 m.p.h., and the test was carried out in 42 laps of 6 hours each. As soon as one driver had completed his six hours another took his place, without stopping the engine, and in due course this amazing test was completed, and dismantling showed that the engine had not deteriorated in the slightest but was as sound as when it came out of the works.

Some little time previously, I must mention, one of the first of the 1927 Ariel sidecar machines made history by climbing Snowdon. The test was observed by officials of the Autocycle Union, who testified that the mountain was climbed in 23 minutes 31.5 seconds. This was the first time a sidecar machine had ever climbed Snowdon, and the Ariel had the distinction of also beating the solo machine record of 24 minutes 6 seconds.

Motor Cycle Testers leaving the Ariel Works.

ditions generally are difficult, the Ariel motor cycle appears an ideal mount. Some year or two ago I rode an Ariel through the most difficult country in England—as a matter of fact it was through Yorkshire, Durham, and Northumberland—and as I was indulging in a hobby which can only be ridden successfully in out of the way places, the Ariel was often called upon to go where there were neither roads nor footpaths. Its behaviour was all that could be desired, and throughout the strenuous month the machine never received the slightest attention. At the end of the holiday a clean-down showed that the excessive vibration to which it had been subjected had not had the slightest effect upon it. Not even a nut had worked loose.

Of course that is saying a good deal for a motor cycle. I have had mounts that were continually shedding bits of

COMPANY NOTES AND REPORTS.

BARCLAYS BANK (Dominion, Colonial and Overseas).

The report for the year ended September 30 last states that after payment of all charges, full provision having been made for bad and doubtful debts, the net profits amounted to £482,045 19s.. To profit had to be added the sum of £114,294 12s. 3d. brought forward from September 30, 1926, making a total of £596,340 11s. 3d. which has been appropriated as follows:—To provision for income tax, etc., £120,000; to reserve fund £150,000; to interim dividends paid July 21, 1927, at the rate of 8 per cent. per annum on the "A" and "B" shares, less income tax £95,566; to final dividend at the rate of 8 per cent. per annum on the cumulative preference shares of £1 each fully paid, less income tax, payable January 20, 1928, £57,376; to final dividend at the rate of 4 per cent. per annum on the "A" shares of £1 each fully paid, and the "B" shares of £5 each, £1 paid, less income tax, payable January 20, 1928 £50,920; balance to be carried forward £122,478 11s. 3d.; total £596,340 11s. 3d.

It is reported that the Yugoslav Government has commenced negotiations for a loan from France.

An official *communiqué* announces that Captain V. H. Fergusson, District Commissioner of the Bahr-el-Ghazal Province, and M. Andrea Panatopoulos, a Greek merchant, have been murdered by Nuers near Lake Gorr, north of Shambe. The murder is alleged to have occurred while cattle taken by the Nuers from the Dinkas were being restored to their owners. The murderers are followers of Chief Garaliark of the Nuong tribe.

Near East Markets

CYPRUS TRADE IN OCTOBER.

The following report on Cyprus trade in October has been issued by the Trade Commissioner for Cyprus:—

Imports showed an all-round increase and were above the average. Exports maintained their position and prices. There was a drop in the price of potatoes owing to a slight appearance of disease and reduced quantities. The olive crop has been a very good one, production being about three times greater than last year. The quantity is still, however, not equal to the local demand and there is therefore none available for export.

Oranges began to be exported in small quantities during the month. It is anticipated that the quantity available for export will exceed 20 million. Orange gardens are extending rapidly.

Shipping was well up to the average.

EXPORTS			IMPORTS

The Sudan exports of gum in October totalled 19 tons of bleached of the value of £E1,090, 1,152 tons of hashab of the value of £E37,814, and 248 tons of tallow of the value of £E5,026. For the first nine months of this year the exports totalled 18,867 tons of the value of £E605,215. For the same period of 1926 the exports were 19,991 tons of the value of £E756,108.

TENDERS INVITED.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

Tenders are invited for the following contracts, and must be made by the dates mentioned.

EGYPT.

Filters and Accessories.—The “Municipalities and Local Commissions Section” of the Egyptian Ministry of the Interior invites tenders for the supply and installation of three mechanical filters and accessories for the water-supply works at Luxor. January 21. (D.O.T.)

Steel Reservoir.—The Ministry of the Interior, Municipalities and Local Commissions Section, Savoy House, Cairo, invites tenders for the supply and installation at the town of Luxor of a steel reservoir of 300 cubic metres capacity on a steel framework tower, together with the necessary steel piping and fittings as well as a water level indicator. The maximum water level is fixed at 32 metres from the ground. January 15. (D.O.T.)

Design and Construction of Swing Bridge.—The Egyptian Ministry of Public Works invites tenders for the design and construction of a swing bridge at Abu Hommos on the Mahmoudieh Canal (near Damanhour). February 15. (D.O.T.)

Machinery, Etc.—The Controller of Technical Education, Ministry of Education, Sharia Qasr el Aini, Cairo, invites tenders for the supply of machinery and machine tools for Fayum, Beni Suef, and Qena Trades Schools. January 21.

INDIA.

Machine Tools.—The India Stores Department (Engineering Branch) invite tenders for the supply of machine tools for Saidpur Workshop, Eastern Bengal Railway. January 9. (D.O.T.)

PERSIA.

The following are among tenders invited by the Persian Ministry of Public Works:—

Rails and Fittings, Etc.—Tenders are invited for 10,000 metric tons of steel rails, open hearth preferred (Martin or Siemen-Martin or similar process), for fittings to equip the above rails, for metal ties to equip 80 kilometres of standard gauge track, and for 100,000 wood ties.

Small Tools.—Tenders are invited for small tools such as shovels, picks, wheelbarrows, track tools, etc.

Trolleys.—Tenders are invited for 60 trolleys, wheels, axles, and bearings only for a track of 1.435 m.

Bridge Steel.—Tenders are invited for bridge steel erected in place.

Locomotives, Wagons, Etc.—Tenders are invited for eight locomotives for 76 c.m. track, internal combustion preferred, also for 200 wagons, half for 60 c.m. track, half for 76 c.m. track.

Miscellaneous.—Tenders are also invited for 500 tons Portland cement, four concrete mixers, steel reinforcing bars, culvert pipes, powders, dynamite, etc., power shovels, portable sawmills, corrugated iron sheets, railway dump carts, centrifugal pumps, hand pumps, and force hand pumps.

Further particulars of the above and other tenders can be obtained from the Persian Legation.

In October 52 merchant vessels of a net tonnage of 194,922 entered Port Sudan harbour as compared with 61 vessels of 219,552 tons in October, 1926.

Roumania received from Germany by way of reparations during the period November 10, 1918, to August 31, 1927, 63,213,360 gold marks, or 2,528,534,400 lei, of which 56,067,518 gold marks represented railway material. For the period September 1, 1927, to August 31, 1928, Roumania is to receive a further amount of 14,752,064 gold marks, or 590,082,760 lei.

Company Meetings.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.

Increased Passenger Earnings.

Lord Inchcape's Speech.

Viscount Inchcape, Chairman of the Peninsular and Oriental Steam Navigation Company, presiding on December 14 at the company's eighty-seventh annual general meeting, said that although passage earnings had advanced by a quarter of a million, few of the voyages had left a credit balance. There had been for various reasons a shortage of cargo to and from India, China, and Australia. In China the position continued to be most unfortunate. They had suffered severely through the coal strike. Their consumption was practically the same as in the previous year, but the cost was £241,000 more.

Passenger Traffic.

The cost of victualling, equipment, and wages continued high, and despite efforts made to decrease working expenses without impairing efficiency, they had found it difficult to make ends meet. In the past few years they had built steamers specially designed to meet the increasing demands of passengers, while a number of the older ships had to a great extent been remodelled. It was, he continued, no easy matter to run a ship to India, Australia, or China with 700 or 800 passengers, to feed and house them well, and to keep them all contented. While the directors got few complaints, they received numerous expressions of satisfaction, thanks to the attention given to every one by the captains, officers, engineers, pursers, and by the staff, afloat and ashore. Year by year, he added, an increased number of Indian ladies and gentlemen travelled in P. and O. steamers, and no effort was spared to make them comfortable. (Hear, hear.)

In comparing the cost of first-class steamer travel with that of hotel life ashore, he gave some remarkable figures. Taking hotel costs at £2 a day and deducting that daily rate from the total steamer passage return fare, the charge for first-class conveyance on a trip to and from Bombay worked out at 1½d. per mile; to Singapore and Sydney, under 1d.; to Hong Kong, under 1d.; to Yokohama, under 1d.

The passenger accommodation of the 19,000 tons turbo-electric steamer building for the company had received from their technical and supervising staff and the Board the greatest possible care. The method of propulsion, which was designed to give economical results and a complete absence of vibration, was not an experiment, for there were, he said, already fifty-one such steamers in commission, running successfully, and several being built.

Marine Insurance.

Although the decision arrived at some years ago, by his colleagues and the Company's associates, to place with the P. and O. Insurance fund the marine risks of their allied lines had resulted in a considerable yearly profit, the insurance market had been thereby deprived of a good deal of business. For this reason he had suggested to the Board that the P. and O. might cover its risks by re-insurance in the market, which was done. The balance remaining at credit of the company's insurance fund, after meeting the few outstanding claims, would be in the neighbourhood of £3,000,000. This they would continue to treat as a liability, for the reason that the P. and O. Company did not insure its ships except for any value in excess of £500,000, and then against total loss only. They did not propose to close the fund, and in the unlikely event of re-insurance premiums being raised, they would carry the risk themselves.

The Late Mr. F. A. White.

By the death of Mr. F. A. White they had lost an old friend who had served the company as auditor for twenty-five years. The Board had nominated Mr. Darby, who succeeded Mr. White as underwriter of the Marine Insurance Society, to fill the vacant office, and he, with Sir Robert Williams, the other auditor, would come up for re-election next year.

Thanks to the intervention of Lord Ritchie, Chairman of the Port of London Authority, the special train conveying outward passengers and their baggage from St. Pancras was now permitted to run alongside the steamers without change of engines, thus avoiding delay.

Efficient Organisation.

Recently, travelling by the special train which conveyed 600 passengers and their baggage to the Ranpura, he went down to inspect the vessel's arrangements. The visit was a surprise one. He found, as usual, everything in apple-pie order. Their Indian crews, he was happy to add, continued to give complete satisfaction—always on the spot and alert, always civil and sober. The P. and O. and its allied lines had again transported in the past year 2½ million passengers, again, he was glad to say, without the loss of a single life. For this the gratitude of the Board and of the stockholders was due to all those who served the company afloat and ashore. He never looked upon them as servants, but as colleagues, anxious, as

he, the speaker, was to maintain the great traditions of the P. and O.

The mail contract service had been carried on with efficiency. Last year the company carried 37,000 passengers from London and Marseilles and 650,000 bags of mails. Looking back for two years, although he might go further, the mails had invariably been delivered within contract time, so that merchants in London, in fact throughout the kingdom, got their letters delivered on Monday morning.

The New Deferred Stock.

At the extra-ordinary general meeting of November 10 last it was agreed to increase the Deferred Stock of the company by a million sterling, the stock being offered, in the first instance, to Preferred and Deferred Stockholders in proportion to their holdings at the price of £200 per £100 Stock. As, under the Charter, holders of less than £40 stock were not entitled to apply, some small balance was left in the company's hands, which would be sold in the market and the profit credited to the company. The issue had given them a little over two millions in cash which would be useful for the company's general purposes. Even if they had had power to issue Debentures, which they had not, he doubted, judging by what other companies had had to pay, if they would have done so at a lower rate than six per cent. Assuming they continued to pay ten per cent. dividend on the Deferred Stock, the new money would cost them only five per cent., and they had avoided a considerable cost for underwriting, brokerage, advertising, and printing. The issue had given the Stockholders a bonus approaching half-a-million sterling, provided, not by the company, but by the market. (Applause.)

P. and O. Banking Corporation.

Some seven years ago they had subscribed for 51,000 shares in the P. and O. Banking Corporation at a cost of £516,375, an investment that had paid them something over 5 per cent. The P. and O. Bank, located in the P. and O. Company's building, would continue to be useful to the company and its allies. Recently the Board, considering that the money could be more advantageously used in the company's business, had accepted an offer to purchase the company's shares; the sale had yielded £547,400, including interest, which gave them a profit, exclusive of interest accrued, of £19,125, an item which would come into next year's accounts as an addition to their provision for that rainy day which, as a rule, came sooner or later, and, he was sorry to say, was with them now.

His lordship, continuing, said that their investments gave them no anxiety. £3,996,241 bills payable for new ships, outstanding a year ago, had been reduced at September 30 last to £381,000, which amount also had since been liquidated. Shipbuilders had said they would have preferred to keep the bills running, but the Board had thought it better to pay them off and the friendly relations with the builders would be in no way thereby disturbed.

Improved Suez Canal Facilities.

The administration of the Suez Canal Company consistently endeavoured to improve the facilities for passing vessels through the Canal, and the speed of their transit would shortly be increased by a knot an hour. Lately, by providing floating landing stages at Port Said, they had made it possible for passengers to walk to and from the shore free of charge and free of the services of local boats and boatmen. He was glad to report that a few days ago the Suez Canal Board had decided to reduce canal transit fees by five gold centimes per ton, bringing the rate to seven francs a ton as from April 1 next, and relieving British shipowners alone of about £160,000 a year. Before the War the rate was 6.25 francs per ton. The suggestion to reduce the rate emanated, not from the British directors, but entirely from their French colleagues.

Industrial Peace.

Although, year after year, he referred to subjects not apparently related directly to the company's affairs, there was, he continued, in the conduct of a vast sea service such as that of the P. and O. Company and its associates scarcely a department of the national life which did not affect the trade and enterprise in which they were engaged. The whole country owed a debt of gratitude to the Prime Minister, Mr. Baldwin, for the Trade Disputes Act, which he, the speaker, regarded as a substantial contribution to the national welfare and a charter of liberty to the subjects of the Realm. Strikes and violence usually resulted in misery and want for the workers and their wives and children. In this connexion to no one was the country more indebted than to Mr. Havelock Wilson, President of the Seamen's and Firemen's Union—hear, hear—who, in spite of great physical infirmity, had steered his union through the recent trying times so that in the past few years his members had not lost a day's pay through strikes or stoppages.

Socialising the Banks.

He had recently read in the Press the scathing remarks of Mr. Beaumont Pease, Chairman of Lloyd's Bank, on the Socialist proposal for nationalising the banks. With the train of predatory legislation which might be expected from a Socialistic Government, what, he asked, when the moment for dealing with the banks arrived, would be the exchange value of the pound sterling? What would have become of the world-wide trust in British finance which was one of the intangible assets of British banking and trade?

He believed that the leaders of labour in their efforts for peace in industry had realised that commercial enterprises, if they could not make a profit, or at least pay expenses, must close down, wholly or partly, which meant throwing more people on the dole.

Unemployment and Migration.

The Unemployment Insurance Bill now before Parliament provided that substituted occupation might be found for a man whose employment in his accustomed trade was not available. Migration was the remedy which leapt to everyone's mind when this subject was discussed. The Dominions, he said, needed an access of workers for the due development of their primary industries and it was to be hoped that migration of men and women of British birth to British lands beyond the sea might tend to regain its former level. Shipowners were equipped to accommodate such traffic; that accommodation was capable of expansion, did the need arise; and any sustained increase by migration in the man power of the Dominions was bound soon to be reflected in an increase of our exported goods.

He ventured to suggest that it would be more to the advantage of the Dominions to develop their natural resources than to build up industries in the towns by protective tariffs. He would like to see

the same freedom of trade within the Empire as existed between England and Scotland and throughout the territory of the United States of America.

He recalled an utterance by the late Mr. Joseph Chamberlain in March, 1895:—"If by any means, by protection or any other, you shut the door on foreign goods, you may be quite certain that fewer British goods will go abroad." Mr. Chamberlain's remarks in 1895 were in his, the speaker's, judgment, equally true to-day.

Disposal of Australian Government Steamers.

At the close of the War our Government had found themselves possessed of 614 ships which they had built or taken over from the enemy. They wisely decided to dispose of the lot and the last was sold a few months ago. The Government of Australia bought or built a number of ships which they operated for some years. Mr. Hughes, the then Prime Minister, who had originated the scheme, had thereby involved his country in the loss of many millions. Apparently his idea was that, having ruined the established lines, the Government would put up money for more ships to be run at ruinous rates, which in his, the speaker's, opinion was political economy gone mad. A wiser man, Mr. Bruce, now in power, had decided to rid his people of this wasteful incubus. The majority of the ships had been sold and the seven which remained were now also to be disposed of. Government trading was, he added, with rare exceptions, a losing business for the taxpayer.

The Waterside Strike.

There had recently been a recrudescence of labour troubles in Australia; the Waterside Workers, throwing over the Court Awards, had refused to work overtime, involving serious delays to vessels, although the mail steamers were forced to sail on contract dates. The firm attitude of the Commonwealth Prime Minister had, he said, probably avoided a general strike. Strikes in Australia in 1926 had numbered 360, involving 113,034 workers, who lost thereby 1,310,261 working days and £1,415,813 in wages. The condition of shipping affairs on the other side of the world for some years past reminded him of a play he recently saw, entitled "One Dam Thing After Another." (Laughter.)

The So-called "Inchcape Group."

As to the view of some people in Australia that he, the speaker, controlled all the shipping trade between Great Britain and Australia, there was, he said, no greater delusion. Some forty-five years ago he had inaugurated for the British India Company a service from Calcutta to Australia with a small steamer of 1,500 tons. The trade gradually developed and for many years the British India had run a regular service with vessels of 10,000 to 12,000 tons. Some years ago, during his tenure of office as Chairman, the P. and O. Company, which had served Australia since 1852, the year in which he was born, was offered and acquired an interest in the Federal Company, and later in the Orient Company. But the P. and O. had no interest in other great lines serving Australia, such as the White Star, Aberdeen, Blue Funnel, and Commonwealth and Dominion Lines. There were, he said, Conference Agreements, governing rates of freight and sailings, to which, he might mention, the Government (Commonwealth) Line was a party, but without such arrangements there would be chaos. The sea was open to all, and if they showed themselves high-handed, outside tonnage would speedily appear to keep them in order. He hoped his words would disabuse the minds of their friends in Australia.

Other Companies Never Attacked.

During a lengthy business career, not one of the lines with which he had been associated had ever attacked the trade of another company or another man. If themselves attacked, which had been seldom, they had fought; and, if need be, would fight again. In every case where they had embarked in trades occupied by others, trade and ships had been offered to them and acquired on terms satisfactory to the sellers.

Prudent Finance.

Their investments in associated lines stood in their books at the purchase prices; these had not been written up. Beyond being kept in touch with the operations of those companies and working in unison with them, neither he as Chairman nor the Board ever interfered. Personally, he had never been inside one of their offices. The P. and O. Company had, he added, in recent years been indebted to its associates for considerable assistance in addition to the ordinary dividends distributed.

It had been suggested that the Company should disclose the intrinsic value of its investments. Such a statement might be useful to their competitors, but it would not be to the advantage of the company. They had a costly building programme before them and, even if the next few years should bring increased profits, these would need to be added to their resources for new ships. If the Company had divided its profits in good years up to the hilt, it would have been in a sorry plight to-day.

Concluding, his lordship hoped that he had not detained the meeting too long. Although the P. and O. was not doing so well for the time being as he could wish, he hoped when they met next year the Board might again be able to recommend a moderate dividend. (Applause.)

The Hon. Alexander Shaw (deputy-chairman) seconded the resolution, which was carried unanimously.

The retiring directors (Sir Charles Stewart Addis and Sir Montagu Cornish Turner) were re-elected, and the auditors were reappointed, and the proceedings terminated with a vote of thanks to the chairman, directors, and staff.

STEUA ROMANA (BRITISH).

Position of Roumanian Oil Industry.

The annual ordinary general meeting of Steaua Romana (British), Ltd., was held on December 14 at Winchester House, Old Broad Street, E.C., Sir Albert G. Stern, K.B.E., C.M.G., presiding in the absence through indisposition of the Chairman, the Rt. Hon. Lord Greenway.

The Chairman, in the course of his speech, in moving the adoption of the report and accounts, said: In July last the Steaua Romana Company, Bucharest, increased its capital from 866,625,000 lei to 1,000,000,000 lei by the issue of 266,750 shares of a nominal value of 500 lei, at the rate of 560 lei each. These shares were offered preferentially to the existing shareholders, and this company took up the number to which it was entitled to subscribe. The dividend for the year ended December 31, 1926, paid by the Steaua Romana Company, Bucharest, was 15 per cent., or 75 lei per share.

The production of the Steaua Romana Company from July 1, 1926, to June 30, 1927, was 483,580 tons, as compared with 352,637 tons in the previous year. The total quantity of products exported during the same period was 335,478 tons, an increase of 124,784 tons on the previous year. The production for the five months ended November 30 last was 244,353 tons, as compared with 199,008 tons during the corresponding five months of last year.

An agreement has been concluded between the Roumanian Government and the Steaua Romana with regard to the settlement of the company's claim for payment of compensation for the destruction of its property in 1916. This claim will be met by payments in half-yearly instalments over a period of 40 years. The first three half-yearly instalments have already been paid by the Roumanian Government.

It was with very great regret that we heard of the death of King Ferdinand, under whose wise and tactful rule Greater Roumania was beginning to develop her magnificent resources. While the country was still mourning the loss of her Sovereign a further shock was experienced by the death of that great statesman and patriot, the Prime Minister, Mr. Ionel Bratianu. In spite of these very severe losses I have every confidence that able hands will be found to guide the destinies of Roumania, and that her great natural riches will continue to be developed on a sound economic basis.

The production of oil in Roumania continues to increase. The total for the first ten months of this year was 3,034,903 tons, as compared with 2,689,438 tons for the corresponding period of last year, and it is probable that the total production this year will exceed 3½ million tons.

The total tonnage of petroleum products exported from Roumania during the same period was 1,576,001 tons, as compared with 1,201,038 tons for the corresponding period of 1926.

In spite of this satisfactory increase in Roumania's production and exports, the steady decline in the world's prices for all petroleum products since our last meeting has made it increasingly difficult for the oil industry in Roumania to show profits in proportion to the capital invested in that country.

It is with pleasure that I am able to inform you that the Roumanian Government appreciates this state of affairs and has already done much to alleviate the difficulties against which the industry is struggling.

Regarding our accounts, it will be seen from the balance-sheet that at June 30, 1927, we held 217,375½ shares in Steaua Romana, costing £1,123,865 6s. 10d.

Our trading profits for the year have increased from £21,539 to £26,147. The dividend received by us from the Steaua Romana Company in respect of the year 1926 was £16,927, as compared with £14,821 for the year 1925. This dividend is very small, particularly in view of the fact that it is paid on a capital which at the present value of the lei is enormously below the sterling capital which has actually been invested in the company.

That the company has not in recent years been able to pay larger dividends has been due, partly, to the excessive taxes and transport tariffs, and which have now been reduced or are in course of being reduced; partly to the recent low level of prices; but, above all, to the fact that it has during the past few years not only made good the heavy War damages of 1916, but has carried out a large programme of development of its fields—from which has resulted the present largely increased production—and also of its refineries, pipelines, fleet, selling agencies, etc., the cost of which has been very largely met out of profits. The first and last of these causes are now, I am pleased to say, disappearing, and the second—namely, the low level of prices for oil products—is one that must sooner or later be adjusted.

The profit for the year, before making provision for taxation, is £107,426. After deducting approximate liability for income-tax for the year, there remains a balance of £88,266 which, added to the balance of £22,913 brought forward from the previous year, makes a total of £111,180. Out of this we propose, subject to your

approval, paying a dividend on the Ordinary shares at the rate of 4 per cent. per annum, less tax, amounting to £64,000, placing to reserve the sum of £25,000, and carrying forward a balance of £22,180. We might, as you will observe, have increased our dividend by 1 per cent., but I think you will all approve of the sound policy we have now initiated of building up a reserve fund.

The report and accounts were unanimously adopted.

SUDAN COTTON REPORT.

The following particulars are taken from the monthly report of the Central Economic Board of the Sudan Government:—

Mongalla Province.—The Meridi cotton crops are poor, the seed germination being unsatisfactory. Cotton in the Yei, Moru, and Opari Districts is promising. The Latuka and Central Districts will have bad crops owing to exceptionally bad rains.

Nuba Mountains Province.—September. Reports on the cotton crop of the Province are now sufficiently detailed to enable previous early reports to be revised. It would now appear that the Talodi District crop will probably be bigger than last year's, by a small margin. This cotton looks remarkably healthy and picking should be general towards the end of October. Less cotton has been sown, apparently, at Korongo, but in the Kawahla the crop is more extensive than last year's.

October.—The cotton crop, generally, is good. Picking began during the month and large supplies were ready for the opening of the markets in November. The Kadugli crop is definitely bigger than last year's and it is very favourably reported upon. The Delami crop is also very satisfactory and possibly covers a larger area than last year.

Kassala Province.—The sale of last season's crop of the concessions area, amounting to 8,340 bales, has been completed. Hishing and sowing of the new crop are practically completed everywhere in the concessions area and the following are the details of the areas sown:—Hadaliya, 5,530 feddans; Mitateib, 8,280; Tendelai, 3,900; Degein, 3,880; Mekali, 4,260; Kassala, 3,940; total, 29,790. The final effective area will be about 25,000 feddans. Rain-grown cotton in the Southern Districts is reported to be progressing favourably.

Dongola Province.—Ghaba.—The cotton crop continues to look very healthy, though a few bolls have been shed owing chiefly to high winds. Nuri.—Cotton (approximate area 700 feddans) on the whole is looking well and is fairly free of pests. Picking should commence in November. Flying locusts were present until October 20, when they migrated. Gureir.—The cotton crop is developing well and in places the heads of the plants require topping. In the Karu area cotton has suffered from high winds experienced during the month, but is now recovering.

Berber Province.—Kitiab.—The total area under cotton is 903 feddans, of which 615 feddans are Government land and 288 feddans native land. The crop is very late, but should yield well towards the middle of November. Picking was started on October 15 and 173 kantars were delivered into store by the end of the month. The cotton is clean, fairly uniform in type, and has a good staple. Mikeilab.—The total area under cotton is 598 feddans. Picking in the Karu area started during the month and 25 kantars were delivered into store. The Gezira cotton is not yet ready for picking. There are still places very backward in growth, but the remainder is healthy and promises well. Bouga.—573 feddans are under cotton cultivation. South of the Garanese area cotton has matured rapidly and boll opening is uniform over all sections of the station. The weighing in of cotton commenced on October 29. Genduttu.—522 kantars of cotton were delivered into store in October.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 14:—

Egyptian Futures.—Sakel Contract.—This market has continued to feel the absence of adequate trade support and, with increasing pressure both from the weight of "actual" supplies and further liquidation of speculation held cotton, periodical weaknesses have been experienced. Values at to-night's close, whilst not the lowest of the week, show losses of 43 to 44 points for near and 27 to 40 points for distant positions since the date of our last report. Recent operations certainly leave the market in a sounder technical position, as not only has the large "Bull" account worked up during the summer been liquidated, but encouraged by the persistent decline of the past few weeks small speculators have turned over to the "short" side and trade interests likewise have been inclined to utilise the contract to hedge stocks. Whilst certainly there are no tangible reasons why the market should deviate from its present downward tendency, there are signs of increasing resistance at the ruling levels and at times quite small covering orders have sufficed to maintain a steady undertone. Trade report do not reveal any increase of activities in yarns, but we understand that more orders have been booked in certain quarters and further business is being withheld owing to the prevailing ideas that the raw material has to come down still further in price. The Alexandria market continues to suffer from lack of the necessary commercial support to counter-balance periodical bouts of hedge selling by banks and other holders; a large exporting house there have cabled us their views as follows:—"Consider drop too rapid, expect danger small crops Egypt and America next year will soon influence markets which are now feeling full weight of this crop; henceforward statistical position must improve as invisible interior stocks both countries are far below last year." Summing up the situation, we consider we have now reached the stage when values will commence to develop more stability, and on this account we think the moment opportune to reduce "short" commitments, with a view to switching round to the other side on the first signs of an improving trade demand.

Upper Contract.—Only a moderate business has transpired in this market during the past week, and no features of outstanding interest have occurred. Weakness in the American markets has rather inclined sentiment to the "bearish" side and values have declined 25 to 39 points on the week. Fundamentally, the position at ruling differences with other cottons appears sound, but confidence will continue lacking until the trade demand broadens. On the whole, we are not against the market, and consider that down-scale purchases will later be realisable at profits.

Egyptian Spot.—Trading in this department has again been depressingly quiet and a further substantial drop in prices has occurred. The American Bureau Report published last week, which was of a mildly "bullish" character, and the Egyptian Government's final crop estimate (the tendency of which was much the same), have both been completely ignored as market factors, and until yesterday we seemed to be without any power of resistance whatever. Alexandria, however, called a halt on this date and a better tone at once became noticeable in all markets. After the very large drop which we have experienced recently, it was not surprising that in some quarters there was a tendency to "turn round," on the assumption that the bottom had been reached. Manchester displayed rather more interest than usual and one or two small lines of forward cotton were booked, but the whole weight put through proved insufficient to raise prices more than a few points. The American market still rules the situation and

until some definite upward movement occurs there, it would not appear likely that we shall witness any sustained rise in Egyptian. We must, however, express some surprise that spinners are not taking more advantage of the current level to obtain a portion of their requirements.

No change has been witnessed in the daily inquiry; Uppers, 13½d. to 14d., have been in popular request, whilst rather more interest has been showing in Fully Good Fair to Good Sakel at from 17½d. to 18½d. Sudan cotton has continued in moderate request only. Forwardings to spinners for the week ending the 9th inst. were returned as 8,358 bales Egyptian and 1,364 bales Sudan. Estimated sales: 1,500 bales Egyptians and 670 bales Sudan. Quotations of Sakel have been lowered by 55 to 60 points; those of Upper and Pilon by 40 points. F.G.F. Sakel to-day, 17d. F.G.F. Upper to-day, 13.65d. F.G.F. Pilon to-day, 13.90d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended December 8, state:—

Since our last report the futures market has been active but decidedly weak. The week's summary of price movements is as follows:—Sakellaridis: January, 33.58 dollars, 1.69 dollars down; March, 33.90 dollars, 1.68 dollars down; May, 34.18 dollars, 1.75 dollars down; November, 34.70 dollars, 1.18 dollars down. Ashmouni: December, 25.65 dollars, 0.93 dollars down; February, 25.93 dollars, 1.05 dollars down; April, 26.18 dollars, 1.04 dollars down; October, 25.90 dollars, 0.85 dollars down.

Sakel.—The market during the past week has had to support the publication of two crop estimates, both of which have been bearish in their influence. On the 6th instant the Alexandria General Produce Association published its final estimate of the Egyptian crop, 6,400,000 kantars, against a preliminary estimate of 6,200,000 kantars, and to-day the American Bureau issued an estimate of the American crop, giving a figure of 12,789,000 bales, of which 11,743,000 bales already ginned. Both the estimate of the Alexandria General Produce Association and that of the American Bureau are above the figures expected and the market has been weak under the liquidation which followed their publication. The market is weak and may probably go lower; spinners have not been buyers to any extent and there is no commercial support in the market.

The lack of demand is reflected in the export figures of the past week; these figures are not very encouraging when one considers that they refer to the first week of a month which is generally one of the busiest of the season. The statistical position is slightly worse this week; the Alexandria stock now stands at 3½ million kantars, the record of the present season. The fact that the drop has not awakened any interest on the part of spinners is discouraging, and unless this position quickly improves, it is but natural to expect prices to drop away still further. Reports from consuming centres do not indicate any improvement in conditions, and from practically everywhere one hears talk of reducing production, this having latterly been in excess of demand.

Uppers.—This market has been slightly less weak than

JOHNSTON LINE

Mediterranean, Black Sea and Danube.

REGULAR SAILINGS from:

Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Bralla.

For Freight and other Particulars, apply:

JOHNSTON LINE, LTD., 6 Billiter Street, London, 9, Mount Street, Manchester, and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

Sakellariadis : Business has been quiet and demand very moderate, but all styles have been dealt in. Spot differences are generally without much change for Good Fair and upwards, but for the grades below Good Fair they are

Up-Country : Business is absolutely stagnant in the villages and, apart from some sales of distress cotton, little or nothing has been done during the past week. The factories are, for the most part, full of cotton, but, as we mentioned last week, most of them are only ginning three or four days a week ; with warehouse space scarce and prospects for the quick sale of their cotton so poor, holders are not at all anxious to gin their cotton.

COMMERCIAL BANK OF GREECE

(A Limited Liability Company Registered in Athens.)

Notes of the Week.

The Passing of the Year.

The one feature in common that all the countries of the Near and Middle East have had during the year now drawing to a close is that one and all are stirring with new aspirations. Attempts to give effect to the new ideas are made sometimes hesitatingly, sometimes crudely; for dissatisfaction with things as they are range from extreme nationalism, which in certain lands brooks neither supervision nor advice, to a courageous effort to put an end to administrative corruption and inefficiency. Among the Balkan States the year may come to be invested with special significance both for Yugoslavia and for Roumania; each country has been called upon to adjust itself to the passing of the central figure in the old régime, and it has yet to be seen whether the new can be grafted at once on to the old, or whether there must be a long transition period during which much dead wood will have to be cut away. In Yugoslavia the veteran Pashitch died before the new year opened, but the twelve months that have elapsed since then have not sufficed to enable the Kingdom to build a new order on any sure foundation. For Roumania the death of M. Bratianu promises to be followed by more immediate results, unless the old school of thought should prove able to put up an unexpected resistance to the reforming zeal of the Transylvanians. Bulgaria pursues her difficult course, in an attempt to gain the relief from onerous peace terms to which she considers her exemplary conduct since the War entitles her. For Greece, in spite of some notable achievements, the year has provided no answer to the question with which the country is mainly concerned. The impression conveyed to the foreign onlooker is that although the present régime is accepted by all parties, it is regarded by none as being invested with permanency. For the time being, however, all classes of the population welcome the political truce that it has brought, and are in no hurry to risk a change. Perhaps the most notable headway during the year has been made in Turkey, where adaptation to Western standards is the declared policy of the Government and has been responsible for two conspicuous measures, an official census and an attempt to deal with the Kurdish problem by persuasion and good government in the place

of Oriental methods of suppression. The door to normal relations with Western Powers has been left slightly ajar preparatory, no doubt, to being thrown wide open when the financial stress can no longer be coped with by makeshift devices. Mustapha Kemal Pasha has ventured to leave Angora for a three months' stay in Constantinople, and may in due course embark on a foreign tour as soon as he realises that it is possible for some of the Great Powers to be interested in the good government and economic development of Turkey without harbouring designs on her territorial integrity. There remains of the Balkan States Albania. The position in that country turns on the personality of the President, who has decided that his country's future as well as his own existence must be made dependent on Italy's favours. His policy is not popular in Albania, but the people have probably never accorded unchallenged popularity to any of their compatriots since Skanderbeg. For the present Ahmed Bey Zogu rules the country with a firm hand, with Italian help and financial support in many spheres. The Treaty with Italy has been the outstanding event of the year; but its full significance will be shown only at a future date.

Egypt in 1927.

For Egypt the year now passing is likely to prove memorable chiefly as a bridge of peace connecting a period of storm with, it is to be hoped, a long era of tranquillity within and without. True, it has been marked by the death of Zaghloul Pasha—an event which may in the country itself overshadow all other happenings; but the great leader had already set his own seal of peace on the conduct of Egyptian affairs, and his mantle in this respect has fallen on no less eager shoulders. Under Sarwat Pasha and Nahas Pasha, the new leader of the Wafd, Egypt has officially set her foot on the first rung of the ladder that leads to a treaty of alliance with Great Britain. They will mount the remaining steps at her own pace, conscious that they have national support for the conclusion of a formal agreement regulating Anglo-Egyptian relations, but anxious to achieve, as far as possible, unanimity among the people for the details of the understanding, which, while possibly not giving the Egyptians

all they wanted, will yet bring them advantages of which they have lost sight in their concentration upon matters of less practical importance in the everyday life of the nation. The turn of the year finds the Egyptian Government summoning a conference of the Capitulatory Powers to discuss modifications in or the abolition of the Capitulations, and also embarking on a scheme for the reform of the Mixed Courts. The progress made during the year has been due to the restrained attitude of the people and Parliament, and the early attainment of the goal in sight will depend largely on the maintenance of this attitude.

Bulgaria's Difficulties.

Since the Armistice, Bulgaria has had six Governments and thirty-nine since the existence of the country as an independent State. In these forty-eight years one Prime Minister, M. Stamboulloff, has remained in office for seven consecutive years, two others for four and three years respectively. The average duration of the other Ministries has thus been less than a year, and on this analogy the present Cabinet of M. Liaptcheff, which took office in January, 1926, may be said to have shown a normal degree of stability. That its position should now be uncertain may be due to a political restlessness characteristic of all Balkan peoples, but in all probability represents a satisfactory development in the political life of the country which has been in progress since the Stambolisky régime. As a reaction to the strong movement to the Left associated with M. Stambolisky there came the inevitable swing of the pendulum. Under M. Tsankoff it showed signs of remaining too long at a high point on the Right, and M. Liaptcheff took office with the object of introducing a happier balance between the two extremes. It may be regarded as in some measure a tribute to the success of his Government that the feeling has now gained ground in Bulgaria that a still more equitable adjustment is possible. Some of the Left groups have purged themselves of the suspicion of Communist leanings and are claiming co-operation in the Government on the ground that the domestic situation calls for the united effort of all constitutional parties. At the same time the extreme Right sees signs that it alone is able to save the country, and accordingly M. Liaptcheff is being subjected to pressure from two directions. The hitch in the negotiations for the loan on which Bulgaria is counting under the auspices of the League of Nations is a set-back to the Ministry, although it does not appear that Bulgarians as a whole disapprove of the stand that it has made on the subject. Oppor-

tunity was taken of the presentation of the Reply from the Sobranie to the Address from the Throne for political conversations in the Palace, and it is generally supposed that there must be sooner or later important administrative changes. The reputation of M. Malinoff, who was Prime Minister for seven months in 1918, stands deservedly high both in Bulgaria and abroad, and it has surely been an anomaly that his services should have been lost to the country in an administrative capacity for so long. King Boris's predilections must inevitably incline towards a Coalition Government on the widest possible basis.

A Native Policy for the Sudan.

It is typical of British colonial or imperial methods—based, as they are, on instinct rather than design—that the new Governor-General of the Sudan in his first Report should state his conviction that of the large issues facing the Sudan Government, few, if any, are comparable in importance with that of placing on a more clearly defined basis our policy in regard to native administration. In view of the fact that Great Britain has been responsible for the administration of the country for nearly thirty years, and for almost as long a period has been turning out each year a supply of educated natives from the Gordon College at Khartoum, it would have been thought that native administration was being developed on lines long since clearly laid down. Beyond, however, the acceptance of the general principle of decentralised control, Sir John Maffey finds no definite programme in respect either of method or of time. The two native agencies employed for administrative purposes are the tribal chiefs and sheikhs as native authorities administering their own people, and executive officials selected for the public service from the ranks of the native population. Sir John Maffey favours the former system and is introducing a policy of strengthening the authority wielded by the native chiefs over their people as judges. He is frankly opposed to the alternative system, which he designates an instrument of bureaucracy that would constitute “a costly elaboration of the administrative machinery.” Yet it may be doubted whether the other policy, which, as the Governor-General admits, must necessarily yield place to the impulse of new ideas, “unless fortified betimes,” can expect to hold the field for long, especially in the face of an increasing output of educated natives. The policy required, it would seem, therefore, should provide for a combination of the two systems. More than a year ago it was urged in these pages that a more carefully considered native policy was needed, and one suggestion made was that, profiting by experience elsewhere, the Sudan Government should avoid the mistake of training native officials to regard the whole of the Sudan as their legitimate sphere, with the result that many of the races of which the population is composed would sooner or later find themselves under alien, though native, jurisdiction. The native should be required to find in his own territory and among his own people scope for his intellectual talent and administrative capacity. In this way it should be possible to prepare for the gradual and smooth development of native administration from the old tribal methods to a system more likely to commend itself to more sophisticated generations.

The Ruler of the Wahhabis.

Later information on the raid by the Wahhabis on Busriyah, north of the Iraq-Najd frontier, does not clear up definitely the question of who is chiefly to blame, King Ibn Saoud himself, or his unruly Ikhwan, but it appears very probable that the rule of the Wahhabi leader, in this outlying part of his vast domain, has for the time being simply run out. Whether and how quickly he can restore it is a matter upon which it is not possible to guess very precisely, but whatever be the explanation of this absolutely unjustifiable raid on Iraqis, there can be no doubt

THE SITUATION IN ROUMANIA.

Recent events in Roumania would seem to have brought that country to the parting of the ways. With the death of M. Ion Bratianu, following, as it did, so close upon that of King Ferdinand, the system with which he was identified, and which under his guiding hand, with the support of the King, appeared to have become almost second nature to the people as a whole, is proving far less acceptable to the nation now that his masterful personality has been removed. It would have been thought that, as M. Vintila Bratianu had always been regarded as his brother's main prompter, his succession to the leadership of the Liberal Party and of the Government would ensure not only the smooth development of that system, but also its inevitable intensification. Whether it is that the prestige that was M. Ion Bratianu's fails M. Vintila Bratianu or that the country has slowly but surely been emancipating itself from the leading strings in which the elder brother contrived to keep it, the fact remains that the system is showing signs of breaking down. It was an essential part of the system that the Liberals should be in power or that M. Ion Bratianu should continue to exercise the authority even when another, as in the case of General Averescu, actually held the reins of government. To this end elections were "made," the degree of force that might be required to bring about the desired result depending on the measure of resolution shown by the Opposition in seeking to obtain success for itself. The more dangerous opponents were, if possible, eliminated by one method or another before the election day; at the polling stations Opposition voters, as far as could be arranged, were prevented from registering their votes, or, if need be, their votes were lost or were not counted. Passions ran high for two or three days, heads were broken freely on both sides and the liberty of the subject counted for little or nothing; but the amnesty that King Ferdinand would be relied upon to grant on the Government's advice served to draw a veil over the proceedings, and the country turned to the order of the day. So much were these the recognised rules of the game that M. Ion Bratianu with ninety-five per cent. of the seats at the dissolution of Parliament, when he sanctioned the appointment of General Averescu as Prime Minister, had to acquiesce in the return to the Chamber of Deputies of only fifteen of his Liberal followers at the elections carried out by his successor in strict accordance with Liberal methods. The path of unconstitutionality, however, is set on a dangerous slope; yet the prestige of M. Ion Bratianu was such that it helped to disguise the direction that the country was taking, and it has required his removal from the scene to bring home in their entirety the perils ahead to the majority of his compatriots.

The decision that Roumania is being called upon to make to-day is whether it will continue on the broad but slippery road of unconstitutionality, or will turn off to the narrow, and at first uncomfortable, path of constitutionalism. With a consistency that commands admiration M. Maniu, the Transylvanian leader and now the head of the Nationalist-Peasant Party, is the chief protagonist of the latter course. It is recorded of him that he could have been Prime Minister of a Coalition Cabinet in 1919, when offered the post by King Ferdinand, if he could have brought himself to consent to M. Ion Bratianu's condition for co-operation, that the elections should be so made as to secure a certain representation for the Liberal Party. M. Maniu refused to stultify his political career by such a start, and since then has remained in the political wilderness. It is significant of the Transylvanian leader's position to-day that immediately on being appointed Prime Minister, M. Vintila Bratianu endeavoured to secure his co-operation in the Government. Again the stumbling-block was the "making" of elections, which M. Bratianu still considers essential to the success of his policy and the well-being of Roumania. On this point and the allied question of a return to strict constitutionalism the two leaders have definitely joined issue. The struggle is embittered by the present condition of the country, which M. Maniu has summed up in his indictment of the Bratianu régime as "a situation, both material and moral, that is disastrous." He holds the Liberal system of government responsible not only for the lamentable financial and economic state of Roumania, but also for its "deplorable moral state." The reputation for corruption that the country has gained he characterizes as a national humiliation.

Even when all allowance has been made for political bitterness in a Near Eastern country, it is evident that feeling is running high at the present moment in Roumania. The fight that M. Vintila Bratianu is putting up against his outspoken opponents conveys the impression of being much less whole-hearted than would have been expected from his elder brother in similar circumstances. It is generally believed that he has already tacitly conceded M. Maniu's point of view that the interests of the country call for the resignation of the Liberal Government and the dissolution of Parliament; but he is anxious to safeguard the economic structure that the Liberal Party has built up. According to the Transylvanians this structure is so linked up with the economic life of the country that, however much they may resent the abuse of power which in their eyes it represents, they have no alternative to continuing its existence, and they are willing to give M. Bratianu guarantees to this effect. Foreign observers are not called upon to take sides in the domestic politics of the Roumanians. They cannot fail to note, however, the symptoms to which M. Maniu has called attention, and they realize that Roumania under whatever régime has a long way to go before she can fully rehabilitate herself from an economic point of view in Western eyes. Their own experience prompts them to favour constitutionalism as against unconstitutionality, and in Roumania's interests they would sincerely regret to see the country reduced to such a pass that only an appeal to force could bring it back to constitutional methods. M. Maniu's programme includes a wide policy of decentralisation, as opposed to the highly centralised system of the Bratianus, which has failed to supply Roumania with the type of official of which she stands in need. The crux of the situation will in any case remain largely economic, and for the very first step—the stabilisation of exchange—a foreign loan will be necessary. It may be doubted whether conditions will be favourable for the floating of such a loan abroad until the Roumanian Government has given proof of a complete change of attitude and methods, and if a Nationalist-Peasant Cabinet is regarded as the only alternative to M. Bratianu's Government, then the sooner it is in a position to prove its worth the sooner will Roumania be able to grapple seriously with her economic and financial problems.

The Near and Middle East*

From Our Own Correspondents.

Baghdad, December 16.

The Wahhabis.

A serious frontier raid took place on November 5, when a body of Ikhwan under Faisal ed-Dowish, of the Mutair tribe, attacked an Iraq police post at Busriyah in the Nasiriyah area. The attack was delivered in darkness and without warning, and only two survivors were left of the six policemen and thirteen labourers at the police post. A force of desert police despatched from Nasiriyah found the mutilated bodies of the victims, and later a punitive expedition of the Royal Air Force inflicted punishment on a section of the Mutair who were in the desert near Busriyah.

On November 24, Faisal ed-Dowish was reported to be collecting a force of 5,000 tribesmen at a point one hundred miles south-east of Busriyah, in preparation for another attack on Iraq territory. A few days later, the Shaikh of Kuwait was urgently recalled from Basrah, where he was staying on the report of an advance towards Kuwait by Faisal; and a few days later a village in the neighbourhood of Juhrah (Kuwait) was attacked; some fighting and looting took place, but no further raid is reported.

In the meantime, a number of tribal elements whose flocks were grazing near the frontier have taken refuge in the Zubair district. It may be noted that Al Busriyah is 75 miles north of the Najd frontier. Ammunition and barbed wire have been sent to the frontier posts, and British bombing planes are patrolling.

These affairs have caused deep perturbation among Iraqis, and not without reason. An indignant local Press points out that either King Ibn Saoud cannot control his followers, or he has no respect for the Treaty recently concluded between himself and the Government of Iraq. More precautions and defensive measures are demanded, and the Government's "watchful policy" is stigmatized as inefficient and weak.

To-day, December 16, a fresh raid is reported from Basrah. At Irkhaniyah (some forty miles from Busriyah, where the police post was attacked) a band of Ikhwan attacked on December 10 some tribesmen who were moving their flocks in the district south of Nasiriyah. The raiders are believed to have been led by Faisal ed-Dowish, but a full account of the affair has not yet been received.

The King's Return.

King Faisal returned to his kingdom on December 15, travelling from Cairo by Imperial Airways. A large

gathering of notables and officials, Iraqi and British, headed by the Regent and the Acting High Commissioner, awaited him on the aerodrome. His Majesty received greetings in a marquee before driving to the Palace through the crowds which lined the decorated and beflagged streets. At night no less than twelve electrically lighted triumphal arches across the principal street made Baghdad appear more festive than it has been for many a long day, but more than the return of a beloved monarch is needed to break the Baghdadi habit of early-to-bed, and the streets by ten o'clock were illuminated for the usual stray loafer and homeless cat.

Speculation is rife, of course, on the terms of the new Treaty, in the negotiations for which King Faisal has been taking part. The text is to be published, according to an official announcement, on December 20. As already reported by your correspondent, Parliament, when it assembled on November 1, was adjourned for six weeks, by the end of which time the King and Prime Minister were expected to have returned from England. Delays over the Treaty negotiations, however, kept the King so long that the four months' absence from Iraq which he is forbidden by the Organic Law to exceed was in fact overstayed. A special meeting of Parliament, therefore, was called by the Regent to consider this point. The Assembly when it met on December 7 was rendered somewhat stormy by members of the Opposition who spoke disrespectfully of what may be translated the King's "joy-ride" to Europe. Other members, on the other hand, waxed enthusiastic in praise of King Faisal, and the Assembly finally decided to thank the King for the trouble he had taken in supervising the negotiations, and to approve of an extension to the period of his absence. This decision was afterwards adopted by the Senate. Deputies and Senators having been brought up to Baghdad for this extraordinary session, it was decided that they should remain in session without another dispersal.

The High Commissioner.

The High Commissioner was expected to reach Baghdad by air on December 17, but he actually arrived quite unexpectedly on the afternoon of December 16, landing on the R.A.F. aerodrome at Hinaidi. He is accompanied by Lady Dobbs and Miss Dobbs.

Transport.

Imperial Airways are becoming increasingly popular with the travelling public, especially since their new timetable made it possible to make the journey from Cairo to Baghdad in one day. The extraordinary difference made by air transport to the dwellers in remote spots hitherto only visited by slow coastal steamers is well illustrated by the recent journey of a doctor who, summoned by urgent cable to Paris, made the journey from Bahrain to Gaza in 24 hours by chartering a special aeroplane from Imperial Airways.

The establishment of an air line between Constantinople and Baghdad is now under consideration by the Turkish Government.

The question of a railway across the desert to the Mediterranean is the subject of much discussion here, since the Turkish Petroleum Company struck oil; but much has yet to be done in extending the railway system within Iraq's own borders. Mosul is not yet connected by rail with the capital, but the construction of a Mosul line was advocated by General Hammond after his inspection last year, and is to be undertaken by the Government as soon as the financial position will admit.

Cholera.

In spite of the cold dry weather which prevailed during November, the cholera epidemic, never serious this year, has nevertheless not yet been stamped out in spite of general compulsory inoculation of the townspeople. Three cases occurred in the week ending November 26, twenty in the following week, and six are reported up to date.

The King's Grandmother.

The King's grandmother, who was over eighty, died at Baghdad on November 22. King Faisal and his brothers owed to her their early upbringing, their mother having died when they were children. The funeral was attended by the Regent (ex-King Ali) the Amir Ali (brother of the Queen), the Acting High Commissioner, Acting Prime Minister, Presidents of the Senate and Chamber of Deputies, Cabinet Ministers, British Advisers, foreign Consuls and ex-Ministers. Ecclesiastics of all creeds and many notables of Baghdad were also present. The body was buried immediately behind the Theological College. In front of the procession some three hundred Arabs carried baskets containing gifts which were distributed to the poor as the coffin was carried through the thronged streets.

Belgrade, December 22.

"A Pre-War Winter."

The people of Belgrade, and especially the thousands of Russian refugees living here, are rejoicing in the return of what they term the "pre-War Serbian winter" with its two feet of snow, 20 degrees Centigrade below zero, its blue skies and brilliant sunshine. Belgrade is transformed into a fairy town, and on every side are to be heard the music of sleigh bells and the laughter of children and adults indulging in winter sports even in the centre of the capital. Out at Topčider and on Avala skiing and bob-sleighbing are in full swing, and skating has already begun on the Bara Venecija.

Taxes and the New Provinces.

But in the Skupshtina there were recently heated scenes. On the 16th inst., just before it closed down until January 15, for the holidays there were even blows exchanged and a few drops of blood shed. The reason for these storms was the discussion of the question of the reform and unification of the tax laws. There are some seven systems of tax collection still in force in this country, in the different provinces, and the Government has never yet been strong enough to deal with the question of their unification. The Opposition, which is now mostly composed of members from the new provinces, demanded that since the Government has decided not to apply the clause of the new Finance Act which would have imposed an income tax on the people of Serbia, who have never yet paid such a tax, they should also remit payment of income tax in those provinces where it was still paid as a part of the tax system inherited from the State under which they had been before. They demanded that this change should be made at once and come into force from January 1, 1928. Dr. Spaho, acting Minister of Finance, replied that so important a matter could not be dealt with off-hand and must wait until the whole matter of the unification of the tax laws could be dealt with. He could not see his way to promise the remission of the payment of income tax in the provinces where it was still levied until

January 1, 1929, as the 100,000,000 dinars which this tax was estimated to produce could not be covered in any other way. This announcement led to stormy scenes. The Opposition protested that the Serbs were exploiting the new provinces which bore far more than their share of taxation, vigorously announced their refusal to pay the tax after January 1, and even threatened to leave Belgrade and refuse further co-operation in the Central Government unless they received satisfaction in this matter.

These threats are not taken very seriously, but more will be heard of this matter when the conference of the Croatian Peasant Party and the Independent Democrat Party meets in Zagreb about January 15.

Cabinet Changes.

There are strong rumours in Belgrade of changes in the Cabinet, and it is confidently stated that Dr. Lazar Markovitch is to enter the Government as Minister of Interior. This, however, might arouse protests from the Democrat members of the Coalition and might make still further changes necessary. There is talk of a Government led by M. Ninko Peritch, by Dr. Nintchitch, or by Dr. Davidovitch even, but the holiday season having already begun further developments may be delayed until the middle of January. Owing to the fact that the Orthodox Church has not yet accepted the New Calendar we have two St. Nicholas' here, two Christmases and two New Years. The holiday season really begins with the Serbian St. Nikola on December 19, for this is the most important Slava for Belgrade people. On this day almost forty per cent. of the Serbs in Belgrade celebrated their family festival, and the remainder must spend the day rushing from friend to friend, congratulating them on their slava, eating *djito*, *slatko* and cakes and drinking much wine, *rakija* and coffee. From now until about January 15, there is a constant succession of holidays, Catholic and Orthodox—which make serious political developments or work of any kind very difficult.

CYPRUS.

Nicosia, December 6.

The Governor and Egypt.

Sir Ronald Storrs is leaving for Cairo on the 8th inst. for about two weeks. Lady Storrs will follow a week later. The Cypriots in Egypt still hope that it may be possible, through the good offices of Sir Ronald, to bring about some arrangement by which they may be recognised as British subjects. Mr. Ormsby Gore, in a recent despatch to the Governor, has again pointed out very clearly the difficulties which render this concession impracticable. Nevertheless, hopes are indulged that if a favourable solution cannot be found, they may be relieved of the obligation of becoming Egyptian subjects, which will be enforced, in accordance with a recent Egyptian law, in the case of those who choose to remain in Egypt.

The Governor is anxious that the estimates for the coming year may be passed before his departure. The Legislative Council was called to meet on November 30, and has been hard worked ever since, both at day and late night sittings. All work at offices concerned has been proceeding at high pressure. The Governor at the opening of the Session referred to the death of Sir Malcolm Stevenson, the late Governor. He eulogised the work that he had carried out in the island during a service of eight years, as Chief Secretary and Governor, and to the various useful measures that had been passed during his tenure of office. A memorial service was held in the British Church at Nicosia.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

REPORT ON THE SUDAN.

The Stationery Office have just published as a Blue Book the Report on the Finances, Administration and Condition of the Sudan in 1926 (Sudan No. 2, 1927, Cmd. 2991. 2s. net).

In a general review of the situation Sir John Maffey, the Governor-General, says:—

In the course of the six months or more that I have spent in the Sudan since my appointment I have become convinced that of the larger issues facing the Government of this country few, if any, are comparable in importance with that of placing upon a more clearly defined basis our policy in regard to native administration.

In his annual report for 1925 my predecessor wrote as follows:—

"The principle of administrative policy towards the native population has been indicated in previous reports. Briefly, it is one of decentralised control; to leave administration as far as possible in the hands of native authorities wherever they exist, and by guidance, advice and correction, where required, to assimilate traditional usage to the requirements of equity and good government. This involves the employment of native agencies under supervision for the simple administrative needs of the country to whatever extent is compatible with a reasonable standard of efficiency."

With these aims, which are in conformity with the recommendations of the Milner Commission of 1919-20, I am in full agreement, but the time-factor is of importance, and there are two distinct agencies for the realisation of the object in view. The first of these consists of the tribal chiefs and sheikhs as such—that is, as native authorities administering their own people; the second consists of executive officials selected for the public service from the ranks of the native population. The lines along which these two agencies function are not, of course, the same. The first is an instrument of devolution, the second of bureaucracy, and it is to the former that I have appeared to me wise to devote more particular attention.

As regards the time-factor, the Sudan may be regarded as still in its "golden age," but it cannot long remain so, and it behoves us to take steps while the opportunity remains to lay a foundation upon which a lasting structure may be built from the best material to be found in the country.

A tribal organisation, tribal sanctions and old traditions still survive, though their validity varies from province to province, but under the impulse of new ideas and with the rise of a new generation all these alike will tend to crumble away unless they are fortified betimes. Some progress has been made successfully on these lines during the last few years, but I have felt that opportunities of an even more definite progress are slipping away, and that it is essential that experiments of wider scope should be made while the ideal is rendered comparatively easy of realisation on account of the survival of the older personalities.

Moreover, the alternative is a costly elaboration of the administrative machinery, such as it is impossible to contemplate with equanimity. By the judicious and progressive application of devolutionary measures and in districts where conditions are suitable, and by ensuring that the native agencies which are to be responsible for administering these measures are remunerated on a scale sufficient to give them their requisite measure of status and dignity, it should be possible not only to strengthen the fabric of the native organisation but, while maintaining our supervisory staff at proper strength, gradually to reduce the number of sub-mamurs, clerks, accountants and similar bureaucratic adjuncts in the out-districts.

The most obvious line of advance towards the realisation of the object in view has been generally agreed to be that of strengthening the authority wielded by the native chiefs over their people as judges in criminal and civil cases, for the power and status required by the chief as a judge, whether sitting alone or as president of a tribunal of elders, must naturally tend to enhance his authority as administrative and executive head of his tribe or district.

With this aim in view, a simple permissive ordinance (the "Powers of Sheikhs Ordinance, 1927") has recently been passed by the Governor-General's Council, and it is hoped that its application to the provinces will become effective as from the beginning of next year.

To turn now to the economic sphere. Two years ago the completion of the Sennar Dam (which was officially opened by his Excellency the High Commissioner in January, 1926) marked the beginning of a new era in the development of the Sudan.

Thanks to favourable conditions and good will and good work on the part of all concerned, the first year's results from the cultivation of cotton on a large scale were highly satisfactory and the benefits predicted by Sir Geoffrey Archer in his report for 1925 have been fully realised. Labour has presented no difficulty and the general well-being of the natives in the thickly-populated Gezira area is manifest.

A particularly satisfactory feature of the Gezira project is its undoubted popularity with the people. Cultivation and production have been quickened by science, to the vast advantage of the native, but there has been no upheaval of the social system. The people live in their villages, pursue their customary avocations and reap contentment and prosperity from their profitable association with the Government and with the Gezira Syndicate, under whose instruction and supervision the crop is grown and marketed.

In a country where the people have had to rely for their sustenance on a capricious rainfall, the guarantee of freedom from the menace of famine is the richest of blessings. Some 50,000 acres of irrigated land was sown with grain, and their harvest made a doubly welcome addition to the food supply in a lean year.

It must not, however, be forgotten that the very leanness of the year in other parts of the Sudan has been an important factor in creating favourable labour conditions in the Gezira. Thus a good year for the rest of the Sudan may conceivably mean a less ample supply of labour in the Gezira, but it is not unreasonable to suppose that the habit acquired in the last two years by inhabitants of neighbouring provinces of going to the Gezira to earn money in cotton picking will not be relinquished, however good the conditions elsewhere.

For the second year in succession the Northern Sudan suffered from scarcity of rain and grain shortage was general. The import of grain supplies from India and elsewhere, the establishment of a central reserve of grain by Government, and control of prices, secured the safety of the people, but the scarcity reacted somewhat severely on general trade, already suffering from the decline of prices in cotton and gum.

Away from the Nile the measure of the Arab's prosperity is his supply of water and grazing, and in respect of these he is never entirely free from anxiety. On the other hand, so implicit is his trust in Providence that he is apt to make somewhat ineffectual efforts on his own behalf to obtain or conserve water which may serve his needs in the dry season. An organised attempt has been made and is being continued with gratifying success in the northern provinces to stimulate native interest in this problem. Wells and "hafirs" (shallow ponds) are being made, not only for the provision of drinking water, but with a view to rendering grazing grounds accessible for longer periods, and funds, tools and supervision are being supplied by the Government wherever circumstances justify the experiment.

Despite these years of drought the material progress of the people continues and the standard of living rises steadily.

Sir George Schuster has contributed to this report an exhaustive review of financial progress covering the last five years. I have no hesitation in saying that the present satisfactory position could not have been attained but for the unremitting energy and outstanding ability which have characterised his tenure of office as Financial Secretary to this Government.

The Department of Education has lately turned its attention more particularly to the Southern Sudan. In these southern provinces, under conditions that differ widely from those prevailing in the north, missionary bodies of various denominations have laboured for two decades, and their schools have done valuable work. The Government have now inaugurated, in close co-operation with the missions, a definite scheme of educational organisation, and have made considerable grants by way of subsidy. The happy combination of missionary enterprise and experience, on the one hand, and of Government aid, on the other, should afford sure ground and opportunity for the development of these negroid and pagan peoples.

Progress in other ways is evident in the south. Many new roads have been cleared or constructed and mechanical transport increases rapidly. The advantage of rapid communication and the definitely humanising effect of permanent road systems are strikingly apparent in regions hitherto regarded as remote. Motor transport throughout the country has advanced considerably and with corresponding benefit to general administration and public security.

The pilgrimage has received special consideration during the past year. African pilgrims are drawn chiefly from the British and French colonies in the west, and an undiminished stream of these devotees flows unstemmed through the Sudan. With few exceptions all are poor and earn their living as they go. Reduced railway fares and the simplification of the quarantine service at Suakin, the port of embarkation, have been introduced, and it is hoped that with the co-operation of the present Government in the Hejaz, which has shown its ability to organise this yearly traffic, the general conditions of the pilgrimage will be improved. From the beginning of 1927, I may add, the Sudan Government are taking over the administration of the Suakin quarantine from the International Quarantine Board.

I am glad to report that the political situation has remained satisfactory and that public security in the provinces has, generally speaking, been undisturbed.

Sir Geoffrey Archer in his report of last year referred to the projected occupation of the unadministered portion of Sudan territory situated in the south-east of Mongalla Province. Preparations went forward quietly throughout the year and the area was successfully entered in January and posts established with a minimum of opposition.

A list is then given by the Governor-General of those who men who left the Sudan Service in 1926, including Sir Geoffrey Archer, Messrs. C. E. Lyell, K. C. P. Struve, C. P. Browne, W. R. G. Bond, Sir Wasey Sterry, Chief Justice R. H. Dun, Judge Peacock, Mr. Hugh Fraser, Major P. C. Lord, Major E. O. A. Newcombe, Major C. H. Armbruster, Mr. J. W. Crowfoot, and Major C. R. K. Brecon.

Chapters follow upon Frontiers and Public Security. We quote these (retaining the official spelling):—

FRONTIERS.

Arabia: (a) The Hejaz.

On the 21st October, 1926, Sultan Abdel Aziz Abdel Rahman-ibn-Saud was officially recognised as King of Hejaz by His Majesty's Government. Since then he has devoted himself with considerable energy and success to the task of consolidating his rule in the Hejaz and Nejd, and public security has been well maintained, with the result that pilgrims have enjoyed an immunity from interference hitherto unknown. During the pilgrimage season a Moslem conference, attended by delegates representing various organisations—

in the different countries of the Moslem world, assembled at Mecca for the discussion of matters relating to the Holy Places and the comfort and well-being of pilgrims.

The Hejaz Government has agreed to assist the Sudan Government in its efforts to regulate the African pilgrim traffic, and with this end in view has prohibited disembarkation of pilgrims at all places other than Jeddah.

(b) *Asir and Yemen.*

Saiyid Ali-el-Idrisi, the ruler of the Asir, was early in the year deposed by his uncle, Saiyid-el-Hasan. The new ruler subsequently concluded a treaty with Ibn Saud, in which he recognised the suzerainty of the King of the Hejaz over the Idrisi territories whilst retaining a measure of autonomy in internal affairs.

The establishment of a Hejazi Protectorate over Asir has accentuated the difference between Ibn Saud and the Imam Yahya, who lays claim to Asir as part of his ancestral dominions. There have been frequent rumours of impending hostilities followed by inconclusive accounts of peaceful negotiations.

The Imam's capital was visited by an Italian delegation, headed by Signor Gasparini, Governor of Eritrea, and a treaty between Italy and the Imam was negotiated. Italy recognises the independence of the Imam's territories and receives trade facilities and preference with regard to concessions for mines, railways, etc.

Abyssinia.

The activities of Abyssinian poachers, referred to in last year's report, continued, especially in the earlier part of the year, and on several occasions shots were exchanged between armed bands and the police. In April His Majesty's consul at Dangila met Negadras Dasta, an Abyssinian official sent by Ras Tafari to inquire into these incidents. The Negadras agreed to the consul's proposal that Fitaaurari Zallaka, the Abyssinian Governor at Balaya, should be recalled, as he was either unwilling or unable to prevent these occurrences, and in August it was reported that Ras Tafari had consented to his dismissal.

A threatened attack on frontier villages west of the Setit River by Abyssinian brigands who had revolted against Ras Ayalewu failed to materialise, and a complaint to the effect that a British officer had "dried up" the waters of a frontier river near Gallabat was investigated by a British and an Abyssinian official and proved to be without foundation.

The death occurred in December of Fitaaurari Hapta Giorgis, K.C.M.G., for many years Minister for War and Governor of the Southern Provinces. He was one of the "Elders of Menelik," and a principal member of the Central Government. His death has been the cause of numerous changes in the distribution of offices in the Central Government and in provincial governorships.

Mr. Arnold Hodson, C.M.G., His Majesty's Consul for South-West Abyssinia, has been promoted to be Governor and Commander-in-chief of the Falkland Islands. His wide knowledge of Abyssinia, and his complete understanding of the frontier problems, have been of the greatest value to the Sudan Government.

Eritrea.

Cordial relations were maintained with the Eritrean authorities. The dam on the Gash River at Tesenei was completed in time for the flood and about 3,000 feddans were put under cultivation.

French Equatorial Africa.

The system of discussing the various questions arising in connection with the administration of the Darfur-Wadai border at personal meetings between the local French authorities and officials of Darfur Province was continued successfully, and the co-operation of the French Commandant of Fada has been of great help in recovering camels raided in Dongola Province by Gor'an marauders from French territory.

Uganda.

Under a proclamation dated the 14th November, 1926, a small strip of territory situated in the vicinity of the Teretinia Mountains, which hitherto formed part of the Uganda Protectorate, was formally included within the boundaries of the Sudan. The object of this frontier adjustment, reached as a result of a conference held at Kitgum in April, 1924, between representatives of the Governments

of Uganda and the Sudan, was to facilitate the control of sleeping sickness and the administration of the local tribes.

PUBLIC SECURITY.

Disturbances of the peace recorded during the past year have been of purely local importance and public security generally has been satisfactory.

The operations undertaken against the Nuba of Jebel Gulud, to which reference was made in the last report, were brought to a completely satisfactory conclusion. All the men responsible for the murder of the Mek were either killed or captured and no further recurrence of trouble in this area is anticipated.

A succession of raids by western desert tribesmen from French territory is reported from Dongola. Their most serious exploit occurred in June, when a caravan proceeding to Egypt was attacked near Bir Natrun. Four men were killed and 100 camels stolen. A light car and aeroplane reconnaissance was dispatched with a view to studying the country and investigating the possibilities of undertaking counter-measures. Since this reconnaissance no further raids have been reported.

Difficulties which arose between the Kababish and Gumuiya tribes over water and grazing rights at Um Inderaba, near Omdurman, resulted in an affray involving several casualties. The matter has been fully investigated and the question settled to the satisfaction of all parties.

Following on representations made by Kenya and Uganda regarding raids into their territory by the Taposa tribe, preparations were made in the autumn for the occupation of this tribe's territory, and a force consisting of two companies of the Equatorial Corps advanced into it towards the end of December. The operation was carried out peacefully and, though some trouble was subsequently experienced, signs are not lacking that the presence of a Government post in this previously unadministered area will have the effect of checking lawlessness and the illicit trade in arms and ammunition hitherto carried on in that region by outlaws of Abyssinian and Swahili origin.

Police.

Both mounted and dismounted police continue to carry out their duties in a praiseworthy manner. A police-training school was opened at the beginning of the year, and the following courses of instruction were successfully carried out:—

- (a) An advanced course, of seven months' duration, for selected police officers and n.c.o.'s;
- (b) An elementary course, of three and a half months, for n.c.o.'s and men; and
- (c) Certain specialist courses in drill and clerical and fingerprint work.

The standard of efficiency aimed at is high, but examination and tests at the conclusion of these courses have proved that there is much promising material in all ranks. The introduction of a pensions scheme has enabled a number of the elder men of the police force to be retired without hardship, and the promotion of younger men has appreciably raised the standard of efficiency in the force.

A scheme of standardising the clothing and equipment of the police has been adopted and will, it is hoped, result in a considerable economy. The entire police forces of two frontiers are now armed with magazine rifles, in place of the old Lee-Enfield carbine, and three further provinces will be similarly rearmament during the next two years. The new weapon is popular and adds considerably to efficiency.

Near Uskub twenty railway workers are reported to have been discovered on December 19 frozen to death. In the neighbourhood of Ghevgheli seventeen soldiers guarding the frontier died, and others were taken to hospital suffering from the unprecedented cold.

During October 310 immigrants, including 189 Jews, entered Palestine, and 683 emigrants left the country, including 386 Jews, of whom 308 had arrived there since 1920.

It is announced that the Palestine earthquake relief fund now totals £21,401. The last published list includes £849 from the Palestine Relief Committee in New York.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

CAPITULATIONS AND EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Will you kindly allow an assiduous reader of your interesting Review to object to some things in the letter sent to you from Zifta (Egypt) on "Capitulations and Egypt," published on page 649 of your issue of November 24?

I lived many years in the Near East as an Italian Consul, and the publication of the said letter has a little surprised me. The author writes: "I have lived four years in England . . . and have been before the English law, equal with, say, Mr. Baldwin, your Premier." He goes on to say that, returning now to Egypt, he finds that a foreigner may insult, beat, or even stab him, or rob his house in the presence of a policeman on duty, and the law does not authorise him or our Courts to arrest and try that criminal. . . . Is it not time, he asks, for the Capitulations to die away?

Hoping that the combination of so many misfortunes may be spared the writer, I cannot but remark that, in similar cases, the Egyptian policeman had the full right to arrest the European guilty in *flagrante crimine* and to hand him over to his Consulate, whose Tribunal should condemn him. The records of the Consular Tribunals in Cairo, in Alexandria and in Port Said, have files of hundreds and hundreds of sentences, and in the last decades the more active of these Tribunals, in order to be rendered more efficient, have been placed under the presidency of qualified magistrates.

But the main question is another one: the Capitulations were, originally, introduced not as a gift or a gracious concession of the ancient Sultans to the Christians. In the lands of Islam they represented the necessity that so important an economic element as the Christian population should not be left *outside the law*, subjugated by the said rulers. The Quran, source of every law for the Moslems, could not and would not consider the Unbelievers. It was in the unfitness or impossibility of the Quran to include the Unbelievers that the Capitulations had their origin and their justification. In other words, the antithesis between the Islamic and Christian societies imposed the difference in the laws.

With the passing of time, the Capitulations were extended under the pressure of several European Powers as a guarantee against the injustice of the old Islamic Governments in not granting an honest defence to the lawful activity of Europeans living in their States.

On the contrary, when the Islamic ruling improved, the Powers reasonably consented to restrict the Capitulations; thus came about the reform of the *Tanzimat* in Turkey (for instance, the mixed Tribunal of commerce *Tigiaret*, in 1860), and, in Egypt, with the Mixed Courts of 1875.

Has the moment now arrived for their total abolition?

In my opinion there are serious objections to it: (1) Because the indigenous society still remains deeply Islamic and the difference from and incompatibility with the Christian society has not disappeared to such an extent as to justify common laws for both. (2) Because the recent Nationalistic movement which makes of their religion an instrument of Xenophobia, instead of becoming more lenient is increasing the strong opposition preached by the Quran against Unbelievers. It is now doubled because directed against Christians who are also Europeans, so that no secure confidence can as yet be placed in the objectiveness of the indigenous officials. (3) Because the increase, in the last century, of Europeans on the lands of the Mediterranean Islam, has determined

under the protection of the Capitulations, such an economical, cultural and social improvement in those countries and has developed such numerous colonies that every measure compromising their protection or their increasing numbers is of great importance for all European States and calls for extreme caution. Owing to the establishment of the Capitulations in the Near East is due the development of commerce, the merchant marine, the exportation of European products, of local industries with European capital under European direction. How many diplomatic incidents and serious frictions in connection with the Moslem Governments have been avoided owing to the Capitulations, and how many difficulties can still be avoided in countries where the menace of anti-Europeanism is increasing instead of diminishing? The conclusive proof that the Capitulations are still necessary for safeguarding the legitimate activity of the Europeans is offered by the effect of their recent abolition in Turkey where a great number of Europeans have been obliged to leave because of not finding protection for their work under local justice. Abolition, then, signifies an obstacle to the work of Europeans. (4) Because equality would not be warranted; in fact the Egyptian writer says that he found impartial justice in England which considered him upon the same footing as an English subject. Could we say that European would find the same equality in Egypt if there were not the Capitulations? The late riots in Alexandria have not dissipated the doubt that Europeans would *not* receive the same impartiality and objectiveness from the native Egyptian officials that the author of the letter found in Great Britain.

I remember that an obstacle for the Judges in the Consular Courts was the difficulty of relying upon the native witnesses when the accused was a Christian, because the religious bias was stronger in them than their respect for the truth.

Even to-day, in some indigenous quarters or in some Moslem villages, at the first sight of a European going his way without disturbing anyone, the offence *Kelh* (dog) is immediately pronounced or a spit sent in his direction as a religious propitiation so that the Believer may not be contaminated by the presence of an Unbeliever. This is the revelation of a persistent psychological condition.

If some inconveniences arose from the Capitulations they were offset by the advantage of avoiding serious difficulties and political conflicts. Many of these inconveniences might be eliminated through slow and sagacious reforms: it is a question to be examined with prudence and competence, but the *porro unum* is not to weaken legitimate European activity in the Near East.

Let us remember how much the presence of Europeans has contributed to the improvement and wealth of the Moslem countries and how this would not have been possible without the Capitulations, whose discontinuance would cause an arrest of this advantage.

Let us remember the benefits received, through foreign schools guaranteed by the Capitulations, by the young generations of Islam, who have thereby had the opportunity to turn from the Quranic culture for approaching more closely the European civilization, which is a Christian civilization. To this latter is due the Westernisation of the Near East.—I am, etc.,

ROMOLO TRITONJ.

Rome. November 30.

[Although we do not agree with our Correspondent's line of reasoning, his statement of a point of view that will, no doubt, find expression among the Capitulatory Powers should be considered in Egypt in order that it may be adequately met.—Ed.]

The King and Queen of Afghanistan, with their suites, arrived at Aden on December 21 on board the liner *Rajputana*. The vessel was escorted by twelve aeroplanes. Their Majesties landed and were officially greeted by the Resident, Major-General Sir J. H. K. Stewart, Lady Stewart, and other authorities assembled on the pier. The King visited the Residency and also the famous reservoirs from which the settlement derives its water.

A VISIT TO MACEDONIA AND OLD SERBIA.—II.

(From a Correspondent.)

It will be convenient here to interpose the substance of an interview with M. Bourroff, the Bulgarian Foreign Minister.

M. Buroff pointed out that every minority in Bulgaria possesses its school (the cynic would remark that Bulgaria has no minorities to be afraid of, but the fact remains). M. Buroff discussed Serbian mentality which he describes as *exalté*, as in 1912-1914. What can weak Bulgaria do? She is willing to accept so little; she does not demand more than the rights of minorities for the population of Macedonia. Hitherto she has not put the question directly before the Powers (as she could do) because, when anything is done by Bulgaria, it is immediately misconstrued. M. Buroff declared that he had talked with Sir Austen Chamberlain, and, apparently *à propos*, declared that we were "not good Europeans." He asked what the big Powers intended to do; did they intend to wait for a big crisis? For, said M. Buroff, things will get worse. Macedonia cannot be abandoned. If Yugoslavia made some concession it might be possible to suppress the irreconcilable *komitajis*. Actually in the face of public opinion, it was impossible to do anything. The career of *komitaji* has been regarded as an honourable and admirable one for so long, that to attack the organization in present circumstances was impracticable.

All sections of the opposition in Sofia are in agreement with the Government's views upon the situation in Macedonia. Among Left Wing elements there is an especially passionate anxiety for a settlement of the Macedonian question, since only then can the internal affairs be dealt with. So long as this question remains unsolved, it will be exceedingly difficult to fight against the military secret society which is alleged to be the actual ruler of Bulgaria. This society is said itself to be largely composed of persons of Macedonian origin, and to be responsible in internal affairs for the suppression of freedom of opinion. It may be repeated that if there was much to criticise in the conduct of the recently Yugoslav elections, especially in Macedonia, there is no reason to suppose that the elections in Bulgaria were any more free.

In Sofia, the writer also talked with the Chairman of the Legal Macedonian Emigrants' Organization, and with a representative of the Revolutionary Organization. The impression given must be frankly stated that, while the latter Organization was utterly sincere in claiming no more than wide local autonomy for Macedonia, there are important Bulgarian chauvinist elements in the former body. It is probably quite impossible even for an "insider" to assess the relative importance of these two tendencies. But official Bulgaria not only claims no more than local self-government for Macedonia, but also is even ready, as I was informed by the Chef de Cabinet of the Foreign Minister, to surrender the province of Petritch and perhaps of Kustendil to an autonomous Macedonia.

Although the writer found considerable willingness for compromise in Bulgaria, hopeful signs in Yugoslavia were few. It is a fact, however, that some Serbs are so terrified at the fear of being encircled by Italy and Albania on one side, and by Bulgaria on the other, that they are willing to purchase agreement with Bulgaria and even to form a federal union with her at the price of giving some concessions to Macedonia. This state of mind may be regarded as all the more significant in view of the fact that it is certainly not derived from the Belgrade Press, which is inclined to be mischievously chauvinist.

The general Yugoslav simplification of foreign politics to-day, amounts to this: That Italy does not desire a strong Slav confederation in the Balkans, and, therefore, supports Bulgaria and the Revolutionary Organisation in Macedonia. The fact that the Revolutionary Organisation has even to-day considerable strength in Yugoslav Macedonia is assiduously denied by Belgrade. It may be noted in passing that the majority of the students recently on trial in Monastir had always lived in that part of Mace-

donia now forming part of Yugoslavia. The average Serb is convinced that the Macedonian Organisation and the Bulgarian Government are practically synonymous expressions. It is added that Bulgaria would not dare to act alone, that Italy stands behind Bulgaria and since Italy would not dare to act alone, England stands behind Italy.

There is a fairly just idea of the dangerous possibilities of the situation in Albania. The writer was fortunate enough to have had the opportunity for a long conversation with a foreigner, who speaks Albanian and has lived in Koritsa for several years, upon the present position in that country, which he himself visited two years ago.

The Albanian army consists of 8,000 men. The Italian loan has been almost entirely expended in buying uniforms, mountain guns and other military supplies. Perhaps ten per cent. has been spent on productive works. My informant quite credited the Serbian allegation that bands of 150 to 200 *komitajis* are to be found in the Albanian mountains. The Albanian Government does something against these bands but not much, owing, it is alleged, to Italian policy. This information is given with every possible reserve.

The Revolutionaries vehemently deny that they have any relationship with the Albanian or Italian Government; the fact probably is that they find that they are tolerated to some extent in Albania, and, naturally, in view of the diplomatic situation, prefer at present to work from Albanian rather than from Bulgarian bases.

It is regarded in the Balkans as dangerously possible that revolution, whether or not, instigated from outside, might cause the fall of Ahmed Bey Zogu, a possibility increased since the assassination of Tzena Bey in Prague; that anarchy might follow revolution and Italian intervention follow anarchy. Ahmed Bey is now attempting, in face of strong opposition, some such measure of agrarian reform as is quite essential even for the relative stability of Albania.

M. Stepan Raditch stated that he was accustomed to describe Macedonia as a *domaine de la chasse* for the Radicals; that Macedonia is in fact ruled by about half a dozen Radical extremists, and at the head of whom is a chief of the secret police. M. Raditch is prepared to give the fullest measure of local autonomy to Macedonia. It is interesting, however, to note that, although he was speaking in French, he made use of the English phrase "local self-government." It cannot be said that his alliance with M. Pribitchevitch, leader of the Dissident Democrats, can be regarded as particularly hopeful, from

the point of view of Macedonia. M. Pribitchevitch during an interview showed himself distinctly chauvinist. He insists that the inhabitants of Macedonia are the purest Serbs. M. Raditch himself, when questioned on what language should be used in the schools, since the Macedonian dialect is not a literary language, was so liberal as to answer that he would let the villages choose for themselves, well knowing that they would choose Bulgarian.

It may well be for the League of Nations to be seized of the problem of minorities in Yugoslavia. At present both Yugoslavia and Bulgaria seem afraid of such an appeal. The following reasons may be hazarded for their fear. So far as Yugoslavia is concerned, apart from the risk of an unfavourable decision (almost inevitable in the case of the non-Slav minorities in Kosovo and Southern Serbia) there is always the question of Bulgaria's unwelcome demand for increased military forces "in order better to guard her frontiers against the passage of *komitajis*." Bulgaria fears that for one reason or another the League will decide that the Slav population of Macedonia does not constitute a legal minority. It is conceivable that the League would be reluctant to give a decision adverse to Yugoslavia in Macedonia, because it may be called upon to give a decision not unfavourable to Italy in connexion with Albania.

It is certain that concessions in Macedonia would immeasurably strengthen Yugoslavia. Such concessions might well include the provision of schools in accordance with the wishes of the population, a large increase in the proportion of local officials employed, and the toleration of such methods of political propaganda as are universally regarded as permissible. At present the Committee, while its terroristic acts are not only crimes but also inconceivably stupid, has the excuse that the Yugoslav Government has made formally illegal all propaganda.

The writer found that the idea of a Balkan Federation was one to which universal reverence was paid. Many of the material difficulties of the Balkan States could be solved by a Customs Union, and such a Union might well be the precursor to a loose political union. Italy's ambitions in Albania could have the happy if unforeseen result of provoking this, the one means likely to be finally effective of preserving "the Balkans for the Balkan peoples."

BLIZZARDS AND BREAD IN TABRIZ.

By MIRZA FIROOZ KHAN.

Tabriz, December 3.

We have just had the greatest snow-storm of the season. It was more than a snow-storm, it was a blizzard! It began on Monday, November 28, but the snow did not fall for more than three hours, and it was melted away by Tuesday. The business began in earnest on Wednesday, at two in the afternoon, when snow descended in thick, large flakes until three in the morning on Thursday, December 1. The storm was accompanied by a wind, blowing forty miles an hour. The wind had cleared all the higher roofs (our roofs are flat) of their snow, pouring it on to the lower roofs below. All the roads leading to the provincial towns are snow-blocked. The mail of the provincial towns has been delayed for three days now. It has taken three days for a passenger, in a carriage, to cover a distance of 28 miles. Motor-cars cannot move even in the streets, while carriages are stuck up in the snow. It is a sight to see the noble horses, in profuse sweat, battling against the piles of snow by jumping forwards two or three yards at a time.

The blizzard was followed by severe cold—10 degrees below zero—which caused the waters of the water-mills to freeze, causing a scarcity of flour. The prices of flour have already gone up. Some bakeries are not running at all to-day on the excuse that they have no flour. But this is a false excuse. Every baker has flour enough to last him for a year. Besides, the Government is ready to sell them wheat-grain at a normal price, if the bakers

wish to buy. But none of them will buy any, because they have their store-rooms filled for the winter at the beginning of the autumn. The cold fact is that the Tabriz bazaar bread has never been good. They did this same thing in 1918-1919, when they raised the prices up to 3,000 krans a kharvar (1,000 pounds). M. Molitor, a Belgian, was in charge of the bread supply of the city. The more he insisted upon clean bread, the worse the bakers made it. So bad, indeed, that bread fresh from oven could be eaten only if consumed within two hours. After that it became so hard and black that a hammer was needed to crack it into pieces.

M. Molitor, tired of mild methods, arrested three of the leaders and locked them up in the citadel, cutting off all kinds of food supply. At the end of the third day M. Molitor offered them some of the bread baked by themselves. It was said that one-half of the flour (of this kind of bread) was mixed up with plain stable manure. The men could not eat their own bread. They petitioned the Crown Prince. The latter interceded with M. Molitor in their favour. M. Molitor, instead of releasing the rogues and pleasing the Prince, sent in his resignation as superintendent of the alimentation of the city, but, of course, it was not accepted, and the bread began to become better in quality day after day. Such is the strict execution of all good laws!

A month ago the wheat-grain went up to 360 krans a kharvar, as the result of there being no rain. After a sudden rain-fall for two hours, the prices descended to 220 krans, going up again as soon as the muddy streets were dry enough to work without over-shoes. Now that the blizzard has blocked up all the roads and no food supply can come in from the provincial towns, and the brooks of the water-mills are frozen, the prices are going up again. A few score speculators in wheat-grain are in jail already; this will have, no doubt, a soothing effect upon the rest!

A few hundred sheep and three shepherds were smothered to death a few miles out of the city during the first night of the storm, and twelve others perished near Miana through losing their way in the darkness of the night.

After voting the Budget on December 22 the Roumanian Parliament was prorogued until January 25.

Nearly 47 degrees of frost were last week registered in Bucharest, and it was colder on December 22 than at any time for half a century.

M. Michalakopoulos, Greek Minister for Foreign Affairs, arrived in Rome on December 21 and had an interview with Signor Mussolini.

Admiral Frederick Ross Boardman, C.B., R.N. (retd.), of Grassington Road, Eastbourne, who saw service in the Sudan with the Gordon Relief Expedition, died on September 24, aged 84, leaving estate of the gross value of £1,422, with net personalty £627.

Ilias Bey Vrioni, Albanian Minister for Foreign Affairs, left Tirana for Rome on December 22 for the exchange ratifications with the Italian Government of the Treaty concluded between Italy and Albania at Tirana on November 22. The Minister will be absent from Albania for about a month, during which time the Minister for Public Works will take over his duties.

Prince Arsène Karageorgevitch, uncle of the King of Yugoslavia, has been awarded the French Médaille Militaire. As a young man, Prince Arsène served in the Foreign Legion through the 1885 campaign in Tonkin as a private soldier. His Highness commanded a division of Serbian cavalry in the first Balkan War in 1912-13.

In future the Friday morning sermon in mosques throughout Turkey is to be delivered in Turkish, instead of Arabic. The Department of Religious Affairs has issued orders to this effect and at the same time has forwarded to all *muftis* (preachers) a volume containing about 50 specimen sermons, on which they are instructed to model their compositions.

An offer is being made by the Greek Government to grant a concession of 25 years or more for the exploitation of the mineral waters at Loutraki, near the Corinth Canal, to any firm or group which will undertake to spend about £500,000 on building water establishments, hotel accommodation, etc. A licence for a casino would also be granted.

Book Reviews

THE CULT OF "ASIATICISM."

"DEFENCE OF THE WEST." By Henri Massis. Translated by F. S. Flint. With a Preface by G. K. Chesterton. (London: Faber and Gwyer, Ltd. 12s. 6d.)

This book is an admirable example of the Gallic mind at its most logical. M. Massis, whose reputation as a first-rate thinker is by no means confined to France, sets out to expose the penetration of the West by Eastern, or Asiatic ideas. He is not an opponent of the East as such, although for the purposes of generalisation he finds it convenient to label as Eastern things that are perhaps at least as Western in essence as the Christianity which he upholds; but he finds, in the return by Bolshevik Russia to Asia as her spiritual home, and in the fashion for Oriental philosophy so prevalent in Germany of to-day, grave misgivings whether Europe as a whole may not lose her most precious characteristics — stability, authority, personality, and so forth. This is a danger which in his opinion can be warded off only by the Catholic body of Christendom standing firm on and for its old foundations.

Certainly, M. Massis has worked assiduously to obtain evidence in support of his first contention. He shows how the ideals of equality spread by the white man in the East have been taken up by the East. "Called forth by the idols of the West, the Asiatic crisis comes to a head at a moment when the West is turning away from them and is beginning to doubt their value." This crisis, moreover, he believes is being used by Asia not

merely to arouse its native peoples to revolt in order to deprive our impoverished continent of the immense resources Asia holds. It is the soul of the West that the East wishes to attack, that Soul divided, uncertain of its principles, confusedly eager for spiritual liberation, and all the more eager to destroy itself in that it has of itself departed from its historical order and its tradition.

M. Massis then defines his "Asiatic peril."

When we speak of an "Asiatic peril," we are not accusing the East, in general, but denouncing the philosophic, moral, and social errors and the dubious idealism which Oriental propagandists, educated in our schools and served by certain European idea-mongers, set up in the name of the East against the West.

That sentence is a good sentence, and one that needed saying. One can appreciate its merits and truth, moreover, without being convinced of the whole truth of the thesis of M. Massis.

With that section of the book which is devoted to the hodiernal philosophers of Germany, this is not the place to deal. It is, however, intensely stimulating and interesting, and everyone who is aware of the relation of the Spenglers and Keyserlings of to-day towards the Graeco-Latin culture ought to read it. But what M. Massis has to say upon Bolshevism, readers of *THE NEAR EAST AND INDIA* should study closely. This French thinker avers that

Bolshevism is a danger (not so much as a social and political theory) because it is based on anti-Western, anti-human principles, because it is the logical and resolute antagonist of the great spiritual tradition of which we are holders.

This tradition Russia had adopted only with a feeling of dependency and shame. Liberated from her foreign bondage, she is turning against what now appears to her only to have been the cause of her humiliations and her shortcomings. Therefore, the Russian revolution is nothing but the end of an equivocation, of a paradox that has lasted since the reign of Peter the Great. Tsar Nicholas II did not fall a victim to a European doctrine of progress. It was Peter I that was killed in his person; and his fall has opened up to the Russian popular soul, not, as has been believed, the road to Europe, but that of the return to Asia.

In a very convincing way, M. Massis shows how the physical environment, or rather, the lack of it, has affected the Russian mind: it has had a nomadism, a lack of fixity, the *boisak* spirit. And he quotes Brian-shaninov: "The Russian peasant is nearer the Chinaman, the Thibetan anchorite, the Hindu pariah, than the

European peasant." That is a statement which may profitably be remembered by those who yet marvel at the apparent hold which Bolshevik Russia has on certain Oriental minds.

When, however, M. Massis departs from philosophising, and becomes more political, it is less easy to agree with him. One admits, indeed, that the Europeanisation of Asia has involved a vague revolt of Asia against Europe, that conquest of the Eastern peoples has in a general way restored their consciousness of themselves. But it is, we think, a false generalisation to assert that in the East "the idea of national unity is giving place to the idea of Asiatic unity." It is not true, for instance, to say that "the irreducible Kemalist Turkey dreams of federating the Mussulman nationalities, of Persia, Afghanistan, and Arabia"; while to treat ultra-seriously the Pan-Asiatic League which first met at Nagasaki in 1926, would seem to argue rather an alarmist spirit than a mind which can probe beneath the fearful surface.

In other words, we prefer M. Massis's dealing with the East in Europe to his dealing with the East in the East.

But when he comes to general grounds again, he is very sound. In speaking of the so-called "materialism of Western civilisation," for example, he says, pun-gently:—

For the barbarism that has the smell of the machine we are offered the barbarism that has the smell of the forest. We want neither.

Later, he strikes at the heart of the popularity of Oriental doctrines by Occidental peoples. He writes:—

For, in truth, the so-called Oriental ideas which have been proposed to us in these latter years are nothing but a sort of occultist esotericism, worked out by a professor of religious history, false Hindu prophets, and German philosophers, and they have been spread by theosophists and pacifists in the service of the most recent nationalisms. Put in this way, the famous East-and-West dilemma betrays its true origin.

That is true. To understand the East, which is a capital necessity, one need not accept the East, which is virtual treason.

As we have indicated, there are points in which we disagree with M. Massis, both in his exposition, and in his solution. Alike in his tendency to generalise upon Oriental things and to particularise upon them he gives opportunity for sharp differences of opinion. But there is no doubt that the time had come when some champion of the ordered West should speak, and speak out boldly, against the vague, confused negativisms that have indubitably wandered into Europe from the East mainly by way of Russia and of Germany. This book is, therefore, a timely, stimulating, and important publication. The English version is additionally attractive in that it has a Preface by Mr. G. K. Chesterton, and it has been well translated by Mr. F. S. Flint.

A COMFORTABLE TRIP IN THE NEAR EAST.

"THE MEDITERRANEAN AND BEYOND." By Norma Lorimer. (London: Hutchinson. 21s.)

After reading this book by Miss Lorimer, we well understand why her numerous works are popular. She writes pleasantly, if not always carefully. She is free from British insularity to the extent of violently objecting to any intrusion of Western ways into the East, which, she feels, "spoils" it. She loves her "dear" fellow-humans, with a strong preference for their non-British qualities. And she loves nature and beauty. To use her own words: "travel makes the world a personal thing." She does succeed in making what she has seen personal, not only to herself but also to her readers.

In spite of all these good qualities, we are bound to

point out that she is not free from some of the worst literary and other faults of amateur travel writers. Her history is extraordinarily sketchy and often inaccurate. Even simple geographical statements about country which she has traversed are sometimes startling. To take one instance only, she informs us that "the Sea of Galilee is, I believe, only twenty minutes by automobile from Jerusalem" but advises "the tourist to insist upon a more moderate pace, especially when rounding the hair-pin bends." The advice would seem to be very necessary, but we hardly think that even the most reckless Arab chauffeur has so far managed to exceed 250 miles an hour! Her spelling of foreign names and her treatment of the Italian language are calculated to set the reader's teeth on edge. In a couple of chapters we find, among other errors, Reva (for Riva), a street called "le Stradone," "Cattero" and its "Bocce," "Girgente," "Khnos-sos," (King) "Menos," "Mycenian," "Ptolomies," and so on. As if the gallant Venetian defender of Famagusta against the Turks had not suffered sufficiently at the hands of his cruel enemies, Miss Lorimer must needs caricature the glorious name of Bragadino as Bugadino. Colins, the sculptor of the lovely sarcophagus which forms part of the Maximilian cenotaph at Innsbruck (the "u" of which she persists in modifying), has his own grave hard by and might have been saved the indignity of being called Coli. Nor need Wiener Neustadt, where the Emperor was actually buried, have been called Weimar Neustadt. We are not even safe when she uses quotation marks, for she gravely informs us that the inscription over the birthplace of Our Lord reads: "His De Virgini Maria Jesus Cristus Natus Est." She does not often venture into Italian, but when she does, she nearly always produces startling results. Thus, the lowest Italian coin is called a "centesimo," "mai" is used for "but," "de" for "of" and we read of an "innocento!" We have yet to find the part of Italy where the word for "cathedral" is spelled "Cathedrale" or where that word has "the accent well sounded on the last syllable." Her raptures are generally beyond suspicion, but hardly come off when, writing of the Trieste Cathedral, she speaks of a "delightful picture by my favourite artist, Carpaccio." The picture, which we happen to have seen, is a badly restored specimen of the uninteresting and quite second-rate works of Benedetto Carpaccio, the artistically immensely inferior son of her "favourite" the great Vittore. Like others of his pictures, which one finds scattered about the churches of Istria and Dalmatia, it represents the Madonna with Saints, in this case San Giusto, to whom the church is dedicated, with San Sergio. Clichés are not always safe!

But, with all its faults, the book makes pleasant reading, not often getting much below the surface, but skimming happily along it. It is an account of a journey undertaken, with a lady friend and with all modern comforts, to Egypt via Trieste, followed by a tour in Palestine by motor, and back to Trieste by a slow steamer which stopped for some hours en route at Alexandretta (whence she made a dash to Antioch), Cyprus and Athens. At Trieste she learned of the railway strike in England and so delayed her return by making a detour through Merano and Innsbruck. Of Cyprus she saw only the sea-fronts of Larnaka and Limasol. But that did not prevent her from writing a whole chapter composed entirely of padding (rather a weakness of hers, in common with other amateur travel-writers), of which the best that can be said is that it is quite unconcealed. Like this:—

Nearer our own times the Cyprian wild sheep named the Moufflon was the most interesting wild animal in the island, but previous to the British occupation it was becoming so scarce that its end was inevitable, and it may possibly already be extinct. If this is not so, then it has probably been protected and encouraged to propagate.

It is difficult to understand what she means by saying:—"To all intents and purposes it (Cyprus) does belong to us, however complicated the terms under which we hold it." Her longest and best section is that on Palestine where the utter difference between her expectations and

reality and the effect of sacred associations are well brought out. Also her horror at the plague of churches, her joy in the beauty of Mount Carmel and her genuine admiration of the pluck and efficiency of the Zionist Jews, with whom she compares the Arab very unfavourably.

Miss Lorimer must herself bear the blame for our want of space further to commend her book to our readers. The "howlers" of which we have obliged to take some notice might so easily have been avoided by a little care and by employing a reasonably qualified person to read the proofs. We trust that she will not neglect these precautions next time and so produce something even more enjoyable.

The illustrations are of no particular interest. Our wonder at the inclusion of a full-page photograph of the "Helbling Haus" at Innsbruck was not lessened by the reference to it in the text as "that treasure of Renaissance domestic architecture."

MONEY.

"*MONEY AND MONETARY POLICY IN EARLY TIMES.*" By A. R. Burns. (London: Kegan Paul. 25s.)

Mr. Burns has taken his task seriously and has apparently read all the modern literature on his subject, giving careful attention to the various theories of the writers, weighing them and striving to collate the whole. But he has not taken his task quite seriously enough. He has forgotten that a treatise on a subject is not the same as a bundle of notes, which is what his book often reminds us of. And he has forgotten that, in such a book, extreme accuracy is essential and that exposition requires clarity of statement. It is with regret that we have to say that these qualities are too often neglected. There are arithmetical errors of a glaring description, as in the first sentences of para. 5 on page 263. On pages 235 to 241 he is apparently unable to make up his mind whether a scruple weighs 17.5 or 18 grains. On page 232 he is speaking of a silver unit. Whether he refers to that of Cumæ or that of Corinth is far from clear, but surely it cannot be right to say that a piece of 90 drachms of this unit was equivalent to one-third of the Athenian tetradrachm? Want of space and of willingness to dwell too much on the faults of a learned and meritorious book make it undesirable to multiply examples. But we cannot leave our fault-finding without deploring the constant repetitions from chapter to chapter. Slipshod writing makes hard reading.

And the subject itself, the history and theory of coinage in the first thousand years of its existence, is not an easy one. The data are scanty and uncertain. There are many gaps in what knowledge we have. For instance, we know very little even of when any particular coinage began to circulate by tale instead of by weight or became legal tender. Mr. Burns has undertaken no light task, and we have nothing but commendation for the modest and cautious way in which he attacks it. He has not allowed himself to be deflected from his goal by dallying with the numismatic or artistic aspects of the coins of ancient days. He sticks rigidly to the economic side of the problem. He has many excellent qualities for carrying out the task which he set before himself; we hope that he may find opportunity to try again. If he does, we feel sure that he will do himself and the economic history of coinage in ancient times more justice.

BOOKS RECEIVED.

"Inductive Turkish Lessons." By Fred Field Goodsell. Language School Publication. No. 1. (London: Elliott Stock. 5s. net.)

"In the Country of the Blue Nile." By C. F. Rey. (London: Messrs. Duckworth and Co. 25s. net.)

PERSONAL AND GENERAL

TO-DAY

December 29, 1927 (New Style).
 December 16, 1927 (Old Style).
 Rajab 5, 27, 1346 A.H. of the Muslim Calendar.
 Tebet 5, 5688, of the Jewish Calendar.

The Indian Empire Club is holding its annual children's party to-day (Thursday) at the Hyde Park Hotel.

Lord and Lady Farrer leave Abinger House, Dorking, to-day for India.

Viscountess Elibank will leave 187, St. James's Court, early in February to join Viscount Elibank in Egypt.

The Hon. Mrs. Lionel Cust, who is travelling to Port Said, was to have sailed on December 23 from Tilbury in the s.s. Ranchi.

King Fuad has conferred the Grand Cordon of the Nile on Mr. Frederick Holroyd, President of the International Cotton Federation.

Lady Constance Milnes Gaskell is among the guests of Lord and Lady Lloyd at the Residency, Cairo. She is leaving for India early in the New Year.

Viscount and Viscountess Dunedin left 42, Lower Sloane Street, on December 23 for India, sailing in the s.s. Ranchi.

Sir Charles Stewart-Wilson, K.C.I.E., and Lady Stewart-Wilson left London on December 22 for Biarritz where they will stay for four weeks.

Lord and Lady Airedale were among the passengers in the P. and O. s.s. Mooltan, which arrived at Marseilles on December 23 from Bombay. They returned to 3, Cadogan Square, the following day.

The Bishop of Bombay, Dr. E. J. Palmer, left London on December 22 for Marseilles, to join the P. and O. s.s. Narkunda on his return to Malabar Hill, Bombay. Sir Chartres Biron is a passenger to Colombo.

The Rev. C. T. Horan, formerly Archdeacon of the Church of England in Egypt and Hon. Canon of Egypt, has been appointed rector of Leybourne, in the Diocese of Rochester—patron: the Bishop of Rochester (by lapse).

M. Dimitri Stancioff, a former Bulgarian Minister to the Court of St. James, Madame and Mlle. Stancioff, are spending Christmas in Northamptonshire as the guests of Sir Kay and Lady Muir.

The Crown Prince of Iraq, Amir Ghazi, with Muzahim Beg Pachachi, Iraq Diplomatic Agent in London, is spending the holidays at Torquay.

Sir Leslie Scott, K.C., M.P., expects to sail to-day (Thursday) for India to advise the Chamber of Princes during the course of the inquiry to be held by the Harcourt-Butler Commission.

King Amanullah of Afghanistan disembarked in Egypt on December 25, and was received by King Fuad in Cairo. The following day there was a banquet given in his honour at Abdin. The King of Afghanistan, who is having a very busy time in Egypt, has been received with remarkable enthusiasm.

Sir Hugh Bell, accompanied by his grand-daughter, Miss Pauline Trevelyan, left London on December 27 for Egypt in order to be present at the opening of the bridge over the Nile at Khartoum, which has been constructed by Dorman, Long and Co., Limited. He will be abroad till the beginning of February.

NOTES OF THE WEEK

(Continued from page 802.)

that an unenviable fate is in store for some one. That fate may fall on the presumably insubordinate subjects of King Ibn Saoud; or, if they are, so far from being insubordinate, but obeying their King's commands, then again it will fall on their shoulders, in the form of bomb and bullet when they infract the Iraq frontier. No impartial observer can withhold sympathy from the harrassed and anxious Iraqis, whether it is the Mutair or the Ajman whom they fear—for in this matter Kuwait is at one with Iraq. It is profoundly disappointing to have to chronicle these counts against King Ibn Saoud, who obviously will have now, before tackling the greater problems of Islam on which he has set his heart, once more to set his own house in order. The present uncertainty and anxiety are but giving a handle to those of his critics who assert that he has taken on a much bigger task than one man could possibly achieve. But in the longer view, it is wise to reflect that not in a day can international frontiers and customs be substituted for tribal frontiers and customs. That the former should prevail ultimately is, however, as much the interest of the Wahhabis as it is of Iraq and Kuwait.

The American school at Hamadan (Persia) has been ordered to close on account of its refusal to teach the Quran in conformity with a recent Persian law.

The French Legation in Teheran has notified the Persian Government of its acceptance of the principle of abolishing the French Capitulations in Persia and its readiness to sign new treaties.

A Geneva message states that Princess Daria Karageorgevitch of Yugoslavia has been seriously injured as the result of an accident caused by her motor-car skidding on an ice-covered road. Her daughter, Baroness Henriette Pfluger, sustained severe contusions.

Hashim Khan, Afghan Minister to Moscow, left there at the beginning of the week for Naples, where a conference of Afghan diplomatic representatives in Europe will be held on the arrival of the King of Afghanistan.

A heavy frost affected the railway lines to such an extent that the Budapest-Bucharest express was held up on December 27 near Cluj (Kolozsvár). The train could not be moved, and, although a message was sent through to the next signal-box, a goods train was admitted to the section, and came into collision with the express, and many passengers were injured.

The Albanian Press Bureau announced last week that M. Jan Kotchi, a deputy, and M. Dementrius Poppa, of the Foreign Office, were leaving Tirana for Rome in order to negotiate a Concordat between Albania, where there are five Latin bishoprics, and the Holy See.

M. Bouroff, Bulgarian Minister for Foreign Affairs, on December 23 gave a farewell banquet in honour of the Hon. Sir William Erskine, who leaves Sofia, after six years' service as British Minister to Bulgaria, on his promotion to Warsaw.

The Friends Foreign Mission Association, founded in 1866, will henceforward be known as the Friends Service Council. This Council will be responsible not only for the F.F.M.A. work in India, China, Syria, Madagascar, and Pemba, but also for the activities developed since the War, mainly on the Continent, of the Friends Council for International Service. The new Council has as its joint Secretaries, Mr. H. T. Silcock, late Secretary of the F.F.M.A., and Mr. Carl Heath, late Secretary of the C.I.S.

INDIAN BANKING.

At the annual meeting of the Associated Chambers of Commerce of India and Ceylon, which was held in Calcutta last week, the Bengal Chamber proposed a resolution recommending the early institution of an enquiry into banking in India with a view to steps being taken to regulate banks and banking business. The meeting adopted the resolution, subject to an amendment so widening the scope of the proposed enquiry as to make its primary object an examination of existing banking facilities with a view to their extension. This would indicate that the European Chambers are largely in agreement with the views to which expression was given in the Legislative Assembly last August. It is true that the Assembly wanted a Commission with a majority of Indians and an Indian Chairman; and that we have no information as to how the Chambers view this part of the proposal. But the remainder of the Assembly's resolution would appear to be in line with their recommendation. The demand made by the Assembly was for the appointment of a Commission to enquire: firstly, into banking facilities with a view to their improvement and expansion, with particular reference to the development of industries and agriculture; and, secondly, into the question of what measures, if any, are necessary to regulate and to control banks and banking business. The proposal for an enquiry cannot be said to have originated with the Assembly. It was first made in the report of the External Capital Committee which was constituted by the Government of India in 1924, and of which Sir Basil Blackett was Chairman. This Committee strongly recommended that at the earliest possible opportunity the whole field of banking in India should be subjected to a co-ordinated survey. For it recognised that India has a great accumulation of dormant capital; and that, in order to make this available for investment, banking facilities must be increased and extended. The Royal Commission on Indian Currency and Finance also expressed the opinion that an extensive and scientific survey of banking conditions should be undertaken.

It will be seen, therefore, that the proposal for an enquiry is strongly supported. The Government of India also are not opposed to it; but Sir Basil Blackett told the Assembly in August that in their opinion the time was not ripe for deciding either the scope or the exact nature, or the form of the enquiry. He added that the Government had been working at the subject for a long time; and that they were trying to complete the survey which the External Capital Committee had in mind. We notice also that it was mentioned in the debate, that the Government did not want to start a general enquiry until the Reserve Bank Bill had been disposed of, and the report of the Agricultural Commission submitted. Now that the Assembly has been re-inforced, by the Associated Chambers, in its demand for an enquiry we imagine that the Government of India will consider the matter again. In a question of such difficulty and magnitude a few

months' delay is probably not of great consequence. But we certainly think that there ought to be an enquiry, and that in its main features it should follow the ideas expressed in the two resolutions. Whether it is undertaken by a Commission, or a Committee, or other agency would also seem to be of secondary importance so long as the investigators are in all respects well-qualified for the work. Banking—meaning by the term organised joint stock banking—is developing slowly in India; and it will be for the agency which is entrusted with the enquiry to put forward recommendations calculated to quicken the pace. We agree with Sir Basil Blackett that nothing but the desire of the Indian people to have banking facilities will create those facilities. But we think, nevertheless, that useful results may be expected from a searching investigation extending over the whole field. The question is admittedly of the highest importance to the future of India. For it is manifest that any measures which will persuade the people to make their savings available for the development of their country cannot fail to be of the greatest material advantage.

We are not competent to set forth in detail the difficulties—some of them technical in character—which are believed to stand in the way of the more rapid development of organised banking in India. But we notice that several of these difficulties were lucidly dealt with recently by Mr. M. M. S. Gubbay, the General Manager of the P. and O. Banking Corporation in a paper read before the Royal Society of Arts. Among other matters, Mr. Gubbay pointed out that suitable local investments are not as a rule available for Branch Banks in India. This want results in the rates which Branches offer for deposits being determined, not by the measure of the local demand for accommodation, but by the rates at which their deposits can be invested in well-secured short term commitments in the commercial centres. It has also the effect of forcing the Branch Bank to leave the supplying of the local accommodation requirements to other agencies, generally to the private banker. Mr. Gubbay also rightly emphasised the importance of the private banker in Indian banking. No details of the operations of these private bankers are available; but it is common knowledge that their operations extend to every part of India. Rural banking is still practically in their hands; and the part which they play in the financial life of the people is vastly greater than that played by the Joint Stock Bank. And one of the problems to be investigated, especially if a central banking authority is established, will be as to how effective control is to be exercised over the private bankers' credit operations.

There are many other matters connected with the question of the expansion of banking facilities to which reference might usefully be made. But we cannot do more than touch briefly on the matter of regulating banks and banking business. The need for the introduction of banking legislation was emphasised as long ago as 1913, when numerous bank failures occurred in various

parts of India. Even before the occurrence of these failures the Government of India announced that in their opinion legislation ought to be seriously considered. Their idea was that the use of the terms "bank," "bankers," and their equivalents should be restricted to companies registered under the Indian Companies Act. And if this were done they would have imposed certain restrictions upon the institutions thereafter possessing the name and prestige of banks. The outbreak of war in the following year delayed the proposal, which remained in abeyance until 1920 when the Government of India again brought it forward. They outlined a series of proposals following more or less on the lines of those which they had originally set forth seven years previously. But in 1920 it was understood that the question of legislating in England was being discussed; and some of the leading commercial interests in India suggested that the outcome of this discussion should be awaited before any steps were taken. So far as is known to us the question has since been again in abeyance. But, presumably, it will be raised again now by the resolutions of the Assembly, and the Associated Chambers, and it is of quite sufficient magnitude and importance to warrant an enquiry even without the still larger question of banking expansion to which it has lately been connected.

CURRENT TOPICS.

Where India Leads.

That as a result of the protective tariff introduced less than four years ago to assist the indigenous steel industry, the production of finished steel in India has been largely increased, and works costs and charges been reduced by about 30 per cent., was disclosed by Sir David Chadwick in a paper read recently before the Royal Society of Arts, Indian Section, on "The Work of the Indian Tariff Board." Knowledge is the key to understanding and a very great deal of the misapprehension which undoubtedly exists in quarters, otherwise well-informed, in this country regarding the precise implications of India's industrial progress will be removed by Sir David's frank and impartial account of the actual facts. As Secretary to the Government of India in the Commerce Department during practically the whole of the period under review he has played an important part in the events which he recorded, and his tribute to the manner in which the Tariff Board has discharged its onerous and responsible duties is both timely and deserved.

That India's decision to adopt a system of protection was founded rather on national sentiment than on economic fact is unquestionable. India self-contained, self-supporting and self-governing, was an attractive picture to put before the country and even the Industrial Commission, with the experience of the early war period fresh in the minds of its members, was impressed by the prospect. But as Sir Campbell Rhodes, lately returned from the far different atmosphere of Geneva, and himself a member of the Fiscal Commission which laid down the line of advance, who presided, once observed in another connection, "it is an attractive picture so long only as the picture is of the impressionistic and not of the Dutch school." But if political sentiment was largely, though not entirely, responsible for its adoption in the manner in which the policy of discriminating or "selective" protection has been applied has on the contrary, as Sir William Larke generously testified, always borne the closest possible relation to economic facts. Indeed he went so far as to suggest that in the thoroughness with which the Board has investigated the applications from the several industries concerned, and the form in which it has presented its recommendations the Indian authorities had set an example to other countries pursuing the same difficult and somewhat tortuous path.

Jute Gambling.

There seems to be something peculiarly difficult in the framing and enforcing of legislation to control or to tax gambling. Here in England the attempt to legislate for the taxation of betting transactions has given rise to endless discussion. And in India, although it was fairly easy to tax betting, it is apparently very difficult to legislate against gambling in "futures." The Bombay legislation which was passed a few years ago to control cotton gambling in "futures" appears, it is true, to have been more or less successful. But the enactment of the law was preceded by a long period of trouble and difficulty. For a considerable time past efforts have been made to control the jute gambling that is so widely prevalent in Calcutta. But we see from the latest Indian newspapers that the problem is not yet solved. This gambling is known locally as the *Bhita Bazar* or "inside market." In its early days the *Bhita Bazar* was really a "futures" market, and its operations were restricted to persons actually engaged in the jute trade. At that time it was of some use to the trade; but for several years past it has degenerated into a wild gamble in which all kinds of people entirely unconnected with the trade have recklessly indulged. It has had a bad effect on the legitimate jute market; and *bona fide* traders have long been insistent in their demands for its suppression. But suppression is much more easily asked for than achieved, as the trade has discovered. The gambling is carried on at various resorts known as *baras* or exchanges. At some of these places genuine jute business is transacted; at others there are both genuine and gambling transactions; and at still others there are gambling transactions only.

About eighteen months ago the London Jute Association presented to the Secretary of State for India a memorial in which it recommended that the gambling should be suppressed by law, and a genuine "futures" market for jute established. This recommendation met with considerable support in Calcutta, where proposals for legislation were already under discussion. In July 1926 a Bill, having in view the same object as the London memorial, was introduced in the local Legislative Council by a private member. By this measure every *bara* was to be registered under the Indian Companies Act if it wished to continue to carry on business. If it failed to register it would be proceeded against by the police as a common gaming house. The Bill also provided that every transaction should be on a written contract, conferring on the parties the right to offer or to demand delivery; and that the *baras* should not admit the general public, business being carried on by licensed brokers and agents only.

The Bill, which was to have application not to the jute trade only but to any trade, was withdrawn after a great deal of discussion. It was strongly opposed. Many of those interested in the jute trade thought that it might have the effect of establishing a legalised form of gambling which would be as harmful to their interests as was the *Bhita Bazar*, and even more difficult to suppress. And representatives of other trades feared that it proposed a procedure which was really impracticable; and on general grounds they expressed themselves as strongly against any interference by the Legislature or the Government. A further attempt is, we notice now to be made to promote legislation, another private member of the Bengal Legislative Council having framed a Bill for the introduction of which he has asked for sanction. This measure seems to be on very much the same lines as its predecessor, but it definitely provides for the exemption from its provisions of certain existing trade associations. We shall be interested to see how it is received, and whether it has any chance of success.

A Reuter message from Lahore states that the Punjab Chiefs' Association has resolved to co-operate with the Simon Commission and to submit written demands for the Commission's consideration.

The Indian Floods Relief Fund, started in London last autumn, has now been closed, and the total amount received, £1,435, has been remitted to the Governor of Bombay. All the incidental expenses of the fund have been met privately.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 8.

The Royal Commission.

India is still, or even more, a Babel of conflicting voices. It is reported from Bombay that a meeting was held on December 4 of citizens representing various shades of opinion, "to re-affirm their resolve to have nothing to do with the Statutory Commission." Sir Purshotamdas Thakurdas, Sir Chimanlal Setalvad, Sir Manmohandas Ramji, Sir Phiroze Sethna, Mrs. Sarojini Naidu, Mr. M. A. Jinnah, Mr. H. P. Mody, Chairman of the Bombay Millowners' Association, and other leading men were present. Sir Chimanlal Setalvad, the principal speaker, said, among other things, that the pronouncements in Parliament were entirely unconvincing and had confirmed and accentuated the fears of Indians regarding the Commission. Is it possible that anyone should believe that? It is not possible. The explanation of such a thing's having been said would take some space to set forth. There was, to begin with, the temptation to this or that leader to secure a more undoubted leadership by saying what would make most stir in the hearts of what the Indians themselves must own is an emotional people. Then the thing is said in a foreign language, a language that, however well public men in India may appear to understand and use it, is nevertheless not their own language. There is a gulf, greater or smaller according to circumstances, that is, the emotional appeal of the occasion, between what one hears from the platform and the home thoughts in the vernacular of the speakers. A man, when he is using another language than his first one, is not so held back by the sense that what he is saying may some day be quoted against him. Hardly ever are a man's words quoted against him in India. What is said to-day is soon forgotten. All these are facts to be borne in mind by anyone who wishes to follow the Indian situation from your far side.

Bengal seems less inclined to commit herself to the extreme course. An afternoon party was given earlier in the week by the Indian Association in Calcutta to Sir P. C. Mitter. Sir Provas said that those who had eyes to see must realise that mutual bickerings, party differences, and communal jealousies had resulted in national cleavage. Indeed, from one point of view, nationalism had never been at a lower ebb than it was to-day. Continuing, he said: "I know my silence on the Simon Commission has been misunderstood and misconstrued by the different political groups. Those who take an intelligent interest in politics are well aware that in matters of importance such as this Ministers must be guided by the majority in the Council. After the majority have given their mandate, and if the mandate is such that it is against the innate conviction of the Minister, it will then be time for him to consider the position. It was for this reason that I thought that it was not fair on my part to express any opinion in advance. I am sure the Council will give its mandate, and when the Council has done it, it will then be my time to decide the matter. Therefore, I am not in a position now to tell you what I shall do."

For all his intended caution, Sir Provas did express something very like an opinion of what should be India's attitude to the Commission. He is reported to have said: "The leader of the Conservative Party and the members who took part in the debate on the Commission have thrown out a challenge—'produce a Constitution for India.' If you really feel that you are a nation, put down your party differences, take up that challenge, and produce a Constitution. Then the question is, Who will produce it? In my opinion the Legislative Assembly, where you have the elected representatives of the people belonging to the different parties and communities, is the best place where this can be done. If in the Legislative Assembly you cannot agree, then please do not talk of

the national unity of the 318 millions of Indian people. Let us not run away from facts. If you face facts, you must admit that if the elected representatives of the people cannot sink their differences, we must say good-bye to any desire to sink the differences among the masses and the classes."

Mr. Bepin Chandra Pal, who also spoke, would seem to see in the occasion an opportunity of reducing the Swarajist party to at least temporary ineffectualness. While he repeated that the appointment of a purely Parliamentary Commission was a calculated insult to India, he argued that his countrymen must not allow judgment to go against them by default so far as the working of the present Constitution goes. In other words, while they must refuse to accept anything at the hands of such a Commission, they must put their house just as much in order as it would be their policy to do, if they saw their greatest opportunity in making the most favourable impression possible on the Commission. How Mr. Pal can expect the Swarajists to see eye to eye with him there it is difficult to see. Their aim for now eight years has been to show that the present Constitution is not workable. In Mr. Pal's attitude one sees how little is cared here for consistency.

There are men in the Punjab who would go much further in the line of conciliatoriness than Mr. Pal. Rai Sahib Chotu Ram, leader of the National Unionist Party, has said that while he conceded that the Tory Government had done all they could to provoke a boycott, the Indians should not lose their balance. Let them present their case in the best possible light to the Commission. Another member of the Punjab Legislative Council, Pandit Daulat Ram Kalia, allowed himself to say that a boycott is a weapon of the weak, and since they had such a strong case for presentation to the Commission, instead of boycotting it, they should devote themselves wholeheartedly to the collection of evidence and its presentation to the Commission. He ridiculed the idea of a boycott as the outcry of grumblers and "do-nothings" only.

The Bengal Ministry.

The next, very short, session of the Bengal Legislative Council is to begin on the 13th. A meeting of the Swarajists is to be held the day before, when presumably it will be decided whether to make a move at once to overthrow the Ministry, or to hold their hands for a time. The arrangements for this meeting are reported to be in the hands of the former *détenu*, Mr. Subhas Chandra Bose. His star, it may be said by the way, appears to be rising, while Mr. Sen-Gupta's sets; for Mr. Bose is said to be going to put himself forward, or be put forward, for the Mayoralty in place of Mr. Sen-Gupta. A counter-move would appear to be to have Mr. Bose re-installed as Chief Executive Officer to the Corporation. It is all a pretty kettle of fish. The Bengal Ministry may be more secure than a month ago. If it is, it is thanks to their opponents being more divided in their aims than they were.

Far Eastern Association of Tropical Medicine.

Calcutta is full of medical men from all parts of India and the rest of the world. What has brought so many together is the Seventh Congress of the Far Eastern Association of Tropical Medicine, a meeting for which I happen to have had good opportunities for judging, very careful preparatory work was done. The Governor opened the Congress on Monday, when he read a long message from the Viceroy. Since they heard it read, except for visits to Government House, the Asiatic Society and the Indian Museum, the doctors have been steadily at work, reading and hearing technical papers. Much good should result to these disease-swept lands.

Cholera.

With commendable energy, Sir P. C. Mitter, reviving the practice of Sir Surendranath Banerjee, when the latter was Minister for Local Self-Government, summoned

a District Board Conference to discuss measures against cholera. The Minister himself presided, after the proceedings had been opened by the Governor. The problem is largely one of a pure-water supply, and that means that it is largely a question of money. The East has the diseases of poverty, and in proportion to the degree of poverty. When, in the nineteenth century and at earlier times, cholera broke out in the British Isles, everyone was alarmed, the rich as well as the poor. The proof of that is in all the biographies of the time. Cholera may rage in Calcutta, and yet I be quite unconcerned. Why? Because I know that there are really two Calcuttas, the Calcutta of, to put it so, the insanitary Middle Ages, where cholera may be rife, and the Calcutta of the twentieth century, where cholera will not be known. I live in the second Calcutta.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, December 10.

Bombay and the Commission.

Bombay has not quite finished with the Statutory Commission yet. Early this week another meeting was held to reaffirm the decision of the leaders to advocate the total boycott of the Simon Commission, as a reply to Lord Birkenhead's pronouncement in the House of Lords. The speakers had nothing new to say. They all declared that the exclusion of Indians from the Commission was an affront and involved a principle on which there could be no yielding. Once again the Liberals were predominant and exceeded the Extremists in the vehemence with which they condemned the Commission. A significant factor, however, is the very poor contribution which the Muslim community has made to the boycott movement. The first meeting in Bombay was attended by a sprinkling of Muhammadans, the second meeting saw even that sprinkling reduced, and when the Aga Khan arrives in Bombay, there is every indication that they will climb down on Lord Birkenhead's side of the fence. Mr. Jinnah has already announced that he is willing to abide by the decision of the majority, even though it is against the boycott; Sir Abdur Rahim has maintained a sphinx-like silence since his first statement on the subject. There is every indication, therefore, that the Muhammadans will place their case before the Commission when it arrives in India.

The Waters of the Indus.

An interesting dispute which takes us at once out of the monotonous controversy on the Reforms, is that between the Bombay and the Punjab Governments regarding the utilisation of waters of the Indus for irrigation schemes of the two provinces. The Punjab Government some time back decided to revive an old project for irrigating an arid tract on the west, known as the Sind Sagar. The Bombay Government protested on the ground that, if the Punjab Government proceeded with the work, the Indus would be left with too little water for the service of the Sukkur Barrage canals. The matter was referred to the Secretary of State through the Government of India, who decided that the Punjab Government should suspend its scheme pending an inquiry. The Government of India suggested that the Irrigation Board, consisting of three engineers, should inquire into the matter. The Government of the Punjab, on the other hand, suggested that the Indus Discharge Committee should undertake the task. This Committee consists of two engineers appointed by the Bombay and the Punjab Governments respectively, with the Consulting Engineer to the Government of India as Chairman. The Government of India has not yet come to a decision on the point, but in view of the fact that Bombay has sustained considerable loss in the Back Bay Reclamation Scheme, she cannot be too careful in protecting her irrigation works in Sind.

The Training Ship.

"A step forward" is the appropriate title with which a local newspaper welcomes the admission of thirty students from all over India for training as officers in the merchant service on board the training ship *Dufferin*. Forty out of a total of 77 that sat for the examination passed, and a further ten were eliminated in the medical test. To this number Bombay contributes almost half, while Lahore runs a close second, Calcutta and Madras bringing up the rear with 4 and 1 respectively. Captain Digby Beste, in welcoming the cadets, laid great emphasis on discipline, which, he declared, was the first essential in the Navy. He hoped that the boys would maintain the traditions of the *Dufferin*. Indians regard this as a great step forward in India's advance. Moreover, it will go some way—even if a short way—towards solving the unemployment problem in this country.

Municipal Schools in Bombay.

The Bombay Municipality is coming in for a great deal of criticism for its policy regarding the administration of schools, and when the budget for the Municipal Schools Committee for the year came up for consideration, a substantial cut of a lakh and a quarter was passed, reducing the total to about Rs. 28 lakhs. It cannot be gainsaid that the Schools Committee has been rent by petty squabbles amongst its own members, which have greatly decreased its efficiency. The Schools Committee as at present constituted is scarcely a credit to one of the largest cities in the Empire.

Distinguished Visitors.

The official programme of the visit of the King of Afghanistan and Lord Irwin to Bombay has now been published. His Majesty lands in Bombay three days after the Viceroy, who arrives on the 11th instant. Already arrangements are being made for presenting addresses to the King, and the season, which generally opens late in February, will start early next week to all intents and purposes. A real disappointment to the citizens of Bombay will be the decision of the Viceroy not to have his speech broadcast, as was previously announced. The number of listeners-in has increased so rapidly within the last few months that the disappointment will be widespread. Bombay will have a very busy fortnight indeed.

Sea Disaster Inquiry.

Bombay, a few weeks ago, was visited by a cyclone which devastated the cultivated tracts in the south of the Presidency. By far the greatest damage done was at sea. Two coasting steamers, the *Sant Tukaram* and the *s.s. Jayanti* bound for the southern ports, foundered off Ratnagiri. The former with about 150 on board was reduced to a mass of wreckage and only 27 were saved. Of the latter there has been no trace to this day. The *s.s. Jayanti* had accommodation for 800 passengers, but luckily was carrying only 132 on board. A strong agitation was set on foot in Bombay to hold an inquiry into the sinking of the two ships. The Government of Bombay have now decided that the case should be investigated by a special Court of Inquiry. It is to be hoped that the inquiry will result in adequate safeguards being provided for the safety of passengers travelling by coasting steamers, which at present are not even equipped with wireless apparatus.

Mr. John Gemmell, of Harescombe, Northwood, and of Alexander Lawrie and Co., East India merchants, St. Mary Axe, E.C.3, chairman of the British India Tea Company and the Jaipur Tea Company, and a director of the Jhanzie Tea Association and the Makum (Assam) Tea Company, died on October 19, aged 67, leaving estate of the gross value of £342,594, with net personalty £338,481. He gives:—£1,000 each to the Church Aid Committee of the North London Presbytery of the Presbyterian Church of England; the Foreign Missions Committee of the Presbyterian Church, and St. Andrew's Colonial Home, Kalimpong, India; £500 to the Caledonian Schools, Bushey.

"CO-OPERATION IN INDIA."

The revised edition of Mr. Wolff's well-known book, first published in 1919, will be welcomed by all interested in the advance of co-operation in India, a movement which must have so great a share in the development of the country. If we remember that Mr. Wolff has never visited India, the accuracy of his information, and the soundness of the conclusions drawn by him, are remarkable. Dependence on the written report, and on figures presented by officials whose inclination and whose duty are to be optimistic, may occasionally lead to deductions which are not wholly correct, at least for all the Provinces; but Mr. Wolff's general picture of the results achieved by and the possibility remaining for co-operation in India is in the main a true one.

The progress since the passing of the Co-operative Act of 1904 has indeed been remarkable; but, as Mr. Wolff rightly observes, India is the country of countries for co-operation. The poverty of its peasant cultivators and the necessity for advances in the cultivating season placed the mass of the people at the mercy of the Mahajan or Bania. In the old days, the latter lived for the most part on fair terms of give and take. But the advantages offered by the Civil Courts, and the protection of the law against reprisals for unjust dealing, proved too great a temptation for the honesty of the average money lender. It was not possible for Government to take his place: and co-operation was the only means to save the cultivator. Only a fraction of what is necessary has yet been achieved. The existing organisation, for example, while it has done much for the ryotwari portions of the country, has hardly touch many of the Zamindari tracts.

Mr. Wolff rightly stresses that the advance has been principally due to the efforts of the Government officers who have served as Registrars in the various Provinces. Although it is inconsistent with the true spirit of co-operation that the movement should be State-governed, once it has reached maturity, State tutelage is required in the early stages of growth. More especially in the rural portions, and in areas in which co-operation is little known, progress depends on the energy of the Registrar and his scanty staff. Mr. Wolff, therefore, while deprecating an increase of State interference, rightly advises an increase of staff.

One of the most serious drawbacks to the advance of co-operation in India (as to many other forms of progress) is the lack of mutual confidence, especially between members of different religions and castes. Mr. Wolff, perhaps, somewhat over-rates the feeling of mutual helpfulness in India. It doubtless existed in the village community in its original form of people of one caste and religious belief. But it is now so weak that one-class Co-operative Societies, however inconsistent with the true spirit of co-operation, must long continue to be inevitable in India.

As Mr. Wolff observes, in the rapid harvest that has already been reaped, many tares have been found among the wheat. Cases of speculation and corruption have not been rare: in some cases attempts have been made to use the co-operative machine for political purposes. Far more common, however, has been the tendency of the Panch that guides the local Society to confine its benefits to their own relations or caste-fellows. Mr. Wolff rightly stresses the necessity for strict check, and the appointment of Supervising Councils. In the case of Municipalities and District Local Boards, the official control has been abandoned, and the power has been handed over to local citizens, without any provision for such a check as was exercised in the United Kingdom by the Local Government Board over far more experienced unofficial administrators. The results have been in many cases disastrous, and it is most undesirable that the same mis-

take should be repeated in the case of co-operation, though the check should be exercised more by co-operators themselves than by Government.

In no phase of local activity has co-operation a more useful field open to it than in banking. It is well-known that India is painfully deficient in banking facilities outside the great towns. The branches established by the Presidency Banks, or by the Imperial Bank of India since their absorption, have certainly not supplied the want, and the indigenous banks have not commanded the necessary confidence. Lending on personal security, in the manner so common, and so conducive to local enterprise, in Scotland and Ireland, has never been practised by the banks in India, doubtless owing to the lack of confidence already alluded to. Mr. Wolff rightly insists that, while control should be decentralised, co-operative finance should be centralised. It is very necessary that the number of banks run on the sound lines of the Provincial Co-operative Bank of Bombay should be increased.

Co-operation has achieved its greatest success in India in connection with agricultural credit, and the development of small holdings. Whether it can do much, without special legislation, to prevent the terrible evil fragmentation, and the passing of land from the cultivating to the capitalist class, as Mr. Wolff seems to hope, is very doubtful. In Bombay, legislation to check fragmentation has been introduced by an Indian Member of Council, well-known for his sympathy with co-operation: and the special Land Alienation Act in the Punjab has been blessed by so good a co-operator as Mr. Calvert, while a similar measure has been remanded by the Muhammadan landholders of the neighbouring Province of Sind.

In other matters, co-operation has yet made considerably little headway. The Societies for marketing produce have been only occasionally successful: and it may be doubted whether those for the improvement of agricultural stock, highly necessary as they are, will be able to overcome local customs and prejudices. The societies for co-operative industry have been only moderately successful: while the Urban Societies, confined to one community, or one set of employees, have been useful as Provident Societies for the encouragement of thrift, rather than as embodiments of co-operative effort. But the figures, as a whole, whatever deductions and discounts have to be allowed, are encouraging. Mr. Wolff's book is well worthy the study of anyone interested in the welfare of India.

The one woman member of the Madras Legislative Council has successfully moved a resolution recommending legislation to prevent the dedication of minor girls to service in the temples, a service that usually leads to a life of prostitution.

It is officially announced that the King has approved the addition of two Puisne Judges to the permanent strength of the High Court of Judicature at Patna, and that the two vacancies thus created have been filled by the appointment of Kulwant Sahay and Mr. Thomas Stewart Macpherson, who are at present temporary additional Judges at the Court.

The Bengal Government announces its adoption as a scheme of agricultural education. It will begin with the training of classes of 60 teachers, who will afterwards be drafted to 60 schools in the Provinces, where agricultural farms will be started. The scheme is the result of the report of the Stapleton Committee, which was accepted in its entirety by the Government.

Sir Harcourt Butler, the retiring Governor of Burma, left Rangoon on December 20, and Sir Charles Innes was duly sworn in as Governor. The Rangoon Corporation presented an address to Sir Charles, in which they said that the municipal revenue was insufficient to meet requirements and that the lack of an adequate water supply was strangling the development of Rangoon.

The Governor of Bombay, Sir Leslie Wilson, on December 20 unveiled a statue of the Prince of Wales, in military uniform, which has been erected at the Cooperage, in the residential district of Bombay. The statue, which has been presented to Bombay by the Aga Khan, is the work of Mr. Leonard Jennings, the sculptor in the service of the Government of India.

"Co-operation in India." By H. W. Wolff. (W. Thacker and Co. 13s. 6d.)

THE INDIAN STATES COMMITTEE.

The following *communiqué* has been issued by the India Office :—

"After consultation with the Government of India, the Secretary of State for India has appointed a Committee to inquire into certain matters affecting the Indian States. The terms of reference were stated by the Viceroy at a banquet at Rajkot on November 22, and are as follows :—

"(1) To report upon the relationship between the Paramount Power and the States, with particular reference to the rights and obligations arising from (a) treaties, engagements, and *sanads*, and (b) usage, sufferance, and other causes; and

"(2) To inquire into the financial and economic relations between British India and the States and to make any recommendations that they may consider desirable or necessary for their more satisfactory adjustment.

"The members of the Committee are Sir Harcourt Butler, G.C.I.E., K.C.S.I. (chairman), Professor W. S. Holdsworth, K.C., Vinerian Professor in English Law, in the University of Oxford, and Colonel the Hon. Sidney C. Peel, D.S.O. Lieutenant-Colonel G. D. Ogilvie, C.I.E., of the Indian Political Department, has been appointed secretary. The Committee will assemble at Delhi about the middle of January."

The appointment of the Committee was announced in THE NEAR EAST AND INDIA'S issue of December 8. The text of the reference in Lord Irwin's speech at the Rajkot banquet to the Committee is as follows :—

"Along with all other thoughtful members of your order you are now anxious and deeply concerned about the question of your constitutional position in regard to and your future relations with the Government of British India. It is a political puzzle of the utmost difficulty and one to which I do not attempt here and now to give any final answer. I would say that in my view the more your administrations approximate to the standards of efficiency demanded by enlightened public opinion elsewhere, the easier it will be to find a just and permanent solution. Your rights, dignities and privileges under your treaties and *sanads* have been frequently reaffirmed and I am certain that no British Government will fail to maintain them, nor even apart from them would any change affecting your position be likely to be proposed without the fullest possible consideration being given to your views and sentiments.

"In my conversations, however, on this general question with many of the Princes I have become aware of a strong body of opinion in favour of early exploration of some of the more technical ground by which it is surrounded. Whatever may be found to be the ultimate solution of the wider problem of the States, viewed in relation to developments in British India, there is, I think, force in the contention of many of the Princes' order that there are meanwhile certain practical questions which may profitably be examined without delay. It has therefore been decided by the Secretary of State to appoint a small expert committee firstly to report upon the relationship between the Paramount Power and the States with particular reference to the rights and obligations arising from the treaties, engagements and *sanads* and usage, sufferance and other causes, and secondly to inquire into the financial and economic relations between British India and the States and to make any recommendations that they may consider desirable or necessary for their more satisfactory adjustment.

"The personnel, I trust, will be announced shortly and it is hoped that the committee will assemble in India in order to commence its inquiry in the near future. I have little doubt that it will command the confidence of the States and meet with all the assistance it may require at the hands of the members of your Highnesses' order.

THE INDIAN STATUTORY COMMISSION.

The following communication has, by desire of the Chairman of the Indian Statutory Commission, been issued to the Press in India :—

"The members of the Indian Statutory Commission propose to sail from Marseilles on January 20 and expect to reach India, for the purposes of a preliminary visit of about two months' duration, on February 3. They will visit New Delhi, where the Parliamentary session will have just begun, and hope also to go on this first occasion to one or two of the Provinces. The object of these journeys is to see on the spot the working of the legislative and administrative machines of India and to consult informally with Indian legislators and Ministers and with other persons on the subject with which the Commission has to deal."

NEWS IN BRIEF.

Mr. Gilbert Hollished Blomfield Jackson, I.C.S., has been appointed a Puisne Judge of the High Court of Judicature at Madras in succession to Sir Charles Spencer, I.C.S., who has retired.

The Chief, or Pandit, of Ghor, a State in the Bombay Presidency, has been granted an hereditary salute of nine guns. The late Chief had a personal salute of 11 guns given at the Delhi Durbar of 1903, but since his death the Pandit of Bhor has had no salute. Sir Chintia Manrao Dhundiras, Chief of Sangli, another State in the Bombay Presidency, who has an hereditary salute of nine guns, has received two additional guns as a personal distinction.

Rangoon University has conferred the Honorary Degree of Doctor of Laws on Sir John Cargill, Bart., Chairman of the Burmah Oil Company. The degree was conferred *in absentia* on December 10 by Sir Harcourt Butler, Governor of Burma.

It may be recalled that the Burmah Oil Company gave to university authorities £100,000 for the purpose of establishing a college of mining and engineering to be associated in some way with the name of the company.

The establishment of the Army Education Corps in India is to be reduced by seven subalterns with effect from next April 1. The corps is to cease its work in connexion with the organisation and supervision of vocational training, but as a temporary measure three officers of the corps will carry on the work under the Adjutant-General with the grading of staff captains. The development of training for oversea settlement is in hand, and in time it is hoped to discharge a considerable number of men in India to proceed direct to oversea employment.

In consultation with the Anglo-Indian Association, London, Loughborough College is recognising the following European schools in India as centres for the annual open scholarship examination in engineering :—The Lawrence Royal Military School, Sanawar; La Martinere, Lucknow; Philander Smith, Naini Tal; Cathedral High School, Bombay; St. Joseph's College, Bangalore; La Martinere, Calcutta; and the Victoria School, Kurseong. The college authorities have also decided to accept Latin or any modern language in lieu of French.

Lord Sumner, in the course of delivering a judgment of the Judicial Committee of the Privy Council recently on certain interlocutory applications, said that their lordships remarked that it was with some doubt in the mind of at least one of the Judges of the High Court of Calcutta that leave to appeal to His Majesty in Council was given in this case; and they thought it right to add that, as a general rule and in the absence of special circumstances or some unusual occasion for its exercise, the power of making interlocutory orders was one which was not a suitable subject for review. Not only were the practice of the Court and manner in which experience had shown that it was wise to apply it better known to the High Courts in India than they could be to their Lordships, but the delay occasioned by taking that additional appeal added gravely to the procrastination which was already the bane of Indian litigation.

ARMY APPOINTMENTS.

The following appointments in India are notified in Orders :—Lieutenant-Colonel H. F. Collingridge, D.S.O., as officiating commander of the 7th Infantry Brigade at Dehra Dun.

Captain J. E. F. Paton, Royal Corps of Signals, as officer commanding the 4th Indian Divisional Signals, at Jubbulpore.

Captain H. Marshal, Special List, to the 1st Indian Divisional Signals at Rawalpindi.

The reorganisation of military districts in India, already detailed in THE NEAR EAST AND INDIA, is now being completed, and the following changes take place :—

The Poona District becomes the Deccan District, with headquarters at Secunderabad.

The Poona Brigade Area becomes an Independent Brigade Area.

The Central Provinces District is reduced in status to second class.

The 10th Infantry Brigade and Area are transferred from the Central Provinces District to the new Deccan District.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Egypt's Trade Position.

In 1926 Egypt had a very considerable adverse trade balance, but during the present year conditions have been more favourable for the export trade, and the figures for the first ten months make it evident that the adverse balance will this time be a very small one. The value of the exports for the period was £E37,176,302 which compares with £E32,734,946 for the corresponding period of 1926, an increase of £E4,441,256. On the other hand the value of the imports fell from £E43,410,255 to £E38,820,472, a decline of £E4,589,783. It should be explained that of the increase in the value of the exports cotton was responsible for £E2,873,303, a fact which throws an encouraging light on the country's economic position. If the optimistic expectations with regard to the tourist traffic this winter are borne out, and there seems every likelihood that they will be, the country will have at the outset a substantial basis for a prosperous new year. At the moment the one drawback is the cotton position. As a result of the lack of development of consumption combined with the expansion of production elsewhere Egypt finds herself to-day with unduly large cotton stocks, the reduction of which to reasonable dimensions is dependent on factors over which she herself can have no influence.

The Sudan.

Elsewhere in this issue will be found extensive extracts from the report on the Sudan for 1926. The year in question was one of special importance for the Sudan, for with the opening of the Makwar Dam the country was placed in a position to develop cotton-growing on a large scale. While it has begun to benefit substantially in that direction there has been the apparent paradox of an economic depression which has had a pronounced effect on the activities of the country. The chief cause of this was the failure of the dura crop for the second year in succession, with the result that instead of being an exporter of this commodity the Sudan has had to import large quantities. So far the effect on the country of the development of cotton growing has been severely limited, and while the Gezira has been prosperous most of the rest of the country has felt the effects of the economic depression. As the areas devoted to cotton growing are enlarged the incidence of a depression arising from similar causes will be correspondingly reduced, and it is a matter for regret that so far the extension of rain grown cotton has not been more substantial. Apart from the question of the development of transport facilities, which, of course, is of outstanding importance, progress has been hampered by the price of American cotton, and the problem for the authorities is to find how to make this type a remunerative crop when the price is at a low level.

Conditions in Greece.

At the meeting of the Ionian Bank Ltd., a report of which will be found elsewhere in these columns, Sir John Stavridi dealt in detail with the conditions in Greece. He pointed out that during the year under review Greece had what she so badly needed—peace and a stable Government—and the results were noticeable in every sphere of activity. It is, as he remarked, no mean achievement to

have come to an agreement over War Debts with all her creditors in the past seven months. In addition satisfactory progress has been made in regard to the national finances. As regards the outlook the fact that the League of Nations has approved of the issue of a large loan, which will make its appearance early in the new year, is a sufficient indication that the economic basis of Greece is fundamentally sound. The loan in question, for which negotiations are to be opened in London this week, and the amount of which will be considerably smaller as a result of the American Loan to which I referred last week, has been approved on conditions which, as Sir John Stavridi justly pointed out, will provide the country with a solid modern organisation. Besides the establishment of a new bank of issue which will have control over currency and credit the Government is to reform its administrative system and also undertakes definite obligations in regard to the maintenance of Budget equilibrium, and the limitation of short term loans.

Rubber in 1928.

It is not going too far to say that in the coming year the rubber market is likely to present one of the most animated features on the Stock Exchange, at any rate in the first part of the year. Once again the past week has seen a considerable reduction in the London stocks, and as the full effects of the restriction policy have yet to be seen and as it is anticipated that American buying will be of a substantial character in the first quarter of 1928 it requires no particular foresight to anticipate considerably higher prices for the raw commodity. That it should now be no more than 1s. 8d. and that the average for the quarter should be under 1s. 7d. is surprising in view of the general position. It is still possible that the average for the quarter which ends on January 31 will be 2s. per lb., but if that is to be the case the average for January will have to be over 2s. 4d. per lb. Failing an average for the quarter of 2s. per lb. the percentage of 60 will obtain for another quarter, and if that is the case it is inevitable that much higher prices must rule, for the effect of the steady and perhaps rapid reduction in the London stocks is bound to have its influence. Taking the long view, however, it is not what happens now that really matters, but whether when restriction is at an end it will be for good or whether it will merely be followed by a further reduction of output. The answer to that question depends entirely on the extent to which the market for rubber develops.

EGYPTIAN IRRIGATION SERVICE.

A comprehensive survey of the organisation and administration of the Egyptian Irrigation Service is given in a report* recently issued by the Ministry of Public Works in Egypt. The Irrigation Service, it may be pointed out, is the largest of the nine departments constituting the Ministry of Public Works, well over half the total number of posts being held by the staff of its three branches. The main objects of the service are (1) the distribution of water and the provision of an efficient system of drainage and the protection of the country against being flooded by the Nile, and (2) the design and construction of works to ensure a better distribution of water.

As is well known Egypt is practically a rainless country, and it depends for the water necessary for irrigation on the Nile, whose rise and fall corresponds with the rainy and dry seasons in the three countries to the south—the Sudan, Abyssinia, and Uganda. Of the total area of Egypt—about one million square kilometres—it is pointed out that only one-thirtieth or about six and a half million feddans is cultivable, excluding the lakes which may ultimately be reclaimed. Of the cultivable area about 5,300,000 feddans are under cultivation, of which about 4,000,000 are perennially irrigated and produce two and sometimes three crops in the year, while the remainder are under flood or basin irrigation and produce only one crop. In Upper Egypt from Assiut to Assiout irrigation is on the basin system, in Middle Egypt, from Assiout to Cairo, irrigation is principally perennial, while in Lower Egypt irrigation is entirely perennial.

The Assuan Dam and the Esna, Assiout, Delta, and Zifta Barrages are the principal works for the control of the Nile. The Upper Egypt basin system obtains its supply partly by flood canals whose levels are controlled by the Esna Barrage and partly by a canal on the west bank of the river whose levels are controlled by the Assiout Barrage. There are also numerous large feeder canals which take their water direct from the river and are independent of these Barrages. By these various canals the 212 basins of Upper Egypt obtain the flood waters. The basins are gradually filled; the water remains there for a few days and is then run off through regulators to the Nile, and the basin areas are utilised for the sowing of crops.

The Middle Egypt perennial system obtains its supply through the Ibrahimia Canal whose levels are controlled by the Assiout Barrage. The supply from this canal is diverted at Deirut into other main canals from which higher up branch and distributing canals take off, and by means of outlets the water is distributed to the fields. Six arterial canals whose levels are controlled by the Delta Barrage provide the supply to the Lower Egypt

* "The Irrigation Service, Its Organisation and Administration." By P. M. Tottenham, C.B.E., Ministry of Public Works, Egypt. (Government Press, Cairo. P.T.20.)

perennial system. These canals have regulators every 15-20 kilometres, and above them there are branch and distributing canals, and the water is distributed to the fields in the manner already described in the case of Middle Egypt. The main canals, it is explained, may serve from 200,000 to 1,000,000 feddans, branch canals from 20,000 to 200,000 feddans, and branch canals from 500 to 25,000 feddans.

During the flood and river months the natural discharges of the river are sufficient, but in the spring and summer months the water is generally inadequate, and it is the function of the Assuan Dam to supplement the supply at the period.

EXPORTS CREDITS GUARANTEE SCHEME.

Owing to the rapidly increasing use which is being made of the facilities provided by the Government under the above scheme for the assistance of those engaged in export trade, it has been found necessary for the Export Credits Guarantee Department to secure larger and more suitable accommodation. The department will take up occupation of the new premises at the end of this year and as from December 29, all communications should be sent to:—The Manager, Exports Credits Guarantee Department, 9, Clements Lane, Lombard Street, London, E.C.4. The Department's new telephone number will be Royal 8771.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, January 9). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahratta for Calcutta (Birkenhead, January 3).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, January 11).

British India Line.—S.s. Manora for Bombay and Karachi (London, December 31); s.s. Warfield for Colombo, Madras, and Calcutta (London, December 31).

Cunard Line.—S.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool January 7, Swansea January 10); s.s. Cypris for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, Glasgow, and Swansea, January 14).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 21).

P. and O. Line.—S.s. Razmak for Bombay (London, January 6); s.s. Nankin for Colombo, Madras, and Calcutta (London, January 7).

Prince Line.—S.s. Stuart Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, January 10).

Ellerman and Papayanni Lines.—S.s. Andalusian for Gibraltar, Malta, Jaffa*, and Haifa* (Glasgow December 30, Liverpool January 2); s.s. Mardinian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 7). * Subject to sufficient inducement. Cargo taken on through Bills of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended November 30 amounted to £E9,563, making the total from April 1 £E203,302. For the corresponding periods of the previous year the totals were £E12,253 and £E221,761.

The municipal council of Belgrade has decided to construct 17 buildings, of 8 apartments each, for workmen and two homes for workmen with 200 beds in each (says an American Consular report). It has also decided to enlarge the terrace in the park of Kalemegdan so that it would encircle the fort up to the Danube.

The following appointments have been made on the staff of the Imperial Bank of Persia, London: Mr. E. M. Eldrid, Sub-Manager, to be also Secretary; Mr. J. S. R. Wright, late Manager of Baghdad Branch, to be Assistant Sub-Manager; Mr. A. H. Wright, to be Accountant in place of Mr. G. W. Kelbe, who retires on December 31 next, after 38 years' service.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 23.

The Stock Markets have enjoyed a busy week, for in addition to the arrangement of the fortnightly settlement—the last of the year—there has been considerable activity in several sections. Gilt-edged stocks have been notably good, and other high-class investment securities have benefited sympathetically. Perhaps the most noteworthy feature, however, has been the belated rally in the home railway market where buying orders in anticipation of the dividend announcements have caused a marked rise in prices, owing to a scarcity of stock. In the industrial markets a further sharp rise in Triplex Glass shares was followed by a slight reaction, and Mond Nickels were prominent with a pronounced upward movement. But in other directions also, such as the artificial silk and gramophone groups, activity shows little signs of abating, and it would appear that the Stock Exchange will end the year in good fettle.

The interesting announcement on Thursday that Italy has returned to the gold standard, and has stabilised at 92.46 lire to the £, was welcome but unexpected, as it had been generally expected that no definite action would be taken until France had declared her policy.

The Stock Markets in 1927.

The year 1927 has all but run its course. In the closing days of a year the average man is tempted to be retrospective. And the investor is only one side of the average man. Thus the investor will be asking, "What investment rewards has the dying year brought me?" There will doubtless be a partly unsatisfactory answer—here and there. The heavy industries, for instance, have not regained such a measure of prosperity as one could have wished. Again, the more speculative sections of the Stock Exchange, such as oil, rubber and mining, might easily have been more buoyant. But, on the whole, the investor has little ground for complaint. His lot, indeed, would be happier if every year were no worse than the one that is ending. The average level of Stock Exchange prices today is appreciably higher than a year ago.

Let us glance at the "Bankers' Magazine" index number of security values. The year 1921 is the basic

year and therefore equals 100. During the past eleven months the index number of fixed-interest bearing stocks moved up from 109.3 in December 1926 to 110.6 in November 1927. The movement in the case of variable-dividend securities was more striking, there being an advance during the same period from 135.7 to 145.9. One need hardly remind the investor that the outstanding feature was the extended boom in industrial securities, which was highly "selective," the investor purchasing first one favourite share and then another. The securities of the "new" industries, including the artificial silk industry, were particularly favoured.

The "New" Industries.—Their Relative Value.

There seemed, indeed, some little danger of the importance of the "new" industries being exaggerated. A writer in the current number of the *Westminster Bank Review* provides a much-needed corrective in this connexion. He pays a well-merited tribute to their value, but urges the need for preserving a sense of proportion as regards their present relative position. The typical "new" trades which he reviews have less than 700,000 workers on their books, against approximately 1,200,000 in the coal-mining industry and an aggregate of 1,000,000 in iron and steel, ship-building and general engineering. Their expansion during the last four years has attracted some 127,000 fresh workers to their ranks, but this total, it is rightly emphasised, is not much more than half the number at present unemployed in the single industry of coal production. In these circumstances one must endorse the view that, so long as the great basic trades are unprosperous, the activity of the more recently established industries can offer but partial compensation. Doubtless the "new" industries, without exception, will play an important part in the national economy of the future, but it is most essential for the investor to bear in mind their relative importance.

Reflections on the Rand Dividends.

The uncertainties attaching to gold-mining, even on the celebrated Witwatersrand, are well exemplified by this year's experience. In the spring everything seemed to be going well. The good mines were counted upon to do better than ever before, while great expectations were entertained respecting several properties which have yet to win their spurs. Unfortunately for those interested, these anticipations have by no means been fulfilled. The Government Areas and the Modderfontein—the two greatest gold mines in the world—have in the one case increased the dividend rate and in the other maintained it at the enhanced level of June. That remarkable proposition, the Sub-Nigel, is paying 3s. 6d. as against 1s. 3d. for the second half of 1926. On the other hand, two of the leading Main Reef companies—the City Deep and the Robinson Deep—are making no distribution in respect of the current half-year (the latter as regards its ordinary shares). Several more of the old-established concerns have been under the necessity of reducing their rates, while in other cases the programme of expansion has been interfered with by delay in the delivery of plant or similar untoward incidents. Over all has hung the shadow of the shortage of native labour, and lately there has arisen the threat that this may be accentuated by the withdrawal of certain recruiting facilities hitherto allowed by the Mozambique Government.

It is reported that the Turkish Government has given a contract to a German group for the building of railway workshops at Kaisaria.

It is reported that an English group has acquired a controlling interest in the Bor copper mines in Southern Serbia.

The Bulgarian National Bank has reduced its rate of interest on current accounts by 1 per cent., making the rate 4 per cent. for private accounts and 3 per cent. for those of the banks.

Work has been continued on a programme for the construction of new railway lines in Roumania to an estimated length of 1,589 kilometres, the total estimated cost being 22,792,000,000 lei (says an American Consular report). It is proposed to carry out this work only as funds become available.

Motors and Motoring.

By G. B. B.

Motor cycling readers will be interested in the new spring fork which has just been placed on the market by a Smethwick firm, Messrs. Carfield, Ltd. The fork is described as being suitable for light weight machines up to 350 cubic centimetres, but I understand that a heavy weight pattern is about to be introduced for big solo and sidecar machines. The chief point of interest about this new fork is that the link spindles are carried on ball bearings of the cup and cone type, and as the spindles themselves do not bear at any point they cannot seize up. A hardened steel cup is pressed into the malleable casting at the end of each spindle and the cone is screwed on to the spindle and locked in position, the fork link being held between this nut and the cone. Shock absorbers with spring star washers and Fibrax friction discs are fitted, and a central compression spring is used. The fork strikes a new line in design, and I should say it is likely to be popular. One or two of the leading makers have already taken it up, and others are, I understand, likely to follow suit.

The British motor cycle has firmly established itself in the front rank of the world's productions, and whilst there is always a danger lest successful manufacturers may tend to rest on their laurels, there is probably sufficient competition amongst makers to ensure a steady forward policy. The present-day machines, it is true, look almost ideal: there seems no direction in which they could be improved, but that progress is still possible no one will deny. In fact, *Motor Cycling* considers that there are many engineers who can see basic faults in present-day design which will be eradicated in course of time. The lot of those engineers

who are seeking to introduce what they regard as improvements is just now not too happy. Sales managers and popular prejudice are against them, but they do deserve credit for their uphill fight. At the present time much attention is being paid to steering and frame design, and the mere fact that a new type of fork has been introduced, as noticed above, goes to show that some consider that the general idea of the normal front fork is not yet perfect. Then there is the big question as to whether the power transmission can or cannot be improved. There are many who hold the opinion that the two-wheel drive is certain to come, and others are pinning their faith on improvements in super-chargers. Whether any of these ideas will come to fruition in the near future remains to be seen, but one thing is certain, and that is that British motor cycle manufacturers as a body are determined to retain the lead which they now possess.

Free Wheel for Light Cars.

The "free wheel" for light cars is a refinement which is certain to come. It has already received attention of a more or less serious character by several light car makers, and although so far the idea has not received general approval by the public, those drivers who have tried it are unanimous in its praise. One of its chief advantages is that its use reduces fuel consumption and causes sweeter running, and another is that it facilitates gear changing. There are, of course, arguments against its use, but, speaking as an engineer, I find very little in them. To my mind the free wheel for light cars is one of the most promising ideas we have had since the War and it will be a thousand pities if it is allowed to pass out of the list of next season's improvements.

I have mentioned super-chargers, which are now being used by a very few. From the ordinary user's point of view the advantages of a super-charger will be found to outweigh all considerations of extra weight, cost, and complications, remembering that where a super-charger is in use a low compression engine can be used without any sacrifice. Mr. C. A. Villiers states that the characteristics of a super-charged engine, as compared with those of the atmospheric induction type, are high compression at high revolutions, which do not produce vibration, as opposed to high compression at low speeds necessitated by a loss in volumetric efficiency at the power peak and accompanied by less flexible operation. The super-charger, like the free wheel, is another refinement which is certain in time to become a standard fitting for the light car, and it would be as well were manufacturers to bear that in mind when designing future models.

The Department of Overseas Trade understands that it is proposed to hold an exhibition of machinery of all kinds in Beyrout about the end of March next.

The Eastern Telegraph Company, Ltd., announce the payment on January 15 next of a dividend at the rate of 3½ per cent. per annum, less income tax, on the preference stock of the company for the quarter ending December 31, 1927, and the third quarterly interim dividend of 2½ per cent. on the ordinary stock, free of income tax, in respect of profits for the year ending December 31, 1927. The transfer books of the ordinary stock will be closed from January 2 to 9, 1928, both days inclusive.

A new textile school is to be opened in the near future in Leskovats, Yugoslavia. The purpose of this school (says an American Consular report) is the training of efficient assistants for textile engineers and superintendents of textile factories. The course of studies, both theoretical and practical, is to last three years. A laboratory will be attached to the school for determining the quality of the thread and material, and also a museum in which will be displayed all kinds of wool, cotton, flax, and silk textiles, as well as laces, ribbons, and braids.

CYPRUS CROP PROSPECTS.

The Trade Commissioner for Cyprus has issued the following report on Cyprus crops in November:—

Owing to the almost complete absence of rain the barley has been considerably damaged. Grass is drying up and the flocks are suffering from lack of food.

The sowing of barley, wheat, and oats continues but the dry weather is disappointing.

The potato crop now being harvested is average in quantity but the quality is excellent. The demand from Egypt and Greece is good and prices are steady at 7½d. to 8d. per stone.

The olive crop is still being gathered and extraction of oil continues.

A considerable quantity of carobs has been shipped to England. The price is steady at nearly £5 per ton.

Oranges are being shipped to Egypt. Prices range between 10s. to 12s. a thousand for round oranges and 25s. to 30s. for Jaffa oranges. The crop is attacked by scale and the Mediterranean fruit fly.

Mandarines are seriously damaged by fruit fly.

Pomegrates.—Exportation has been completed. A few cases were sent to England but have found unsuitable for the market on account of the lack of colour in both skin and pips. Price 7½d. per stone in Cyprus.

Grapes.—Price has risen to nearly 2d. per lb., but there are few left.

JAFFA ORANGES.

A report dated December 9 from the Empire Marketing Board's correspondent at Jaffa states that the weather continues fine and cold, but that rain is badly needed. The fruit is very much improved in colour owing to the cold weather. A decision of the Chamber of Commerce to suspend shipments for 15 days was not altogether successful, but only 17,000 cases were shipped from November 26 to December 13.

Regular shipments appear to have begun again, however, and 45,000 cases were shipped last week and are due at Liverpool and Glasgow about the end of this month, while a further shipment of 23,000 cases to Manchester on Monday of this week is now advised. Total shipments up to the present are slightly below those at the corresponding date last year.

THE EGYPTIAN MARKET FOR JEWELLERY.

Before the World War there was a strong aversion on the part of the average Egyptian to wearing imitation, or other than genuine jewelry. This sentiment (says an article in the United States "Commerce Reports") is still strongly embedded in the average native of the poorer classes who can afford very little jewelry, but demands pure gold or silver when he does buy. However, the purchasers of the very expensive jewelry are showing a tendency to buy not always the best available, but less expensive jewelry which still presents a good appearance.

The jewelry trade depends entirely upon importation of precious metals and stones from abroad as neither are mined in Egypt. Though most of the plain, drawn-gold,

and silver bands and ornaments for the bazaars are manufactured locally, practically all of the high-priced jewelry is imported. Some engraving, designing, and the stone setting is done in the larger shops, the gems being imported from Europe. Nearly all of the gold and platinum imported is unmounted work, such as bracelets, rings, and brooches for making into the finished pieces. Labour is cheap and it has been found more advantageous from the importer's standpoint to do as much of the finishing as possible in Egypt.

Importations of gold and articles made in gold are mainly from France, England, and Germany. The small articles such as gold pins, cuff buttons, and studs are brought principally from England and Germany. Rings and other kinds of jewelry are received in quantities from France.

The market for certain articles is restricted because of the dress of the native Egyptians. Belt buckles, watch fobs, gold and silver cigarette cases, which go with European dress, are sold only to Europeans and natives who are accustomed to wearing European clothes.

The jewelry made of precious metals for the peasants is made locally. According to the census of 1917 there were 6,076 goldsmiths in Egypt—2,212 in Cairo, and 586 in Alexandria. In general Egyptian jewelry is distinguished by its heavy weight, but often it is light, and delicately made with a perfect and minute finish according to the clientele for whom it is intended. Among the lower class, however, exquisiteness of finish is not esteemed, these people preferring rustic jewelry with ostentatious designs to artistic jewelry. Gold is wanted more than work of art, and 21 carat gold is the most popular.

The goldsmiths in some provinces have acquired a reputation through adopting certain designs and models. In Upper Egypt, for example, earrings are manufactured in the shape of the horseshoe and the crescent. In Cairo, middle-class women wear malleated earrings in the shape of a hand, called "Fatima's hand." In the Sharkieh Province most of the jewelry in vogue is fashioned in the form of a fish, which was the emblem of Egypt during the epoch of the Roman Christian dynasties.

The market for emblematic jewelry is limited. Of the 14,000,000 inhabitants of Egypt but 1,100,000 are Christians, 60,000 Jews, and the rest Muhammadans. The Muhammadan religion forbids the use of religious emblems, although the people like the crescent as an emblem.

TENDERS INVITED.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

Tenders are invited for the following contracts, and must be made by the dates mentioned.

EGYPT.

Tractors.—The State Domains Administration is considering the possibility of purchasing a number of tractor ploughing sets and requests firms interested to apply to the Administration, Savoy House, for copies of the specification.

Clothing, Etc.—The Chief Inspector (Direction General, Customs Administration, Alexandria, invites tenders for the supply of:—(a) Clothing and equipment; (b) tarbushes with tassels; (c) boots for guards, required for the year 1928-1929. February 15.

Clocks, Etc.—The Director-General, Physical Department, No. 1, Sharia El Insha, Dawawin Post Office, Cairo, invites tenders for the supply of wall clocks, tell-tale clocks and stop watches. January 2.

Rubber Solid Tyre.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of rubber solid tyre for the Government Workshops, Bulaq, Cairo. January 3.

Steam Engine, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of one steam engine and one centrifugal pump at Karnak temple. February 5.

INDIA.

Locomotive Travelling Crane.—Tenders are invited by the Indian Stores Department for a locomotive travelling crane for the Eastern Bengal Railway, Calcutta. January 16. (D.O.T.)

EGYPTIAN GOVERNMENT.

TENDERS will be received up to noon on 25th February, 1928, at the Office of the Director-General of Reservoirs, Ministry of Public Works, Cairo, Egypt, for the excavation of approximately six and a half millions Cubic Metres of earthwork in the remodelling of the Fouadia Canal in Naghamadi District, Upper Egypt. Work is to be handed over by the 30th June, 1930.

Specification and Form of Tender may be consulted at the above-mentioned Office from January 1st onwards and purchased on payment of £5 per set.

THE SUDAN IN 1926.

The year 1926 was an important one in the history of the Sudan, for with the expansion of the Gezira scheme it marked the development of the country as a great cotton-growing region. Apart from the expansion of the cotton crop the year, owing to climatic conditions, was marked by the vicissitudes that are bound to occur from time to time in every country dependent almost solely on the soil for its economic progress. The dura crop was a failure for the second time, and trade depression prevailed which has lasted up to the present time, though it may now be said to be nearing its end owing to the good crops obtained during the present year. A succinct survey of developments in 1926 is given in the recently issued annual report* from which we give the following extracts:—

Financial Results.

The financial results for 1926 are chiefly notable for the inclusion for the first time of the revenue and expenditure for the Gezira project, the returns from which were remarkably good and greatly exceeded the budget estimate, which was based on normal expectations. The revenue, direct and indirect, derived from this project, combined with an exceptionally large return from the gum trade, accounts for the comparatively favourable results for 1926, which otherwise were affected more adversely than was expected by the bad rains all over the country and by the poor floods at Tokar and Kassala.

According to the figures available (the accounts for the year are not finally audited) the results for 1926 are as follows:—Revenue, £E5,857,988; expenditure, £E5,482,388; surplus, £E375,600.

The financial position of the Sudan must always rest on a somewhat uncertain basis, in that its main sources of revenue depend upon climatic conditions, but the results of 1926 suggest the existence of something in the nature of a compensatory principle, in that seasons of bad rains are likely to be accompanied by conditions favourable to the collection of gum, and to the yield of the irrigated crops in the Gezira.

In the case both of the railways and of the Government's normal administrative expenditure and corresponding revenue, the general level of receipts has, since 1922, risen more than the general level of recurrent expenditure. The surplus margin thus created has in both cases been utilised in the same way, that is to say, it has partly been used to establish a sounder basis of finance in the form of including in current expenditure proper provision for renewals and reserves of various kinds, and partly "put back into the business" in the form of capital improvements and special expenditure. The result has been that arrears in many directions have been overtaken and adequate provision made for the future, particularly in the Railway Renewals Fund, and in the building up of a special reserve fund against the possibility of losses in the early years of working the Gezira project. The future must depend very largely on the working of that project. If it can be stabilised on a basis which provides

enough direct revenue to balance the current cost of irrigation, and the services of the Gezira loans, then the Government will have the benefit of the indirect revenue which it creates, while the accumulated reserves can be invested in extensions. In this manner the way should be opened for the further steps which are necessary to arrive at a fundamentally sound position. First among these should come a reduction in the general level of taxation.

New Projects.

A new agreement was concluded during 1926 with the Sudan Plantations Syndicate. The following principal changes are involved:—(i) The area of the concession is substantially increased. (ii) The period of the concession is extended from 1939 to 1950, but with a right on the Government's side to terminate it either in 1939 or 1944 on payment of full compensation for loss of prospective profits by the syndicate. (iii) On completion of the full additional area, the Government's share will be increased from 35 per cent. of the net proceeds to 40 per cent., and the syndicate's reduced from 25 per cent. to 20 per cent. The full area is expected to be in cultivation in 1930. For 1926-27 the Government's share is increased to 37½ per cent., and thereafter by gradual steps until the full area is completed. (iv) The syndicate is to repay the Government the sum of £400,000 sterling advanced to it under the original agreement.

This extension of area will involve the Government in capital expenditure estimated at about £E1,700,000, which is to be financed partly from the £400,000 sterling repaid as above, partly from the balance remaining over from the original Gezira Loan Funds, partly (to the extent of British-made materials employed) from the Gedaref Railway and Development Company Loan, and partly from the Government's own reserves. It is noted that, whereas the total capital expenditure on completing the original 300,000 feddans is estimated at about £11,500,000 sterling, or nearly £39 per feddan, the development of the new area will only involve an additional expenditure of about £10 per feddan. The difference is, of course, mainly accounted for by the fact that the original expenditure included the cost of the dam as well as the canalisation. It is clear that, on this basis, an extension must greatly improve the Government's position—especially as it is combined with an increase in its percentage share in the proceeds.

The decision was taken during 1926 to extend the Kassala Railway forthwith as far as Gedaref, with the ultimate intention of continuing from there to Makwar, thus linking up with the present main line from Port Sudan to El Obeid. Work on the extension to Gedaref was started in the autumn of 1926 in anticipation of raising the necessary loan, and a contract for the large bridge across the Atbara was placed with Messrs. Dorman, Long and Co. Railhead reached the River Atbara in January 1927. It is expected that the bridge will be completed and railhead advanced to Gedaref before the rains in 1928. This development is expected to prove a great stimulus to the export of crops, especially durra, from the country lying round and to the south of Gedaref. This is an area of more certain rainfall, and better security for regular production, than any now served by the rail-

way. The provision of facilities for moving large quantities of grain at cheap prices from such a district should help towards keeping the cost at a moderate level, and avoiding the violent fluctuations which now occur when the rains fail—as they do periodically in the northern provinces. Incidentally also, it should help to prevent any disturbance of the country's economic balance as a result of the large sums of money realised from cotton growing in the Gezira.

Railways and Steamers Department.

The gross receipts at £E.2,115,999 were the highest on record, the previous best figures having been £E1,998,914 in 1921, during the period of post-War inflation when all rates stood at a considerably higher level. These exceptionally good results were mainly due to increased receipts from cotton, gum and sugar. Apart from gum, the working of the Gezira irrigation project is almost entirely responsible for the above increases.

The opinion is sometimes expressed in local commercial circles that the Sudan Government derives very substantial revenue from the railways and, in fact, uses its ownership as an instrument for imposing taxation. The following figures are, therefore, of interest, showing the comparison of the amount paid each year by the Government as a "customer" of the railways with the net dividend which it has got as a shareholder. The figures for "Government Traffic" include transport for the local army, for all civil departments, and for the stone traffic for the construction of the Sennar Dam. (Prior to 1925 the army traffic represented traffic for the Egyptian army.)

Year.	Net Dividend retained. £E.	Value of Government Traffic. £E.
1922	267,549	520,702
1923	387,055	500,303
1924	423,216	552,929
1925	307,829	404,343
1926	451,405	368,200

From this table it appears that it was only in 1926 for the first time that the Government drew a net balance in cash from the railways. When it is considered that the railways capital account, after deducting capital, raised on loan, for which interest has already been deducted, amounts to no less than £E.6,298,910, it cannot be said that the Government is drawing an excessive cash dividend from its railways.

Port Sudan.

The developments at this port may properly be considered in connection with the railways. Construction on the two new coaling berths and the coal transporters proceeded during 1926, and these are expected to be ready in the autumn of 1927. These works, together with other improvements at this port, are estimated to cost, when completed, £E.412,105, which is to be provided as follows:—From the Sudan Construction and Equipment Company Loan, £E.206,105; from the Gedaref Railway and Development Company Loan, £E.86,000; from Government reserve funds, £E.120,000; total, £E.412,105. The new town water supply, brought by a pipe-line from Khor Arbat, 18 miles away, was also completed during 1926, and on the success of this first instalment it was decided to double the line. This work is being carried out by the Public Works Department. The total cost of the enlarged undertaking will be about £E.100,000. This has been financed as to about £E.40,000 from the Sudan Construction and Equipment Company Loan and as to the balance from the General Reserve Fund.

Rain-grown Cotton.

Exceptionally bad rains and the severe slump in the price of American cotton combined to give this industry a check in the 1925-26 season. The shortage of grain

and consequent high price of dura also militated against any substantial areas being put under cotton.

The provinces in which the Government has taken steps to encourage cotton growing fall into two groups—northern and southern. In the northern group the Government's intervention is limited to the supply of seed and the provision of ginning facilities. In the southern provinces, however (Mongalla, Bahr-el-Ghazal, Upper Nile and Nuba Mountains), conditions are much more difficult, and the Government has been forced to intervene in the buying and transport of the crop. Altogether six small ginneries have been erected or ordered. Pending the completion of these ginneries the moving of unginned cotton from distant points is a costly operation, and at the minimum prices paid by the Government a loss was incurred on the 1925-26 operations. It is estimated that this loss was at least counterbalanced by the increased earnings from railway and steamer traffic and in other indirect ways; but, in order to be on the safe side, provision has been made from the Reserve Fund to cover possible losses in 1926 and 1927. Cotton prices have improved recently, and the result for 1927 is likely to be quite satisfactory. The policy is to proceed with caution in this development, but, according to the results at present obtained, it appears that, with a price of 7½d. for "American middling" in Liverpool, production can be carried on with a reasonable margin of profit in these provinces as soon as the local ginneries are operating. The indirect benefits which result from providing these primitive people with some chance of occupation and economic production are, from an administrative point of view, of great importance.

Trade.

The external trade of the country, excluding transit goods and specie, increased in value from £E.9,606,091 in 1925 to £E.10,764,906 in 1926, an increase of £E.1,158,815, or 12 per cent. This result is due to the large increase in the value of cotton and cotton seed exported, viz., from £E.1,756,053 to £E.3,091,359, an increase of £E.1,335,306. But for this larger output of cotton the value of external trade would have shown a decrease as compared with 1925.

In last year's note the economic position was discussed at some length. Briefly, the successful results of the first season's working of the Gezira cotton-growing scheme on a large scale were being eagerly awaited, but the anticipated success of the scheme was not enough to dispel the general feeling of depression and anxiety caused by the comparative failure of the food crops of 1925-26.

Prices of the chief food grain, dura (millet), were very high, and the people, especially those living in towns, were looking forward with foreboding to the hard times ahead before the next harvest, and to the worse difficulties that might follow a further short crop in 1926-27. Foreign trade was suffering from the unsettled state of the world's markets. The heavy decline in cotton prices had already set in.

The year 1926 thus opened with misgivings, and, with the notable exception of the Gezira irrigation scheme, where a high yield compensated for the lower price of cotton, has unfortunately fulfilled some of these gloomy forecasts and provided a number of unpleasant experiences.

JOHNSTON LINE

The rains of 1926 were again insufficient, and the rain crop of 1926-27 takes its place beside that of the previous years as one of the smallest on record. But for the large sums of money derived from their cotton cultivation by the people on the Gezira scheme, about £E.1 million, and the 50,000 acres of dura grown on this irrigated land, the economic position would have been very much worse, and in recounting the troubles under which trade has laboured of late there must always be set-off the immense advantage to the country in the acquisition of this vast permanent addition to its productive assets. A good Nile flood in 1926 also helped to ease the food situation by enabling a larger area of riverain food crops to be cultivated, while the prompt action taken by Government for the control of grain prices has done a great deal to restore the confidence of the people and put them in good heart. In spite of a second successive poor rain crop, the food question is causing less difficulty than it did a year ago. Nevertheless, the high price of grain during the last eighteen months, apart from its other ill effects, has been a severe handicap to trade, and has swallowed up the small surplus of trading capital possessed by the native population of the central and northern districts. Instead of exporting some 30,000 tons of dura, the Sudan has had to import 21,000 tons to supplement domestic resources, and is therefore some £E.400,000 to the bad on its dura account.

In order to ensure a sufficiency of food for the people in the large towns and in districts where the crops had failed, the Government built up a central reserve of grain by purchasing dura from overseas through local importers. At the same time, the import duty on dura was waived and special cheap railway rates introduced for imported grain. The successful policy of non-interference with public imports or with the internal movement of grain resulted in a continuous inflow of grain supplies from India and elsewhere, and the demands on the Govern-

ment reserve were small. There is no doubt that prices were stabilised by the presence of a large stock of grain held by the Government, and though prices were high in comparison with years of plenty, the people were fed with practically no active intervention in the grain trade.

Imports of grain amounted to 21,734 tons, of which 11,276 tons were for Government use. Issues of grain made by the Government were:—Army and Civil Departments 3,733 tons, Poor relief 400 tons. At the end of 1926 the Government held 7,000 tons of grain to face a second year of food shortage.

(To be continued.)

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at October 31, 1927, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share capital (300,000 fully paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E1,145,625; current, deposit, and other accounts, £E16,033,296; Egyptian Government, £E17,329,388; Sudan Government, £E174,140; Mixed Tribunals, £E1,824,384; bankers' accounts, £E747,617; cheques and bills payable, £E224,571; sundry other accounts, £E2,086,960—£E43,953,481. Company Meeting.

IONIAN BANK.

Improving Position in Greece.

The annual general meeting of the Ionian Bank Ltd., was held on December 21 at Basildon House, Moorgate, E.C.

Sir John Stravridi (the Chairman), in the course of his speech, in moving the adoption of the report and accounts, said: During the year under review Greece, which is our main field of action, has had, what was so badly wanted by the country, peace and a stable Government, and the results thereof are noticeable in every sphere of activity. I think you will agree with me that it is no mean achievement to have been able within the last seven months to agree the terms of settlement of her War debts with all her creditors—Great Britain, the United States, and France—with the latter, subject to arbitration concerning the payment for the supply of armaments in 1917 and 1918.

But this is far from the sum total of its achievements. When the new Government came into power it found the national finances in a state of absolute confusion. With praiseworthy determination, the Finance Minister took this problem in hand, and succeeded in cutting down the national expenditure and in tightening up the collection of taxes. He then applied to the League of Nations for the approval of the conclusion of a loan for an effective sum of £9,000,000, and also for authority for the Financial Committee of the League to assist Greece in the preparation of a complete plan of currency and banking reform, which was to place her on the same level as the most advanced countries in Europe. The League of Nations then sent out to Greece a deputation to collect the fullest possible information regarding the State finances, and, on the report of this body, the League of Nations prepared a scheme giving authority for the loan and dealing with the various problems which are to lead to the financial reconstruction of Greece. The proposals were: the constitution of an autonomous bank of issue, the achievement and maintenance of budgetary equilibrium and the stabilisation of the currency; also the payment of all Budget deficits and the completion of the work of settling the refugees.

The plan is a vast one, and follows the classical principles of sound financial policy, and will provide the country with a solid modern organisation. The Greek Government has heartily accepted all the conditions laid down in this well-thought-out programme, and has undertaken to see that it is carried out to the full.

This entails, in the first instance, the creation of a new bank of issue, whose primary duty will be to ensure the stabilisation of the gold value of its notes, for which purpose it will have the control over currency and credit in Greece.

Then the Government is to reform its administrative system; all its receipts and payments must be passed through the new bank. The Government also undertakes definite obligations concerning the maintenance of budgetary equilibrium, the publication of accounts and the limitation of short-term loans.

By a master-stroke of straightforward dealing with the United States, the Minister of Finance succeeded in obtaining a very tangible token of good will of that great country in the shape of a loan of 12,500,000 dollars at 4 per cent., which will replace the portion of the loan which was to have been issued under the aegis of the League of Nations for the settlement of the refugees.

It is now expected that the balance of this loan, amounting to £6,500,000, will be issued by the beginning of February, when we may expect a new and prosperous era to open for Greece, in which we have no doubt our institution will participate.

There is much to be done in Greece even after balancing the Budget and stabilising exchange. The organisation of the country, its administration and agriculture, all call for urgent attention.

Turning to our work during the past year, we have, as I fore-shadowed last year, opened agencies at Scala in the Peloponnesus, at Naoussa in the industrial centre of Macedonia, at Drama, and at Xanthi in the tobacco district. The Xanthi agency has since been promoted to the status of a branch.

Our organisation in Greece has made substantial progress. Our difficulties in obtaining suitable recruits for our staff are waning. This will, I hope, enable us to resume our policy of expansion through the further extension of our network of branches or agencies.

So much has been published in regard to figures relating to the finances, the Budget and trade of Greece, that I feel that I should not take up your time this year with what might be considered a redundancy.

In Cyprus we have established a central office at Nicosia, the official capital and the seat of the Government of the Island, and agencies at the principal ports, Limassol, Larnaca, and Famagusta. Our business in Cyprus has developed well in proportion to the possibilities of the island, but it is too early to expect profits from a centre where we had only been working seven months at the closing of our balance-sheet.

In regard to our work in Egypt, I told you last year that, having followed a policy of prudence, we had suffered no capital losses but that our results had been somewhat affected. During the year under review I am glad to say that we have done somewhat better, notwithstanding the maintenance of such policy.

The recent visit to England of His Majesty the King and of the Prime Minister of Egypt will, it is hoped, lead to a better understanding between the two countries, and to a constructive and fruitful collaboration which should be of great benefit to Egypt.

The position in Constantinople is the same as I depicted it to you last year. Our policy remains one of expectancy until such time as we can gauge with greater certainty the attitude of the authorities to foreign institutions working in Turkey.

The report and accounts were unanimously adopted.

CHESS.

By "CARO-KANN."

I give this week another ending from the recent match between the past members of Oxford and Cambridge Universities, the players being Mr. G. E. Smith, Cambridge, White, and Mr. A. Crothers, Oxford, Black. White has just played 35, Q—B4 (ch), and play continued . . . K—Kt2; 36, R—K7, Q—B8 (ch) (there is nothing better, and this check only delays the ultimate issue by two moves); 37, K—R4, Q—B5 (it is curious that there was no other way of defending the pawn); 38, Q—K5 ch, K—R3; 39, P—KKt4 and mate follows.

After the unduly prolonged match for the championship between Capablanca and Alechin it was inevitable that the question of a change in the conditions in regard to these matches should come under consideration. Most players will probably be of the opinion that there are two respects in which there is an obvious need for an alteration. One is the need for frequent contests for the title, and the other is that the matches clearly require to be limited. In my view the best solution would be to hold a small tournament each year in which the champion and say the three most prominent aspirants to the title would take part, each player contesting perhaps four games with every other player. Limited to four players that would mean a tournament of twelve games, and in all probability over a term of years the results would not be vastly different from those under the existing system. The method has the advantage moreover that it would permit of a wider circle of aspirants to the title.

The ordinary general meeting of the Crédit Foncier Egyptien will be held at Cairo on January 12.

Ferguson Bros., Port Glasgow, have received a contract from the Calcutta Port Commissioners for three twin-screw hopper barges and for a double bucket dredger.

The Greek Government is prepared to grant a concession of 25 years or more for the exploitation of the Loutraki mineral waters to a firm or group that would undertake to build water establishments, hotel accommodation, and town works, according to a suggested scheme involving an expenditure of 165,000,000 drachmae, or about £500,000 (says a Reuter message). The Government is also prepared to grant a privileged licence for the opening and running of a casino. Various other facilities as well as exemption from duties and taxes will also be granted. Further information can be obtained from the Department of Therapeutic Waters at the Ministry of National Economy, where all offers must be submitted by February 15, 1928.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended December 21 :—

Egyptian Futures.—Sakel Contract.—Although this market has not shown any decided strength, the firmer undertone to which we drew attention in our last report has been well maintained, and values show gains of 15 to 24 points for near and 19 to 25 points for distant positions on the week. Strictly speaking, there have been no fresh developments in the situation to warrant the greater confidence now ruling, with, perhaps, the exception of the sounder technical position of the markets owing to the heavy liquidation on the recent decline; in addition we have probably now faced the maximum weight of hedging operations. The general tendency is to relegate to the background the visible supply question and to concentrate more on the prospects of a healthier trade demand in the early days of the New Year. Latterly, Manchester has provided somewhat more cheery reports, but the business evidently lacks the necessary volume to encourage spinners to depart from their warranted policy of only covering their near requirements. We still maintain that more general buying is held up through lack of confidence in the outlook; sentiment in this quarter can rapidly veer round however, and it may be that a further upward move in American values will furnish the necessary stimulant.

No special features have been revealed by the Alexandria reports except, perhaps, the greater steadiness displayed in comparison to recent weeks; the position there, as at this side, depends entirely on a revival of trade activity. Exports up to the end of the first week of December total 725,685 kantars, and the receipts for the corresponding period 1,158,851 kantars. The basis of all qualities appears attractive, and it is rather surprising that spinners have not availed themselves more freely of some of the undoubtedly cheap offers that have been made.

To conclude, we still consider that prospects favour the "long" side, and would advise conservative purchases should the market develop any reactionary tendency.

Upper Contract.—Business in this contract has again proceeded on rather quiet lines, but, influenced by the hardening of values in the American markets, a good tone has been displayed, with the result that prices on the week show gains of 20 to 28 points for near and 14 to 20 points for distant positions.

Spinners still operate cautiously, but trade reports, on the whole, are somewhat better in tone. Competitive outsiders are still dear compared with our ruling basis. At the existing difference, 364 points, we consider that purchases of March in our market against sales of American contracts will later prove profitable.

Egyptian Spot.—Sentiment has been more mixed during the past week, and a welcome halt has been called to the decline. Unfortunately, we cannot yet state that any increase in buying power has resulted so far as spot cotton is concerned, although the inquiry, particularly during the last two days, has shown improvement. As a whole, spinners probably still distrust the current level, yet the fact remains that nine days ago cotton was purchasable at $\frac{1}{2}$ d. per lb. less than it costs to-day. Manchester reports have lately displayed a more vigorous tone, and although spot sales here actually show a decline on those of the previous week there has undoubtedly been more business about for forward delivery. The Sakel inquiry has leaned rather towards the lower cotton, say from 11 $\frac{1}{2}$ d. to 12 $\frac{3}{4}$ d., and the volume of inquiry has decreased in proportion as the price of the cotton wanted increased.

Uppers have remained in fair request, chiefly for cotton at from 25 below to 25 on contracts. Pilon has been in slightly better favour at round about 15 $\frac{1}{2}$ d. to 16.00d. Sudan Sakel has been neglected, but a line of new crop White Sudan (good staple cotton) was reported as having

been placed yesterday at 16.00d. Forwardings to spinners for the week ending 16th inst. were reported as 5,194 bales and 1,405 bales Sudan. Estimated sales 1,200 bales Egyptian and 700 bales Sudan.

Quotations of Sakel show an advance of 25 points, and those of Pilon and Upper 45 points on the week. With the Christmas holidays so close at hand, it is not expected that much business will mature during the course of the next ten days, but, as usual, hopes of better things to come early in the New Year are running high. F.G.F. Sakel 17.25d. F.G.F. Upper 14.00d. F.G.F. Pilon 14.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended December 15 state :—

Since our last report the futures market has been active with heavy fluctuations both ways; at the close to-day the market seemed somewhat nervous. The week's summary of price movements is as follows :—Sakellaridis : January, 33.42 dollars, 0.16 dollars down; March, 33.75 dollars, 0.15 dollars down; May, 34.00 dollars, 0.18 dollars down; November, 34.35 dollars, 0.35 dollars down. Ashmouni, December, 25.90 dollars, 0.25 dollars up; February, 26.02 dollars, 0.09 dollars up; April, 26.24 dollars, 0.06 dollars up; June, 26.44 dollars, 0.06 dollars up; October, 25.70 dollars, 0.20 dollars down.

Sakel.—The week opened with very poor markets, January going as low as 32.15 dollars on a continuation of the hedge selling against financed cotton and pressure by speculators. The low levels reached attracted some commercial buying.

The market was also helped to some extent by the better tone of New York following on the publication of the November American consumption figures which showed takings of American cotton by American mills of 626,000 bales against 584,000 bales during the corresponding month last year. During the last few weeks reports from America have predicted short time for the mills there, but the figures now published do not confirm these reports, American mill takings of Egyptian cotton during November amounted to 13,600 bales of 750 lb. each against 10,929 bales for the same month last year.

There is nothing special to remark on the demand from abroad; but for a certain amount of buying when January dropped to about 32 $\frac{1}{4}$ dollars the demand during the week would again have had to be described as very poor. The statistical position is slightly better owing to smaller arrivals. This falling off is, of course, to be expected; the crop is smaller this year and, of necessity, the arrivals cannot keep up to last year's figures. The straddle between the near months of Sakel and Ashmouni, at the close to-day, is 7.52 dollars against 7.93 dollars last week and 8.69 dollars a fortnight ago; this difference must, in our opinion narrow still further.

On the basis of the Government figures of stock at the end of last season and arrivals and exports since that date, the stock in Alexandria on 7th instant consisted of Sakel 1,510,000 kantars; Ashmouni and Zagora 1,300,000 kantars; we estimate the up-country stocks at the same date: Sakel 1,750,000 kantars; Ashmouni and Zagora 1,290,000 kantars; which gives as total supply in Egypt: Sakel 3,260,000 kantars; Ashmouni and Zagora 2,590,000 kantars available for consumption in addition to the half million kantars of Sudan Sakel which will soon be on the Liverpool market.

The recent drop has carried prices to a more reasonable level but we think that a further decline is not at all unlikely; the demand has not really improved and with the approach of the Christmas and New Year holidays spinners' interest in the market will probably tend to become less.

Uppers.—The market has followed, more or less, the fluctuations of the Sakel market, but it has not been active. December is well held, being quoted at about parity with February, and should this position be maintained it is probable that the third December tender will be fairly heavy. At the second December tender, 4,000 kantars dockets were issued, making the total so far this month 18,250 kantars.

The week's receipts amount to 145,755 kantars against exports 203,815 kantars; the stock in Alexandria stands at 3,163,339 kantars.

The official figures of arrivals and exports for the period September 1, 1927 to December 7, 1927 are as follows:—arrivals, Sakellaridis 1,235,081 krs., Ashmouni and Zagora 1,707,814 krs., Pilon 166,804 krs., Various 125,966 krs., Scarto 60,790 krs., total 3,296,455 krs. Exports: Sakel, 773,841 krs., Ashmouni 950,009 krs., Pilon 74,170 krs., Various 57,390 krs., total 1,855,410 krs.

Spot.—Minet el Bassal has once more been a dull affair during the past week. Demand continues poor, holidays are approaching, and generally the outlook is not very encouraging. Sales amount to about 14,000 bales, of which we estimate 6,300 bales Sakellaridis, 6,800 bales Ashmouni and Zagora, 700 bales Pilon and 200 bales other varieties.

Sakellaridis.—Demand continues poor and a mediocre turnover has resulted, covering all grades. Low grades are scarce and hard to buy. Spot differences are generally without much change, but there is some pressure to sell the better grades, of which there is a very fair stock. These cottons are neglected and the present premiums seem very reasonable.

Ashmouni and Zagora: have once more met with only a moderate demand. All grades up to Strict Good have been dealt in, but the very high grades are neglected. Spot differences are unchanged.

Other Varieties.—A retail business has been done in White. Spot differences are steady and firm. In Brown a few bales have been done. A very fair business has been done in Nahda and high premiums have been paid. At the State Domains auction this week, several lots of Nahda were sold at very high premiums indeed.

Pilon.—A moderate business has been done at last week's rates.

Up-Country.—There is nothing fresh to report. Cotton is freely offered although not pressed for sale but the turnover during the week has been small.

A certain amount of new crop business has been transacted, the sellers being the growers who have need of money and who have to engage their next crop to obtain the necessary funds.
